This doesn't make sense. The idea of America pouring untold billions of dollars into aid abroad—handouts, loans, and defense materials—to stay the threat of Soviet encroachment against Western Europe, in particular, has been sold as a vital necessity to the public here. It must be quite obvious to even the most myopic statesman that if our closest ally in Europe is so unconcerned with the Russian threat as to pull out her men and trade with the enemy—then why should the United States be so concerned about the Reds?

The truth of the matter is that the British are now openly defying our leadership in the Western Alliance—and if President Eisenhower doesn't clamp down on them forthwith he will find himself an erstwhile leader, not a present one.

The obstreperousness of John Bull commenced at Suez less than a year ago. There he went into Egypt on a sneaky deal on which he failed even to notify Ike in advance. Result: he was soon set back on his heels. Next, following this fisco, the British lion demanded—and got—a couple of billion dollars worth of new credits from us for his spoils and refused to pay interest on his American loans extending far away into the future. We let him get away with it—and without a whimper of protest.

Having found us easy on that one, Britain next said she was going home from our system of mutual defense at the Rhine barrier in Germany. Again we were soft, and said nothing, but nothing. We hastened to assure our dear friends that we would never allow anything to come between us and our alliance, not even the unilateral, selfish, and unfriendly treatment we had just been subjected to. We proudly proclaimed we were a patsy.

So this latest action of the "hooray for me and to heck with you" boys in London

should come as no surprise to anyone this side of the Atlantic. The harsher they have treated us in the past, the more we have responded to their wishes. So why blame them? It's nice work if you can get it. And the British can get it if they try.

We will do well to remember that the mountains of goods the British are set to ship to Red China—with whom the United Nations is still technically at war, incidentally—will only go to release Communist manpower to work on additional war potential for use in a shooting war with us someday. Where will the British be when that happens? On whose side will they be found? And finally, if they trade with Red China and help build up Mao Tse-tung's war machine as they now propose to do, then we might well ask ourselves whose side they are really on today? What is the true answer insofar as the American people are concerned?

Most critical item of all: When will our leaders speak out wrathfully against such obviously nefarious transactions with the enemy by our allies, as in this case?

In judging the question of trade with the Reds, let us be guided by the action of the British themselves in two past world wars. At such times they maintained that even the supplying of Germany with foodstuffs for the starving civilians in that country amounted to trade in strategic materials. We were told that anything and everything which sustained the German economy was contraband. Now that the shoe is on the other foot, we may well ask No. 10 Downing Street to explain what the difference is supposed to be today.

Atomic Energy

EXTENSION OF REMARKS
OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. LESINSKI. Mr. Speaker, there has been much controversy presently regarding the development of nuclear power for electrical energy. However, I see no current opposition or argument to the use of atomic energy for peaceful purposes. There has been question as to the safety precautions and the possible violation of the law by AEC.

I submit, for the RECORD, Resolution No. 46, Atomic Energy, issued by the 16th constitutional convention, UAW, Atlantic City, N. J., April 7–12, 1957. The resolution points out the lack of coordination between Government and private industry in the use of this vital element for the future benefit and progress of America:

RESOLUTION NO. 46, ATOMIC ENERGY

The development of atomic energy to serve the peaceful uses of mankind has presented to the world a unique opportunity for progress toward human betterment in all lands and among all peoples. Here is a challenge which the United States and the family of free nations must not fail to meet promptly and to good purpose. Our union has played an active and leading role in proposing what it believes to be farsighted, immediate and imaginative action by the United States to meet the unparalleled opportunities of this new era in human experience.

In 1955 President Reuther served as a member of the Panel on Peaceful Uses of Atomic Energy which the Joint Congressional Committee on Atomic Energy set up to review and report upon programs and possibilities in this field. In January 1956 he filed with the Joint Committee his separate opinion on these issues, and was a cosigner of the report which the panel filed with the committee at that time.

In August 1956 the UAW filed, with the Atomic Energy Commission, a petition of intervention in order to protest the issuance by AEC of a construction permit for the Lagoona Beach atomic power reactor in lower Michigan near the densely populated Detroit and Toledo areas, in violation of the law and of AEC safety regulations. It was joined in this action by two other unions, the IUE and the Paperworkers.

On May 2, 1956, and again on February 26, 1957, the president of the UAW presented testimony to the Joint Committee on Atomic Energy calling for congressional action to reestablish United States leadership in atomic energy and to speed the development of atomic power for domestic and international purposes.

In February 1957 he addressed the conference on radiation hazards called by the AFL-CIO economic policy committee, outlining the unique problems confronting workers subjected to atomic radiations and pointing to the new approaches that must be taken through legislation and collective bargaining to cope with these problems.

One conclusion that can rightly be drawn on the basis of this experience is that the Atomic Energy Commission, under the chairmanship of Lewis Strauss, speaking as it does for the Eisenhower administration, is not carrying out the great responsibilities entrusted to it. By its own actions and inactions it stands indicted of total failure to comprehend the part which our country must play in helping to shape the future of the atomic age and of total incapacity to understand the creative potentials of the American system when its private and public resources are mobilized in effective teamwork for the achievement of common, public, national goals. Instead, the Atomic Energy Commission, under Strauss domination, and with Eisenhower concurrence, has warped and twisted a great national opportunity into a controversy over ideological issues which have nothing whatever to do with the great issues and opportunities which confront us.

Rarely have we seen so much damage done to the meaning and purpose of American institutions by fanatical forces abusing their power for their narrow and selfish purposes.

At our 15th constitutional convention 2 years ago we said:

"The power of the atom is a priceless public resource, holding out clear and early promise of bringing immeasurable benefits to people everywhere. But its benefits will be a long time in reaching the people if the present plans of the Atomic Energy Commission proceed without challenge, checkmate, and drastic overhaul by the Congress of the United States."

It is regrettable to have to report to this convention that to date the Atomic Energy Commission has continued in its inadequate, reckless, and reactionary policies without effective check by Congress. There are indications, however, that vigorous challenge of the Commission's betrayal of public trust may be forthcoming in this session of Congress.

1. ATOMIC POWER IN THE UNITED STATES

Delay in the development of atomic power in the United States has resulted from decision by the Atomic Energy Commission that private enterprise, not the Government must carry the load. Through this decision the Commission turns the job over to electric utility companies which have neither the resources, the know-how nor the desire to carry it out. It thereby curtails the opportunity of manufacturers, engineers, and research laboratories to gain experience and make progress in the new technology. The domestic-reactor program is a demonstrated failure. The job is not being done.

Only the Government has the financial resources to incur the risks involved at this stage of atomic power development. Only the Government can marshall all the resources of private enterprise that are needed to get the job done.

In his separate opinion as a member of the panel of 1955, President Reuther said:

"To meet the challenge and to realize the opportunity of the peaceful uses of atomic energy, we must mobilize all our forces and enlist the active participation of every segment of our economy. We must make full use of the capabilities both of Government and of private enterprise. Only by drawing upon the special contributions of each can we make satisfactory progress toward our objectives—fortifying the strength of our Nation, advancing the welfare of our people, and discharging our world responsibilities."

In a telegram to President Eisenhower May 28, 1956, our union called the President's attention to statements by AEC Chairman Strauss opposing Government construction of demonstration power reactors, pointed to press reports that Russia and Great Britain are forging ahead of us in this field, and asked him to direct all qualified persons under his control to make public all information in their possession on the relative status of atomic-power programs here and in other countries.

In testimony before the joint committee on the following day, President Reuther examined in detail and exposed the spurious arguments advanced by Chairman Strauss for opposing a responsible atomic-power program under Government auspices.

Nine months later, in February 1957, testimony presented before the joint committee on behalf of the UAW contrasted the grossly inadequate atomic power program of the United States with reactor construction schedules in Great Britain and Russia. Latest official information from Britain scheduled the construction by 1965 of between 5 and 6 million kilowatts of installed atomic power capacity. Latest report on the Russian program is that 2 to 2½ million kilowatts of atomic power capacity will be in use by 1961. For the United States the best AEC can claim is that we will have 1.3 million kilowatts of atomic power capacity by 1964.

This disgracefully inadequate figure is, however, grossly inflated. During the past year, one United States atomic power project after another has run into discouraging increases in estimated costs, or has been set back several years by technological difficulties that had not been anticipated. Not more than one-quarter of a million kilowatts of atomic power capacity appears really likely to be completed by 1960. Beyond that the prospect is highly uncertain since so many of the projects boldly proclaimed by the AEC are still in the preliminary stages and may never materialize.

The blunt fact is we lag dangerously behind both Britain and Russia, and our prospects during the past year have not accelerated; they have materially and substantially deteriorated.

This is exactly what your union has anticipated to be the effect of the mistaken, misguided policies pursued by AEC. The position which President Reuther took in his panel report and in his testimony a year ago is now being taken by manufacturers of atomic equipment in statements before the joint committee. They too say that Government must carry the major share of the burden at this early stage of reactor development.

Extreme pressures from Chairman Strauss and from the White House defeated enactment last year of the Gore bill which would have put the AEC realistically into reactor

development. The bill will come up again this year.

2. INTERNATIONAL AGENCY FOR ATOMIC ENERGY

Before the United Nations, on December 8, 1953, President Eisenhower electrified the world with his "atoms for peace" proposal—a plan by which the atomic energy "have" nations might share the peacetime benefits of the atom with the "have not" nations.

Today, his proposal has ripened into a draft treaty agreed upon by representatives of nations on both sides of the Iron Curtain and awaiting ratification by their governments. It provides a mechanism for bringing atomic power development to other peoples on the basis of their needs through genuine international cooperation and with full safeguards against extension of the capability of waging nuclear warfare. It is endorsed by the International Confederation of Free Trade Unions.

Russia is the only major power to have ratified the treaty to date. Western nations understandably wait for the United States Senate to ratify the treaty which the United States President was the first to propose.

Here, however, is another example of the tragic gap that exists between bold Eisenhower words and Eisenhower deeds. He has shown no disposition to press for Senate adoption of his own brainchild. Isolationist Republican colleagues of the President are campaigning against ratification, and the White House remains silent. AEC Chairman Strauss, holding on April 1 his first press conference in 15 months, spoke not one word on behalf of the treaty.

Only a broad national grouping of leading citizens and organizations can hope to prevail on the Senate to ratify this vitally important treaty over the indifference of a President who originally proposed it, and against the opposition of a diehard clique among his fellow Republicans.

3. ATOMIC POWER REACTOR HAZARDS

The construction permit issued by the Atomic Energy Commission August 4, 1956, to Power Reactor Development Co. (PRDC) for a fast-breeder reactor on the shore of Lake Erie between Detroit and Toledo was issued in violation of the law and of the Commission's own safety regulations and in disregard of the adverse report of its advisory Committee on Reactor Safeguards, which said that not enough is now known about the safety characteristics of this type of reactor to justify its construction at this site.

Because of the extreme public hazard involved, and because such irresponsible action on the part of AEC can set back the atomic power program many years, the UAW promptly filed petition of intervention in order to challenge this AEC action. We were joined in this petition by the IUE and by the paperworkers. Our action was endorsed by the AFL–CIO executive council August 30, 1956, and again by the industrial union department of the AFL–CIO February 21, 1957.

The Commission responded to our petition by ordering public hearings to be held, not on the subject of its own illegal action, as we had demanded, but on the questions of reactor safety and financial responsibility which should have been decided before any construction permit was issued.

This proceeding is still in progress. The record made to date, however, clearly establishes the financial irresponsibility of the PRDC organization and the sweeping disregard for safety which characterizes its plans for designing, building, and operating this reactor. Hailed by AEC as a demonstration of private enterprise assuming responsibility for reactor development, it turns out to depend absolutely over the next 10 years upon huge Government subsidies. Legality of these subsidies is in doubt and may well be challenged by committees of Congress.

PRDC's expert witnesses, the men supposed to be responsible for the reactor's safety, frankly admit upon cross-examination that for reasons of economy they are not adopting measures which would make for greater safety, and may actually engage in operating practices which will substantially increase the possibility of an accident.

Both the AEC and PRDC make clear they are willing to take risks in this reactor providing the Congress underwrites insurance to cover claims that would arise in the event an accident occurs. Financial protection, at Government expense, of the responsible parties appears to be more important in their eyes than protecting the lives and property of the public from an accident.

The hearing record also demonstrates how AEC policy with regard to secrecy of civilian atomic information is being employed to protect its own misguided practices from public scrutiny. Confirmation of evidence adduced by us in the hearings to the effect that a gigantic subsidy to PDRC is to be paid by AEC in the form of a very high price for the plutonium produced in this reactor was put under the secrecy classification by AEC and withheld from the record.

S. 1684, a bill to revise the entire safety procedure of AEC as applied to power reactors has been introduced. Hearings on this measure can bring to light the considerations which entered into the illegal issuance of a construction permit to PRDC. The record made by the intervening unions in the PRDC case will provide for these hearings an abundance of information and provocative leads.

4. HAZARDS OF RADIOACTIVE ISOTOPES IN INDUSTRIAL APPLICATIONS

The atomic age has brought into existence new forms of many natural elements which emit several kinds of high-powered radiations and can serve many useful purposes. They are also extremely hazardous to the human body. Like X-rays, they can both cure and kill.

These radioactive isotopes, as they are called, have already been issued under AEC license to some 1,500 industrial plants. Thus, an increasing number of workers are being subjected to possible exposure to these hazardous radiations.

This new industrial hazard is unique. It cannot be seen or felt. The damage done, which may include cancers or premature aging and death, and will always, in greater or less degree, do some injury to the children born to exposed parents, does not arise at once, but may be delayed for years. The damage is cumulative, each exposure adding to the injury done by past exposures. As President Reuther said in his opening remarks at the AFL–CIO radiation hazards conference February 27, 1957:

"We are dealing with a new kind of hazard, a hazard which is deadly, which is devious, which is unseen, which is persistent, which is delayed in its reaction, which is often hidden, but which is always eternal."

Regulations issued by the Atomic Energy Commission governing the use of the resources of radiation for industrial purposes are far from adequate. They permit workers to be exposed to radiation far above the limit recommended by the highest scientific authorities for the general population. They do not protect workers' rights to have the workplace adequately surveyed for radiation, or to have his individual exposure adequately recorded and made known to him.

Bad as the AEC regulations are, their enforcement is worse. It is practically nonexistent. AEC lacks staff to inspect the use of these dangerous substances which it is providing to industry under license, and there is no indication that it is doing anything much to train an enforcement inspection and enforcement staff.

In testimony presented to the joint committee for the UAW February 26, 1957, the committee was urged to make an investigation of the use and policing of these dangerous radiation sources by industry. Federal law and enforcement are essential. Workmen's compensation principles must be revised to meet the peculiar characteristics of this new type of hazard. A States' rights approach cannot meet the problem either sensibly or adequately.

In addition to legislation, there is a responsibility upon us in negotiating contracts to see that workers are fully and adequately protected, and that the procedures employed to that end are jointly supervised by labor and management. Here again, as with the advent of automation, we must meet new problems with new measures adequate to cope with them, so that workers shall not be made to pay with their health and their lives the price of progress in the atomic age.

Commencement Address—Catawba College

EXTENSION OF REMARKS

OF

HON. GEORGE A. SHUFORD

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. SHUFORD. Mr. Speaker, on Monday, June 3, 1957, Catawba College, Salisbury, N. C., observed its 106th commencement program. My colleague, Hon. HUGH ALEXANDER, of the Ninth District of North Carolina, delivered the commencement address which is a challenge to the youth of America. Because of its timeliness and general interest, under unanimous consent, I include Congressman ALEXANDER'S address in the Appendix of the RECORD:

Mr. President, members of the faculty, graduates, students, and friends of Catawba Colleges, I share with you the deep regret that our distinguished senior Senator from North Carolina, the honorable SAMUEL J. ERVIN, Jr., cannot be with us today. He is an outstanding American, a gifted speaker, and a devoted public servant, whose service in the United States Senate has been recognized by the entire Nation. I am honored to substitute for him on this auspicious occasion.

I shall long remember this day as one on which I had the honor to meet with my Catawba College friends and neighbors and share with them the joy of seeing their sons and daughters receive their college diplomas.

I am proud of Catawba College. I have known and count among my friends, many of her outstanding faculty members and graduates. I have watched with pride her outstanding growth and widening spheres of influence until today Catawba College is regarded and accepted as being in the forefront of the educational system of our State and Nation. Her high scholastic requirements and deep religious atmosphere are known in educational circles throughout our land.

This is a matter of deep satisfaction to all of us as we join together in celebrating the 106th commencement of Catawba College.

I can understand and appreciate in the fullest sense that great feeling of personal pride that swells the hearts and gladdens the souls of the parents who have come here this morning to see their sons and daughters honored. You have a right to be proud; a right to be happy; and I rejoice with you in the splendid scholastic achievement of your sons and daughters.

To the young men and women assembled here today I want to extend my heartfelt congratulations. Your attention to your studies, your perseverance and steadfast de-

votion to duty are deserving of the highest praise and commendation. You have gained a victory and your life henceforth will be blessed and shaped by the years that lie behind you.

I know there is a feeling of sadness among you this morning. It is natural that it should be so, for we do not lay aside the happy associations and fond memories of this life without a sense of sadness. While perhaps you are not aware of it today, yet tomorrow you will awaken to a glorious sunrise of a new day and a new order of things.

Graduation is a necessary phase of our growing up. It is a part of that mantle of maturity which must settle on the shoulders of each and every one of us if we are to assume our rightful place in the world. While we hesitate to break the golden cords that bind us to the happy past, yet the cord must be loosened and we must march ahead. In so doing we grow up and assume the rights, duties, and responsibilities of maturity.

It is in connection with those new responsibilities which you are about to inherit that I want to talk for a few minutes this morning. Some of you will go on to pursue further study at the post graduate level; some of you will immediately take your place in life and assume the responsibilities of a career and a home of your own. At some point in your lives many of you young men here this morning will have to fulfill your military obligations to your country.

But regarless of what the next few years will bring one thing is certain—all of you are about to shoulder new and more demanding responsibilites. The world you are about to enter as responsible young men and women is vastly different from what it was when I graduated from college; vastly different from what it was even 5 years ago. The conditions under which we live today are continually shifting. Ours is an age of great progress—great advancements on all fronts—in the arts and in the sciences.

In all things our civilization is moving ahead. Today mankind has more of the necessities and the luxuries of life than the greatest minds could possibly foresee in the past. As you take your place in tomorrow's world you graduates will step into a dynamic society—a society which holds untold promise for the future and the richest of blessings for mankind if made to conform to Christian morality.

Throughout America this week we have observed Memorial Day. It is altogether fitting and proper for us to pause a moment this morning and reflect on the significance of this day on which we honor the memory of, and pay tribute to, the heroism of those Americans who fought and made the supreme sacrifice that we might assemble here today in the full enjoyment of our liberties.

America and its free institutions is not an accident. It is the result of the sacrifices in blood and treasure of dedicated men and women who had the dream of a better tomorrow for their children. Their dream is our feality. Their sacrifice is now our blessing.

America and its free institutions has been handed down to us by our forefathers as a sacred trust. We must not in any way impair our free institutions but so preserve them that our children's children, in all the ages that lie before us, will bless us for our devotion to liberty.

Therefore, as you young men and women face the future it is well to keep in mind the fundamental principles upon which our Nation was founded and which have enabled it to reach its great position of world leadership. It is well, also, to remember that the character and strength of any nation is commensurate with the character and strength of its citizenship.

Our forefathers did not have the idea that the world—that society, in general—owed them a living. They had to depend upon themselves for food, shelter, clothing and the defense of their homes against the hostile Indian and white man, and thus developed an independence of character and spirit that has distinguished our Republic down through the ages among the nations of the world. The individualistic nature of our forefathers was the great force that wrestled America from a vast wilderness and made the desert bloom. The unfettered freedom of our Democratic institutions enabled every American to reach the fullest development of his talents.

Had the men and women of 1776 been afraid to face an unknown future, the Thirteen Original States of this Union would have stagnated and suffocated along the eastern seaboard.

We are living in an age of great change. Our age has produced in certain areas of our national life a feeling that the ideas and principles of our forefathers will not work in the 20th century. There is a school of thought in America today—and unfortunately some of it has been translated into positive action—that America has outlived its heritage of the past; that a new way of life must be initiated.

Such a philosophy is false and dangerous to our liberties. The great principles upon which our forefathers fashioned this Republic are as vigorous and vital today as they were 150 years ago. For the United States to forsake its glorious past of individualism and free enterprise, is to invite destruction.

I, therefore, urge you young people to cling fast to the fundamental principles of government as embodied in the Constitution of the United States. Your right to develop your individual talent in the way you see fit in a precious liberty that has been purchased at great sacrifice. To surrender that right is to give up your freedom and ultimately our American way of life.

Now, since the dawn of recorded history, every age has had its problems. Fortunately for mankind, most of these problems have been overcome and civilization has moved forward to the light of a new and a better day.

As for our present era, it will take no great amount of searching in order to find the problem that plagues modern society. It is a problem that circles the globe and has our great peace-loving Nation and the free countries of the world living in a virtual state of siege. That problem is international communism, the godless doctrine that has stalked the world with rapid strides since the end of World War II and brought misery and enslavement to hundreds of millions of people.

Only our great strength has kept that calamity from engulfing our Nation and destroying our precious liberty. Though we may never have to fire another gun—and I pray God that such may be the case—in the defense of our way of life, yet we will have the shadow of international communism to face for many years to come. It will force us to spend our treasure and place our young men in uniform for many years. It will keep the world in a constant state of tension and agitation and will tax the patience of free men.

There is no immediate solution to this problem. The only thing we can do is to keep our Nation's defenses strong and keep ourselves educated to the dangers of the ever-present menace. The burden of this tremendous task to maintain our liberties will rest in a short time with you young men and women. If ever there was a period in our national existence when young people should be conscious of their liberties and the blessings of their American citizenship, it is the age in which we are now living.

So, I say to you young graduates that you have a solemn duty to perform. It has been thrust upon the free world by causes over which we have no control. But nevertheless, we must cope with it and conquer it, or our way of life will be destroyed. We must, therefore, be vigilant of our liberties and on guard against any material force or philosophy that would destroy our democratic institutions. We should glory in our Americanism and should never give our allegiance to any false doctrine however noble it may sound on the surface. So long as young America understands, appreciates, and loves Americanism, so long then will we maintain the blessings of liberty for ourselves and our posterity.

Let us realize here today that America is the last great hope of the world. If we fail in our mission civilization will be set back a thousand years. Let us resolve, therefore, to face the greatest challenge of our age with determination and courage and in so doing we cannot help but have a brighter tomorrow.

As we face the coming challenge of the future we must have a firm foundation upon which to ground our hopes, our ambitions, and our spiritual aspirations. Nothing of value in this life has ever resulted without plan or purpose. It has been said that man cannot live by bread alone. I know of nothing truer than that fundamental statement. Man, in brief, needs Christ.

As we walk the pathways of life we must travel hand in hand with Him if we are to have inner peace and material success in its truest sense. In our modern world, beset on all sides with the forces of atheistic materialism and spiritual doubt, we need to keep Him near. The great power and moral force of His teachings are the sure foundation upon which every successful life must rest.

In my work in Washington I meet many men who have risen to places of power, wealth, and fame. One thing has always impressed me in connection with their character. They have been men with spiritual convictions; men in whose bosoms the glory of Christ has manifested itself.

Let us remember, always, that a life shared with Him is a happy life—a rich life—a full life. As you begin your march into the future, take along His companionship. There is nothing that I could say to you today that carries so much meaning and so much promise for your future well being.

Life will challenge you on all sides. That is natural. Every day many situations will arise in which you must make decisions. In making these decisions you will often have an inner struggle as to what you should do. You will be tempted to do the so-called smart thing, or that which is more advantageous to you from the standpoint of profit or gain.

But the smart thing—the advantageous thing—should never be the rule by which you govern your life.

There is only one thing which you should do—in fact, you must do—that is the right thing. Only the right thing—that which is just and proper—will ever be the smart thing in life for any of us.

It has been said that if we are true to ourselves then we cannot be false to any man. There is much wisdom in that statement, and it would be wise for us to carry it with us in the days ahead.

We should strive at all times to be ourselves. The Creator shaped each of us in His own image and endowed us with a separate and distinct personality. There is no need in this life for any of us to effect the ways and attitudes of others. Only by developing our own personalities and coming to know and appreciate the strength and weakness that is inherent in our nature, can we find happiness and lead successful lives.

I do not know what success means to the young men and women assembled here this

morning. Possibly each of us in our own way has a definition of success. Some of us may look upon success as wealth. Some may consider fame as success, while others would consider success as having enough of the essential things of life as to be free from want.

But to me the successful man or woman is the person who grows each day a better and more useful citizen. The successful man, to my way of thinking, is the individual who gives without thought of reward to others, and strives to build a better community in which to live.

I might add that there are unlimited possibilities for young people today. It is true that the frontier in America has disappeared and it is no longer possible for vigorous youth to pack his family in a wagon and set out across the mountains to virgin territory. But keep in mind that not all frontiers can be marked off in miles on the ground. The world is full of unknown, uncharted realms waiting discovery by mankind. There is a great need for prepared young people in the fields of science, government, education, business, and engineering. The shortage is so great in many of these fields that I understand recruiting from our colleges is a common practice today. In my opinion the opportunities of today are perhaps greater than at any time in our history. I am sure that I do not need to remind you that the traits of character that have marked heroes throughout history are still very necessary in our competitive living. Courage, initiative, hard work, enthusiasm, and honesty are just as valuable today as in the past.

May I suggest that even with all the demands that are made upon you—take time to live.

Take time to think—it is the source of power.

Take time to give—it is too short a day to be selfish.

Take time to play—it is the secret of perpetual youth.

Take time to read—it is the fountain of wisdom.

Take time to pray—it is the greatest power on earth.

Take time to love and be loved—it is a God-given privilege.

Take time to be friendly—it is the road to happiness.

Take time to laugh—it is the music of the soul.

Take time to work—it is the price of success.

In conclusion, I would like to sum up briefly what I have endeavored to put across to you young men and women this morning. As you leave here for the last time as a class I would like for you to carry with you a realization of your responsibility as a young American in a world that is to a great extent hostile to the ideals upon which your Nation rests. I would like for you to go out into the main stream of life dedicated to your country and to the principles for which it stands. I would like for you to hold fast to the Cross of Jesus Christ, for it will ever be a source of strength and comfort to you, in victory and in defeat.

And, in conclusion, I would like for you to know yourself and to be true to yourself in all things. If you will remember these things and keep them ever before you, your paths will ever be bright and your lives a success.

Again, I want to say it has been an honor and a privilege to be with you this morning. Thank you for your kindness in inviting me here, and may God bless each and every one of you.

Independent Scrap Dealers Approve Small Business Committee's Investigation

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. PATMAN. Mr. Speaker, the Select Committee on Small Business is conducting an investigation of the iron and steel scrap industry. This is an extremely important investigation from the standpoint of several thousand small businesses. Secondary iron and steel are, of course, vital raw materials in the operations of the steel mills, many of which are small, semi-integrated producers, without ore mines and blast furnaces of their own.

In addition, there are approximately 4,000 independent scrap-yard dealers in the United States whose business consists of collecting, processing and selling iron and steel scrap. These scrap yard dealers are, in reality, small manufacturers. In addition to serving as collection points for the assembly of scrap materials—which is one of the functions of any manufacturer—the scrap yard dealers serve the indispensable functions of sorting, grading, processing, compressing, and bundling the scrap materials—in short, putting these materials into forms which make them usable in still other manufacturing processes.

SCRAP FIRMS ARE FAMILY BUSINESSES

The scrap yard dealers business is perhaps unique among American businesses, in that almost all of these firms are individual family enterprises. In fact, there is an old saying in this industry that the size of the business depends upon how many brothers there are in the family, to help run the business. Within the last few years however, one or more very large corporations have arisen to tower over all the smaller competitors in this industry. Furthermore, not only have organizational changes been taking place, but new trade practices have been taking place which pose serious threats—or so it seems—to the welfare and even to the continued existence of independent scrap-yard dealers. These have occurred in both domestic and foreign markets. The Small Business Committee of the House is, as I have said, looking into these matters; and it is hoped that when the Committee has learned all of the pertinent facts it will have some constructive recommendations to make. Further hearings will be held next week, on June 18 and 19.

SCRAP DEALERS EXPRESS "THANKS"

The National Federation of Independent Scrap Yard Dealers, Inc., has expressed its approval of the commiteee's investigation, and expressed its "thanks" for the Committee's work on this matter to date. The Committee is in receipt of a letter of June 7, from Mr. Stanley Asrael, President of the National Federation of Independent Scrap Yard Dealers, Inc., attaching a resolution which was adopted on that date by the board of directors of the National Federation of Independent Scrap Yard Dealers, Inc. I believe that other Members may be interested in this letter and resolution, which are as follows:

NATIONAL FEDERATION OF INDEPENDENT SCRAP YARD DEALERS, INC.,
New York, N. Y., June 7, 1957.

Hon. WRIGHT PATMAN,
Select Committee on Small Business,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN PATMAN: I take pleasure in enclosing herewith text of a resolution adopted by the board of directors of the National Federation of Independent Scrap Yard Dealers, Inc., at its meeting in New York City on Monday, June 3, 1957.

It not only expresses the views of the board but, I feel, fairly reflects the attitude of the approximately 4,000 independent scrap yard dealers in the United States.

We have had several meetings with members of your staff. I take this opportunity to state to you the great regard which I have for their work and to note the high level of efficiency and courtesy on which the current study is being conducted, judging from my personal experience.

Very truly yours,

STANLEY ASRAEL,
President.

Resolved, That the board of directors of the National Federation of Independent Scrap Yard Dealers, Inc., at a meeting assembled, extends its thanks to Hon. WRIGHT PATMAN, chairman of the House Small Business Committee, for the splendid work being conducted by the committee and its staff in its trail-blazing study of the vital scrap industry, composed for the greatest part, numerically, of small-business men; and be it further

Resolved, That it is the sense of the board of directors of the National Federation of Independent Scrap Yard Dealers, Inc., that the current study fills a sorely needed review of this industry which has too long been regarded as being merely on a standby basis and has been denied proper recognition for the indispensable role which it plays in our national economy as one of the few remaining major "noncaptive" components of the steel industry.

Housing Legislation

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, June 14, 1957

Mr. JOHNSON of Texas. Mr. President, in a letter to the Washington Post and Times Herald, President George S. Goodyear, of the National Association of Home Builders, comments on the housing legislation recently approved by the Senate.

Mr. Goodyear presents the views of the builders ably and well. I ask unanimous consent that his letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the Washington Post and Times Herald of June 13, 1957]

NEXT TO NOTHING DOWN

Your June 2 editorial, Next to Nothing Down, seems to me to be a rather superficial examiantion of one of the most important and far-reaching legislative steps taken by the Congress to make it possible for all Americans to buy good homes

It appears to me that, in trying to appraise the Senate action in the brief space of two paragraphs, you missed entirely the broad scope of the Senate's accomplishment. This legislation is aimed at one of the basic objectives which the Washington Post traditionally has supported—good housing for all the people.

If it is enacted into law, it will—for the first time in our history—bring home ownership within the reach of every self-supporting family in America. There are millions of such families today who want and need homes but who—for one reason or another—have been unable to accumulate sufficient cash savings for the downpayments now required under law.

The only question you raise is whether these people are good mortgage risks; that is, Are they going to be able to pay for their homes? I shall cite some statistics which show they are, but for the moment let's consider this: Does the real security of a home mortgage depend upon a 3 or a 5 or a 10 percent downpayment, or does it actually rest on the integrity of the American family and faith in the future progress of this Nation?

No statistics can give the final measure of a man's integrity, but the record certainly is on the side of the American home buyer. If your editorial writer had examined the official record of the FHA program since its inception in the 1930s he would have found that the default rate on nearly $29 billion of FHA-insured home loans has been only three-tenths of 1 percent. And the defaults on GI loans, made for little or nothing down, amount to only three-fifths of 1 percent on $40 billion. Surely, you will agree that FHA and GI home buyers have not "walked away" from their obligations?

The National Association of Home Builders consistently has opposed the so-called no-down-payment loans which would encourage reckless and irresponsible home buying; and it has supported Government regulations which require the same careful credit investigation for FHA and GI home buyers as are demanded on conventionally financed home mortgages. But there is a vast difference between reckless lending and the extension of housing credit to responsible families who pride themselves on paying their debts.

The pending legislation provides an unprecedented opportunity for these families to achieve home ownership and, at the same time, to build up family savings through their monthly mortgage payments, which they could not do while paying the same or even slightly less in rent.

As for the advantages of buying versus renting, I should like to call your attention to an article published in your newspaper on May 27, which graphically shows what has happened to rents and housing costs in the Washington area. The article found that housing costs in this area have remained practically unchanged since January 1952, while rents have risen continuously.

It also pointed to the heavy cost of financing home ownership through second trusts, which add enormously to the home buyer's burdens, and which NAHB has opposed. We seek a sensible, long-term pattern of mortgage financing which will enable the great majority of American families of modest means to buy homes without undue financial strain.

As to your claim that home builders' methods are outmoded and wasteful, I can only say that this is a long-outmoded cliche which has no reality today. The Federal, State, and local building codes under which home builders are compelled to operate may indeed be outmoded—and are in most communities—but the home-building industry is constantly seeking new and improved methods of construction. We invite your editorial writers to visit NAHB's new research institute home in Kensington, Md., and see for themselves what is being done to provide better and more economical materials for the American home.

GEO. S. GOODYEAR,
President, National Association of Home Builders.
WASHINGTON.

Extension of FDIC Power Hits State Bank Departments

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. PATMAN. Mr. Speaker, a very interesting and informative article, entitled "Extension of FDIC Power Hits State Bank Departments," written by Mr. Ben DuBois, of Sauk Centre, Minn., secretary of the Independent Bankers Association, appeared in the June 1957 issue of The Independent Banker, known as the national voice of America's independent bankers.

Believing the article will be of interest to the Members of the Congress, I am inserting it in the RECORD at this time.

The article follows:

EXTENSION OF FDIC POWER HITS STATE BANK DEPARTMENTS

(By Ben DuBois)

The Federal Deposit Insurance Corporation came into being for the purpose of insuring bank deposits as a protection to the depositing public. It was permitted to examine nonmember State banks and, in case of necessity, State members of the Federal Reserve System and national banks. The purpose of this examination privilege was to minimize the corporation's risks. This has been accomplished.

During the 22 years that the corporation has been operating, the total net loss has been a little less than $21 million. For the year ending December 31, 1956, net income from United States Government securities alone amounted to over $43 million. Total expenses and losses for that year were about $10 million. The total losses in 22 years were much less than the income on investments for 1 year. The corporation certainly has minimized its risks.

From the insurance standpoint the corporation has done an excellent job. It is very much a worthwhile organization. It has brought a high degree of stability to banking. It has proved that the insurance of deposits is feasible, and the banking fraternity and the public in general look upon the corporation with deep respect.

COMPLAINTS HEARD

But through its examinations, the Federal Deposit Insurance Corporation is becoming a policymaker. Monetary policies should be left to the Board of Governors of the Federal Reserve System. Also, the FDIC is encroaching upon the prerogatives of the banking departments, in some instances pushing the State banking departments into subservient position.

We hear more complaints about the examinations of the FDIC than we do of the other examining agencies. The comptroller of the currency sits on the FDIC Board. We hear little criticism of national bank examinations.

Is there a movement on foot, abetted by the comptroller as director of the FDIC, to encourage State banks to change to a national charter or to avoid the irritating examinations by the FDIC by becoming a member of the Federal Reserve System?

ALL EXAMS THOROUGH

It can be assumed, we believe, that examinations by the National Banking Department and by the Federal Reserve banks are fully as thorough as the examinations by the FDIC. From personal experience, we believe the examinations by the State banking departments are equally good.

Is the assumption of more and more direction to banks by the corporation through its examinations a scheme of the FDIC to break down the autonomy of the States and to supervise, direct, and make policies for State banks through a Washington office?

Perhaps there is no well laid plan to do any of the things enumerated above. Maybe it is merely Washington bureaucracy stretching out for more control.

We believe we see dangerous handwriting on the wall that should be heeded. We often wonder why the FDIC as an insurer needs to examine all nonmember State banks. It accepts in general the examinations made through the Comptroller of the Currency's office as well as examinations made through the different Federal Reserve Banks. Couldn't it accept the examinations made by the different State banking departments?

The State banking departments have a responsibility for seeing to it that the banks under their supervision are properly run. These agencies will do their utmost to protect depositors of State banks. It is patent on its face that the corporation sort of looks down its nose upon examinations made by State banking departments.

State banks, of course, pay a fee for examinations by the State banking departments. The FDIC makes no charge, but the banks pay for this examination nevertheless through the premiums they pay to the corporation.

If the corporation maintained only a skeleton crew for examining problem banks, it could lessen its cost of operation and we believe that ultimately it could return more of the premium the banks pay the FDIC.

As long as the corporation fails to recognize the competency of examinations by State banking departments, the more it puts our State banking departments in a subservient position.

SETTING A TREND?

Perhaps the trend is toward eliminating examinations by the State Department. Then the only thing that would be left is the right of chartering. These rights are infringed upon a bit because when a State issues a new charter, the new State bank may get insurance or it may not.

On the other hand, a charter issued to a national bank automatically gives it insurance. If a going bank can't secure insurance from the FDIC, it may join the Federal Reserve System and then the corporation will insure it. It appears to be a lopsided situation.

When a newly chartered state bank makes application to the FDIC for insurance, the corporation in many instances withholds insurance until the bank management se-

lects an executive officer satisfactory to the FDIC.

The corporation doesn't leave it to the state banking department to decide whether or not the proposed executive officer is competent. Taking away from the state banking departments their responsibilities weakens these departments.

Perhaps in some instances the shucking of responsibility is pleasant. Final disposition of troublesome problems can be placed on the other shoulders. However, if we are to maintain strong state banking departments, these departments must measure up to their responsibilities.

It is our belief that when the Congress permitted the FDIC to examine banks it was for the purpose of minimizing risks, not to give the corporation power to set policies and to select managing officers for the banks.

It was not the intent of Congress, surely, to have the corporation dominate the situation and to put state banking departments in a position of less responsibility.

Unless corrections are made, our dual system of banking will become a hollow shell and by indirection its substance may be destroyed.

Salute to Unions

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, June 14, 1957

Mr. HUMPHREY. Mr. President, yesterday an event of special importance to our Nation and to the labor movement occurred in New York City with the celebration of David Dubinsky's 25th anniversary as president of the International Ladies Garment Workers' Union.

This morning's New York Times contains an editorial relating to this subject and to the 20th anniversary of the Amalgamated Laundry Workers' Union. I ask unanimous consent that this editorial entitled "Salute to Two Unions," be printed in the Appendix of the RECORD.

Mr. President, I had the honor yesterday of addressing some brief remarks to the Madison Square Garden celebration in honor of Mr. Dubinsky.

I ask unanimous consent that the text of my statement be printed in the Appendix of the RECORD.

There being no objection, the editorial and the remarks were ordered to be printed in the RECORD, as follows:

[From the New York Times of June 14, 1957]

SALUTE TO TWO UNIONS

Two events this week call attention to the achievements of American unionism at its best—to be weighed heavily in the balance against the shortcomings which the McCLELLAN committee has disclosed. We refer to the 25th anniversary of David Dubinsky's presidency of the International Ladies Garment Workers' Union, and the 20th anniversary of the Amalgamated Laundry Workers' Union—a sharp contrast to the other laundry workers' union which faces expulsion from the AFL–CIO for corrupt practices.

It is a tribute to Mr. Dubinsky's enlightened statesmanship that a general work stoppage this week, blessed by the employers, was the first that has taken place while he has been president—unlike the turbulent years of economic warfare that went before. Through the peaceful processes of collective bargaining, backed by effective organization, a sprawling group of workers, torn by factionalism, debt-ridden and unable to meet their own payrolls—has become a well-knit organization of close to half a million members whose wages are more than three times what they were, whose working hours have gone down from 16 a day in sweatshops to 35 hours a week in regulated factories and who have a quarter of a billion dollars in their union treasuries and welfare funds. But the achievement cannot be measured in such figures alone. The union has been a crusader against corruption and a pioneer in the full disclosure of its financial affairs, honestly administered.

Twenty years ago the laundry workers of New York were poverty-stricken, overworked, tuberculosis-ridden, exploited by both Communists and racketeers—orphans of the labor movement. While other international unions refused to enroll them, the Amalgamated Clothing Workers, under the leadership of the late Sidney Hillman, offered them the Amalgamated's protection, strength, and prestige. Today, with no discrimination as to race or color, their wages have trebled, their hours of work have gone down from 60 to 40 a week. They enjoy life, health, and retirement insurance benefits and can get free medical care at their $1.5 million health center. As with other ACW affiliates, their finances are a well-audited open book.

Accolades to the garment and laundry workers for their outstanding accomplishments and to Mr. Dubinsky for his distinguished services in a dedicated cause.

MESSAGE OF SENATOR HUMPHREY TO TESTIMONIAL TO DAVID DUBINSKY, MADISON SQUARE GARDEN, NEW YORK CITY, JUNE 13, 1957

David Dubinsky has always been to me the finest symbol of the heart, the soul, and the intelligence of the labor movement. The 25 years he has spent as president of the International Ladies Garment Workers' Union has permeated the economic, social, and political life in America with the spirit of humanitarian democracy. The consequences of his leadership have been felt beyond the confines of the garment industry. The strength of his personality and the intensity of his idealism have affected all aspects of our Nation's life.

In labor relations, his union has set the pattern for a harmonious industrial stability while attaining the highest standards of working conditions and wages for its members.

The significance of David Dubinsky's political leadership can best be expressed by noting the great careers of Franklin Roosevelt and Herbert Lehman, both of whom owe a large measure of their political success to the ILGWU.

The ethical life of America has been strengthened by the high standards of morality which have been identified with David Dubinsky.

The cultural life of America has been enriched by the pioneering services of the ILGWU in bringing the arts and the members of the ILGWU together.

The ILGWU was an early leader in workers' education. Democracy here and abroad has had no finer friend, nor more loyal champion, than David Dubinsky. His energies and the resources of his union have been responsible for the preservation of free trade unionism all over the world.

It is indeed an honor to be permitted to join the Nation in paying tribute to David Dubinsky on his 25th anniversary as head of his union. I consider it a great privilege to be his friend.

Address Before Democratic Governors Conference

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. PATMAN. Mr. Speaker, I am inserting herewith an address delivered by me before the Democratic Governors Conference at the Mayflower Hotel here in Washington, May 4, 1957.

It is as follows:

Mr. Chairman, distinguished participants in this National Conference of Democratic Governors. It is a great honor and pleasure to be here with you today.

I have been asked to talk to you about the administration's tight money and high interest rate policy, particularly how it has affected the economy of your States and your financing of urgently needed public facilities.

Until recent years, the debt-management and monetary policies of this Nation, under Franklin Roosevelt and Harry Truman, were directed toward strengthening the credit standing of the Federal Treasury as well as that of the State and local governments. Their policies were directed toward maintaining high levels of economic expansion by keeping capital costs low. They supported an ample but not excessive supply of credit at all times, available at reasonably stable interest rates.

Under those policies we achieved full employment and a fair and equitable distribution of purchasing power among the broad masses of the population.

In 1953, a new Republican administration came to power in Washington. One of the first things the Secretary of Treasury did was to announce that interest rates were too low. Since early 1953, he has been raising rates up and up and up.

We are in a period of the greatest manipulation of fictitious interest rates and credit that this country has ever seen.

For the first time in the history of this country we have a Secretary of the Treasury who has stated he does not consider it to be his responsibility to get the lowest interest rates possible for the people on their public debt.

The Secretary of the Treasury says that all he does is follow the market. Apart from the fact that there is abundant evidence that he has led the market on numerous occasions, the truth is that he regularly invites the big investment bankers, the life insurance companies, and the commercial bankers in to advise him what terms to set on his forthcoming issues.

Has the Secretary of the Treasury ever invited the Governors to advise him what interest rate to set on his securities; or consumers; or small-business men? The answer is "No."

But he has invited in the past 5 years the Investment Bankers Advisory Committee on Governmental Securities, whose chairman is also chairman of the First Boston Corporation, the largest dealer and investor in State and local government obligations in the country. And, coincidentally, the recommendations of this group as to the terms of new Treasury issues have been followed exactly with few exceptions.

In 1953, when the Secretary broke the 2½ percent rate on new long-term bond issues, who were his principal advisers? The for-

mer chief executive officer of the First National City Bank of New York and the head of the bond department of the Continental Illinois Bank in Chicago.

What have the recommendations of these advisers and actions of the Secretary of Treasury cost the States?

The inflation of interest rates since 1952 has sharply eroded the value of the State tax dollar for purposes of paying interest charges on their debts.

The most spectacular impact of recent monetary and debt-management policies has been the sharp rise in interest rates paid by States and local governments and the failure in a large number of cases of those governments to sell the bonds which they offered.

Increases in interest rates on State and municipal bonds have been greater than increases on AAA corporate bonds and United States Treasury bonds.

For the first time in a great many years the rate on high-grade tax-exempt municipal bonds is greater than the yield on taxable United States Government bonds.

Since 1952 the yield on high-grade State bonds has nearly doubled; and high-grade municipal yields have risen by 35 percent. This compares with an increase in yields on AAA corporate bonds of 17 percent and United States Treasury taxable bonds of 24 percent.

Despite these higher interest rate increases for State and local bonds, there was a heavy volume of postponed or unsold issues of authorized bonds in 1956.

Soaring interest rates are bound to be reflected in a curtailed State-local government capacity to meet construction needs over the longer run.

For example, the extra interest to be paid on a school bond issue sold by a New York State school district last year, due to the rise in rates over the past 4 years, would be enough to build a school for 900 pupils.

The most recent reports of the Census Bureau show that interest paid on State debt in fiscal 1956 totaled almost one-third of a billion dollars, more than double the fiscal 1952 sum and three times the fiscal 1950 figure. An indirection of the disproportionate rise in State interest charges may be seen by this comparison. From fiscal 1955 to fiscal 1956, direct expenditures of the States on current operations rose 8.4 percent whereas interest payments rose 24 percent or nearly three times as fast.

It is well known, of course, that the rise in rates was sharpest in the last 6 months of calendar 1955 and consequently was not reflected in the census figures.

From fiscal 1952 to fiscal 1955, interest paid by local school districts on school bond issues rose 25 percent faster than direct general expenditures by local school districts for education.

These are only samples of what we may expect if present monetary policies continue. According to estimates of the United States Departments of Labor and Commerce, the overall need for State-local public facilities in the next decade amount to about $200 billion, including $92 billion for highways, $42 billion for education buildings, $22 billion for hospitals and institutional buildings, $25 billion for water and sewerage works, and $23 billion for other non-Federal public works. To meet these needs will require capital outlays in the next 10 years at an annual rate of $20 billion compared with present spending of $12 billion a year.

By 1965, State-local debt is expected to exceed $60 billion or about 50 percent higher than it is today. On a $60 billion debt a 1 percent interest rate differential would mean $600 million in additional interest payments annually. If State-local interest rates advance over the next decade only at the same rate as they have from December 1952 to March 1957, the additional annual interest payments on the debt in 1965 could be $1.2 billion. This is what the Eisenhower monetary policies may cost you.

Under present monetary policies, many urgently needed State-local projects of high social priority will be cut off and pressures will grow for the Federal Government to undertake directly the financing of construction that has heretofore been financed at the State-local level.

We need to create a market at reasonably stable and low-interest rates for State and local bond issues. This function had been satisfactorily served in the past by the RFC. Recent events have demonstrated that access by the States and local governments to loanable funds at reasonably low and stable rates is of the greatest importance. Some facility must be created to perform this function.

Immigration and Nationality Matters

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. WIER. Mr. Speaker, under permission to extend my remarks in the CONGRESSIONAL RECORD, I include a letter from Rabbi David Aronson, Beth El Synagogue, Penn Avenue North at 14th, Minneapolis, Minn., with resolutions adopted by the Rabbinical Assembly of America at its convention on May 16, 1957, on the preservation of human life and the elimination of the restrictive, discriminatory provisions of the Immigration and Nationality Act of 1952—McCarran-Walter Act.

The letter and resolutions follow:

BETH EL SYNAGOGUE,
Minneapolis, Minn., June 11, 1957.

Congressman ROY WIER,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN WIER: I am enclosing copies of resolutions adopted by the Rabbinical Assembly of America at its convention on May 16, 1957.

I trust that you will fully support these just resolutions.

With kindest personal greetings, I am,
Cordially,

Rabbi DAVID ARONSON.

RESOLUTION ON ISRAEL, SUEZ, AND AQABA ADOPTED BY THE RABBINICAL ASSEMBLY CONVENTION, KIAMESHA LAKE, N. Y., MAY 16, 1957

Out of deep religious concern for the preservation of human life, we urge the statesmen of our country to redouble their efforts to bring peace and stability to the Middle East. Essential to the prevention of hostilities in that area is a fair and clear American foreign policy. To hide behind the smokescreen of inability to cope with a situation within the United Nations framework, only makes a mockery of peace and justice. The world has a right to expect progressive leadership from the United States of America such as was demonstrated during the recent crisis of Jordan. Lack of American leadership in the Middle East will result in continued violence which may eventually spread to other areas. Promises, which have been made or implied by the President of the United States of America to Israel concerning the use of the Suez Canal and Gulf of Aqaba, must be fulfilled if we are not to yield to the blackmailing devices of Arab potentates who flirt with communism. Egypt must not be permitted to return to the positions from which it may again blockade the Gulf of Aqaba and its international waterway.

The Rabbinical Assembly of America deplores the failure of Congress to eliminate the restrictive, discriminatory provisions of the Immigration and Nationality Act of 1952 (McCarran-Walter law), which have been denounced by many religious and civic groups and by Presidents Truman and Eisenhower.

We urge Congress to enact speedily amendments which will revise the immigration law in order to:

(a) Substitute an equitable and nondiscriminatory formula for the admission of new Americans in place of the invidious national origins quota system.

(b) Eliminate the unnecessary and harsh deportation provisions.

(c) Eliminate the inequitable distinctions now in the law as between native born and naturalized Americans.

(d) Set up fair appellate procedures in immigration and nationality matters.

We further call upon the President to make use of the powers at his disposal in order to admit refugees from Egyptian tyranny and persuasion as was done for the Hungarian refugees.

Steel Labor Looks at Management

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. ROOSEVELT. Mr. Speaker, the protestations of large corporations that labor is undermining economic stability through demands for higher wages which raise production costs and therefore prices are not unusual. Yet a glance at comparative production and wage statistics makes obvious the error of this theory, and shows that actually net profit per man-hour figures continue to climb at a proportionately greater rate than wage figures in many cases. This point is well illustrated in the following excerpts from an address by David J. McDonald, president of the United Steel Workers of America, delivered on June 6, 1957, at the Conference of Industrial Union Department of AFL–CIO in Washington, D. C.:

STEEL LABOR LOOKS AT MANAGEMENT

(Excerpts from address of David J. McDonald, president, United Steelworkers of America, June 6, 1957, Mayflower Hotel, Washington, D. C., at Conference of Industrial Union Department of AFL–CIO.)

Steel management, as exemplified by the spokesmen of the largest steel corporation—United States Steel—gives strong evidence of having a split personality.

For sheer quantity of public utterances on the evils of inflation, steel management takes a back seat to no one.

On the other hand, steel management also leads the field in the irresponsibility of its pricing policies which have contributed to the rising trend of prices for more than a decade.

This is not the usual case of the left hand being unaware of what the right hand is doing. Instead, it is a calculated strategy designed to enable the industry to accumu-

late ever higher profits through continuous steel-price increases at the expense of the consumer, and still escape the blame and public censure which such actions deserve. The strategy is not a complicated one. It involves the following:

1. Finding a scapegoat. For this purpose the Steelworkers Union is an excellent target. Organized labor as a whole represents a supplemental target—presumably guilty by association with the Steelworkers Union.

2. Making speeches by the dozen and issuing reams of publicity all aimed at molding public opinion toward the twofold proposition that steel management is public spirited and opposed to higher prices, but is forced to raise prices because of the wage increases negotiated by the union; and

3. Counting on the constant repetition of this theme and the unthinking, unquestioning support given to it by newspaper and magazine columnists and editors, business-oriented, antilabor Congressmen and management spokesmen of other industries to convince the public of the virtue of management and the evil of labor unions.

As always, the best way to expose such tactics is to set forth the facts. In the past 2 months, in preparation for the next semiannual steel-price increase scheduled to be levied on or about July 1, Roger Blough, chairman of the board, and Robert Tyson, chairman of the finance committee of the United States Steel Corp., have sounded off on their favorite theme with renewed vigor.

Labor they say, is about to cause another price rise.

Management, they say, is reluctant to raise prices, but is compelled to do so.

Well, let's see.

It seems to me there is one clear test as to whether a company is forced to raise prices—and that is if its income is insufficient to meet its costs and to provide reasonable profit over and above its costs.

The record of a company which was forced to raise prices because of wage increases to its workers would show a relatively consistent profit for each hour worked by its employees—a profit growth in line with productivity growth—and would also show a gain in revenue from increased prices approximately equal to increased costs resulting from wage increases.

Let us look at the record of United States Steel. Then you can easily brand such statements of its spokesmen for what they really are.

In 1939 United States Steel's profits before taxes were equal to 13 cents for each hour worked by each employee. In 1940 this profit was doubled to 26 cents. The following year, in 1941, profits per man-hour climbed to 38.8 cents. By 1947 it reached 42.6 cents. In the recession year of 1949 it went to 60.3 cents. In 1950 it was 85.4 cents. In 1955 another new record was established when profits per man-hour hit $1.38. Last year, despite a strike, it was $1.345.

And in its most recent report for the first 3 months of 1957, United States Steel revealed that its profits were at an annual rate of $1.80 for each hour worked by each employee. This represents an increase of 30 percent over its previous record profit per man-hour in 1955, an increase of more than 110 percent over 1950, an increase of 322 percent over 1947, and a completely fabulous increase of 1,284 percent since 1939.

The corporation's net profits, after taxes, per man-hour also reveal a spectacular rise from 10 cents in 1939 to an annual rate of 89.8 cents in the first quarter of 1957, an increase equal to 13 percent a year compounded annually from 1939 to 1957. This rate of net profit, 69.8 cents per man-hour, is 30 percent greater than last year.

The corporation has repeatedly attempted to justify its price increases which have led to these fantastic profits by alleging its employment costs have risen 6 percent a year compounded annually.

Even if this is true its profits, out of which wage costs are paid, on this same man-hour basis, have increased an average of 15.7 percent compounded annually for the past 18 years, a rate nearly twice as great as the wage increases.

How can the statements of Mr. Blough and Mr. Tyson be squared with the facts? The answer is they cannot. Can a corporation which has increased by 30 percent its net profits from 1956 to 1957 for each man-hour worked, by mean of exorbitant price increases in July 1956 and again in December 1956 and early 1957 now claim that those price increases were forced by wage increases?

Since the postwar period—that is, 1945—there have been 21 "rounds" of steel price increases. There have been nine "rounds" of wage increases. These price increases have yielded the industry more than $3 in revenue for each $1 of wage increases. Remembering this 3-for-1 formula and noting the fantastic growth of profits per employee hour which accompanied these price increases, only one conclusion is possible.

Wage increases in steel have not caused a single steel price increase.

The upward movement of steel prices through the years has been caused by the steel industry's determination to widen its profit margin by a consistent policy of imposing ever-higher prices on customers and eventual consumers of steel who are helpless to resist.

They say nothing succeeds like success. In a way, the steel industry typifies this. Year after year—and more often than not, twice a year—the steel industry hikes its prices in utter disregard of the welfare of all concerned. Despite pronouncements to the contrary, the price increases are not tailored to increased costs, nor do they bear any relationship to how well the industry is doing profitwise.

For example, 1956 was a good year for United States Steel. Its net profit was $348.1 million (second best in its history), a return on net worth of 12.6 percent. This was considerably above the profits in other recent excellent years such as $222.1 million in 1953 and $215.5 million in 1950.

So far in 1957, net profits are at an annual rate of $461.9 million—about 25 percent higher than in any previous year in the corporation's history.

But they are beating the drums for still another price increase.

As usual, labor costs are blamed. But the facts demonstrate something entirely different.

United States Steel's net profits in 1956 were $348.1 million—pretty close to $1 million profit every day of the year. In 1957 they are at an annual rate of $461.9 million.

The total cost of the wage increase and other benefits which will go into effect on July 1 will amount to less than $51.5 million in 1957. This increased cost—assuming no increase whatsoever in productivity—will reduce profits before taxes by $51.5 million, and will reduce net profits by $24.7 million.

In other words, if the corporation were to pay this July 1 wage increase which they contracted for last year, instead of forcing its customers to pay for it, the corporation's net profit for 1957 (based on its current rate of profit) would be over $437 million. Even without raising prices, and without obtaining greater output per man-hour, the corporation is in a position to increase its net profit from $348.1 million in 1956 to $437 million in 1957.

But, despite this, the corporation is planning its second 1957 price increase and, to hide the fact that it is solely to accumulate an even greater profit, its leaders have the effrontery to claim they are forced to raise prices.

Because of the industry's success in the use of this tactic, there is every reason to expect that it will be continued into the indefinite future. Because the results of such policies can only have a most undesirable impact on our economy, it is important that these facts be brought home to the people of the Nation.

The public is entitled to know the truth so that an informed judgment can be made with respect to this entire matter of wage-price-profit relationships in our economy. Those who are concerned with the problem of unchecked profiteering in some of the Nation's key industries, and with the impetus given to inflation by such profiteering have a right to know the facts and it is our job to see to it that the facts are made available.

Pigtail Pensions

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an article on pensions for World War I veterans, which appeared in the National News, official newspaper of the Veterans of World War I of the U. S. A., Inc., published in Washington, D. C.:

PIGTAIL PENSIONS

It will come as a surprise to many World War I veterans that the American Government, although unable or unwilling to grant adequate pensions to veterans of 1917–18, has made a present of nearly $50 million to retire some 80,000 soldiers who have fought for Nationalist China.

But let one who has been in the front line of those Members of Congress fighting the pension battle for World War I veterans tell the story.

Reprinted below is the text of a speech made by Hon. GEORGE H. CHRISTOPHER, of Missouri, on the matter of providing aid and succor to the aging veterans of Chiang Kai-shek's army:

Mr. CHRISTOPHER. Mr. Speaker, when the Congress undertakes to pension America's old disabled and down-and-out veterans, invariably certain propagandists attempt to stampede the American taxpayers by citing astronomical cost projections. But what about our pigtail pension program? Yes, how much in dollars and cents are the taxpayers paying to pension Chiang Kai-shek's soldiers who turned their backs to the Communist invader?

"According to reliable press reports, Mr. Eisenhower's ICA is really going to town for Chiang's army. I am talking about the Free China veterans' program being set up by Harold V. Sterling, a retired Assistant Administrator of our own Veterans' Administration.

"Under this program $48 million ICA money will be spent this year—as initial outlay—to pension 70,000 veterans of Chiang's forces and to build old soldiers homes, military convalescent camps, a general hospital, a tuberculosis hospital, and several public works projects.

"The projects are being supervised by the George Frye Associates, a management organization, with offices in New York and Chicago and, of course, at the taxpayers' expense.

"Now the veterans being pensioned are not service-connected. They are just being retired at the United States expense. Ac-

cording to Ralph Boyce, of the ICA, this 'is a means of getting rid of old soldiers to make room for new ones.' That's a service pension scheme if I ever heard of one.

"Of course these expenditures represent only the beginning, and from year to year the Congress will be called on to appropriate the necessary funds for completion of Chiang's building program and to hand over the money for the pension payments."

All of this assistance for a doubtful ally is in direct contrast to the plight of some of the needy veterans who waged a victorious battle for their country in 1917–18.

One of the many examples comes to our attention. On March 29, 1957, in New York City, a destitute 61-year-old World War I veteran plunged 17 stories to his death before hundreds of spectators. A patrolman pleaded with him in vain for 20 minutes. "Nobody wanted to help me," said the man, tentatively identified as Julio Cantino. He related in despair that he was broke, couldn't pay his room rent, and couldn't get assistance from welfare authorities or the Veterans' Administration.

American veterans have every right to ask why huge funds are being expended to aid an ungrateful nation while little is done to alleviate the pitiful condition in which many veterans of World War I now find themselves.

Suspension of Saturday Mail Deliveries

EXTENSION OF REMARKS
OF
HON. GORDON CANFIELD
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. CANFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following telegram from James L. Knight, president, Southern Newspaper Publishers Association:

CHATTANOOGA, TENN.

Hon. ARTHUR E. SUMMERFIELD,
Postmaster General, United States Post Office Department, Washington, D. C.

The Southern Newspaper Publishers Association is deeply concerned at the possibility of complete suspension of Saturday deliveries of mail, and especially delivery of newspapers on rural routes. Such action would be particularly harmful in the South because rural mail subscribers constitute a larger percentage of total newspaper circulation in this region than in other parts of the United States. Suspension of Saturday deliveries would have a serious effect upon the economy of the South and would be looked upon by the people of this region as an unfriendly act.

We recognize the serious financial problems with which the Post Office Department is confronted, and we are of the opinion that the newspaper publishing industry should pay its just portion of any necessary additional cost of maintaining acceptable postal services. However, it is our considered opinion that, if any curtailment of postal services becomes necessary, maximum efforts should be made to economize in other branches of postal operations where economies can be effected before suspending Saturday deliveries, especially on rural routes.

This association (whose membership includes 23 percent of all daily newspapers in the United States, with total daily circulation of more than 11½ million) is now assembling information from its members concerning the number of their rural mail subscribers who would be affected by suspension of Saturday deliveries. It is hoped that you will give us an opportunity to present this information for your consideration before you take any definite action with respect to suspension of Saturday mail delivery.

JAMES L. KNIGHT,
President, Southern Newspaper Publishers Association.

Government Bond Market in Slump—National Disgrace

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. PATMAN. Mr. Speaker, there is no reason why Government marketable bonds should sell below par. The bond market can be supported without cost to the Government, the taxpayers, or the Federal Reserve System.

I am inserting herewith copy of a letter I have received from the president of a bank in Davenport, Iowa. It is as follows:

NORTHWEST BANK & TRUST CO.,
Davenport, Iowa, June 6, 1957.

Congressman WRIGHT PATMAN,
Washington, D. C.

DEAR CONGRESSMAN PATMAN: The Des Moines Sunday Register of June 2, 1957, published an article headed "Bond Market Slumps Again." It gave some very interesting, but sad news about the Government bond market and it quoted as follows:

"Chairman WRIGHT PATMAN, Democrat of Texas, of the House-Senate Economic Committee urged the Federal Reserve Board to resume purchasing of Government bonds until they were restored to par and end what he called a 'national disgrace.'"

I certainly am very happy to learn that someone is trying to correct this disgraceful situation.

Our bank was organized in July of 1941. We are located in the northwest section of Davenport which is made up of business and residential property. This section, like many others throughout the United States, has had and is having a very rapid development. Our people are strong believers in savings accounts. Our bank now has over $7,400,000 in savings accounts on which we pay 2 percent interest semiannually. We also have $1,200,000 of savings certificates on which we pay 3 percent interest semiannually. This represents about 60 percent of our total deposits.

Our board of directors has always recommended the purchase of substantial amounts of United States Government bonds. We have from time to time stressed the fact in our advertising of the fine Government bond portfolio carried in our bank. We have always felt that such investments made for a sounder bank and created additional security beyond the Federal Deposit Insurance; however, with the present trend of downward prices we hesitate to stress this investment to our depositors and it is my firm belief that the disgraceful situation now existing is also affecting the sale of other bonds such as E, H, and K.

I am in hearty agreement with your recommendations and do hope you will be successful in the correction of this very, as you put it "national disgrace."

Yours very truly,

W. F. MEIBURG,
President.

Small banks all over the Nation are in a squeeze. Many of them have 50 percent and more of the funds they can invest in Government marketable bonds. These bonds have gone down, many of them to 88 or 12 points below par. A large number of the banks of the country would have a substantial amount of their stock wiped out entirely if they were to sell their bonds in the present market.

The law favors the banks in this matter and permits the examiners to carry the bonds on the books of the bank at par although they are selling much below par. This is done on a logical and reasonable theory that if they are retained until maturity, the bank will collect 100 cents on the dollar.

But this does not help them at the present time. Too many banks have too much of their funds invested in United States Government bonds which are frozen in their possession, and they cannot be disposed of to enable these banks to make local loans to local businesses and otherwise furnish the credit needed for local communities. If holders of Government marketable bonds other than commercial banks, could sell their bonds at par, there would be plenty of money available for residential housing. Under the present tight money market, big concerns are not inconvenienced in the least in getting all the funds desired at a reasonable rate of interest, but small concerns are unable to get adequate credit. The banks—the large ones in particular—are rationing and allocating credit. This situation poses an important question, and that is, are the banks allocating this credit in a way that the public interest is considered? If the people only knew, and if the Members of Congress knew, how few banks and how few businesses control so much of the credit and money of the country, it would be shocking to them.

INTERNATIONAL DISGRACE

Among the many letters I have received on this subject, in which comments were made anonymously, one from a large city in Florida and from one of the largest banks in that city, enclosing a statement showing the closing trading quotations on United States Treasury bonds, is of interest. The closing quotation, 87.24, for 2½ percent Government bonds was circled, with this notation: "An international disgrace."

Oklahoma's Golden Jubilee

EXTENSION OF REMARKS
OF
HON. PAGE BELCHER
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. BELCHER. Mr. Speaker, under leave granted, I wish to insert in the RECORD the following resolution passed by the Golden Jubilee, Inc., an organization which is observing the 50th anniversary of Oklahoma's admission to

statehood. The following resolution clearly outlines the problems my State has had in being besieged by all the calamities from dust to downpours:

Whereas the great State of Oklahoma, rich in Indian lore and cowhand history, has become a land of culture and industrial progress; and

Whereas this great 46th State of the Union and the metropolitan center of Tulsa is celebrating the golden jubilee of statehood; and

Whereas this State and this city has for several years and many moons preceding the year of our Lord, 1957, been ignored by the raingods and baked by the sungods, thereby, causing painful droughts; and

Whereas soon after Tulsa's golden jubilee began, reverent raingods put on warpaint and deluged great State with floods, thereby, causing spectacular celebration known as Tulsarama, heap big show recreating Oklahoma and Indian Territory history, to be postponed and has further hampered its performances after its opening Saturday, June 8; and

Whereas noble tribes of Oklahoma have long ago smoked pipe of peace with State's palefaces and wish to join with them to continue great celebration of Tulsarama: Be it therefore

Resolved, That great fathers of the United States House of Representatives, join with the Honorable PAGE BELCHER of Oklahoma's district, in appeal to sungods and raingods to sign treaty of peace with each other and divide their blessings on Tulsa and all Oklahoma, permitting Tulsarama to continue its "teepees to towers" show.

Mass Deportations From Lithuania

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. HOLLAND. Mr. Speaker, today Lithuanians commemorate the anniversary of a great national tragedy. Sixteen years ago this mid-June an estimated 34,260 persons were deported by Soviet Russia to remote areas in Siberia and the Arctic region.

That this act of singular brutality reflects an inner sickness within the Communist system goes without saying. It is incomprehensible that a system of government which perpetrates such terrible acts of inhumanity could have any genuine message for mankind. And yet, the Communists have succeeded beyond all expectations in spreading their gospel of violence, desecration, and decay throughout the world. Many uninformed persons have unfortunately accepted the false words of this Communist anti-Christ as a doctrine of salvation.

On this anniversary of the mass deportation of Lithuanians we commemorate a tragic occasion. But the sacrifice of those thousands of people would not have been in vain if we of the free world cite their deportation as a classic example of Communist tyranny.

Let all those who are tempted by the false doctrine of communism examine carefully the case of Lithuanian deportations. Let them see communism in action; and then, let them ponder if this is a fit instrument of government for mankind.

Importation of Foreign Oil

EXTENSION OF REMARKS
OF
HON. JOHN JARMAN
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. JARMAN. Mr. Speaker, the ability of the United States to develop intelligently its great natural resources has played the major role in this Nation's survival and victories in the great wars of this century. Success in these conflicts preserved our unique political freedoms.

In no field of industrial development has this talent manifested itself with greater force than in the dynamic progress of the oil and gas industry of this Nation in time of war or peace. This industry and its advancements in exploration and development have been and will be of vital significance, not only to the oil-producing States, but to the entire Nation, for oil and gas today account for 70 percent of the energy consumed by the United States. It must be obvious that nothing could be more important to the adequate national defense of this country than the continued healthy development of this industry and the guaranty of a continued source of domestic oil at all times.

It was recognized by the President of the United States and a Special Cabinet Committee in 1955 that the importation of foreign oil, above the 1954 ratio of 1 barrel for every 10 produced domestically, could threaten the national security by retarding future exploration, discovery, and production of oil and its derivative products within the continental boundaries of the United States. The Congress, in this same year, by the inclusion of the Defense Amendment to the Trade Agreements Extension Act, provided the Chief Executive with a power to prevent such a danger from occurring. Despite this legislative and executive recognition of the seriousness of the problem, the menace has continued with imports rising steadily above the 1954 ratio, being interrupted only by the closing of the Suez Canal, and importations this year are expected to be the highest ever. The sole efforts made to curb the flood of imported oil have been the futile attempts of the Office of Defense Mobilization to beg the large importing companies to voluntarily reduce their imports. This approach has been and will be a vain and fruitless effort. Now, again in 1957, 2 years later, the Office of Defense Mobilization has declared that there is evidence that importations are increasing at a rate which could threaten our national security and the President has merely called for still another investigation.

Can any man dispute the danger of increased dependence upon the tenuous supply of the Middle East in the face of the recent Suez crisis and the ever threatening situation still existing? Surely, the memories of the Second World War and the complete success of the Nazi U-boats in greatly reducing tanker shipments have not completely faded.

With every barrel of imported oil over the prescribed ratio, we do violence to our domestic industry. How long can this Congress, with the best interests of this country in mind, continue to allow such a situation to go unchecked? It is now too late for investigations or volunteering and the time has come to act decisively to control a condition which is too vitally significant to ignore. The authority granted the President by the Defense amendment should be exercised immediately to curb this rising tide of oil imports, or the Congress as a body responsible for the general welfare of one hundred and seventy million citizens of this country must act affirmatively and at once to legislate a formula of limitations which will forever operate to prevent the endangering of the future development of one of our greatest natural resources.

Court Foils New United States Tax Raid in Premium Iron Ores Case

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. HAYS of Ohio. Mr. Speaker, another example of this administration's left hand not knowing what its right hand is doing is illustrated by this article from the Financial Post, of Toronto, Canada. The State Department works to build up better relations with our neighboring countries and the Internal Revenue Bureau apparently tries to wreck what is being done:

[From the Financial Post, Toronto, Canada, June 1, 1957]

COURT FOILS NEW UNITED STATES TAX RAID IN PREMIUM IRON ORES CASE

An American tax raid on a company located in Canada has been foiled—at least temporarily.

The United States Commissioner of Internal Revenue last week took the unprecedented step of secretly filing a petition asking the entire United States Tax Court of 18 judges to review the recent decision in the Premium Iron Ores case.

In that decision the United States tax men were defeated in their attempt to extract large sums in taxes and penalties from Premium Iron Ores, a Canadian incorporation.

As reason for trying to reopen the case the United States Internal Revenue Commissioners cited the importance of the issues involved, "particularly the construction of the Canadian tax convention."

The full United States Tax Court has dismissed the appeal for review.

The one further avenue available to the Commissioner is to appeal the Tax Court de-

cision in the United States Court of Appeals, provided he can first obtain approval of the Treasury Department, the Justice Department and the State Department.

Any reversal of the present Premium Iron Ores would have the most alarming consequences for scores of firms with international business activities.

Premium had for years been paying its Canadian taxes, had cleared its tax position with Canadian authorities and had no reason to suspect its tax position would be challenged. The Canadian-United States tax convention was designed to cover the tax position of companies in world trade.

If the United States tax men could successfully raid Premium, they would have successfully dynamited the Canadian-United States tax convention and opened the way for wholesale raiding on many companies operating outside the United States.

Hawaii

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. BURNS of Hawaii. Mr. Speaker, Statehood for Alaska and Hawaii will soon be before the Congress. Though the majority of the Members of Congress are on record as favoring statehood for both of these incorporated territories, there are some Members who question action now.

The editorial from the St. Louis, Mo., Post-Dispatch which I include herewith briefly and concisely states the case for Hawaii and deserves the serious consideration of all. The last paragraph is of particular moment since the "contradiction" to which attention is drawn is a matter which, if continued over a period of time, will have its effect in the social, economic, and political institutions of the people who must live under that contradiction.

The editorial follows:

[From the St. Louis Post-Dispatch of May 19, 1957]

IN JUSTICE TO HAWAII

If the people of the United States would only put themselves in the position of the people of the Territory of Hawaii, statehood for both Hawaii and Alaska, in our opinion, would be quickly voted at this session of Congress. New hearings have been completed and there is ample time for admission votes in the House and the Senate before the midsummer adjournment.

If the people of the 48 States were to put themselves in the position of their fellow-citizens in Hawaii, here are some of the things they would be conscious of:

Hawaii has more than a half million population. This is more people than any of the 48 States had at the time of admission with the single exception of Oklahoma.

Hawaii has more people today than three States. If Hawaii is admitted, it will at once enter the population standings above Delaware, Wyoming, and Nevada. And these 3 States now cast a total of 6 votes in the Senate's 96.

Hawaiian residents pay more than a quarter billion dollars a year in Federal taxes. This sum is larger than the amount of Federal taxes paid by the people and industries of nine States.

Despite this heavy taxation the people of Hawaii are without representation in Congress. They do have an elected delegate to the House, but he has no vote on the bills in Washington that affect the people of Hawaii. Moreover they have no choice in the selection of their Governor who is an appointee of the President.

These are important reasons of fairness and justice as to why Hawaii should be admitted to the Union. But there are reasons in the complex of the world today even more important. Today the United States is in a long, hard struggle against totalitarianism. It is in this context that the people of the United States particularly should see the Hawaiian case now.

For if Hawaii is taken into the Union, this will be a striking demonstration that the United States practices in its own political activities what it preaches to the world. Hawaii's location makes it the first display of the American way of life for many visitors from the Orient.

The main arguments against admission boil down to three. First, it is separated from the mainland. Second, it would change the seating in Congress. Third, it would give statehood to a cosmopolitan population with some elements of dubious loyalty.

All these objections, if such they are, have been answered sufficiently, in our opinion. Aviation and electronic communication have brought Hawaii much closer to Washington than Philadelphia and New York were to Washington not many years ago. The seating in the House changes after every census.

Finally, as to loyalty, who could want more than the record of the young men of Hawaii in World War II and Korea? The Nisei of Hawaii wrote one of the bravest chapters in the bitter Italian campaign when their units fought heroically along with boys from over the Union.

Hawaii has already drafted a state constitution, ratified by its people by the overwhelming vote of 3 to 1. Over the years, there have been some 20 separate hearings at which more than a thousand witnesses have been heard. Both parties are on record for admission. At different times both chambers of Congress have voted for statehood.

More than 6 years ago, a report of the Senate Committee on Interior and Insular Affairs said that to continue Hawaii in its "political" inferior status" is "a contradiction in our position of moral and spiritual as well as material leadership in the world." And that is just what it is.

Golden Jubilee of the Slovak League in America

EXTENSION OF REMARKS
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. HOLLAND. Mr. Speaker, on the occasion of the 35th congress and the Golden Jubilee of the Slovak League of America, the Right Reverend Monsignor Francis Dubosh, former president of the league, broadcast in Cleveland, Ohio, on May 26, 1957, the following address:

GOLDEN JUBILEE OF THE SLOVAK LEAGUE OF AMERICA

Friends, this is an important year in the annals of the Americans of Slovak origin, for this year, on May 30, they celebrate the 50th anniversary of the founding of the Slovak League of America, here in the city of Cleveland. The founders were the representatives of Slovak centers in the United States of America. They came to Cleveland at the invitation of men like Father Stephen Furdek, of Cleveland, and Peter V. Rovnianek of Pittsburgh, both outstanding men in their time. The purpose that these men had in mind was, to organize Slovak immigrants for the protection of their nationals left in their native land, absorbed into the state of Hungary, a country consisting of many nationalities. It was the avowed policy of the Hungarian Government to Magyarize the peoples within its jurisdiction. To accomplish this the Hungarian Government stooped to injustices upon the Slovaks in particular, in its effort to amalgamate the Slovak nation and thereby cause it to lose its national identity.

However, many resisted all efforts to liquidate their Slovak nation. Many of the common, little schooled Slovaks, migrated to the United Etates, there to seek liberty and justice, as well as an opportunity to earn a livelihood. The early immigrants, those coming here in the eighties and nineties, settled in the mining towns and the steel towns of Pennsylvania. Others came to the northern part of Ohio. Some went as far as Illinois. Everywhere times were hard. They could scarcely eke out an existence. But, rather this, than to live in a land of persecution and injustice.

This exodus of some of the faithful Slovaks proved providential. Once here, free from oppression and tyranny, these Slovaks did not forget their nationals in the homeland. Over there they had parents, brothers and sisters, friends, whom they did not abandon in the time of stress. Those over there continued to keep them informed of the atrocities being perpetrated on the Slovak people; that their schools were confiscated as also their cultural institutions and newspapers; and that they were not permitted to speak their own language in public places. Conditions became so unbearable, that protest and opposition to the tyranny of the government only brought further reprisals and jail, as it did to Msgr. Andrew Hlinka, the great champion of the Slovak nation.

The lamentable cries of the Slovaks reached the ears of their compatriots in the United States. Due to the death-dealing actions by the Magyar government upon the Slovak nation, living in their traditional land, the Slovaks here felt the need of organizing in defense of their nation. This they did at the first congress of representatives from all parts of America, which congress took place in Cleveland on the 30th of May 1907. Here the Slovak League was given life; and its main purpose at that time was to protect the Slovak nation from extinction by holding protest meetings and by informing the American public of the injustices perpetrated on their compatriots in Europe. Another main aim was to encourage all Slovaks to become citizens of the United States as quickly as possible, thereby to show that they love free and democratic America.

God, the author of justice, does not permit injustice to rule too long. The end came during the First World War. The Slovak League during that time encouraged the Slovaks of America to join either the United States Army or the Czecho-Slovak Legion formed in the United States. The Slovak League cooperated with the American Czechs in bringing about the dismemberment of the Austro-Hungarian empire, out of which other countries were formed, one being the Czechoslovak Republic. To bring about the formation of the Czechoslovak Republic great sacrifices were necessary, not only of men but also of money. The Slovak League raised $1 million among the Slovaks in America for liberation purposes—hundreds of thousands more than did the American Czechs. To

the American Slovaks no sacrifice was too great to make, for liberty and justice and to preserve the life of the Slovak nation, to which it had every right, given it by the author of nations.

The Czechoslovak Republic was born in the minds and the hearts of the American Czechs and Slovaks, who joined their interests in order to obtain liberty, justice and democracy for their own nationals tyrannized in Austria-Hungary. The representatives of both of these nations met in Cleveland, where they formulated an agreement guaranteeing each of these nations, autonomy in a federative union of states. This was called the Cleveland Agreement, signed on October 25, 1915. This agreement became the basis for future negotiations, which were finally concluded in Pittsburgh. There, all doubts about the position of the Slovaks in the new Czechoslovak Republic were removed by Thomas G. Masaryk, who was shown the terms of the Cleveland Agreement and who accepted them with some of his own revisions, agreeable to both sides. This new agreement became known as the "Pittsburgh Pact, signed on May 30, 1918, not only by the representatives of the Czechs and the Slovaks living in America, but also by Masaryk, himself. In all these negotiations, the Slovak League of America was recognized as the sole representative of the Slovak nation in America and abroad.

The Slovaks rejoiced that they could join with their brother Slavs, the Czechs, in a country that would give equal recognition to both nations; that now, after a thousand years, the Slovaks could develop nationally, culturally, economically and religiously without any hindrance. The smoke of battle had scarcely disappeared, the new republic was still in its swaddling clothes, when Thomas G. Masaryk, the first President of Czechoslovakia, showed his true colors; that he was not so democratic, so just, for he, who redrafted the "Cleveland Agreement" into the "Pittsburgh Pact," declared that pact accepted over his own signature, to be a "scrap of paper," a la Kaiser Wilhelm of Germany. It really became a "scrap of paper" for all intents and purposes, for the Czech Government gradually converted Slovakia into a conquered colony. It sent Czech officials of a low moral caliber to rule the Slovaks. Progressively the government tried to dissolve the Slovak nation into a Czechoslovak nation—better stated: into a Czech nation.

Now again the Slovak League went into action, calling attention of the free world to the injustices and the perfidy of the Czechoslovak Government, led first of all by Thomas G. Masaryk, and later by his protege, Eduard Benes. This same Benes, who misled President Franklin Roosevelt into dealing honorably with Russian Communists, stating that they could be trusted; this same Benes who delivered his country into the hands of Russia, thereby causing immense harm not only to the Czechs, but principally to the Slovaks. The Slovaks have continuously resisted all attempts to denationalise and to communize them, going so far as to demand an independent state. This independence they attained, even though briefly, on March 14, 1939, when the Slovak Republic was born, with the lovable Dr. Jozef Tiso as its first president. As the liberty bell expressed the joy of the American settlers at their newly won independence, so, too, the Slovaks rejoiced at the tidings, that they not only gained autonomy, but more: their total independence from the Czech Government. They obtained their own free republic on the basis of a recognized principle: the right of self-determination, which right belongs to all nations.

Regretfully the Slovak Republic was short-lived. Why? To quote from America, a Catholic weekly (April 13, 1957), "The cause of the Slovak Republic has suffered in world opinion from circumstances of its origin. Yet, during its brief existence it was recognized diplomatically by 27 countries. * * * The Slovaks never fought against the Western Powers." If they had done so, as the enemies of the Slovaks declare, would Great Britain, France and the remaining countries have recognized Slovakia as an independent country? To continue quoting America: "The nation has made its mistakes, but in Eastern Europe who can throw the first stone? The Slovak people are bearing up admirably under Communist attempts to destroy their religion and culture. Those who admire their qualities of character are convinced that the future holds something better for them."

Toward the fruition of this, the Slovak League of America has and will continue to work and to sacrifice and to pray, especially that the Slovaks will again become masters of their own country, where they can develop freely. That this may become an actuality, the Slovaks must have their own independent Republic of Slovakia.

We bid welcome to the delegates of the Slovak League meeting here in the 35th congress. May God bless their deliberations. We also invite the general public to the Slovak Exposition being held today and tomorrow in the auditorium of Benedictine High School.

Waste and Confusion in Our Federal Government

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. PILLION. Mr. Speaker, this is the second of a number of articles dealing with the problem of waste and confusion in our Federal Government written by Mr. Clarence Francis, national chairman, Citizens Committee for the Hoover Report, and published in a pamphlet entitled "The Coupler," by the Symington-Gould Corp., of Buffalo, N. Y.:

HOW CAN GOVERNMENT WASTE BE STOPPED?

The first article showed some of the waste and duplication in the Federal Government which the second Hoover Commission found. The Commission did not stop there. It made specific recommendations on how this waste could be stopped.

The first Hoover Commission completed its work in 1949. In all it made 273 recommendations for streamlining Uncle Sam and reducing his "wasteline." Between 1949 and 1952 some 72 percent of these recommendations were adopted by Congress and the administration. The total savings thus far resulting from these actions are estimated at over $7 billion.

And that, in nontechnical language, "ain't hay." Among the many benefits of the Commission's work were (1) great gains in unification of the armed services, (2) rebuilding and strengthening of the Department of Labor to Cabinet Status, (3) creation of a Department of Health, Education, and Welfare, (4) consolidation of four agencies into a single General Services Administration to do the Government's housekeeping more efficiently and at less cost, (5) reorganization of the Internal Revenue Service eliminating much confusion and corruption (6), separation of subsidies from payments to airlines for carrying mail.

One good move begets another. The General Services Agency made a survey and found one Government unit that had a 93-year supply of fluorescent bulbs on hand, another with a 247-year supply of looseleaf binders. Had there been no first Hoover Commission, there would have been no General Services Agency to discover these things and correct them.

Thus, in 1953 was born the second Hoover Commission, also unanimously created by Congress pretty much in the image of the first. The second commission labored for 2 years and produced a 3.3-million-word report which showed among other things:

That Federal paperwork, much of it unnecessary, engaged the fulltime services of 750,000 persons and costs $4 billion a year (enough to run the whole Government 25 years ago).

That one Federal ship line which claimed to be making a profit of $4 million a year was actually losing about $100 million a year, because it failed to mention certain items of cost in its accounting.

That the Government suffers heavily from a 25-percent per year turnover in employees due to antiquated personnel procedures; for example, the Government has 144 different pay scales for its 2.3 million employees.

Now, why was the first Hoover Commission successful, and what is the outlook for action on the second commission's recommendations? The first commission succeeded because, for the first time in history, citizens of both parties from coast to coast united in support of the recommendations when the commission completed its work. The Citizens Committee for the Hoover Report was formed early in 1949. Under the leadership of Temple University's President Robert L. Johnson, the Citizens Committee helped bring the work of the Hoover Commission before the American public. Without the voice of the citizen, the Hoover recommendations would have died in the dusty pigeonholes of Washington.

The second commission finished its great service in June, 1955. It left 314 recommendations which, if fully adopted, would eventually save over $5 billion a year—and that's about $100 per average American family per year. Down to now some 39 percent of the commission's recommendations have already been adopted with eventual annual savings of $532 million a year. That's a good start but what are Congress and the executive branch going to do about the remaining 61 percent of the recommendations in 1957?

I Am Glad I Live in Michigan

EXTENSION OF REMARKS
OF
HON. VICTOR A. KNOX
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. KNOX. Mr. Speaker, throughout the State of Michigan May 19 to 25 was known as Michigan Week. These days were set aside for the citizens of our great State to focus their attention to the social and economic resources of our State and to think of the many things that make Michigan a good place in which to live and work.

The Bank of Stephenson sponsored an essay contest entitled "I Am Glad I Live in Michigan" for the 9th and 10th grade students of the Daggett Carney, and Stephenson High Schools.

Under leave to extend my remarks, I wish to include the essay which won the grade prize, written by Judith Corey of Stephenson, Mich.:

I AM GLAD I LIVE IN MICHIGAN

Someone said, "Live 20 years in the same place and you will always want to live there." It's home.

To me Michigan sings a happy song. Just listen to the birds singing. I feel a burst of pride and well-being when I ride my horse over its countryside, breathing its clean wholesome air and watching the many birds in their flight over the hills and valleys.

The woods are truly an enchanted forest made from spring's trailing arbutus and hepatica; summer's tiger lily and goldenrod; and the falling of autumn's painted leaves. Each season wears a new gown of many hues. It's like a wedding procession that never ends. The drifting snow of winter is a purest white. What bride could be dressed more beautifully than a Michigan forest after a fresh snowfall? The lighting effects are by aurora borealis and the wind in the pines is Mendelssohn's Wedding March.

Where but in Michigan could a country youth learn to love nature and enjoy it so? We have blue rivers in which to go swimming and fishing, beautiful lakes on which to go boating and water skiing, camps for youth of all ages, and parks for the enjoyment of all.

Picking blackberries, blueberries, or raspberries and coming home to eat them with sugar and cream is the best treat of all. Can't you imagine eating of a big bowl of tempting, luscious-looking berries? Umm.

Yesterday as Old Shep, our collie, watched, deer pastured on the south slope by the house. Soon they will have their little spotted fawns by their sides. They're truly God's creatures.

Though the old hand pumps are gone, good clear, clean, and plentiful water still remains.

For all of these reasons I am glad I live in Michigan.

The Truth About TVA and Taxes

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. EVINS. Mr. Speaker, no agency of our Government has been more maligned, more deliberately misrepresented or more bitterly attacked than that internationally renowned model of democracy in action, the Tennessee Valley Authority. The private utility monopolies have spent millions of dollars in attempts to poison the minds of the Nation against this valuable national asset. Especially unjustified have been the various loose statements about TVA and taxes. Recently our colleagues on the House Public Works Committee inquired into this matter and Mr. W. O. Wessenauer, manager of TVA's power department, gave the committee a report on taxes TVA pays and discussed other matters related to taxes. The magazine Public Power reprinted this report in full and I ask unanimous consent to insert this reprint in the RECORD.

The article "The Truth About TVA and Taxes," follows:

THE TRUTH ABOUT TVA AND TAXES—TVA'S PROFITS TO THE PEOPLE OF THE NATION FAR EXCEED COMPANY TAX RATES

(For more than two decades, the Tennessee Valley Authority, the largest publicly owned electric system in the United States, has been the prime target of public power critics. The most repeated charge of private power companies and other detractors has been that "TVA does not pay taxes." Even when they admit that TVA does make payments in lieu of taxes to local and State governments, propagandists insist that TVA's low rates results from the fact that TVA does not pay Federal income taxes. What are the facts? How do TVA's payments to the Government compare with the Federal income taxes which are paid by private power companies? The answer to these questions and to the frequently heard charges of the private power companies has been submitted to Congress. In answer to questions asked during hearings on legislation which would authorize TVA to issue revenue bonds to finance its new power facilities, G. O. Wessenauer, TVA power manager, presented a report on TVA and taxes. The report, the TVA Power System and Taxes, was prepared by the Reports Unit of TVA's Office of Power. Spelled out here is the record of TVA's earnings as compared with private power company tax payments. This record of 23 years of TVA power operations shows that TVA not only is paying all the costs of its operations but has earned enough to pay the Government's cost of money plus the taxes that a private power company would have paid and made an additional "profit" for the people of the Nation. Because of the interest in the question of TVA and taxes and because of the significance of this record, we are pleased to reprint the report in full.—The Editors.)

In fiscal year 1956 TVA paid $4,448,000 in lieu of taxes to the States and counties of its service area, and the municipal and cooperative electric systems which distribute TVA power paid $6,910,000, a total of $11,058,000.

These payments are, of course, of primary concern to the States, counties, and cities of the power-service area, which depend upon them, together with the taxes they collect from all other sources, to support the public services whose budgets make up the costs of government. The TVA region appears to consider the payments reasonable and fair. But in the general and widespread attack on TVA conducted by propagandists for the private power companies the size of these tax payments has been singled out for special attention.

Various charges are made. It is contended, for example, that the rates of private-power companies are higher than TVA rates because their tax burden is heavier, and ingenious calculations are presented in support of this thesis. The fact is, however, that many private companies pay as taxes to State and local governments a smaller share of their earnings, or of the electric bills they collect, than is paid in the TVA power service area. Nevertheless, their rates are higher than those paid by consumers of TVA power. The price of power cannot be shown to be directly related to or controlled by tax payments.

TVA rates to the ultimate consumers are lower than those of the average private utility, not because of differences in the amount of taxes, but primarily because its sources of energy are more economical and its rate of earnings more modest, and because both TVA and the locally owned and managed distributors retailing TVA power have as their objective, by law, the widest use of electricity at the lowest price to consumers, instead of the greatest profit to the utility.

WHY TVA RATES ARE LOW

There are many differences in the costs of operation in the TVA area and similar costs elsewhere. In its steam plants TVA produces electricity with less use of coal per kilowatt-hour than the average utility and with operating and maintenance costs that are well below the national average. The expenditures of the local distributors of TVA power average far below those of other utilities, including costs of distribution, customer accounting and collecting, sales promotion, and administrative expense.

TVA and the distributors of its power publish full data on operating costs, including payments in lieu of taxes, to facilitate comparisons by those interested in public fiscal policy or in electric rates. It may be that in some areas the electricity consumer bears too large a share of the support of public services. In other areas the share may be too small. The people have a right to know the facts in order that prudent public policies may be established.

In comparing tax and tax-equivalent payments made by the public-power agencies in the TVA area with the taxes paid by private utilities, two major differences between the TVA area and others must be kept in mind.

First, the arrangement under which power is supplied to consumers in the TVA area is not the same as the typical power service arrangement in areas served by private utilities. TVA is engaged in the wholesale end of the business; it owns and operates only the facilities required for generation and transmission of power. The retail business is handled by 151 locally owned and managed distribution systems which carry the power to the ultimate consumer. In the TVA area, ownership and earnings, and therefore taxes and tax equivalents, are divided between TVA and the distributors. The taxes or tax equivalents paid by these distributors must therefore be added to the payments made by TVA to calculate the total power system payments for comparison.

Second, before comparing the total payments by utilities in the TVA area with the total taxes reported to be paid by any private utility, the income taxes paid by the private utility must be segregated and separately considered in order that like things may be compared.

Income taxes are based on profits. They represent a percentage of the net income remaining after all operating costs and depreciation have been met, and after interest requirements have been satisfied. A comparison between the Federal income taxes paid by different private utilities is simply a comparison of their profits for any given year. The company with the greatest profit would pay the most, whether its power rates were low or high or whether its service was inadequate or excellent.

TVA, of course, is owned by the Federal Government, and its entire net income belongs to the United States. The municipal and cooperative distribution systems pay no income tax on their earnings as a matter of national fiscal policy. Such systems pay no income tax whether they are located in the Tennessee Valley or elsewhere in the United States. A comparison can and will be made between the revenue the TVA power system provides for the Federal Government and the income taxes paid by private power companies, but first the facts with respect to State and local taxes or tax equivalents paid by the public power system in the TVA region will be presented.

TAX EQUIVALENTS

TVA's properties and operations cannot be taxed directly by State or local governments. This is not unique to TVA, but is in accord with the generally applicable rule that the properties and operations of the Federal Government are not subject to taxation by the States or their subdivisions. TVA's payments in lieu of taxes are made under a

formula adopted by the Congress, and made a part of the TVA Act (sec. 13), with the concurrence and approval of State and local taxing bodies. The present section 13 was adopted by the Congress in 1940 after the major transfers of utility properties from private to public ownership. Extensive consultation with State and local taxing bodies preceded the recommendations to the Congress which were adopted after committee hearings and floor debate. Experts in public fiscal policies were consulted. The result was the present formula under which a minimum of 5 percent of TVA's gross revenues from the sale of power, exclusive of sales to the Federal Government itself, is paid to State and local governments in lieu of taxes.

When the amendment was under consideration there were suggestions that the proposed percentage of gross revenues to be available for in-lieu payments was overgenerous. It was pointed out that States and local governments were large consumers of electricity, that they would enjoy immediate savings in the costs of Government by savings in the electric bills for schools and public institutions, for street lighting, water pumping and other municipal requirements. It was urged further that the TVA power system was not a business enterprise in the usual sense of the word. It would not be operated for profit as the private companies had been, but would deliberately, according to the policies set forth in the act itself, be managed to stimulate the general economic growth of the area, with a resulting increase in taxable wealth. That was one point of view.

Nevertheless, it was clear that the sudden shift of existing properties from private to public ownership would create serious revenue problems in some jurisdictions, and that benefits in savings or revenues from other sources would not immediately be realized in compensating size. It was agreed, therefore, that it was reasonable to expect electric consumers in the TVA area to continue the traditional practice of making a contribution to the costs of State and local government through their power bills. In-lieu tax payments were set up as an item of cost in power operations, except in the case of power produced for the use of the Federal Government itself. The 1940 legislation provided that at the end of 5 years the experience under it should be reviewed and a report made to Congress. This was done, and the general satisfaction with the plan was indicated by the absence of any objections to it when the report was made.

This is the formula under which TVA made in-lieu tax payments of $4,148,000 in fiscal year 1956.

In general, the 98 municipal electric systems make payments in lieu of taxes equal to the sum of the State, county, and local ad valorem property tax rate applied to the depreciated cost of their electric properties. Two distributors are privately owned utility companies and their taxes are assessed and paid in the same manner as other private utilities. The majority of the 51 rural electric cooperatives distributing TVA electricity—those which operate in Tennessee, Alabama, Kentucky, and Virginia—pay State and local property taxes on the basis of an assessment of their properties by State commissions. All cooperatives in the States of Mississippi, Georgia, and North Carolina are exempt by State law from State and local taxes. The distributors' payments therefore follow State and local practices. These TVA power distributors paid $6,910,000 in taxes or in-lieu payments to State and local governments in 1956.

PAYMENTS COMPARED

The $11,058,000 contributed to State and local governments in tax or in-lieu payments in fiscal year 1956 represented 6.1 percent of the consolidated revenues received by the distributors and by TVA, excepting only TVA's revenue from sales to Federal agencies which by the TVA Act is excluded from the base upon which its payments in lieu of taxes are computed.

This percentage is somewhat below the 9.0 percent reported as the average paid by all private utilities in the United States for calendar year 1955. Nevertheless, there are many private companies which pay a smaller percentage of their revenue to State and local governments than the publicly owned systems of the TVA area pay, and none of these companies sells power at rates which are lower than the rates in the TVA area. The 12[1] private companies serving areas adjacent to the area served by the TVA system range in their payments from 4.4 percent of gross revenue to 11.0 percent. The rates at which they sell power are higher than rates in the TVA area, regardless of the relative size of their tax payments.

As reported above, last fiscal year (1956), TVA and the distributors of TVA power paid State and local taxes (including tax equivalents) of $11,058,000. In 1937, before the major transfers from private to public ownership in this region, the State and local taxes paid on all electric operations in the same area totaled less than $3,350,000. In 18½ years in the TVA power service area the taxes received by State and local governments from their power suppliers have grown by 230 percent, a rate of increase that is higher than the average for private power companies during the same period. The record shows that in approximately the same time (18 years instead of 18½), State and local tax payments by private utilities of the Nation increased by 200 percent, from $207 million in 1937 to $625 million in 1955.

These are the facts with respect to tax payments, their size, the method under which they are computed, and how they compare with the national and regional experience of private companies.

Nevertheless, spokesmen for the private utilities have attempted to convince the public that local communities would receive larger local taxpay cuts if they chose service by a private company, and that simply for that reason they would be better off. The experience of the Tennessee Valley challenges both conclusions. In any event, these are, and always have been, questions for the public to decide. Clearly there is no area of the country outside the Tennessee Valley where citizens, as taxpayers and consumers, have given so much attention to these questions. Citizens of the TVA power service area do not regard the power system which serves them as a source of revenue, but as a tool of regional development. Nevertheless, without any allowance for the savings to local governments as a result of low electricity rates, or for the increase in other sources of taxable wealth resulting from the regionwide application of TVA's low-cost, high-use policy, the tax revenues the region now enjoys appear to be larger than they would have been had private power companies continued to serve the people, assuming that increased tax revenues in this region would have followed the national average.

FEDERAL INCOME TAXES

All the earnings of TVA belong to the Federal Government, which owns and operates the power generation and transmission facilities. No percentage of net income is reported paid to the Federal Treasury under the heading of "Income Tax." Only 2 of TVA's 151 power distributors are privately owned, but these distribute power at the same rates as the others and pay taxes exactly as though they obtained their energy from private sources for resale. As indicated above, 149 of TVA's distributors are municipalities and cooperatives; nowhere in the United States do municipalities or cooperatives pay Federal income taxes from their utility operations. Looking only at the TVA, it will be found that the Federal Government has received more net financial gain from this public power system than it would have received in Federal income taxes on a privately owned utility with similar revenues.

In fiscal year 1956 TVA's net income after allowance for the cost of money to the Goverment was about $26 million. All this belongs to the Federal Government. From a private company the Government would have received an income tax of approximately half of such net income.

THE RECORD OF 23 YEARS

Over the full period from TVA's inception to the present, 1933 to 1956, the Government earned $366 million on the TVA power investment, after paying all operating and maintenance expenses, depreciation, and the payments in lieu of State and local taxes. These earnings represent an average annual return of 4 percent on the Government's average investment during this 23-year period.

During the past 23 years, the average cost of money to the Government was about 2 percent, and if that rate of interest had been charged on the power investment for the full period, it would have amounted to $183 million, half of the 4 percent return. The remaining $183 million is the Government's margin over and above all operating and maintenance expenses, depreciation, payments in lieu of State and local taxes, and interest. This is 14.8 percent of TVA's gross power revenues of $1,238 million for the period.

The $183 million developed in the above calculation can be compared with the income taxes the Government might have received from a private utility with the same gross revenues in those years. For the last 23 years, income taxes paid by private utilities ranged from less than 3 percent of gross revenue in the early thirties to a high of 13.6 percent in 1955. These are the percentages reported by the Federal Power Commission. Applying the annual percentages to TVA's revenue, a typical privately owned utility would have paid Federal income taxes of about $140 million from $1,238 million of sales during the period. The margin of $183 million which TVA earned for the Government was $43 million more than that amount.

This comparison with the average percentage of revenues paid as income taxes by private utilities ignores the fact that in the principal case where private utilities have contracted to sell large quantities of power to the Government, namely, the Ohio Valley Electric Corp. (OVEC), the income taxes paid by the utilities will run less than 3 percent of revenue; and more than half of TVA's revenues are now from bulk power sales to the Atomic Energy Commission and other agencies of the Federal Government.

And every year the Federal Government profits in another way because of TVA's power program. The power costs of the atomic energy plants—both those served by TVA and those served by private utilities—are less by many millions of dollars than they would be without the service from this nonprofit system and the example it established.

So far as the general question of electric rates is concerned there is no evidence at all that taxes keep electric rates up or that the tax burden falls any more heavily on consumers served by power systems that are privately owned than by those that are publicly owned. There may be instances where the property taxes on individual utilities are

[1] Excludes Electric Energy, Inc., a privately owned utility that sells a large block of power to the Atomic Energy Commission and whose State and local taxes in 1955 averaged only 1.2 percent of revenue.

unfairly high, and more instances where a reduction in taxes and rates would stimulate economic growth and provide new sources of taxable wealth.

In the case of TVA the rate policies have resulted in a very rapid increase in rural electrification. They have developed the best market for electric appliances in the country. New industries have been established, new jobs created. The region is stronger than it was when this regional development program was begun. The people and industries of the region are today contributing directly a larger share of the total Federal tax collections than they did 23 years ago. The services of State and local government have been improved. A more prosperous area is supporting government at all levels more abundantly.

The TVA Federal tax story—Profits to the people of the Nation—The record of 23 years' operations, 1933–56

	Millions
Gross TVA power revenue	$1,238
Less TVA power costs, including all operating and maintenance expenses, depreciation, and payments in lieu of taxes to local and State governments	872
Government's gross profit on TVA power sales	366
Less interest: cost of money to the Government averaging about 2 percent	183
Government's net profit on TVA power sales	183
Less Federal income taxes private power company would have paid into Federal Treasury [1]	140
Profits to the people of the Nation	43

[1] Based on gross income. If maximum corporation income tax is applied, income taxes paid by utility with the same net income as TVA would be only $95 million.

A Congressman's Day

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Friday, June 14, 1957

Mr. HUMPHREY. Mr. President, I have just received from the Department of Defense, Office of Armed Forces Information and Education, a pamphlet entitled "Congress at Work," which was originally prepared by the staff of Senior Scholastic magazine and has been purchased and reprinted for the use of armed services personnel.

Because this pamphlet does such a fine job of explaining the Congress, I wish to call it to the attention of my colleagues.

In addition, I was very pleased to note that one of the feature articles in this pamphlet is entitled "A Congressman's Day" and is based on the working day of the dynamic and energetic Congressman from the Eighth District in Minnesota, Representative JOHN A. BLATNIK.

Although it is impossible to print the excellent picture coverage in the article, I do feel that my colleagues will find interesting the article itself by Mr. Roy Hemming, and I, therefore, ask unanimous consent to have printed in the Appendix of the RECORD the article entitled "A Congressman's Day," from the pamphlet Congress at Work.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A CONGRESSMAN'S DAY—MEET REPRESENTATIVE JOHN A. BLATNIK OF MINNESOTA AND ACCOMPANY HIM ON A TYPICAL WORKDAY IN CONGRESS

(By Roy Hemming)

"Some people think a Congressman's life is very glamorous. They think he spends most of the day sitting in the House of Representatives, listening to dramatic speeches by the great orators of Congress.

"A Congressman's life is nothing like that. Speechmaking in Congress is a minor activity. A Congressman spends most of his day at routine work—handling routine details in his office, or plugging away at the routine of committee work. It's a hard, dogged life—averaging 10 to 14 hours a day, 6 days a week, sometimes 7."

The speaker was Representative JOHN A. BLATNIK, Democrat, Minnesota. Mr. BLATNIK has been representing Minnesota's Eighth Congressional District since 1946. Last November he was reelected for his sixth term. He won 74 percent of the popular vote—the largest majority of any Minnesota Congressman of either party.

Mr. BLATNIK, now 45, used to be a school teacher. He taught for 2 years in a one-man rural school. Then he moved on to Chisholm High School, Chisholm, Minn., to teach math and chemistry for several years. Later he became administrative assistant to the Superintendent of Schools for St. Louis County, Minn.

He entered politics in 1940—winning election to the State Senate. During World War II, as an Air Force intelligence officer, Mr. BLATNIK was dropped behind enemy lines in northern Italy. He was responsible for evacuating over 400 United States airmen shot down behind those lines.

In Washington, Representative BLATNIK has been a leader in pushing through two important bills: The St. Lawrence Seaway project and the vast Federal Highway Construction project (see "a How a Bill Becomes a Law").

A few weeks ago, I accompanied Representative BLATNIK on his work schedule for a typical day.

Most of his day was spent in committee work. "The most important work of Congress is done in committee," he told me. "That is where the details of all major bills are thrashed out. Often this takes weeks of debating and wrangling. And you always have to compromise. You always have to work hard to get just part of what you wanted originally. But in the end, there is a great satisfaction in seeing the work of many months finally approved by Congress to become the law of the land.

"Behind all this," Mr. BLATNIK continued, "are the unseen and unsung heroes of Congress—the Congressmen's staffs. You never see their pictures in the papers or learn their names. They're never sitting on the stage at the big banquets. But these talented people—clerks, stenographers, researchers—do a very important job—and do it very well."

Mr. HUMPHREY. Mr. President, it occurs to me at this time to remark that the Congress might do well to consider the possibility of printing photographs and charts as well as the printed word in the CONGRESSIONAL RECORD. It is a well known truism that a picture is worth a thousand words and I respectfully suggest to my colleagues that, if careful restrictions are agreed upon, the inclusion of pictorial material in the CONGRESSIONAL RECORD would be extraordinarily useful not only to our contemporaries but to future historians.

Annual Report of Colony House, Inc.

EXTENSION OF REMARKS
OF
HON. FRANCIS E. DORN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. DORN of New York. Mr. Speaker, under permission granted, I should like to include the annual report of Colony House, Inc., the settlement house in my congressional district, the work of which has been so outstanding, under the executive direction of Miss Sara M. McCaulley.

The annual report follows:

A SETTLEMENT HOUSE AND ITS COMMUNITY

THE PAST COMMUNITY

Forty-four years ago the Gowanus area of Brooklyn welcomed a new neighbor into its midst—a settlement house. Many times during this period our role in the community has been questioned, but we have steadfastly striven not only to be a good neighbor to all but also to be a living, dynamic force in the area. Our primary concern has been in the immediate area surrounding us, but we also have had a major concern for our borough and city.

Robert Fontaine, the author, recently recalled the words of Henry Ward Beecher in his Royal Truths:

"It is a good world for the purposes for which it was built; and that is all anything is good for."

So too our community, which is our immediate world, has a purpose. Its purpose is not to provide us with a constant bliss and aimless gaiety, but opportunities to strengthen and develop our moral and spiritual selves. It is a community that has continuously provided us with constant and everchanging challenges to our faith, our courage, and our dreams—and everchanging opportunities to develop ourselves beyond our earthbound beginnings.

Those are our purposes for which this very good world was, indeed, built and one finds it difficult to deny that it serve these purposes in an admirable and breathtaking way.

Throughout the years this community has challenged our faith, courage and dreams but has also provided opportunities to help us to develop a "good world." We constantly had to ponder on "the purposes for which it was built."

Surely one of its major purposes was inscribed on our great Statue of Liberty:

"Bring your tired, your poor, your huddled masses, yearning to be free. The wretched refuse of your teeming shore, send these; the homeless, tempest-tossed to me. I lift the lamp beside the golden door."

From our early days, with Irish, Italian, German and other European groups, as well as a number of American Indians coming to this area to seek refuge in a better world until the present day with arrivals from Puerto Rico and Hungary we truly have been a "refuge for the homeless." Courage and faith were ever needed to instill better understanding and meaningful relationships among these racial, religious and cultural groups in our neighborhood for the future of our American Democracy demands co-

hesion and cooperation at the local area base.

This has not been an easy task but it has been stated—"that a community is already in the process of dissolution where each man begins to eye his neighbor as a possible enemy."

As each new group entered our area some fearful neighbors moved away, but during the past year many who had fled returned and new groups also entered our overcrowded area. Recent statistics show an increase of 3,000 residents since 1950. Last year we had 17 nationality groups represented in our membership, but now have 21. With a majority of Spanish speaking neighbors we are still faced with language handicaps which lead to suspicion but through time-tested values we know Colony House's programs have created a climate of freedom where convictions may clash without disaster and where all people in the community can learn to take the clashes in their stride.

Thus Colony House works today in a situation more complex than 44 years ago yet we still strive to stir the conscience of our community to unite its forces to create a better world for our area and to build an island of friendliness in the midst of a great impersonal city.

1956–57 COMMUNITY

A settlement's true value in its area can be determined by two main factors: (1) Improvement in human relations and (2) improvement in living conditions. With these two goals in mind we conducted our past year's activities.

Human relations can only be improved through understanding of a new neighbor and understanding comes only through association.

Two thousand five hundred and eighty members ranging in age from 3 to 92 years of age participated in a variety of meaningful activities in our 3 centers. We found good relations across racial, religious, and nationality lines came through a common interest in cultural activities. In our mixed neighborhood the informal class or club group was a common medium for establishing contacts among different races and cultures.

One hundred and sixty-five children were enrolled in our day-care center. Here the doors were opened to working mothers or those physically unable to care for their children. Through daily work and play these little tots were helped to find out how to live with each other, and sometimes even with themselves, and to find exciting new skills for their busy little hands and minds.

Although we are constantly studying human behavior and problems we have much to learn, but we have firm convictions that our main goal is to teach the worth of the individual and belief in his own dignity. This feeling must be instilled in the very young and be solid enough not to be undermined or corroded in later life by ideas that run counter to belief in man's dignity. We know if these children really achieve this they will gain that measure of personal ethics and responsibility necessary for a free society.

Fifty-five nursery children and 55 school-age children were cared for daily. Our low total registration shows a more stable community than prior years.

With double and triple sessions in our local schools to meet the heavy enrollment needs of the community, we are indeed fortunate to have sympathetic principals and teachers who plan and work closely with our staff.

This program was a shared responsibility of the Department of Welfare, New York City Housing Authority, and parents, and our agency.

Our Gowanus Community Center, an extension program, to serve the Gowanus housing project community, has helped to create a better world and given stability to a neighborhood facing disintegration. Our program inaugurated last year, staff visits to homes of members has paid big dividends. A close-working relationship between parents and staff has developed a better acceptance of adults by the youth. Parents now help plan and assist at weekly dances. During the summer months a team of fathers took responsibility with staff in conducting a program that had real meaning to the 'teenagers. Here we found the 'teenagers were helped to develop inner resources that stood them in good stead in the community. Not only have these youth developed better human relations but gained dignity as individuals by working diligently to raise funds to secure needed equipment for the center.

Our services were expanded to care for more children by the addition of two staff members through the Bureau of Community Activities. Thus the board of education joined forces with the New York City Housing Authority, New York City Youth Board, and Colony House in helping to achieve settlement principles in this area.

The junior boys and girls of Colony House went forth with abiding faith to face the brave new world of tormorrow. In striving to build a better community we helped them develop good sportsmanship as they worked and played together enjoying arts and craft, stories, music, dramatics, singing, dacing and other activities under trained, understanding leadership.

Through a grant from the New York City Youth Board special group work services were given for boys and girls from 13 to 18 years of age.

Throughout the years Colony House has had a roster of fine athletes noted for their sportsmanship. The annual sports dinner with a Dodger team member as guest of honor is a highlight of the season. Here team play and the ability to work with others rather than as an individual are given recognition. The Biddy League members who learned the give and take of team play in early years are now providing leadership in more skillful groups.

To broaden the horizons of the children special excursions were taken throughout the year to libraries, museums, parks, theaters, TV studios, industrial plants, major league ball games, circus, rodeo, and social events at other youth agencies.

Community relationships are really tested during holidays at Colony House. Each month brought some significant day to be remembered. Brotherhood Week was stressed in a series of parties where mothers of teenagers of varied nationality groups prepared suppers for groups of youths and discussed the origin and traditions of the national dish served. Here parents and youth working to prepare the food and then sharing it found a common interest.

As Charles Dickens described it: "There seems to be a magic in the very name of Christmas," and so it was at Colony House. From early October when the youth planned and began work on decorations to transform our settlement into a fairyland through 15 parties ending on January 6, young and old worked as a team.

For the first time we shared a new celebration. On January 6, 250 children and adults closed our Christmas season with "a three kings party" where the traditional songs, food, and gifts by the Magi were presented as on the island homeland of Puerto Rico. So once more we were mindful of the spirit of Christmas that prevailed.

Through the combined efforts of Public School No. 47, the department of health, and Colony House, special programs were conducted on many phases of health. Nutrition problems were stressed and parents were served a typical school luncheon to have them become familiar with the food served to their children. Polio shots were given to our older children and teachers as well as to the nursery children.

During the warm summer days of vacation our day camp at Gowanus was enlarged by combining the two smaller units. This procedure enabled us to serve more teen-agers who are so often neglected during these months. Through the cooperation of the Tribune Fresh Air Fund 158 boys and girls had a real vacation in the country. A number returned to these country towns for the Christmas holidays.

With a knowledge of a successful summer season conducted for teen-agers in the preceding year we again planned with the youth a concerted program geared to their needs. In adolescence a teen-ager gropes his way toward adulthood. He is at once both awkward and sensitive, unsure and confident, ungoverned and restrained. The idealism that makes him easily led is in constant quarrel with the pride that makes him refuse to be told. It is not enough that the adults learn to accept him as he is, but they must guide him to where he really wants to go. In both our centers we tried to guide our youth by self-planned projects. The results were gratifying indeed and plans are already laid for a new season.

Adult clubs have always been a strong factor at Colony House. While they were primarily organized for sociability, they are now self-governed and take responsibility both for their own activities and those of the settlement generally.

Our men's club of alumni and the young married club are both active forces within the program. Both clubs award trophies to younger members who best symbolize the Colony House spirit to them.

Our two mothers clubs have helped to build a better community with a continuous record of 41 years for the senior club and 21 years for the Liberty Club.

The Happiness Club for members over 65 years of age is truly "young in spirit." This club just celebrated its 10th anniversary and it has been a rewarding experience to welcome the old to new friendships and hobbies. Their concerns over the welfare of others has been a real lesson to their juniors in human relations.

Our Gowanus and child care parents groups, the parent-teacher association, the neighborhood committees, and many other groups have aided in our community activities.

Our largest and newest group in the community have really found a place for themselves this past year. The Puerto Rican neighbors have now a club of their own which is a dynamic force. With 100 active members they are visiting homes of newly arrived neighbors, working with teen-agers and are now taking community responsibilities although just 6 months ago the club was formed for sociability. Thus they too, are helping to make our area a good world.

Colony House, alone, could not have marshalled the facts and forces necessary for this social action to meet problems in the area. Thus we are grateful to the following agencies and groups who cooperated with us.

Association of Brooklyn Settlements; American Red Cross; Brooklyn Bureau of Social Service and Children's Aid Society; Brooklyn Council for Social Planning; Brooklyn College; Brooklyn Tuberculosis and Health Association; Board of Education and Community Activities; Principals Teachers and Parents Teachers Association of Public Schools 6, 32, 47; Board of Health; Brooklyn Public Library; Catholic Charities; Citizens Housing Council; Day Care Council, Department of Welfare; Greater New York Fund; Gowanus Housing Manager and Staff; Holy Family and Long Island College Hospitals; Junior League of Brooklyn; Juvenile Aid Bureau; National Federation of Settlements; National Recreation Association; New York City Housing Authority;

New York City Youth Board; New York Telephone Co. Employees; Police of 78th and 82d Precinct; Parochial Schools; Office of the Distrfict Attorney; Sun-N-Fun; United Neighborhood Houses; Youth Council Bureau and Tribune Fresh Air Fund.

An agency can only serve a community through its staff, volunteers and board. In a changing neighborhood it is up to them to build new roots for people—both young and old. Colony House has always been fortunate in having staff who were ever mindful of building this better community for all our neighbors, and thus have created an island of friendliness.

Our faithful and hard working volunteers from Brooklyn College, as well as many individuals throughout Brooklyn, have aided greatly in enriching our program and have thus strengthened our community ties.

Members of the Corporate and Associate Board, the Guild and Men's Council, as well as our many contributors have each played a role in our community plan for better living.

A social agency, today, cannot achieve a vital role in the community without the active participation of board members. Colony House is fortunate in having a close working relationship with staff and board members on a community level as well as borough and citywide. Thus we have become a symbol of a better world to many throughout the years.

THE FUTURE COMMUNITY

As stated in the past year's endeavors our aims were to improve human relations and to improve living conditions in the area.

We feel we have made very significant gains in human relations and during the past year our community has been a brighter and better world. For the coming year we hope to add on to this foundation and build more solid roots in the community for others.

We have not succeeded in improving the living conditions for many of our neighbors. This therefore becomes our major issue for the future. Our overcrowded, unhealthy rooming houses are a great problem.

We feel Colony House has a definite responsibility to stimulate the development of public concern for adequate standards of service and personnel to many of our new neighbors. We too, must help our neighbors make the best possible use of public services available. Housing is our most serious problem but health, sanitation, nutrition and many other problems need constant action.

It is our belief that basic planning and coordination must be done in a neighborhood in order that broad planning and coordination can be carried out on a borough- or city-wide basis. We believe that in order to make democracy a living reality to the American people we must secure active participation of every citizen in planning for a better community. This Colony House cannot do alone and in order to do the vital job ahead we must help to achieve our goal of uniting the forces of a total community to bring a good world to our area.

George Santayanna, the great American philosopher gave us this quotation: "Life is a predicament. We are surrounded by enormous, mysterious, only half-friendly forces."

Surely life in such a community as ours is a predicament. We look back to past years as a time of tranquility but, of course, the predicament was there and surely the enormous, mysterious and half-friendly forces were always present. In seeking a better life one finds it cannot be learned in a few easy lessons; in fact, the lessons are ours to work out and we may find some problems have no answer. We face many problems that have existed since time's beginning—the problems of morals, of manners, of government and religion.

But predicament seems to me to be a good word. It does not mean a trap, nor does it mean a sanctuary.

So Colony House, as in former years, accepts the challenge of the predicament of building a good world and goes forth with faith and courage to meet the enormous, mysterious, half-friendly forces of the future.

The Girard Case

EXTENSION OF REMARKS
OF
HON. GEORGE S. LONG
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. LONG. Mr. Speaker, I am placing in the CONGRESSIONAL RECORD today letters and petitions regarding Sp3c. William S. Girard whom the Japanese are seeking to try in their courts, for having accidentally killed a Japanese woman. I want my colleagues to know the sentiments of my constituents.

The letters and petitions follow:

ALEXANDRIA, LA.

Hon. GEORGE S. LONG,
United States House of Representatives,
Washington, D. C.

DEAR MR. LONG: On the strength of sounding like a radical, I would like to ask just one question: How many of our boys will be crucified in order to appease touchy foreign countries? This question may be to the extreme but in view of the appalling situation extremities are not forceful enough. I am only a housewife with two small sons but I dread terribly to think that my sons may find themselves deserted by the country they defend.

If this pathetic boy, Wm. Girard, is, in the sight of some officials, expendable—please take steps to amend or ratify this treaty that throws our boys to the wolves.

Sincerely yours,

Mrs. J. M. TUCKER.

ALEXANDRIA, LA., *June 5, 1957.*

Congressman GEORGE S. LONG,
United States House of Representatives,
Washington, D. C.

DEAR SIR: As the mother of two boys, I am deeply concerned over the provisions of a treaty that denies the protection of our Constitution to the servicemen whose duty it is to defend it.

Thank you for your courageous stand in protesting the release of Wm. C. Girard to a foreign civil court and demanding that this treaty be amended immediately.

Sincerely,

Mrs. MARK ALEXANDER.

ALEXANDRIA, LA., *June 5, 1957.*

Congressman LONG,
United States House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN LONG: I was certainly pleased to hear that you have spoken out against the decision to turn over William Girard to the Japanese civil courts. This case has certainly aroused public sympathy here in Alexandria.

I know you will continue to protest this treaty until it has been changed to protect all servicemen on duty in foreign countries.

Sincerely,

EVELYN O'QUINN LOFTON.

ALEXANDRIA, LA., *June 4, 1957.*

Hon. GEORGE S. LONG,
United States House of Representatives,
Washington, D. C.

DEAR MR. LONG: I understand you have released a statement to the effect that you have protested the release of an American serviceman, William S. Girard, to the Japanese civil courts. I wish to take this opportunity to congratulate you for taking this stand and to urge you to do all you can to keep this issue alive until something is done.

Realizing that nothing can now be done for Mr. Girard under provisions of a treaty between the United States and Japan, I would still like to know why this agreement cannot be scrapped, if under its provisions, an American serviceman, defending the Constitution, cannot be protected by that same Constitution—after all a good many people have taken refuge behind the fifth amendment.

In the same press release that carried this story I quote the following:

"Wilson and Dulles said they have concluded that the joint committees agreement that Girard be tried in the courts of Japan was reached in full accord with procedures established by the treaty and agreement, and in order to preserve the integrity of the pledges of the United States, this determination by the Joint Committee must be carried out."

The words underlined seem ironic to me. The employment of the word "integrity" is offensive in this case, where a serviceman sent to a foreign country is abandoned by his own country, principally because of the fear of rioting mobs.

How did this treaty come about? Who drew it up? Did Congress ratify it?

I am very much interested in having these questions answered and to know to what extent Americans are supposed to stick their necks out for their country and then have their heads lopped off rather than offend another country.

I am a housewife with a teen-age son and this is my first experience in writing my Congressman. If I did not address my letter properly, please advise the correct salutation, because you will be hearing from me again.

Sincerely,

Mrs. W. H. CARR.

ALEXANDRIA, LA., *June 5, 1957.*

Congressman LONG,
United States House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN LONG: I wish to take this opportunity to thank you for your stand in protesting the release of an American GI to the civil courts of Japan for trial and to urge you to bend all your efforts toward having this treaty changed, so this situation will never again arise.

Sincerely yours,

EARL WHITTINGTON.

BOYCE, LA., *June 7, 1957.*

DEAR MR. GEORGE S. LONG: I am writing you in regard to the soldier prisoner, Girard, who was on guard and killed a Japanese and now is being tried for his life by the Japs.

I wonder if John Dulles has any sons and would he want them tried by the Japs.

I have two sons in the Air Force and if that's the way the Government feels about the boys who are in service and have to guard the property of the Government and then be tried for their life by such as the Japs I am sorry my sons are wearing the uniform. So won't you help this poor soldier and bring him home for trial? I think he only done his duty; what do you think? I am a supporter of the Longs.

Mrs. JIM HILLMAN.

ALEXANDRIA, LA., *June 11, 1957.*

DEAR MR. LONG: While I am sure you are doing what you can, but I can't help writing you. Congress in this case ought to go over the President's head in the case of this boy. Let us suppose he had not carried out his superiors' orders to guard this section, what then Mr. LONG? How many mothers are going to rebel against their boys going over there without the protection of our Armed Forces? Will you refer this to Mr. ELLENDER? All of your people think as I do.

Best wishes,

J. H. PETRIE.

ALEXANDRIA, LA., *June 8, 1957.*

Hon. GEORGE LONG,
United States Representative,
Washington, D. C.

DEAR REPRESENTATIVE LONG: We are shocked by the action of our Government in turning over an American soldier (Girard) to the Japanese Government for trial. We fear that he and other American troops abroad have been betrayed and forsaken.

Your fellow Americans want you to know that the notorious status of forces agreement stands as a monument to diplomatic bungling and is an altar of inane appeasement upon which our national self-respect is being sacrificed. It is unbelievable that our Congress would approve such an agreement in the first instance. We are left dumfounded by the inaction and submissive attitude of our Congress at the present time.

The morale of all American troops abroad and the confidence of the American people in their leaders, cannot but be shaken by the action of the executive branch of our Government, and the inaction of the legislative branch of our Government.

We earnestly protest the denial of Girard's constitutional rights as an American citizen, and if we as American citizens, any longer have a voice in our Government, we ask that you echo our sentiments in this matter and seek to abrogate the infamous status of forces agreement. We urge you to do everything within your power and authority to return Girard to American jurisdiction for trial.

This letter is being written and transmitted to you in compliance with a resolution adopted by the Johnson-Brown Post, No. 1736, of the Veterans of Foreign Wars.

Sincerely,

PHILIP DAFFORD,
Post Commander.

PAYNE-JOHNSON POST, No. 3800,
VETERANS OF FOREIGN WARS,
OF THE UNITED STATES,
Winnfield, La.

Whereas Army Sp3c. William S. Girard has been surrendered to a foreign government for trial for an alleged offense committed while on duty at his post at a United States Army base situated overseas;

And whereas it appears from press reports that officials of the United States Government have negotiated so-called status of forces treaties with foreign governments in which the United States is obligated to surrender to foreign governments for trial any and all members of the Armed Forces overseas, whether on duty or off duty and on the military and naval bases of the United States or off said bases;

And whereas it is the sense of Payne-Johnson Post, No. 3800, Veterans of Foreign Wars, of Winnfield, La., that these so-called status of forces treaties as interpreted by the Secretary of Defense and Secretary of State are a shocking betrayal of the men who wear the uniform of the Armed Forces of the United States and their families, and an abdication of the sovereignty of the United States; be it further

Resolved, That Payne-Johnson Post, No. 3800, by unanimous vote at its regular meeting goes on record as condemning and deploring the treaties which in effect deny American citizenship to members of the Armed Forces overseas and abdicate the sovereignty of the United States Government; be it further

Resolved, That copies of this resolution be sent to the commander in chief, Veterans of Foreign Wars, Senator ALLEN J. ELLENDER, Senator RUSSELL B. LONG, Representative GEORGE S. LONG, and members of the press, radio, and television.

LEWIS LANE,
Senior Vice Commander.
TULEY WELLS,
Post Adjutant.

JUNE 4, 1957.

KIWANIS CLUB OF NATCHITOCHES,
Natchitoches, La., June 6, 1957.

Hon. GEORGE S. LONG,
House of Representatives,
Washington, D. C.

DEAR REPRESENTATIVE LONG: Abandonment to the Japanese of William S. Girard, an American soldier, shows how the status-of-forces treaty—

1. Violates the moral law of fidelity to those who depend on us.

2. Injures the United States politically by incurring loss of face in the Orient.

3. Undermines the foundation of morale in the armed services, and may entirely destroy their esprit de corps.

It is the opinion of the undersigned that the President of the United States should at once reconsider the action in regard to Army Sp3c William S. Girard, and that the President and the Congress should rescind such status-of-forces treaties without delay.

Sincerely yours,

CARL HENRY,
President, Kiwanis Club.
ALLEN R. PARKER,
President, Gordon Peters Post,
No. 10, American Legion.

We the undersigned citizens of Rapides Parish, State of Louisiana, wish to vehemently protest the decision of the Government in allowing the Japanese courts try Army Sp3c. William S. Girard.

We feel that Sp3c. Girard was performing his duty in protecting United States property and the killing of the Japanese was accidental and should be tried by United States military authorities only.

American boys have no choice but to serve in the Armed Forces under present VMT policies and directives. We do not believe that they should be subjected to prosecution of foreign courts when they must, against their wills, be sent to occupation countries and do bodily harm to citizens of these countries while carrying out their orders.

If necessary, we suggest congressional action to stop this decision by the Government.

Hill, Kingsville, La.; Mrs. Eric White, Pineville, La.; Mrs. Leon Boung, Alexandria, La.

THE AMERICAN LEGION,
DEPARTMENT OF LOUISIANA,
May 23, 1957.

Hon. GEORGE S. LONG,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN LONG: The department of Louisiana, by convention mandate is strictly against the releasing of members of our Armed Forces, who have allegedly committed a crime while on overseas duty, to foreign government for trial.

At this time we are particularly interested in the case of Sp3c. William S. Girard of Ottowa, Ill., and wish to protest the action taken by Adm. Miles A. Hubbard.

We would like for you to protest the action of Admiral Hubbard and keep us advised as to the steps being taken by the Defense Department and by the Defense and State Departments to rectify this situation.

We feel that the members of the Armed Forces of the United States are American citizens and should any crime be committed by them while on overseas duty, that they should be tried by American citizens.

With kind personal regards.

Sincerely yours,

M. C. "MIKE" GEHR,
Department Commander.

ALEXANDRIA, LA.,
June 5, 1957.

Hon. GEORGE S. LONG,
Representative of Eighth District of Louisiana, House Office Building, House of Representatives, Washington, D. C.:

After the Korean war we tried American military men who sold out their country. Who is going to try America for selling out her military man William C. Girard? If this decision remains other nations will take this as an example of American weakness and demand our military men for trials in their courts regardless of treaties or agreements.

Rev. L. R. BOWEN,
Pineville, La.

Proposed Jury Trial Amendment to Civil-Rights Legislation

SPEECH
OF

HON. EDMUND P. RADWAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. RADWAN. Mr. Speaker, it is with a heavy heart that I rise briefly to participate in this debate. I am saddened that in this historic legislative body, representing the greatest democracy the world has ever known, we should have to legislate, debate, or even discuss, a matter so fundamental as the right of every qualified citizen of this Nation to cast his ballot.

When there is added to this, the suggestion that an equally fundamental and traditional pillar of our democratic way of life, the right to trial by jury, is being threatened by this legislation, I am indeed shaken to the roots of my being. As an attorney, a former State Senator and now as a United States Representative, I cherish our constitutional guaranty of trial by jury as a sacred right.

That is why, when I see the inviolate right of trial by jury introduced as a bogus, phony, sham issue in a cynical, callous effort to deny a large segment of our population the right to vote, I must rise to set the record straight. Let us label this phony jury-trial amendment for what it really is, an effort to thwart the reasonable enforcement of the law in the traditional American way—in fact, in the only way in which effective enforcement is possible.

An examination of the record reveals the true purpose of this jury trial gimmick, and perhaps the best way to illustrate this is by a few pertinent questions. Last year another civil rights bill was debated in this chamber. By the standards of those who oppose the universal enjoyment of civil rights, it was a tougher bill than this year's proposal. For obvious reasons which I will later touch upon, it contained no jury trial provision.

Question No. 1: Then why was not the bogus jury trial issue raised last year as it has been this year?

Everyone would agree that the legal profession represented by hundreds of local, State, and Federal bar associations would be in the forefront in attacking any effort to erode our constitutional rights, particularly the right to trial by jury as it exists. The hearings on this bill before a subcommittee of the Committee on the Judiciary, consume some 1,300 pages of testimony. Only one witness appearing before the subcommittee purported to represent a bar association and he was the chairman of the executive committee of the South Carolina Bar Association. Examination of his testimony reveals that he made no mention whatever of this proposed jury trial amendment.

Question No. 2: Why has not a single bar association come forward to support the proponents of the jury trial amendment?

The motive of those who have masterminded this new roadblock in the enactment of civil rights legislation is obvious. They know it has nothing to do with the case, but they hope to so confuse the issue in the public's mind, that everyone who opposes their amendment can be accused of being against trial by jury, which is like being opposed to motherhood. But if they hope to embarrass us with our constituents, I think they vastly underestimate the intelligence of the American public.

The type of proceeding involved in this proposed legislation has never, since the inception of our legal system, involved a jury trial. A simple example serves to illustrate this. There is ample evidence that some Americans are unjustly deprived of their right to vote. Both political parties recognized this by pledging in their respective platforms that they would enact civil rights legislation. Now suppose a citizen feels that an election official or board has unjustifiably denied him the right to register, and hence the right to vote. Under the proposed legislation, he would seek an injunction against the official on the ground that he is failing or refusing to perform his official duties.

An injunction is simply a "stop" order; a legal means of preventing a wrong before it occurs. The Federal Constitution guarantees a jury trial in criminal proceedings. But this is not the trial of a crime. No one has been accused of a crime. It is a proceeding to prevent a wrong before it occurs. From time immemorial injunction proceedings have been brought on the equity side of our courts, before a judge without a jury. In fact, a Federal law which required a jury in such cases might very well be held unconstitutional.

A classic example of this proceeding which we all remember occurred when an injunction was issued against the United Mine Workers and John L. Lewis and they received a huge fine for refusal to comply with the injunction. All this was before a judge, without a jury. Under the antitrust laws, Du Pont was very recently ordered to divest itself of its control of General Motors. The trial was before a judge, without a jury. We have passed in this House, in the last few decades, some 28 or 29 specific measures of tremendous importance, where the court is given the right to issue injunctions, or "stop" orders, and if these injunctions are violated, to mete out punishment by fine or sentence, without trial by jury.

And now let us compare the laws of the various States. I have prepared a short legal brief on this subject which I cannot, for lack of time, review in detail, but which I will insert in the RECORD at this point. The brief is short, because the legal proposition is simple and firmly established. It illustrates that the constitutional guaranty of a jury trial is construed to give no right to a jury trial in equity cases, including injunction proceedings.

At this point in the brief, I cite decisions of the United States Supreme Court and of the highest courts in 24 different States.

Now suppose this person who has applied for an injunction to prevent an official from denying him his vote, is successful, and a court has decided he is entitled to that injunction. If the official complies, that is the end of the matter. But suppose the official, having been served with a court order, refuses to obey it. He is now in contempt of court—and the proponents of this jury trial amendment say that he should have a jury trial to determine whether he is in contempt of court.

Question No. 3: What question of fact is this jury to decide?

Is this jury to decide for the judge whether he did in fact issue a stop order. Perhaps he dreamed it all up. Inserting a jury between a court and the enforcement of its own order is an insult to the court, is contrary to law, and is the height of legal hyprocisy. The brief which I mentioned notes that the constitutional guaranty of a jury trial does not apply to proceedings to punish for contempt of court, whether in a court of law, a court of equity, a court having criminal jurisdiction or any other court, citing many cases.

I do not wish to appear to be chiding my colleagues from below the Mason-Dixon line, but a great many of these cases cited in my brief originated in the fine courts of their States, and are supported by the excellently prepared opinions of judges elected or appointed from their areas, gentlemen who were schooled in the culture and traditions of those areas.

Question No. 4: Do the proponents of this jury-trial amendment now hold that these judges and the courts over which they preside are incompetent?

Our President recently drew attention to an opinion of our former President and Chief Justice of the Supreme Court, William Howard Taft, who said in 1908: "Never in the history of the country has there been such an insidious attack upon the judicial system as the proposal to

interject a jury trial between all orders of the court, made after full hearing, and the enforcement of such orders."

And where were these pious platitudes and this lofty attempt to introduce jury trials into an area where they have never existed, when in recent months court injunctions were obtained barring all activity of the National Association for the Advancement of Colored People in Alabama, Georgia, Louisiana, and Texas until all of its records were turned over to the State? There were no jury trials. In Alabama, a fine of $100,000 was levied against that association, without trial by jury, for so-called violation of an injunction requiring them to divulge membership lists.

Gentlemen, let us recognize this jury-trial amendment for what it really is, not an effort to preserve our constitutional right to a jury trial, but an unconstitutional effort to deny the Government the power to give its citizens effective protection of their right to vote, and of their fundamental right to equal protection and liberty and security under law. Let us defeat this amendment and get on to the consideration of legislation which has the endorsement of both political parties in their announced platforms.

Address by Dr. Salvador Araneta at Annual Commemoration of the Adoption of the Philippine Constitution

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include therein an address delivered by Dr. Salvador Araneta upon the occasion of the annual commemoration of the adoption of the Philippine Constitution on February 8, 1957.

This address was made before the Philippine Lawyers' Association in Manila. It deals with the spirit of their constitution in its relation to recent national events and covers the problem of nationalism and the brotherhood of man, conservation of natural resources, sovereignty and territorial integrity and the bases agreement. He also discusses at some length the unlawful and unfair practices of the American PX's in the importation of civilian goods into the Philippine economy without the payment of tariffs or other taxes and without reporting to the Ministry the dollar volume of these exempt importations.

It is a very courageous statement and yet carries a conciliatory overtone in an effort to improve international relations without weakening the sovereignty and territorial integrity of his country.

I believe he puts his finger on the fundamental reasons for the difficulties in which we find ourselves in our negotiations for military bases which are of most importance to both the United States and the Philippines.

Dr. Araneta is one of the outstanding patriots of the Philippines. He is probably the best posted man there on the economics of his country. He was a member of the Constitutional Convention and a graduate of Harvard University Law School. President Roxas nominated him to become Ambassador to London in 1947, but he declined the offer. He was appointed to high positions by President Quirino and was one of the first appointments made by the late President Magsaysay as Secretary of Agriculture and Natural Resources. He is engaged in many business enterprises in the islands. Beyond this, he and Mrs. Araneta established and own two large educational institutions, the Araneta Institute of Agriculture and the Institution of Technology. These two colleges have a combined enrollment of 10,000 students, with about 4,000 graduating annually, so you can well understand the impact upon the islands arising from the activities of Dr. Araneta.

The background and current activities of Dr. Salvador Araneta, together with the following address, were graciously furnished to me by Mr. Paul W. Reeves, of Manila.

President Alafriz, fellow delegates of the constitutional convention, colleagues of the bar, friends:

THE BROTHERHOOD OF MAN IN OUR CONSTITUTION

There is a saying in Spanish, a Dios rogando y con el mazo dando, which applied to our problem of national security must spell praying to God and the belief and practice by us in the Philippines, and by peaples everywhere of the brotherhood of man. President Eisenhower in his state of the Nation speech, pointed out that "National security requires far more than military power," and that "economic and moral factors play indispensable roles." He further underlined that to move a long way toward a peaceful world America should "emphasize aid" to her friends "in building more productive economies and in better satisfying the natural demands of their people for progress."

These sentiments faithfully implemented amounts to the practice of the brotherhood of man on a world scale. On our part, the concept of the brotherhood of man has two angles—one is our duty toward our own nationals, and the other is our duty toward humanity in general.

I said that the concept of the brotherhood of man is a part and parcel of the spirit of our Constitution. With reference to our duty toward humanity that concept finds expression in the provisions by which we renounced war as an instrument of national policy, and that by which we adopted the generally accepted principles of international law as part of the law of the Nation. With reference to our duty toward our nationals the concept of the brotherhood of man is spelled in two sets of provisions of our Constitution:

(a) Those that elevate to a constitutional mandate the practice of social justice in the Philippines, and

(b) The nationalistic provisions of the constitution by which agriculture, forestry, mining, fisheries, public utilities, are reserved to citizens, or to corporations with 60 percent of their capital owned by Filipino citizens.

NATIONALISM AND THE BROTHERHOOD OF MAN

But it may be asked: Are not these nationalistic defenses and practices inimical to the concept of the brotherhood of man in our relations to mankind?

My answer is that there is no such incompatibility, for aliens are not excluded as they can participate up to 40 percent in the capital of even those enterprises earmarked with the nationalistic restriction. Considering that the alien population of the Philippine does not exceed 1 million people, or 5 percent of our population, it is obvious that foreigners are adequately provided a living space in our economy as long as they can participate up to 40 percent of the capital of those enterprises. Aliens, under our constitution, our laws, our practices, and our desires, are welcomed to participate in all lines of economic activities, so long as they do not wish to be exclusivistic, and, as invited guests, are willing to take a minority participation. Time must come and it should come soon that this formula for alien participation will be extended to new industries.

The spirit of the constitution is not, therefore, to exclude aliens from a proper share in our economic activities. But it is the spirit of the constitution to stimulate national participation and to insure the Filipino's predominant share in essential economic activities. The brotherhood of man does not mean the exploitation of our natural resources by aliens in a larger measure than by nationals. The brotherhood of man does not mean a Philippine retail trade dominated by foreigners. The brotherhood of man does not mean an independent Philippines in name only, with foreigners dominating and holding an upper hand over our economic activities, and through them, dominating our Congress and our President. The brotherhood of man as proclaimed in the Gospel, and as consecrated in our constitution, means an equal opportunity to all, to the extent of helping and defending the weak, be he a laborer, a farmer, a citizen, or a pauper, to make possible in practice the actual exercise of that equal opportunity which is the core of true democracy. And so long as our citizens, because of lack of experience, because of lack of capital, because of lack of the necessary disciplines, are in a weaker position vis-a-vis foreigners, it is the duty of the state under the constitution to defend them, reserving a major share of our economic activities to our citizens, to the end that our institutions, economic, social, and political, may not be dominated by foreign influences, and our people may be truly masters and sovereigns in our own land.

More and more we come to realize that the blessing of independence, to be real, must be predicated on our being masters and beneficiaries of our own heritage. If our trade and most important economic activities are held by other hands, they and not we will rule our country and the Philippines will be merely the puppet state of another more virile nation.

NATIONALISTIC SPIRIT OF THE CONSTITUTIONAL CONVENTION

Our constitution was conceived and approved before we were independent, and was made subject to the approval of the President of the United States. And it is pertinent to ask if there is permeating into the constitution a colonial mentality and subservient spirit.

To the credit of the delegates of the constitutional convention, we can truthfully say that the constitution was not authored by minds with a colonial mentality and with a subservient spirit—as far as I know, if there is one provision that did not find its way into the constitution, it was precisely the proposal to nationalize the retail trade, because we were told by President Quezon that its insertion into the constitution might jeopar-

dise the approval of the constitution by the President of the United States. But the convention approved a resolution expressing the views of the delegates on the subject, which read as follows:

"That it is the sense of this convention that the public interest requires the nationalization of retail trade but this convention abstains from approving the amendment introduced by the delegate for Manila, Mr. Araneta, and others on this matter because this convention is convinced that the National Assembly is authorized to promulgate a law which limits to Filipinos and American citizens the privilege to engage in retail trade."

If, therefore, foreign influences were brought to bear on the members of the constitutional convention, the same were exerted to control or lessen the nationalistic spirit that was preeminent in the constitutional convention.

THE NATIONALISTIC SPIRIT MUST NOT BE ANTIFOREIGN

This nationalistic spirit must not be antiforeign but pro-Filipino. To the extent that it is antiforeign, it would be indeed against the concept of the brotherhood of man. To the extent that it is pro-Filipino, it is in accord with our belief in God, for to believe in God is to believe in the social nature of man. And from this belief, there follows our devotion to country. Thus, the Philippines, because of the tradition and political limitations, continues to be the political unit where most of us can find immediate expression for our capabilities and desires to be of service during our sojourn in this life. With the light that has been given me, I feel that the present realities of the international world demand that a new, small nation needs an assertive and dedicated nationalism for its underdeveloped resources, for many of its idle and despondent people, if its nationals are to raise themselves over the misery of their present existence. For if charity begins at home, charity must also begin in our motherland. That only we, as a people can help ourselves and redeem our own salvation with hard work and wise national decisions, and, for this, we have to be united as a people duly supported by our Government. That, at this precise moment in our history, we should be more than careful not to become the prey of foreign promises and attitudes, and we have to be ever jealous of the birthright of our nationals, their dignity, their self-respect, and their assertiveness; that our honor and the long-view national interests shall not be traded for a mess of pottage nor for all the gold for that matter.

Love of country and nationalism are different faces of the same coin. And it is gratifying to see that during the past years, the nationalistic spirit that springs from the Constitution has reverberated in the Halls of Congress, in many Government commissions, agencies, and instrumentalities, in various partiotic and civic organizations, and in the press of the country, culminating in the wise policy of the Monetary Board recently announced by Mr. Gregorio Licaros, to use the economic controls to strengthen the position of our nationals in the import trade.

But it is time to reappraise these nationalistic movements, to reassert its philosophy and to delimit its proper boundaries. Nationalism is a thing of the spirit, and that spirit and motivation must be pro-Filipino, without being antiforeign. We wish well our own nationals, we must protect them, provide them with employment and opportunities to develop an industry and our natural resources by insisting that they be allowed a proper share in the capital and employment of all economic activities in the community, by proscribing foreign exclusivisms, and insisting that nationals are entitled to a 60-percent share in the capital of enterprises, and at least 90 percent participation in all jobs that may be provided by an enterprise in the Philippines.

These measures are just mere defenses to our legitimate aspirations to make the Philippines for the Filipinos, a phrase coined by a great American, the first American civil Governor of the Philippines, the Honorable William H. Taft. In being pro-Filipino, in our desire to make our sovereignty and independence a vital reality, we must not debase our motives with an ill feeling and an ill desire against foreigners. We must not differentiate between nationalized citizens and Filipino-born citizens. It is true that the Constitution provides that only Filipino-born citizens may aspire for Congress, and the Presidency, and Vice Presidency. But precisely because the Constitution has limited the discrimination against naturalized citizens to these cases, the same should not be further extended. Foreigners within the limitations of our immigration laws should be welcomed, and those who have adopted this country as their own, irrespective of color or religion, should be treated as our own, as part of our body politic.

In the same way that we resent a spirit of economic exclusivism on the part of some foreigners, we would be guilty of the same spirit of exclusivism, if we make foreigners feel that they are not welcomed to adopt our nationality. Certainly, those who may decide to adopt our nationality, will do so for convenience. Seldom does one do anything to hurt himself. But convenience and utility is the door to real sympathy and love. A foreigner's sincerity and good faith to become one of us should not be questioned, once he has complied with all the requirements for naturalization and fulfills all requirements to retain citizenship. These requirements should be made stiffer, and should include continued residence in the Philippines, nonmembership in foreign chambers of commerce, sending his children to Filipino schools, and not becoming guilty of violation of any of our trade and antidummy laws.

Moved by these sentiments, I made this statement in 1954, when the nationalization of the retail trade became law:

"I am for assimilating into our nationhood all aliens of good will, who wish to become identified with our people and our institutions. Great nations have been created with such a policy of assimilation. I, therefore, hope that this new act, instead of becoming an instrument of separation and hate, will be an instrument of assimilation and self-respect. It is in this spirit that, I trust, the approval of this act will be taken by Filipinos and aliens alike."

THE CONSERVATION OF OUR NATURAL RESOURCES

But our national heritage is not limited to a proper share in our economic activities. A most vital part of that heritage are the soil, water, and forest resources of the country, and we are all enjoined by our constitution to conserve and develop the patrimony of the nation. This concept is found in the preamble of the constitution, but unfortunately our Government has been lacking in understanding of the necessary measures that need be taken to implement this duty expressly ordained by the constitution in the Government. The unprecedented floods that swept and submerged many parts of Mindanao last December, bringing in their train the loss of hundreds of millions of pesos' worth of our national assets, is a clear evidence of the inadequacy of the attention given to needed conservation policies. It has been conservatively estimated that the soil lost by the country annually due to erosion is worth more than P1 billion. During the short period that I was Secretary of Agriculture and Natural Resources, the First National Forest Conservation Conference took place, and it is to be regretted that most of the recommendations adopted by the conference are not being implemented. Let us hope that the December floods that devastated several Provinces in Mindanao will serve as a dramatic object lesson for the nation to realize the imperative need of a dedicated policy of forest conservation. I venture to say that the little gain that the country may have accomplished in the rural areas during the past 3 years has been more than lost by our failure to give full support to wise conservation policies essential for the implementation of the constitutional mandate to conserve the patrimony of the Nation.

FULL EMPLOYMENT AND ECONOMIC DEMOCRACY

But in addition to floods, the nation is faced with ever-increasing unemployment—which is another case of lack of conservation—that of our human resources. In this connection, it is timely to ponder on the fact that another basic concept of the spirit permeating the constitution, is its concern for the establishment of real economic democracy in the Philippines. Thus, the constitution, in its preamble, calls for the establishment of a government that will insure democracy for the Filipino people. And in the declaration of principles, the promotion of social justice to insure the well-being and economic security of all the people is made the concern of the state. It would appear, therefore, that full employment, to say the least, should be the concern of the state, for full employment is the minimum requirement to insure the well-being and economic security of all the people. We can, therefore, conclude that full employment is a constitutional policy in the Philippines. But it would seem that our leaders consider the constitutional injunction as an ephemeral wish or a lofty mandate impossible of realization.

I do not have now the time to lay down the basis for a conservation policy and a full-employment policy. But I am bold to say that such policies are indispensable if we are to make the Philippines prosperous and impregnable to the forces of communism, and our state is to become a stable, strong, and a lasting reality.

OUR SOVEREIGNTY AND TERRITORIAL INTEGRITY AND THE BASES AGREEMENT

Toynbee, the great living historian, has suggested that the ship of civilization has crashed on the reef of one or both of two central human problems which he calls War and Class. And in this modern world, full employment is the first condition to win the problem of class, and soil, water, and forest conservation is an indispensable measure to forestall the loss of our very livelihood, all of which only shows how far we are in the Philippines to solve the problems of class and its twin problem of poverty.

And to meet the problem of war, rather the problem of foreign invasion, we accepted the bases agreement with America, sacrificing our territorial integrity and our sovereignty.

A study of our constitution will show that one of the paramount preoccupations of the delegates of the constitutional convention was the preservation of the integrity of the Philippine territory, and to this end, the national territory, contrary to all constitutional precedents, is described in the constitution. This cuts at its root any possible desire of future leaders of the nation to enlarge our territory, by conquest or otherwise, and, by the same token, it enjoins our leaders to preserve intact and undiminished that territory. And this brings us many interesting constitutional questions involving the territorial integrity of the country and our sovereignty over the whole and integral portions of our national territory brought about by our bases agreement with the United States. Moreover, this agreement must be studied in relation to the principle consecrated in our constitution of renouncing war as an instrument of national policy, and the provision vesting in Congress the sole power to declare a

defensive war. Contrary to the much publicized and erroneous MacArthur statement that Japan was the first country to renounce war in its constitution, the truth is that the Philippines preceded Japan in this constitutional doctrine by more than a decade.

But we must guard and defend our sovereignty, not only in the matter of the integrity of our national territory, not only in the matter of the jurisdiction of our courts of justice and the sole jurisdiction of congress to declare a defensive war, but also in the matter of our tariff, trade, and import control laws. As it is, the PX, the chain of stores found in military bases, an instrumentality outside the jurisdiction of the Philippine Government, is importing all sorts of civilian goods, without paying tariff duties and other taxes, in complete disregard of our tax laws and of our controls on imports and foreign exchange. The PX is importing in huge quantities, the kind and volume of the imports not being even reported to our government for statistical purposes, and a good measure of these goods are being sold to our civilian population, through about 25,000 Filipino civilians who have the privilege to buy from the PX. Thus, today, the American Government has become the biggest importer, wholesaler and retailer of civilian goods, boring a massive hole into the foreign-exchange regulations of the Central Bank and the tariff, tax and trade laws of the country. These PX's have thus become a stumbling block to the solution of the present fundamental disequalibrium in our foreign trade. The problem is sufficiently serious to merit the good offices of our President for proper representations to the President of the United States.

Let us pray that the nation will continue backing fully the stand taken by Senator Recto and the members of the Philippine panel, ably headed by Senator Pelaez, and loyally supported by Congressman Cuenco and Secretary Barrera, in their determined fight to retrieve our sovereignty and to uphold our constitution.

EQUALITY AMONG THE FREE NATIONS OF THE WORLD

The Philippine stand in the proposed revision is in line with the views expressed by President Eisenhower, in his recent speech on the state of the Nation, where he proclaimed that the American system of regional pacts insists on equality among its members.

In the same speech, President Eisenhower further said:

"The world has so shrunk that all free nations are our neighbors. Without cooperative neighbors, the United States cannot maintain its own security and welfare.

"Interdependence of interests requires a decent respect for the rights and the peace of all peoples."

A DECENT RESPECT FOR FILIPINO RIGHTS

A decent respect for the rights of the Filipino people, paraphrasing the great American President, is all that we demand in our relations with the American Government. And as President Eisenhower has very well admonished his people, by America's loyalty to these principles, by America's practice of them, she shall set a standard to which all who seek justice and who hunger for peace, can rally.

These are indeed mighty words. These words will prove mightier than the sword. These moral, political principles will prove more effective than all the American atomic military power. The rallying point for all free-loving countries is there—but it takes more than words, and promises to make it a reality. As pointed out by Chester Bowles:

"The difference between asserting moral positions for the limited purposes of psychological warfare, and living by them because they are the warp and woof of our national life, is precisely the difference between manipulation and genuineness, tactics, and truth. Thus, the test of our sincerity will not be the frequency with which our revolutionary slogans resound in political speeches, television extravaganzas, and broadcasts of the Voice of America, but our actual day-by-day performance on the issues which move mankind."

Again, the American President has said: "Our country and its government have made mistakes. They have been of the head—not of the heart. And it is still true that the great concept of the dignity of all men, alike created in the image of the Almighty, has been the compass by which we have tried and are trying to steer our course.

"So long as we continue by its guidance, there will be true progress in human affairs, both among ourselves and among those with whom we deal."

These words are very moving and significant. But if they can acquire meaning in the Philippines, there must be a recognition by America of American mistakes committed in the Philippines. The fact that the mistakes were not of the heart, will not exculpate mistakes of the head, which the head fails to acknowledge.

THE TWO AMERICAS AND THE TWO PHILIPPINES

But we must realize that there are two Americas today, in its views and sentiments toward mankind and the future of humanity. There is the America of Henry Hazlitt, shortsighted, unimaginative, egocentric, unconscious, and unresponsive to the needs of the new dimensions of peace. On the other hand, there is the America of Chester Bowles, with "a clear vision of the urgent challenge for free men of all races to act now, together, creatively, ahead of chaos, realizing that in the next 10 years, positive ideas, dedicated people and peaceful action may do what no amount of guns, bombs, and bloodshed can ever accomplish later."

But we should not be guilty of seeing the speck in America's eyes, and yet do not consider the beam in our own. For here, also, we have the two Philippines, which run parallel to the two Americas. For here in the Philippines, we must face the problem of class, the problem of poverty, the need for a real brotherhood of man within our own territory, and in the realization of this goal we are also met with two Philippines with different outlooks and sentiments. This same problem of class that diffuses into the problem of war, America has to face but on a world level, and, as Chester Bowles has said, "if America can recover some of Lincoln's democratic faith and apply it to the world, America will find that her own American Revolution in all its dynamic implications has come to life again, and the peoples of Europe, Asia, Africa, and South America will reach out their hands to the United States in new confidence and in friendship." And Chester Bowles concludes "Then the danger of nuclear destruction may subside, and a stalemate achieved by terror may merge into peace."

Our Constitution was once suspended, when our country was occupied by a foreign power during a period of more than 4 years. So by actual experience we know that the Constitution, and, may I add, American protection is not a guaranty against invasion. But while the Constitution and its spirit may not be a guaranty against a superior force, the thesis which I present to your consideration is that the spirit of the Constitution, if allowed to invigorate the national soul, shall bring about a regime of justice, liberty, and democracy in this beloved land of ours: Justice in the fullest sense, including social justice, with full employment as the first foundation of our economic edifice; liberty, in its true sense, with liberty under God to love Him and our neighbors; and, democracy, in its complete significance, of a government of the people, for the people, and by the people.

I said the Constitution is not a guaranty against a superior physical force. But the spirit of the Constitution, if fully understood and kept vigorous, is a guaranty that the Filipino soul shall become morally strong, capable of shaping world events toward security and peace. And in the fear of God and in the brotherhood of man which are the breath and spirit of our Constitution, we shall find as a nation the true and fundamental concepts that will insure for our people a glorious destiny and will make of us a vital force to human happiness and world peace.

I thank you.

Responsibility of Landownership

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. SCHWENGEL. Mr. Speaker, considering the rather careless way we Americans designate certain weeks as periods for recognizing everything from doughnut holes to Miss Apple Cider, it is refreshing when we finally arrive at something like "Soil Stewardship Week." The week of May 26 to June 2 was set aside as Soil Stewardship Week and lest its importance go unnoticed here, under unanimous consent I insert in the RECORD some excerpts on landownership from a soil conservation booklet which were called to my attention through the pages of the Des Moines (Iowa) Register:

RESPONSIBILITY OF LANDOWNERSHIP

The man-land relationship is a necessary part of God's universal scheme. In the Garden of Eden, God made man a steward of the land and responsible to Him for its care and use.

The Biblical message is clear and emphatic on land use and distribution. A man's inheritance of land was to be held, as nearly as possible, inviolate. Hear Elijah's judgment against Ahab when he would take Naboth's vineyard: "Have you killed and also taken possession?" (I Kings 21: 19). Micah sets forth the prophetic ideal, "They shall sit every man under his vine and under his fig tree, and none shall make them afraid." (Micah 4: 4.)

God's greatest material gift to man is a very special kind of property, containing the basic sources of food, fiber, and fuel for man's use.

Ownership of whatever sort, owner-operator, landlord or tenant, involves utilization of one's property to serve the highest purpose of human development and welfare. In many instances absentee-owners fail to accept their responsibility as stewards of the soil. A special effort must be put forth to remind the absentee-owner of his moral responsibility. Profits made at the expense of soil jeopardize the local community and are made at the expense of the Nation.

In the exercise of his ownership of the land, a good owner develops a just pride in his acres and is actively involved in the improvement of the attractiveness and the productivity of his acres. He comes to feel himself a part of the continuing creative process working cooperatively with God, maintaining the yield, contributing to human welfare.

Landownership consciousness results in the conservation and the improvement of the God-given soil, and at the same time yields social satisfaction to the farmer, his family, his neighbors, and the world at large.

Such ownership eventuates in responsible citizenry and Christian stewards of the land. This kind of ownership should be transmitted from generation to generation. Farm families have a significant opportunity in father-son agreements. The son inherits the land and the soil stewardship practices of his father. The land of such a farm is conserved and enriched for future generations.

Special Election for McCarthy Senate Seat

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. ASHLEY. Mr. Speaker, I am sure that many Members of this House share with me an interest in the special election which has been ordered by the Governor of Wisconsin to fill the seat of the late Senator Joseph McCarthy. This is particularly true since it has been widely predicted that the Democratic candidate may win the election for the first time since 1932. The following article, which appears in the June 17, 1957, issue of the New Leader, presents an informative rundown of the candidates on the eve of the campaign:

SPECIAL ELECTION FOR MCCARTHY SENATE SEAT
(By Frank Wallick)

Governor Vernon Thomson's decision to call a special election to fill Joe McCarthy's vacant seat in the United States Senate gives Wisconsin's stripling Democratic Party its best chance in a generation to redeem the name of La Follette.

Democrats have had good luck in winning special elections—a typical Wisconsin oddity, provided by the State's Progressive legislative fathers. Congressman LESTER JOHNSON of Black River Falls won a seat in Congress this way soon after President Eisenhower's glitter wore off in 1953, and JOHNSON'S party hopes the same thing can happen this year.

Heading the list of Democratic candidates for the 96th United States Senate seat is Milwaukee's bright young Henry Reuss, a rabid conservationist, who is known as the Dick Neuberger of the Midwest. However, Reuss has pledged to withdraw if Congressman CLEMENT ZABLOCKI goes through with his decision to run. William Proxmire, a three-time candidate for Governor who also wants to run, is today out of favor with labor and Democratic heads in Wisconsin.

Republicans will have former Governor Walter J. Kohler, Jr., Lieutenant Governor Warren Knowles, and former Congressman Glenn Davis as their candidates. Kohler is said to be a White House favorite, and, while he is the GOP's best vote-getter, this reputation as Eisenhower's pet will have to be lived down. Knowles and Davis are several shades more conservative in their views than Kohler.

Since the breakup of the La Follette organization in the State, the Democratic Party has tried hard, but without much luck, to recapture its once flaming liberal spirit. The party's strongest figure, Thomas Fairchild, virtually gave up the effort last year by seeking his father's place on the State supreme court. Fairchild might have beaten McCarthy in the 1952 race had not Eisenhower given the late Senator his official blessing. As it was, Fairchild came within 10 percent of victory in a GOP landslide year, carrying the metropolitan areas where enlightened newspapers opposed McCarthy's record.

REUSS, who was beaten in the 1952 Democratic primary by Fairchild, has proven to be the party's most appealing personality since he defeated Congressman Charles Kersten in 1954. With the backing of the powerful Milwaukee Journal, REUSS has inveighed against oil-depletion allowances, championed a new approach to foreign policy, urged a $5,000 ceiling on soil-bank payments, and became the hero of every Wisconsinite who ever fished a trout stream or shot a wild duck.

Wisconsin was the first major agricultural State to be clobbered by the Benson sliding scale when support prices on dairy products were lowered to 75 percent of parity. Benson at one time was in such low favor with the State's farm population that the authoritative Wisconsin Agriculturist and farm poll showed that only 8 percent of the State's dirt farmers thought he was doing a good job. Since then, Benson has improved his standing somewhat, but there is widespread farm discontent.

The State's GOP organization is severely split between the McCarthyite faction and those who call themselves modern Republicans. There are still strong progressive strains in the Republican Party here, a hold-over from the La Follette days. Governor Thomson, remembered by TV watchers during the 1952 Chicago GOP convention for his oratory in support of Taft delegates, has pulled a switch this year by refusing to support a State sales tax—earnestly sought by his industrialist backers.

The man who unwittingly assured Senator ALEXANDER WILEY'S nomination in a hard-fought GOP primary last year has voiced the fears of many a lingering McCarthy follower. Said Howard Boyle, whose slim vote took enough votes away from the GOP convention-endorsed Glenn Davis to nominate WILEY: "The announced candidates are candidates for the White House social list. We need a man who will get in and fight like Joe McCarthy did."

Echoes of this fanatic following may haunt all three of the GOP hopefuls, who will be challenged to pledge allegiance to both President Eisenhower and the late Joe McCarthy in nearly every campaign appearance. It was the regular Republicans' refusal to take a stand for the President that sent many independent and Republican voters into the Democratic column on Milwaukee's Teutonic north side last year, as HENRY REUSS won reelection by the largest margin—30,000—ever witnessed in that once seesaw district.

The hard-boiled arithmetic doesn't favor a Democratic victory. The whole State has gone Democratic only twice in the last 20 years. In 1948, Harry Truman got enough disgruntled farmers to carry Wisconsin. The same year Tom Fairchild beat an inept Republican for attorney general. But maybe it can happen again.

John H. Hobbs

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. TRIMBLE. Mr. Speaker, on Saturday, June 8, John H. Hobbs, of Ruby, Ark., died. In his passing, Arkansas lost one of her most useful and most distinguished citizens.

Mr. Hobbs was a fighter of the old school, interested in the development of the natural resources for the public good.

He was a strong supporter of rural electrification not only in Arkansas but throughout the country. Until illness and advanced age prevented him from doing it, he attended State and National meetings to fight for cheaper rates and area coverage so that the smallest, most humble farm home could have the conveniences of electricity.

In the Press-Argus, of Van Buren, Ark., edited by my friend Hugh Park, there appeared in the June 13 issue a tribute to Mr. Hobbs. I insert it as a part of my remarks:

JOHN HOBBS: A GREAT MAN AMONG US—A MEMORIAL TRIBUTE BY THE EDITOR

It was a lucky day for Crawford County, Ark., some 70 years ago when a commoner of little note was chastized by an English lord of noble ancestry back yonder on the isle of Britain.

We often forget that great great things most often come from little incidents. The commoner was a non-entity in the crowd of humanity's millions, whose folks were proud but poor. As a laborer in the mills of the English lord near London, John Hobbs was required to "make obeisance" every time he saw his master of more wealth and better birth—as birth was rated in those days.

But stormy John Hobbs refused to bow to the lord when he met him a second time in a row—and the lord got down from his carriage and proceeded to put the young upstart in his place. And the young upstart—fiery as they make them—took his place by going immediately to the home of his beloved, taking her to the minister, and proceeding to get married took the first passage for America.

Folks who have read the Press-Argus for years, and those who knew John Hobbs are familiar with the story of this young man, and the three score and ten years he has spent as an American citizen—above reproach and a leader of unquestioned integrity and tireless energy. All will recall the thrilling story of his life published as a serial by this paper a decade ago.

We shall not in this brief eulogy review the events in the life of John Hobbs. There were many. For John Hobbs was continually doing things. He never rested in his good works; and how thankful all of us must be for his decision to leave the State of Iowa and come down here into the hills of Crawford County a good half century ago, and here found a community out on Cedar Creek, raise a fine family, and be planted here for eternity among the people he loved in the soil he loved.

There's a memorial light burning to his memory on every hill and in every dale in the whole of western Arkansas. For among the many good deeds of John Hobbs, the most far reaching will probably be reckoned in his work to bring electricity to the farm family of Crawford County in particular and to America in general. He organized, almost alone by his own personal work, the rural electric cooperative in this county. Then he helped found the Arkansas Valley Electric Cooperative, and became its first and only president until he fell in a stroke under the scorching sun of a hot August day, plodding up and down Main Street trying to help his friend, Jack White, get the farm bureau cooperative store on its feet. The REA refused to let him go and created a post as president emeritus for John Hobbs.

Then from the country and district he went on to an area, and helped organize and became the first and only president of

KAMO, an organization of rural electric co-ops in Kansas, Arkansas, Missouri, and Oklahoma. In that capacity Uncle John often was called to Washington, and there he met the national dignitaries, who no more scared him, or thrilled him, than did fellow members of the quorum court wherein Uncle John Hobbs served as a justice of the peace from Oliver Springs Township for a half century.

Uncle John organized the farm bureau—in fact he was the farm bureau for years—going about finding out what the farmers wanted and thought, and speaking for them. He wrote constantly for the papers; and the Press Argus worked with him, side by side, for 2 decades or more to bring more progress to agriculture.

So the name John Hobbs is well known to all our readers. It began to fade away in the fall of 1955, as all of us realized that the sunstroke was a mortal blow, under which Uncle John continued to struggle. He got weaker and weaker, finally moving from his home which he had continued to occupy after the death of his third good wife, Minerva, in an automobile crash at the highway Y at Alma on June 27, 1955. For the last year he was helpless, under the loving care of his children, Mr. and Mrs. Charles Hobbs, and visited often by hundreds of friends and family who loved and admired his sterling character and dominant personality.

A week before he died, Uncle John went into a coma. The family doctor revived him with the use of a new modern medicine to offset the mortality of shock after heart failure. The new medicine revived him, but the strong old heart had finally met its equal, and at 10:30 o'clock Saturday night, June 8, Uncle John Hobbs slipped into the unknown world of death.

Wednesday afternoon at 2 p. m., neighbors and friends and family gathered in the little community church at Hobbtown, one of the many material "monuments" built by Uncle John who had done everything a Methodist circuit rider to liberal republican justice of peace who had turned to be a New Deal democrat and friend of men like President Roosevelt, President Truman and Speaker Sam Rayburn.

There they heard his long-time friend, Brother W. B. Miller deliver the funeral sermon, and Jack Borchach, an attorney for KAMO at Vinita, Okla., give the eulogy. Neighbors sang a few of the melodies that Uncle John loved, for he was a musician and poet by nature, and often composed bars of rhythm to comfort his soul or express his feelings about a personal or world problem.

Then with the Ocker funeral home in charge, the body was carried to the Morrison cemetery, and there laid to rest. The bearers were: Earl Watts, P. B. Coleman, Fred Coleman, Jack White, E. H. Pritchett, Jr., and Walter Marlar. Serving as honorary pallbearers were Wallace Milton of Ozark, Rex Dewey, Billy Reynolds, Hugh Park, Frank D. Pape, David T. Bryan, Robert Gelly, Sr., and Marvin Coleman.

On the inside page of this newspaper is the favorite family picture of Uncle John Hobbs, showing him with his only daughter, Mrs. Dorothy Pixley, in a five-generation family pose.

In addition to this daughter, he has three sons, an only sister, who lived near him in the Hobbtown community 5 miles northwest of Rudy.

The suryivors are: One daughter, Mrs. Dorothy Pixley of the Hobbtown community; one stepdaughter, Mrs. Lucille Griffith of Rudy; three sons, W. H. Hobbs, Brose Hobbs and Charles Hobbs, all of Rudy; one stepson, W. B. Coatney of Moore, Okla.; one sister, Mrs. Mary Hepden of Rudy; two half sisters, Mrs. Lydia Ballestro of Chicago, Ill., Mrs. Hilda Steele of England; two half brothers, Will Lawrence of Kansas City, Mo., and George Lawrence of Whittier, Calif.; 12 grandchildren; and 17 great, great grandchildren.

Erco Develops KC–135 Flight Simulator

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. LANKFORD. Mr. Speaker, the Erco division of ACF Industries, which is located in my district, recently was awarded a contract to develop a flight simulator for the Boeing KC–135 jet tanker. Like most projects involving the national defense, this assignment called for Erco to deliver the first unit as soon as possible so that the Strategic Air Command could obtain maximum benefit from the training device before the arrival of regular production versions of the KC–135. Erco designed, built, and delivered the first unit in record time and to the company and the men and women who make up its family of employees we extend sincere appreciation for another outstanding contribution to the Nation's defense effort.

Details of how Erco speeded up this program to set a new record for fast development are contained in the following interesting and well-written article by Claude O. Witze which appeared in the May 27, 1957, issue of Aviation Week magazine:

ERCO DEVELOPS KC–135 FLIGHT SIMULATOR

RIVERDALE, MD.—Flight simulator for the Boeing KC–135 jet tanker was delivered to the Air Force before the first aircraft was ready for operation, officials of Erco Division, ACF Industries, reported last week.

The Erco-designed simulator is the first of 11 units now on order. It already is in use at Castle AFB, Calif., where the Strategic Air Command established its first operational wing of Boeing B–52 long-range jet bombers. Cost of the prototype is about $1.8 million, but average cost of the 11 simulators on order will run less than $500,000 each.

Erco spokesmen say they set a new record for fast development, and delivery of the first unit, making it possible for SAC to obtain maximum benefit from the training device before the arrival of regular production versions of the KC–135.

The simulator incorporates latest configuration and performance characteristics of the jet tanker.

Program was speeded by these steps:

Erco and Boeing exchanged engineering representatives to insure earliest possible transmission of accurate data, keeping the simulator up-to-date with engineering changes.

Monthly progress meetings were held during development of the simulator. In addition to Boeing and Erco, the meetings included representatives of the KC–135 Weapon System Project Office, Wright Air Development Equipment Laboratory, Ogden Air Materiel Area and SAC.

Once the project was heavily underway Erco started a three-shift operation to speed construction. Test engineering worked two shifts daily on calibration of the equipment. Maintenance and incorporation of engineering changes was done on the third shift.

USAF acceptance test time was cut from 5 weeks to 2 weeks. Boeing, SAC and WADC provided personnel to speed this part of the program.

The KC–135 simulator is one of the largest and most complicated training devices ever built. It has seats for two pilots with all controls and instruments duplicated as they are in the actual aircraft.

In addition to simulating ordinary flight regimes, is is capable of reproducing the changes in weight, flying characteristics and trim that take place during transfer of fuel from the tanker to bombers or fighters at high altitude. This makes it possible to practice actual refueling missions.

The manufacturer claims that the KC–135 simulator is the most complete training device ever built and that the specifications are the most rigid ever imposed on a designer. The machine is an analog computer, complete with radio, autopliot, and refueling factors in addition to regular flight controls.

Civil Rights Act of 1957

SPEECH
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6127) to provide means of further securing and protecting the civil rights of persons within the jurisdiction of the United States.

Mr. HOFFMAN. Mr. Chairman, I rise in support of the amendment.

(Mr. HOFFMAN asked and was given permission to revise and extend his remarks.)

Mr. HOFFMAN. Mr. Chairman, if our purpose is to protect the right to vote, just why do we limit that right, that protection to the case of one who is deprived of his right to vote, because of just those four reasons?

Mr. McCULLOCH. Mr. Chairman, will the gentleman yield?

Mr. HOFFMAN. I would be very, very glad to yield to the gentleman.

Mr. McCULLOCH. If the gentleman wishes to know my reason why it was limited, I would be glad to give it.

Section 4 of article I of the Constitution of the United States provides:

> The times, places, and manner of holding elections for Senators and Representatives, shall be prescribed in each State by the legislature thereof; but the Congress may at any time by law make or alter such regulations, except as to the places of choosing Senators.

Notwithstanding that section, I am of the opinion that there is some possibility that if this right to investigate on the part of the Federal Government is not limted at least to some of the words in section 1 of article XV of the Constitution, that the bill, if it becomes law, might be unconstitutional.

Mr. HOFFMAN. Now, do you get that? Did you ever hear anything like that? I respect the gentleman's ability. Do not misunderstand me. He and I are

warm personal friends. But, boy oh boy—think of it. The only right of the Congress to protect the right to vote must be based on 1 of those 4 reasons.

Mr. McCULLOCH. If the gentleman will yield further, for just a moment?

Mr. HOFFMAN. Surely; and I hope the gentleman asks for time so that we can continue this discussion, because I know I cannot get any more time.

Mr. McCULLOCH. I shall be very happy to try to get some time.

Mr. HOFFMAN. I am asking these things in good faith. Some of the distinguished Members here want to know about this.

Mr. McCULLOCH. Section 1 of article XV of the Constitution provides——

Mr. HOFFMAN. We all know about that.

Mr. McCULLOCH. But I would like to read it for the RECORD, if the gentleman would yield. I quote:

> The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color, or previous condition of servitude.

Mr. HOFFMAN. I would be willing to take a chance with the Supreme Court. They go along with a great deal of social legislation.

Mr. McCULLOCH. I end the quotation there.

Section 2 then says:

> Congress shall have power to enforce this article by appropriate legislation.

So I repeat, that unless they were limited to voting for Representatives or United States Senators there is a possibility the law would be unconstitutional.

Mr. HOFFMAN. The Congress has no right to protect your right to vote except for 1 of those 4 reasons? Now, do you swallow that?

Mr. JOHANSEN. Mr. Chairman, will the gentleman yield?

Mr. HOFFMAN. I yield to the gentleman from Michigan.

Mr. JOHANSEN. May I ask the gentleman from Ohio, if the restrictions are for the purpose he indicated, to keep it constitutional, how did "religion" get in there?

Mr. McCULLOCH. I would also like to answer that question, and I will answer it with the frankness with which I have tried to answer the other question. I am glad to advise the gentleman that in the Judiciary Committee I proposed to strike the word "religion."

Mr. HOFFMAN. But it is not in the Constitution, the part the gentleman read. You put that one in.

Mr. McCULLOCH. Let me finish answering the gentleman's question because it is so important.

Mr. HOFFMAN. I cannot; I am sorry. But you see what it amounts to. They hold it down to the words of the Constitution because they thought they could not put anything in that was not in the Constitution. They did not dare add protection where the right to vote was denied for any other reason than one of the four given—and protection of the right to vote for any official other than those named because it was thought that it would be unconstitutional.

If my understanding of the argument of the gentleman from Ohio, and other members of the committee who oppose any amendment which would provide "means of further securing and protecting the civil rights or investigating allegations that citizens were deprived of their right to vote for any reason other than because of color, race, religion, or national origin" is correct, it is that such amendments would broaden the bill, and that our right to investigate and bring charges that the right to vote was denied must be limited by the words of the Constitution.

The gentleman from Ohio [Mr. McCULLOCH] read the 15th amendment in support of his argument, but, read again the 15th amendment:

> The right of citizens of the United States to vote shall not be denied or abridged by the United States or by and State on account of race, color, or previous condition of servitude.

And please note that it especially states that the right to vote shall not be denied or abridged on account of race, color, or previous condition of servitude. If the gentleman's argument and the argument of the committee is sound, where, then, did it—or does it—get authority to add the two additional reasons: Religion or natural origin. The argument made against this amendment falls flat. The committee itself added for investigation, and, if justified, subsequent action, both religion and natural origin, neither of which is found in the 15th amendment as just quoted, and read by the gentleman from Ohio.

In the opinion of many, whatever may have been the purpose in the drafting of this bill, it is, on its face, just an attempt to create another snooping agency, through the operation of which a bid is made for the political support of minority racial groups.

Other than the hearsay statement of the Attorney General that there has been some complaint about the right to vote being hindered or restricted because of religion, there appears to be not a single word of testimony in the record that anyone's right to vote has been restricted or any attempt made to restrict that right because of religion.

We hear a great deal about lobbying, but, in effect, here's a bill through which the Congress itself is lobbying for the vote of, let us say, one minority group.

Civil Rights Act of 1957

SPEECH

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6127) to provide means of further securing and protecting the civil rights of persons within the jurisdiction of the United States.

Mr. CELLER. Mr. Chairman, I want to confirm what the gentleman from New York [Mr. KEATING] has stated. We had many more provisions in this bill, many more powers that could be exercised by the Commission, but we cut them down almost to the bone, to the principles that are outlined in the bill before you.

I will say to the gentleman from Michigan [Mr. HOFFMAN] that the Executive has the right to investigate. He is the gentleman's President; he is my President. I do not always agree with him, but I think he has a perfect right to set up a Commission.

This section that is sought to be eliminated provides for the study and collection of information concerning legal developments constituting a denial of equal protection of the laws under the Constitution. That is a very important provision and if we take that provision out we would be hampering to a very marked degree the work of the Commission.

I would say this. We cannot have too many entities focusing the pitiless light of publicity on wrongs envisaged by this subsection (2). Some of them are dreadful wrongs and they must be righted and information concerning them must be spread all over the Nation so that the public consciousness might be aroused to these wrongs.

For that reason I do hope the amendment will be voted down.

Sugar Quota Rise Does Not Help Eastern Price Situation

EXTENSION OF REMARKS

OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. SHEEHAN. Mr. Speaker, last year the Agricultural Committee heard testimony on proposed legislation amending and extending the Sugar Act of 1948, and the industrial users of sugar testified before the committee.

The testimony of Mr. Gordon Picket Peyton, representing 12 different associations of industrial users of sugar, pointed out the fallacy of attempting to provide for an uneconomic distribution of sugar from its normal marketing area. The testimony presented to the Agricultural Committee bearing on this particular phase was as follows:

> An increase in the production of sugar beets would involve a marketing problem beyond the normal marketing area for beet sugar, thereby making such production and distribution even more uneconomic, with consequent price increases necessary. The movement of beet sugar toward the Northeast would involve allowances for transportation costs which would in turn increase the price at which this area would normally get cane sugar.
>
> We therefore oppose a further bolstering of the world market at the expense of our Government and our domestic consumers of sugar. It is not in the interest of the American public to encourage curtailment of sugar production where it can be the most economically produced while fostering through subsidies unnecessary production in the continental United States.

The correctness and the wisdom of this testimony is now borne out by the situation as it exists today. In the June 14, 1957, Journal of Commerce, Mr. Charles F. McCarthy wrote an article in which he stated that the fact that the quota rise of 100,000 tons of sugar has had no particular influence in the domestic sugar market. His article vividly points out the correctness of the testimony on this point given by the industrial sugar users. Mr. McCarthy's article is as follows:

(By Charles F. McCarthy)

The overnight sugar-quota rise of 100,000 tons to 9,100,000 short tons, raw value, had no particular influence in the domestic sugar market.

To begin with the earlier 9 million tons is more than the market will have need for this year. Why the rise?

At best, it was an effort on the part of the administrators to give substance to recent stronger language that they intended to spike a rise in the price of refined sugar in the East.

Under the old Sugar Act strong assertions that thus and so would be done were not necessary. It was only necessary to increase quotas and the market responded. Not so under the new Sugar Act.

The new Sugar Act which became effective last year is beginning to show up its weaknesses. The revised act was written to give the domestic beet-sugar industry more participation in consumption.

But apparently the beet-sugar industry is not big enough yet to fill the larger allotments. The areas that have the sugar, such as Cuba, can't market it here because of the quota restrictions.

SUPPLY UNBALANCED

The result has been a glaring dislocation in supply. In the East where the refiners rely on offshore imports for the bulk of their supplies, a tight situation prevails. In the West the beet-sugar industry with big paper quotas has not produced the supply or matured sufficiently in merchandising and marketing presumably to sell beyond their regular boundaries the additional supplies that have been grown.

In consequence the gap is widening between the beet- and cane-refined-sugar prices. Beet sugar, because of concentrated competition of a larger supply, is selling at 8.65 cents. Cane refined in the East is 9.10 cents.

NORMAL SPREAD

Traditionally, 20 points has been regarded as a normal spread. During the war years when sugar was tight the beet industry convinced the Government that the spread should only be 10 points.

The revised Sugar Act appears to have stripped the head of the Sugar Branch of USDA of his power. He is a jockey without a horse, one observer said.

Under the old Sugar Act if he raised the quota 100,000 tons, Cuba would supply 96,000 tons of the increase.

Under the present act Cuba will supply less than 30,000 tons. Puerto Rico gets approximately half as much. But there's the rub. As recently as May 24 the Sugar Branch had to reallocate 150,000 tons of Puerto Rican sugar because of an indicated deficit. Yet Puerto Rico gets 13,000 tons under the 100,000-ton increase, the beets 22,000 tons. There's 35,000 tons of paper, or ineffective quota in the 100,000-ton increase designed to check a rise in prices in the East.

RECENT SPEED CITED

Presumably it was only modesty and distance from the market that compelled the head of the sugar section to raise the quota only 100,000 tons when obviously considerably more was needed to bring out the required sugar. The sugar official had touched on the future of the market in a recent speech when he said:

"Possibly some of you already know the climax and ending of this year's sugar story; certainly I do not. In seeking light on the problems, I have observed that many who are in a position to know most about the market are most modest as to their ability to forecast. In fact, I might add that the confidence individuals exhibit in their own analyses and forecasts of this year's developments appear to be about proportional to their distance from the market."

The Future of Our Armed Forces: Unification or Reorganization

---

EXTENSION OF REMARKS

OF

HON. STEWART L. UDALL

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. UDALL. Mr. Speaker, during our debate a few days ago on the Defense Department appropriation bill there was considerable discussion of the need for significant new steps in unification of our Armed Forces. Indeed, the report which was filed by the Appropriations Committee contained a finding that interservice rivalry is "expensive and undesirable" and "is getting completely out of control."

The gentleman from Texas [Mr. MAHON], the chairman of this vital subcommittee, bluntly stated his opinion that defense costs will continue to mount rapidly unless new steps are taken to bring about more unified planning and procurement by the Defense Department.

It seems to me that some of our colleagues have misconstrued the arguments made by those of us who favor more unification. These gentlemen apparently hold the view that any further unification must of necessity result in one service, one uniform, and a single, Chief of Staff. Their arguments are confused by the basic assumption that no further unification is possible without a thoroughgoing merger of the services—a move not contemplated by the advocates of greater unification.

Perhaps our discussion of this issue would be clarified if we discussed it in terms of a reorganization rather than unification. Certainly closer coordination in planning, and better teamwork among the three services can be accomplished without a complete revision of the existing defense framework. I am convinced that the staggering cost of our military establishment will, in a short time, make such steps mandatory; and I further believe that this purpose can be achieved without completely unifying the armed services.

A most interesting article which presents this point of view appeared a few days ago in the Christian Science Monitor, under the byline of Mr. Robert R. Brunn, the assistant American news editor of that publication, as part of a series entitled "Arms in the Atomic Age." I commend Mr. Brunn's article to those who are interested in this vital problem:

Standing next to Brig. Gen. Robert W. Stillman as the cadets march, blue rank after rank, to dinner at the new Air Force Academy, one senses tradition in the making.

They already have their special academy vocabulary: "Sir, the soup is on the ramp." "Taxi over here, Mister." "Blast off." And their mascot, a falcon named "Mach." And a football team quietly beginning to dream of thumping Army and Navy.

All this is in the best American military academy tradition. Certainly the Air Force Academy at Lowrie Field has Army and Navy instructors, and joint command and interservice cooperation are taught. But it remains that General Stillman is a Commandant of Cadets doing his superb best to make officers for a separate Air Force.

For this is the Air Force Academy's reason for being. Even now bulldozers are scraping away on a breathtaking site for permanent Academy buildings pushed up against the Rockies south of Denver.

Yet less than 10 years ago the Air Force was part of the Army. And it can be argued that its separation in 1948 was an anachronism—was indeed 20 years too late. For by the time the Air Force was given its own organizational setup the distinction between ground and air strategy was becoming obsolete. Rather than divide Air Force and Army, it could be argued that in 1948 the two should have been mixed more thoroughly.

Careful students of the services still argue that it is not too late to merge the Army and Air Force, but that to include the Navy would be unrealistic because of its entrenched position. But they would make the Navy part of a unification that would give a top Chief and his staff, plus the Secretary of Defense, line-of-command power to run all three services as an overall unit.

Here are some of the arguments for unification of the services, probably short of an all-one-uniform merger:

In the costly maze upon maze of the three-service organization there are overlapping functions, duplication of effort of almost every kind, differing standards, competitive procurement. In the $37 billion in this year's military budget there must be many millions of dollars that could be saved by an efficient reorganization.

The present system tends to build rigidity. Each service is afraid that any revolutionary and necessary change in military doctrine will mean a cut in its appropriations. So they all resist change, hang onto outmoded weapons, allow archaic ways of fighting wars to continue. Empires are being built, a tendency which unification wouldn't end but its proliferation might end.

A good argument can be made that money is often spent 2 or 3 times to develop essentially the same weapons. Unification could centralize research and development and get more for the research dollar. Industry cuts the metal, no matter who orders it. And industry does much of the research.

This argument has its weakness, for in today's race for the long-range missiles it has been seen that more progress was probably made by having all three services take different avenues. When needed, however, the multiple approach could be used under unification.

Civilian defense secretaries can do little to forward an overall strategic concept in step with the times. They are in office only a short while, and due to inexperience become spokesmen for the professional military. Unification would cut short this process of bargaining and debate at a point of fast decision.

Locomotion by foot, ship, and plane no longer is the intelligent division on which to make up the Armed Forces. All three arms

have missiles. All three have airplanes. Airpower is as much needed by the Army as the Navy. All three now have total nuclear weapons. If things continue as they are, in 10 years the Army and Air Force will have large areas of completely overlapping action. Isn't all this an argument for unification under some fresh approach?

Perfected teamwork between all three services is the key to success in modern war. There is no such thing as a separate land, sea, or air war. Shouldn't a single department oversee it as a matter of national survival?

Well, what kind of reorganization should there be apart from the principle that there should be one powerful, responsible command topping it all?

As all three services are moving toward utter duplication if things are kept as they are, the solution could be based on new functions for the basic service divisions. Instead of land, sea, and air, most experts talk about division between strategic and tactical functions.

Strategic? These forces are global in their concept, forcing overall decisions in the grand sweep of war.

Tactical? These forces are smaller in their impact and operation, their action being confined to localities.

For example, the Navy is a classical instrument for tactical or confined operations, such as showing the flag in the Mediterranean, shelling the coast of Korea, providing seaborne airfields for support of land operations.

On the other hand, the Strategic Air Command by its very name indicates its strategic function. It is to hold the global balance of power, to deter total war, and if necessary to engage in an intercontinental exchange of bombing blows.

The Army, Navy, and Air Force under this kind of functional unification would continue to be administrative and training units, running the air-sea-land divisions of two larger commands. Then a tactical force and a strategic force, each made up of men from all three services, would be the fighting organizations.

Tactical-limited war (or police actions) would be fought by this tactical force under an Army or Navy commander. This force would be trained and indoctrinated with that type of war in mind. With ships, planes, jeeps, missiles, guns, soldiers, sailors, and airmen, it would be a sort of permanent joint command of the kind that almost immediately evolves in most modern wars.

Total war would be fought by the strategic force, probably under an Air Force commander. It would include the Strategic Air Command, trained for intercontinental bombing; the Continental Air Defense Command, including Army, Navy, and Air Force units; those Army units needed to defend overseas basis; and naval task forces sending out long-range H-bomb-dropping planes and having ships and submarines armed with ballistic missiles.

Little doubt a reorganization partaking of these ideas will take place.

Right now arbitrary solutions to the unfunctional melee are being imposed from above—such as the absurd ruling that the Army can use missiles of only up to 200 miles and from there the Air Force must take over. Such out-of-hand solutions are only a patchwork papering over of deep malfunctions in the military setup.

Today public opinion, as always in the long run, determines the roles and missions of the Army, Navy, and Air Force. And each service has its powerful citizen propaganda lobby organization keeping on the pressure to defend its rights.

But the rights of the Nation as a whole will slowly take hold, perhaps under pressure from the fantastic costs of the defense effort today.

Ex-General Eisenhower has the power now to name a national task force of the best military and political thinkers to recommend changes. And Congress will listen to the President and the people speak.

Civil Rights Act of 1957

SPEECH
OF

CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6127) to provide means of further securing and protecting the civil rights of persons within the jurisdiction of the United States.

Mr. HOFFMAN. Mr. Chairman, earlier today the gentleman from Florida [Mr. SIKES] referred to breakfasts at the White House. The precedent for presidential entertainment of the party faithful was set long ago.

We recall that when President Roosevelt was in the White House he had breakfasts and social gatherings on some of the islands in the bay. Members who were Democrats were transported—their transportation paid both ways. Someone in contact with the White House ought to advise the President that it would be just as well to take a little longer trip and have a little more enjoyable time by going over Saturday and Sunday—that is if he wishes to follow precedent.

As to certain statements that have been made to the effect that amendments were offered only by Members who intended to vote against the bill, Members who wished to weaken the bill—my vote will be against this bill—but that is not the reason for offering this amendment.

The alleged purpose of this bill is to protect the right to vote, although it is entitled a bill "to provide means of further securing and protecting the civil rights of persons within the jurisdiction of the United States." No other civil right, though citizens possess many, is mentioned in the bill.

If additional, and what is considered by many to be unnecessary, legislation is to be enacted—legislation creating a new Federal agency at an unestimated cost—it is obvious that voting is futile unless the votes are fairly and accurately counted.

That the right to have one's vote counted is a civil right, and the protection of which falls within the jurisdiction of the Congress is evident, as shown by the decision of the United States Supreme Court in United States against Classic.

That case, which was argued in April, decided in May, of 1941, according to Justice Stone, who wrote the opinion of the Court, involved the charge that commissioners of elections, conducting a primary election, had "willfully altered and falsely counted and certified the ballots of voters cast in the primary election"—Justice Stone said that "the questions for decision are whether the right of qualified voters to vote in the Louisiana primary and to have their ballots counted is a right secured by the Constitution" and whether the acts charged violated sections 19 and 20 of the Criminal Code.

After referring to article 1, section 2, of the Constitution, which established the House of Representatives, and to section 4 of the same article, which granted the States the right to fix the time, places, and manner of holding elections for Senators and Representatives, and which authorized the Congress to make or alter such regulations except as to place of choosing—among other things, the Court wrote, 313th United States Reports, page 314:

> The right of qualified voters to vote at the congressional primary in Louisiana and to have their ballots counted is thus the right to participate in that choice.

And over on the next page the Supreme Court said this:

> Obviously included within the right to choose, secured by the Constitution, is the right of qualified voters within a State to cast their ballots and have them counted.

The purpose of this amendment is to give adequate protection to the citizens to have their vote, when cast, fairly and accurately counted.

What is the use of bringing in a bill saying one may vote if the vote is not counted?

Some of us recall that not so long ago down in Missouri—you remember there were quite a number of votes cast and it was alleged there was a conspiracy to suppress the true result of the election there and it was charged that the vote was fraudulently counted. When President Truman went down to see about it—perhaps more accurately, when he was in that vicinity at that time do you remember what happened to the ballots? He did not have anything to do with what happened. Notwithstanding the nearby presence of the President of the United States, someone broke into the courthouse and stole the votes and nothing ever come of the criminal charge. If we are trying to give to citizens the right to vote should we not do what the Supreme Court says here, see to it that the votes are fairly counted?

Mr. ROOSEVELT. Mr. Chairman, will the gentleman yield?

Mr. HOFFMAN. I yield for a correction.

Mr. ROOSEVELT. I want to make a correction. In the circumstance the gentleman refers to, I was responsible for arranging that.

Mr. HOFFMAN. You mean those visits?

Mr. ROOSEVELT. Yes.

Mr. HOFFMAN. Well, the gentleman can put that in the RECORD.

Mr. ROOSEVELT. They were paid for by the Democratic National Committee that paid those expenses each time.

Mr. HOFFMAN. Both going out and coming back? If I have misstated the matter of expense the RECORD may stand corrected, that is as to who picked up the

check. My information is that a Government vessel manned by Government officers was used.

Mr. CRAMER. Mr. Chairman, will the gentleman yield?

Mr. HOFFMAN. I yield to the gentleman from Florida.

Mr. CRAMER. The gentleman made a reference with regard to discrimination by the President.

Mr. HOFFMAN. That was a sort of pleasantry.

Mr. CRAMER. I would like to comment on that.

Mr. HOFFMAN. If it is important, I yield to the gentleman.

Mr. CRAMER. The gentleman from Michigan referred to the remarks by the gentleman from Florida [Mr. SIKES] in which Mr. SIKES suggested that the President was practicing political discrimination by inviting members of his own Republican Party to break bread with him and objected to this practice. Apparently what he considers discrimination in Washington would not be considered the same when applied to Florida. I have been a Member of the Florida congressional delegation for nearly 3 years and I have never received an invitation to break bread with our Democrat Governor at the State mansion. Of course, even Mr. SIKES does not suggest that the President fails to consult the ranking Democrat Members on matters of national concern but Florida's Governor discriminates even here because even as the ranking Republican Member of the Florida delegation I have never been invited to break bread with the Governor of my State.

Mr. HOFFMAN. Is the gentleman feeling badly because the Governor of Florida did not invite him?

Mr. CRAMER. Not necessarily, but I am the ranking Republican Member from Florida and I have never been invited under any circumstances.

Mr. HOFFMAN. Mr. Chairman, this amendment is offered in good faith and all seriousness. Look at it. If you want the votes counted, vote for it. If you do not care, let it go.

A vote for it will be at least a pious indication of good faith.

Award for Pan American

EXTENSION OF REMARKS

OF

HON. ALBERT P. MORANO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. MORANO. Mr. Speaker, it was with a great deal of pride and pleasure that I learned about the 1956 National Safety Council aviation safety award being won by Pan American Airways which flew 5,502,560,000 miles without a fatality to a single crew member or passenger.

While everyone in this Nation enjoys a share of the perfect safety record of this airline which circles the globe, we in the town of Greenwich are especially pleased, for it is my hometown which serves as the year-round residence of two of Pan American's top officials, Mr. Juan Trippe, the president, and Samuel F. Pryor, Jr., vice president, both personal friends of mine.

These two outstanding figures in the field of aviation are largely responsible for the excellent public service of the airline, its important contributions to our national security by maintaining air service and airdromes in the farflung corners of the atlas, and all the while maintaining an unblemished record of safety.

Pan American can well boast as its motto "Safety First and First in Safety."

The Washington Daily News took note of "Pan Am's" modesty in an editorial yesterday June 13. I wish to call to the attention of my colleagues the following editorial:

PERFECT IS PERFECT

Orchids today to Pan American World Airways, which got out a modest three-paragraph handout yesterday announcing that it had won the National Safety Council's 1956 award for flying 5,502,560,000 miles during the year without a single passenger or crew fatality.

We congratulate Pan Am for the shortness of its announcement, and the fantastic length of its safe air time.

Five and a half billion miles is pretty nearly 60 trips from the earth to the sun. Even hoofing it that far you're likely at least to stub your toe. The airline did it at two-hundred- to three-hundred-odd miles an hour through fair weather and foul and nary a bruise. You can't do better than perfect. Saludos, Pan Am.

American Know-How Knows How

EXTENSION OF REMARKS

OF

HON. JOHN J. McFALL

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. McFALL. Mr. Speaker, under leave to extend my remarks, I include the following, relative to the Tri-Valley Packing Association of California. Organized in 1932, the Tri-Valley Packing Association this month celebrates its 25th anniversary as one the biggest grower-canner organizations in the State of California.

AMERICAN KNOW-HOW KNOWS HOW

This is a story, a familiar story of progressive and dynamic American enterprise.

This is the story of industry born in the economic darkness of a ruinous depression of 25 years ago.

This is the story of the Tri-Valley Packing Association of California; but, it is also the same story reflected time and again in the annals of our Nation's economy when hopeful, ambitious, purposeful men defy untold obstacles to prove that American know-how is more, much more, than just an oft-used expression.

1932 was a historic year for California's canning industry and specifically for that State's great San Joaquin Valley. Shortly before this time, the United States Supreme Court compelled the Nation's large meat packers to discontinue the marketing of processed fruits and vegetables by upholding the packer's consent decree; thereby, in one stroke, wiping out the California cooperative canneries, which for 13 years had used one of the meat-packing firms for distribution of its canned foods.

With the collapse of the Association, its grower members were left without an outlet for their farm products at a time when black depression was upon the land and both business and industry were struggling for survival.

Grimly, a group of 89 growers, spurred by the leadership of George N. Pfarr, of Modesto, Calif., set about to salvage its economic future, banded themselves together in a new association which they called Tri-Valley after the State's three greatest food-producing areas—the San Joaquin, Sacramento, and Santa Clara Valleys—and began operations.

They had little besides produce to work with—no money in the bank, only limited credit, a single carload of sugar and enough cans on hand for only a few days packing.

They did, however, have an abundant quantity of hope and determination. The "depression" baby survived its first year.

It was not an impressive beginning. The initial pack consisted of only 5,300 tons of fruit—all yellow cling peaches—which produced 248,000 cases. But it was a start, and by season's end, all bills and employees had been paid. The growers had received the first installment of a return that eventually mounted to a figure of 57 percent above the current market price.

The second year marked a bigger advance. Production more than doubled to 546,000 cases and included eight different food products.

Each year since 1932, Tri-Valley has shown growth—both in quantity and in the variety of fruits and vegetables packed. By 1956, the total pack was more than 4 million cases, representing approximately 100,000 tons of 30 different kinds of fruits and vegetables from the lush valleys of California.

This year, according to a prediction by General Manager Philip N. Mark, Tri-Valley will pack an estimated 5 million cases of food, representing a 15 percent increase over last season's record.

Today, 25 years later, the Tri-Valley Packing Association of California maintains three large modern food-processing plants—in Modesto, Stockton and San Jose, Calif.

Out of the original 89, 12 growers are still supplying products to Tri-Valley. Tri-Valley honors these growers: W. F. Beard, Frank Goodwin, I. W. Hardie, G. O. Hollingsworth, George Kounias, Joe Vieria, and George N. Pfarr, all of Modesto, Calif. Also, F. H. Caulkins and E. J. Caulkins, of Ceres, Calif.; H. A. Codoni, Empire, Calif.; A. W. Oberg and C. E. Oberg, of Hughson, Calif.

The president of Tri-Valley is Edgar Jackson, of Saratoga, Calif. The directors include Franklin Beard and Alfred Terry, of Modesto, Calif.; John M. Doherty, Acampo, Calif.; and George A. Johnson, Patterson, Calif.

Twenty-five years later, Tri-Valley Packing Association celebrates its silver anniversary as one of the biggest independent grower-canner organizations in the State of California.

The Hungarian Plight

EXTENSION OF REMARKS
OF
HON. ALBERT W. CRETELLA
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. CRETELLA. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I take this opportunity of submitting a letter from Joseph J. Hubert, secretary of the Hungarian Community Club of Wallingford, to me.

I believe it speaks most eloquently of the plight of the Hungarians and certainly is a very truthful statement of events with which we concerned ourselves very enthusiastically not too many months ago, and I trust that action will be taken by this Congress in the very near future to pass some legislation which will eventually remove those noble and dedicated patriots whom we lovingly refer to as freedom fighters, from the roles of parolees and give them a permanent status.

We should certainly open our gates to many more who are stranded in foreign countries and like their predecessors, who were permitted to come to this country, we should likewise welcome the remainder:

HUNGARIAN COMMUNITY CLUB,
Wallingford, Conn., June 10, 1957.

Hon. ALBERT W. CRETELLA,
The United States Capitol,
Washington, D. C.:

"Budapest is no longer merely the name of a city; henceforth it is a new and shining symbol of man's yearning to be free." So President Eisenhower called it, and so it remains. Budapest is the symbol that freedom, no matter how cruelly slain or deeply buried, will rise again.

But in the languorous air of a belated spring, amid talk of baseball and trout fishing, it is easy to forget almost anything, particularly a painful thing. Few things are more painful to freemen than the memory of Budapest, where men who were willing to die for freedom were allowed to go unaided to their doom.

It is painful because their blood watered the tree of our liberties, because we can never fully repay this sacrifice, the martyrdom of a whole nation, a whole people. "If we cannot repay it," we were saying a few months ago, "at least we will never forget." On the hills of Budapest this spring the mass graves are still raw wounds, not yet green with grass. The boots of the conqueror still thud above them, and traitors defile the lands the martyrs briefly liberated. Yet the world shows signs of forgetting them already.

Only a few months ago the halls of the U. N. were ringing with the horror and anger of an aroused mankind. With a unanimity seldom achieved on anything before, this organized conscience of the world cried for an end to the infamy, ordered an investigation on the scene, demanded Soviet withdrawal, called for free elections in Hungary. None of this took place. All of it has been ignored. The anger has subsided. Nothing is being planned, nothing is being done.

Many Americans blame the United Nations for this inaction. But Americans will not have the right to blame the U. N. until they do everything in their own power to help the Hungarians. A few months ago, when a nationwide surge of sympathy went out to the refugees, President Eisenhower responded to it.

He punched enough escape holes in the McCarran-Walter Act's redtape to bring 32,000 Hungarians here by plane load and shipload—26,000 of them outside the legal quotas. Authorizing their entry as temporary parolees, he promised measures to give them regular status later—sure that he spoke the Nation's will. So far Congress has failed to fulfill that promise. Moreover, although 38,000 stranded Hungarian refugees are still languishing in Austria and 16,000 more in Yugoslavia, in mounting hopelessness and desperation, the pressure grows to Congress to halt the movement entirely. Thus there is an attempt to sweep the bitter memory of Hungary beneath the rug and to have the United States abandon the strongest weapon it has—short of real weapons—to help all those who are willing to fight for liberation: The promise of safe haven.

Here, then, is the immediate job Americans must do: These Hungarians must not be abandoned, we must stop this shabby betrayal of the brave people who dealt communism a most grievous wound, our immigration laws must help liberation struggles instead of hindering them. When we have done this, and only then, can we demand that the U. N. do more. Our hands will then be clean to lead the U. N. in the things which ought at least to be attempted—to expel the Kadar delegates for contempt, to bring sanctions against the Soviets, to set up a U. N. police force ready to act in new emergencies.

Sincerely yours,
HUNGARIAN COMMUNITY CLUB.
JOSEPH J. HUBERT, *Secretary.*

Tribute to Flag Day

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to pay tribute to our flag on this commemorative day.

Our American patriotism is too often, I fear, pulled out and displayed on the appropriate days, and it should be lived, not just thought and verbalized upon. We too often tend to forget the meanings and the history of the symbols of our priceless heritage, and our own American flag is the highest ranking such symbol of this great country.

We have all studied, at one time or another and in different schools, her history. We all learned the same facts and probably still remember the rudiments, but some things, grasped with a youthful mind, should be reviewed in maturity for rarest appreciation.

Old Glory has been the subject of plays, books, essays, songs, and poetry, and I am sure that each of us has a favorite. Each of us, I am equally certain, has wished for the eloquence to compose some stirring masterpiece to express our own feelings; at least I have, but since I do not possess this eloquence, I would like to use the words of an unknown writer, who will forgive my borrowing his words, I am sure, since I have enjoyed them so many times:

THE VOICE OF THE FLAG

If yonder flag, hanging in graceful folds, could find expression, it might say to the world, "I had my birth in Philadelphia; my stripes of red and white and field of blue and 13 stars were first kissed by Pennsylvania sunlight. I was the first to reach the top of your tower on Independence Hall; I was the first to point out from whence came the music of your Liberty Bell; I led the vanguard of the Continental Army from Valley Forge to Yorktown; I festooned the capitals of every State until, instead of 13, I displayed 8 and 40 stars; I first blushed in protest against slavery in my native Keystone State; the lilies of France once floating over Fort Duquesne were lowered to the lion of St. George floating over Fort Pitt, but both gave way to me when the wind from the free Alleghenies unfurled my colors above the water of the Ohio, at the town of Pitts; I led your conquering armies from Vera Cruz to the city of Mexico; I was trailed in the dust, but rose again to feel the loyal grasp of Lincoln and Grant, and to give inspiration to the millions of men and women who loved the country and the cause for which I stood, and today I float in peace and in glory over every capital in this broad land, and I stand for liberty, for the noblest ambitions of humanity, and for peace through the world and for the dignity and honor and protection of all who love liberty and equality, and who claim the sheltering protection which I have always given."

Charging Cost of Private Utility Propaganda as Operating Expense Improper, Says Federal Power Commission

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. EVINS. Mr. Speaker, none who reads anything more grown-up than comic books can be ignorant of the great multi-million-dollar compaign of advertising propaganda conducted by the private power monopolies against public powers projects both national and local. It has been customary for these companies to charge off the cost of these campaigns as part of operating expense. In this way the full cost has been transferred to the customers and consumers of the private power monopolies who are thus paying for campaigns designed to keep their own rates high. Furthermore, this device results in a considerable loss in income tax to the United States Treasury and this in turn means that the taxpayers of the Nation are in effect, paying about half the cost of propaganda against public power projects which serve the public interest. Recently this practice has received considerable attention from various committees of the Congress including the Subcommittee on Public

Works and Resources of the House Government Operations Committee. The testimony from officials of the Federal Power Commission is most revealing. The June 1957 issue of Public Power magazine contains a very cogent summary of this testimony and, unanimous consent, I enter this summary in the RECORD:

PROPAGANDA EXPENSE: COMPANIES CHARGED COSTS OF BOOKLETS TO EXPENSE ACCOUNTS, FPC DISCOVERS

Two pamphlets designed to mold public opinion, published as joint enterprises by private power companies, have been charged improperly to operating expenses, the Federal Power Commission told a congressional committee last month.

FPC told the Subcommittee on Public Works and Resources of the House Government Operations Committee that inquiries had been made of the 59 utilities sponsoring the pamphlet, Turn on the Light, and of 5 companies in the Rocky Mountain area publishing the Federal Power Program, Its Background, Growth, and Consequences.

All of the companies replying indicated that costs of the publications were treated as expense items in the utilities' books, thus becoming reflected in the rate base. FPC has notified the power companies that such costs "may not be accounted for as operating expenses," and the companies "will be required in connection with future expenditures of similar nature to exclude such costs from operating expense accounts," the Chudoff subcommittee was advised.

In releasing the FPC reports, Chairman EARL CHUDOFF, Democrat, of Pensylvania, declared that the Commisison's opinion has far-reaching implications.

"It is obvious that the multi-million-dollar antipublic power campaign carried on by the electric utility industry in the past few years by television, radio, magazine, and newspaper advertising has been financed through illegal charges against millions of consumers of electricity," he said.

The Pennsylvania Congressman declared that private utilities may be liable "for millions of dollars in back taxes" if the FPC opinion as to proper accounting methods carries over into accounting for tax purposes.

"It seems that since the Federal Power Commission has held that the costs of such political propaganda cannot properly be charged as operating expenses for ratemaking purposes, it would be equally improper to accept them as proper deductions for income tax purposes," Representative CHUDOFF said.

The FPC reports were sent to the committee in response to a request for an opinion on the accounting methods employed by the utilities in connection with the publications. FPC also was asked by the committee to suggest legislation which would eliminate such expenses as charges against rate payers.

No such legislation is needed, FPC said, to prevent "such improper accounting practices in the future." The Commission pointed out that the accounting treatment of political expenditures has been interpreted both informally and in a formal proceeding before FPC (the Northwestern Electric Co. case). Such costs should be charged to account 538, miscellaneous income deductions, which is an account not ordinarily included in the cost of service for ratemaking purposes, FPC said.

With respect to the booklet on the Federal power program, FPC, said, "the subject of the booklet is to present the arguments against the construction and operation of electric power facilities by the Federal Government. In our opinion, this dispute of public power versus private power insofar as it affects the Federal Government is a matter of public policy to be determined by the Congress and is a political controversy."

Expenses in connection with the booklet are, therefore, "political expenditures and are not properly chargeable to the utilities' operating expenses as the cost of rendering electric services."

The purpose of the second pamphlet, "Turn on the Light" was to influence public opinion, FPC said, therefore expenses in connection with the pamphlet were "political expenditures and are not properly chargeable to the utilities' operating expenses."

FPC listed the private utilities which have sought rate increases, based upon "cost of service" which included the costs of the pamphlets. The Commission said that since the expenses in connection with the pamphlets were charged by the companies to operating expenses, "it may be said that they were improperly charged against the rate payers."

FPC pointed out, however, that the relationship of the cost of the two publications to the total cost of service of those utilities seeking rate increases was so small that charging the costs to operating expenses "could not have had any significant effect on rates."

Representative CHUDOFF said that representatives of FPC and of the Bureau of Internal Revenue "will be invited at an early date to discuss with the subcommittee the full extent and the implementation of the Commission's holding." He said he was "gravely concerned" about the "revelations" of the FPC report.

Very Rev. Msgr. Joseph Madden of Wilkes-Barre Honored

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of Monday, June 10, 1957, on the designation of Msgr. Joseph Madden as a domestice prelate with the title of Right Reverend Monsignor by Pope Pius XII:

LOCAL CHURCHMAN HONORED

Designation of the Very Reverend Monsignor Joseph Madden of Hanover Township as a domestic prelate with the title of right reverend monsignor by Pope Pius XII is a signal honor for the local churchman who is chancellor of the Roman Catholic Diocese of Scranton, notary, secretary of the bishop, secretary of the board of consultors and member of the building commission. He also has served as episcopal master of ceremonies, member of the faculty of the university of Scranton and chaplain of the Knights of Columbus and Catholic Daughters of America.

Still in his forties, Monsignor Madden will observe the 19th anniversary of his ordination to the priesthood tomorrow. The new papal honor that has been conferred is the second in a decade. In 1948, he was named a papal chamberlain. As a domestic prelate, he will have the title of Right Reverend Monsignor for life, as well as other prerogatives that are exercised by members of the Pope's household.

For a priest who is only approaching his prime, Monsignor Madden has gone a long way, leading naturally to pleasant speculation about the future. To enjoy the confidence of the reigning Pope and his bishop, as Monsignor Madden does, is no small compliment.

Despite the eminence he has attained, he remains the same modest and unassuming person he was as a resident of Lee Park and member of St. Aloysius parish.

This community also derives no small measure of satisfaction from the advancement of the Reverend James Lowry, JCD., vice chancellor of the diocese and a former assistant at St. Mary's Church of the Immaculate Conception, to the rank of papal chamberlain with the title of very reverend monsignor.

Civil Rights Act of 1957

SPEECH
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6127) to provide means of further securing and protecting the civil rights of persons within the jurisdiction of the United States.

Mr. HOFFMAN. Mr. Chairman, since the political issue has been injected into the debate—at least that is my understanding, permit me to stand on a plank in the Republican platform. One of the principal planks of which was that the country was in danger of inflation and we should economize.

I go along with that. And because we have regular standing committees of the House authorized and qualified to perform the duties outlined for the Commission in lines 3, 4, and 5, this amendment is offered.

The language asked to be stricken provides that the Commission shall "study and collect information concerning legal developments constituting a denial of equal protection of the laws under the Constitution."

We have a regular standing committee of the House, the Committee on the Judiciary, which has jurisdiction and authority to do everything the Commission is authorized to do. We have another committee, the Committee on Government Operations, which has jurisdiction and which has ample funds to make investigations, hold those hearings on the matters referred to in this bill. Now do we want to turn loose a new group and creat a new Federal commission, to render a like and unnecessary service. This bill also provides for an additional district attorney and of course a new staff. Is there any use, is there any sense in talking economy? And then creating a new group to spend unknown sums to duplicate the investigation and hearings now delegated to regular standing committees. Should we not go along with the President of the United States, your President, the President your leaders support 95 percent of the time—I should say on 95 percent of his measures, not 95 percent of the time—go along with him when he asks for economy, when he warns us that the danger of

inflation is right with us all the time and that we should be very very careful of the taxpayers' dollars. That when we make appropriations here they should be carefully considered by the committee? That no unnecessary authorization should be made?

This is not an appropriation; I realize that. It is an authorization, but no estimate has been made, no one has given us any idea as to the cost of the operations of this Commission which can snoop and inquire into almost every subject anywhere in the continental United States: I admit this is not an appropriation bill, but when the appropriation bill comes along Members on this floor will be told, if we object to the amount of money requested, why did we authorize the expenditure if we did not want to appropriate the money. That is a question that always confronts us.

When we have regular starting committees of the House to perform these duties to protect the taxpayers of this land—I should say citizens, rather than taxpayers—why authorize a new commission and permit that commission to have an advisory board, and the Lord Himself is the only one who knows who will be on it, advisers to the commission to go out and take testimony, call in witnesses, incur unlimited expense?

All right, I will go along with the platform—I cannot go along 100 percent, and nobody ever did go along with all the planks in a platform, but here is one that I can go along with, and if I understand the temper of the people at the present time, if I understand the statement of the President, he and they want economy. Then why do we authorize millions, nobody knows how many, why do we write a blank check for a new commission to go out and inquire into the citizens' activities and see what they are thinking and doing? We have heard plenty of complaint about the activities of those in the Revenue Service. They, going about their duties, are called snoopers. Do we want more? We will hear from home if we authorize this new unneeded duplication after they get started on their expedition.

American Aid to Poland

EXTENSION OF REMARKS

OF

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. CRETELLA. Mr. Speaker, it appears to me that the United States has little to lose and so much to gain by making loans to Poland of commodities urgently needed by the people there.

When we review our foreign aid program since 1946, in which billions in outright gifts have been made by us, some to countries of questionable alliance with the United States, who can in good faith oppose the sale of $95 million worth of our agricultural surpluses and machinery to the Polish people who have always been so closely allied to our cause of freedom and peace in the world?

The Communists are well aware of their precarious control over the Polish Government and the faltering economy of the country. I think the American loans which have been proposed will definitely foster a condition of independence of the Polish people from their Communist overseers, and in fact may constitute a reason for Moscow to remove itself from the scene of an increasingly self-sufficient nation, rather than risk further uprisings in Poland which worked against the Kremlin very harshly in the court of public opinion.

If proposed aid in the form of loans to Poland is considered a gamble in some quarters, I say it is a gamble well worth taking. Since the Poznan riots the United States has been able to do little other than to demonstrate to the brave people of Poland that we stand in strong moral support of their actions. We now have an excellent opportunity to answer their positive actions with some of our own. We should take advantage of this opportunity without further delay.

I include at this point two editorials on the subject, one from the Meriden (Conn.) Record, and another from the June 13 issue of the Christian Science Monitor:

[From the Meriden (Conn.) Record]

AMERICAN AID TO POLAND

"A gamble worth taking" is what Vice President NIXON calls a proposal for loans to Poland. Strong opposition to economic aid to Poland or any other Iron Curtain countries stems for fear that such a program eases the burden on the Soviet Union for supplying them with food and other materials. Support is on the basis of hope that the Poles and others with such encouragement, would turn away from communism. The Polish people have been displaying increasing evidence of a determination to follow a course independent of the Soviet Union, as Mr. NIXON points out. So it seems logical to give whatever encouragement is possible to foster hope for eventual freedom.

An international fair is open in Poznan. All exhibits of 30 nations participating have been drawing big crowds, but none got the attention accorded the United States pavilion where home appliances, fashions, fabrics, and automobiles are on display along with a furnished model American house. "Can people, ordinary people, actually own such things in America?" is the query heard on all sides.

While there is visual proof at hand of what scale of living is possible in our free way of life with a free economy, is a good time to boost the desire in Poland to be able to live in the same way. To be sure such a dream is for the distant future. The workers of Poznan demonstrated for "bread and liberty," thereby touching off riots only a year ago this month. Since then there has been more bread and a bit more liberty. Yet the Poles are still a far cry from the kind of freedom we know, and which "brings out the best qualities in men," so better goods are available for a better standard of living.

There are many indications that men of the Kremlin wish no serious trouble in the foreseeable future. Khrushchev's TV talk proved that, although we know even the smallest steps toward disarmament may be taken only with careful policing and open enforcement. But he talked about more open door, more trade, more visits and exchange of cultures. Even talk is a great concession because it is talk that has set up the Kremlin-made artificial ideologies fed to the people of Communist countries and people of other areas who are targets for Communist proselytism.

Concessions to the Poles and the Czechs in recent months, concessions elsewhere, are indicative of increasing awareness among Soviet leaders that their control is possessed of definite weaknesses. They may even be frightened at what might happen, not only in the bomb race, but if there should be too many riots or other revolts like the Hungarian tragedy. The Poles are essentially a freedom-loving people. All things considered, we are inclined to agree with Mr. NIXON that the administration proposal for loans to Poland is a gamble worth taking.

[From the Christian Science Monitor of June 13, 1957]

POLAND RAISING THE CURTAIN

The agreement to sell Poland $95 million worth of American goods, mostly agricultural surpluses but including some coal mining machinery, seems thus far to have evoked no more than a minimum of congressional opposition. This is encouraging and yet it may be queried how well the reasons for a degree of cooperation with the regime of Wladyslaw Gomulka are understood by Americans at large.

A natural objection arises that the Gomulka government is Communist in politics and is an ally of the Soviet Union in the Warsaw Pact. But lying under the paw of the Russian bear any government in Poland that was not Communist would last no longer than that of Imre Nagy in Hungary. And having a stake in the Oder-Neisse boundary as against Germany, the Poles will be very slow to renounce the satellite defense bloc.

Yet the regime which came into power last fall after a showdown with Moscow is definitely nationalist rather than Soviet controlled, and it represents a large degree of Polish independence. The question is whether the United States shall encourage that independence by trading with Poland in commodities which the Polish people seriously need.

The pending agreement involves no grants or gifts to Poland. It is a pledge first to lend $30 million at 4½ percent through the Export-Import Bank for purchases in the United States. Then, under existing authorizations the Commodity Credit Corporation will sell $18.9 million worth of surplus cotton, fats, and oils to be paid for in Polish zlotys. What remains tied up in the House of Representatives is a new authorization to the CCC to sell for foreign currencies, which would enable it, among other transactions, to sell $46.1 million worth of surplus wheat and cotton also for Polish zlotys.

The choice before America could be made by default as readily as by conscious intent. Essentially it is bound up in this: The Gomulko government inherited a Poland in desperate economic straits. Looted and exploited by Stalinism, the Polish people have endured years of hardship. If the present officialdom can give them a bearable existence and some economic improvement, it may last long enough for conditions to become relatively stable.

If it does not 1 of 2 prospects looms ahead. If Gomulko falls, a re-emergence of neo-Stalinists may take Poland back under the Iron Curtain of complete Soviet control. Or if a distraught people should try, almost unarmed, to drive out the satraps of Moscow, there would be bloodshed in which the Western World must stand by helplessly as it did in the case of Hungary or risk starting world war III.

In an unusual tacit alliance Roman Catholic Cardinal Wyszynski and Party Secretary Gomulko have undertaken to steer Poland through this delicate situation to a peaceful attainment of greater freedom and national dignity. Even the aid represented in the present trade agreement may not prove enough. Can the United States refuse to cooperate?

Civil Rights Act of 1957

SPEECH
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6127) to provide means of further securing and protecting the civil rights of persons within the jurisdiction of the United States.

Mr. CELLER. Mr. Chairman, I move to strike out the last word.

In connection with the so-called right of trial by jury being injected into this bill, I should like to read a statement signed by the dean of the Yale Law School, E. V. Rostow; the dean of Columbia University Law School, William C. Warren; the dean of the University of Pennsylvania Law School, Mr. Jefferson B. Fordham; the dean of Harvard Law School, Mr. Griswold. The statement is as follows:

GUILFORD, CONN., *June 9, 1957.*

IRVING FERMAN,
Bethesda, Md.:

The civil-rights bill, is in our opinion creating an erroneous impression with respect to the necessity for jury trials in contempt proceedings which may be brought by the Government to insure the effectiveness of injunctions safeguarding constitutional rights. The bill in its present form is not exceptional. Many provisions of law authorize the Federal courts to exercise their traditional power to punish willful violations of injunctions obtained by the United States Government. There is no denial of due process of law. The injunction itself can be obtained only after a full and fair hearing with a right of appeal. If the injunction is then violated, and contempt proceedings are brought, the Government must satisfy the court beyond a reasonable doubt, that the party charged, willfully disobeyed the court's orders. While we fully support trial by jury in its proper sphere we fear that its unnecessary injection into this legislation will only hamper and delay the Department of Justice and the courts in carrying out their constitutional duty to protect voting and other rights of citizens.

E. V. ROSTOW,
Dean, Yale Law School.
WILLIAM C. WARREN,
Dean, Columbia Law School.
JEFFERSON B. FORDHAM,
Dean, University of Pennsylvania Law School.

The gentleman from New York has very wisely and properly instanced quite a number of statutes where the contemnor is punished by the court without trial by jury. I remember during the prohibition era when there were something like 42,000 padlock injunctions filed against citizens of the United States for violation of injunctions. I heard no murmurs of discontent, no opposition at that time. Those padlock injunctions were obtained without jury trials. Millions of dollars were involved in many instances. Yet the Nation stood by and felt it was proper and appropriate where there were violations of solemn decrees of the court that those who had violated the law and were contemnors who held the court in contempt, who did not give any consideration to the court's injunction, should be punished.

That is the situation here. As to the injection of trial by jury, I certainly want to protect the right of trial by jury. But this bill is not a jury-trial bill. This bill seeks to implement an old statute that goes back to 1871, which gave individuals the right not only on the legal side but on the equity side. The individual could obtain injunctions for wrongs and for deprivation of rights, but in those States where there were deprivation of rights, the one deprived was either too ignorant to assert his rights or he feared economic reprisals or he did not have the wherewithal to hire a lawyer. So that these old statutes became dead letters and there was no action taken under them.

Now, we seek to give the Attorney General the right to go into the equity side of the court for what reason? To prevent the commission of these crimes, to prevent the deprivation of these rights and jury trial has nothing to do with it whatsoever.

The Courts Have No Authority To Amend the Constitution

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. LANHAM. Mr. Speaker, with leave to extend my own remarks in the RECORD, I am including an article which appeared on the editorial page of the Saturday Evening Post of June 8, 1957, by Hamilton Long entitled "The Courts Have No Authority To Amend the Constitution." I agree wholeheartedly with what Mr. Long has to say. The assumption of power to legislate and to amend the Constitution by the Supreme Court is one of the outstanding perils to our free way of life. Unless some way is found to hold the Court in check we are doomed. The article follows:

THE COURTS HAVE NO AUTHORITY TO AMEND THE CONSTITUTION
(By Hamilton Long)

Few subjects are surrounded by more confusion than the function of the United States Supreme Court in interpreting the Constitution. There can be no doubt, however, that the Court has no right to change this basic law or to violate the intent of those who initially adopted it or of those who later amended it. Only the people can change the Constitution, by amendment.

For the Supreme Court to try to bypass this process, by interpreting the Constitution contrary to that original intent, is to usurp power never given it.

The Court's first duty is to protect the people's liberties. This includes restricting the Federal Government to the limited powers granted it by the people in the Constitution. As the then Gov. Franklin D. Roosevelt, of New York, truly stated in his States rights speech on March 2, 1930, these powers do not include authority over many vital problems of Government, such as the conduct of public utilities, of banks, of insurance, of business, of agriculture, of education, of social welfare and of a dozen other important features. In these, Washington must not be encouraged to interfere. However, in his 1936 annual message, as President, Roosevelt boasted of newly expanded Federal powers which he said, in the wrong hands, "would provide shackles for the liberties of the people."

Although the Constitution has not been amended to increase Federal powers since 1920, the Supreme Court in 1937 abandoned its policy of respecting the original intent of the Constitution—as amended—in defining them. It began to change its earlier definitions of that intent, in order to sanction the Federal Government's exercise of vastly increased powers without amendment of the Constitution. The Federal Government now exercises power in all the fields which F. D. R. in 1930 said it should not invade. Many of these increases might have been made eventually, but the proper method to make them is provided in the Constitution and should have been followed. For the Court to attempt to make them by "interpretation" is government by usurpation, the opposite of constitutionally limited government.

How to restore constitutionally limited government is a major question, especially at a time when concern for the proper limitation of Federal power seems all but nonexistent. This generation, like those which preceded it, is the custodian of the liberties of the people and the restraints on Government power which alone can protect them. When we permit judges to "interpret" these guaranties so as to make them ineffective, we help sabotage our own and posterity's liberties.

(EDITOR'S NOTE.—Mr. Long is a member of the New York bar and a student of constitutional history.)

Civil Rights Act of 1957

SPEECH
OF
CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6127) to provide means of further securing and protecting the civil rights of persons within the jurisdiction of the United States.

Mr. HOFFMAN. Mr. Chairman, the lines I seek to strike out read as follows:

Appraise the laws and policies of the Federal Government with respect to equal protection of the laws under the Constitution.

Mr. Chairman, it is all very well to promise economy. It is all very well to argue against duplication of activities. But talk is one thing and voting is another.

I regret that it is impossible to get a record vote on this amendment. It would be helpful to the people in our districts if they could learn, when the question of expenditure of Federal funds for a Commission to snoop into their political and religious thinking, their private activities was before us, who votes for the inquiry and who votes against it.

The Reorganization Act of 1946 expressly confers full power upon the Committee on Government Operations to do

everything this section authorizes the Commission to do. Why duplicate that service? What we are doing is establishing anther group to carry on the duties of the Committee on Government Operations and of the House itself. I do not believe there is a single publication of the daily press that does not each day carry a story about some investigation by a congressional committee, either of the House or of the other body. The amendment is offered not only to keep my record clear but to keep clear the record of those who want to vote as well as talk economy. We are not given even an estimate of what the Commission will cost.

It will be the tool of special groups—some of which will advocate the overthrow of the Government by the denial of civil rights which we now enjoy.

Mr. Chairman, I yield back the balance of my time.

Pure Food Laws

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. MULTER. Mr. Speaker, I am pleased to call to the attention of our colleagues a column written by Mr. Robert K. Plumb, as it appeared in the New York Times of May 31, 1957. This item shows the necessity for an early hearing and enactment of H. R. 7798, introduced by our distinguished colleague from New York, Mr. DELANEY:

PHYSICIANS URGED TO PROTECT FOODS—HEAD OF PANEL ASKS BACKING FOR BILL TO BAN ADDITION OF HARMFUL CHEMICALS—SOPHISTICATED LURE HIT—GERIATRICS GROUP ALSO TOLD OF EARLY EATING OF FATS AS LEADING TO THROMBOSIS

(By Robert K. Plumb)

Physicians were urged here yesterday to support vigorously efforts that are being made to change Federal laws on the addition of chemicals to foods.

Industry's production of "sophisticated" foods to appeal to housewives should be regulated, in the opinion of Dr. Clive M. McCay, professor of nutrition at Cornell University. He was moderator of a panel discussion held by the American Geriatrics Society at the Waldorf-Astoria Hotel.

Dr. McCay is a chemist. His remarks as moderator wound up a discussion on nutrition for older persons and the possible relationships between diet and some diseases. Four physicians participated in the panel.

The moderator said the public was not generally aware that millions of dollars were spent to make food more "sophisticated and easy to manufacture," but that little was spent to study the nutritional values of food products.

FOR RESTRICTING ADDITIVES

He urged doctors to back changes proposed in the Food and Drug Law by Representative JAMES J. DELANEY, Democrat, of Queens. Similar changes were recommended last month to Congress by the Department of Health, Education, and Welfare.

Since 1950 Congress has been considering possible changes in the Food and Drug Law, which now makes manufacturers responsible for the safety of their food products. Under the law, the Food and Drug Administration can act only if it can prove that a particular food additive is dangerous.

Dr. McCay said that the proposed changes should make it impossible for a food producer to add a known cancer-causing agent to processed foods, or to add known toxic chemicals, or to add chemicals unless they increased the nutritive values of food.

He said physicians should urge these steps because industry is going to fight them tooth and nail.

The chemicals now added to processed foods include a wide range of substances designed to enhance appearance, texture, utility or storage qualities of foods.

POSSIBLE SOURCE OF HEART ILLS

During the panel discussion, Dr. Normal Jolliffe, director of the Bureau of Nutrition of the New York City Department of Health, suggested that perhaps pediatricians of a few decades ago should be blamed in part for the large number of heart attacks among young men today.

He said that pediatricians who used to prescribe feeding formulas with too much fat in them might have laid the groundwork for the high fat intake among young adults. Those who are used to eating fat continue the practice, he observed.

Some authorities, including Dr. Jolliffe, believe that scientific evidence suggests a link between a high intake of animal fat and susceptibility to blocking of the coronary arteries that supply blood to the heart muscle.

In another session, Dr. Lee E. Farr, medical director of the Brookhaven National Laboratory, reported that the degenerative diseases of the heart, arteries and nervous system that afflict older persons were being studied with significant technical advances resulting from the use of radioactive trace elements.

In high blood pressure and hardening of the arteries, he said, radioactive isotopes offer a method of study not previously available.

Mr. Speaker, after the article appeared, I wrote to Dr. McCay, asking him for a copy of his manuscript. Dr. McCay wrote me on June 4, as follows:

We have no manuscript from the geriatrics meetings in New York City since we had a panel of 5 replying to about 50 questions handed to us by the physicians of the audience.

I was glad the New York Times reported upon some of our discussion and included Representative DELANEY, since we appreciate how little the public understands about the struggle to get useless, cancer-producing agents out of foods.

The public is constantly pressed by industry on one hand trying to gain sales advantage from coloring such products as Florida oranges and by the Washington agencies trying to force such matters as water fluoridation and DDT spraying without sufficient study of the ultimate injury from their shortsighted programs.

The air spraying with DDT was taking place while our meetings were in progress. At this time of year such spraying means the cows will eat much of the DDT and since haymaking is starting the DDT eating will continue all winter. If the public comes to appreciate that the cow concentrates this product in milk fat it may injure public nutrition because they will certainly decrease milk consumption. The sad part is that no one knows if the gipsy moth may not ultimately become as resistant to DDT as the housefly.

No one has learned how to get intelligent and informed consumer counsel into the picture.

We who have grown gray considering these matters appreciate the interest of you who have so many other concerns.

I do hope that there will be early hearings on Congressman DELANEY's bill so that this important legislation can be enacted.

Address by Dr. Richard C. Hertz at Dinner of the United Negro College Fund

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. DINGELL. Mr. Speaker, in this time of trouble and strife between different ideologies in this world, and during a period marked by considerable racial tension in our own land, it was a real pleasure for me to read an address by Dr. Richard C. Hertz, senior rabbi of Temple Beth El in Detroit, Mich., speaking at the kickoff dinner of the United Negro College Fund held in the Veterans' Memorial Building, Detroit, Mich., on May 8, 1957.

Rabbi Hertz explained to the gathering why he, as a Jew, and others present not of the Negro race found it an honor and a privilege to support the United Negro College Fund to help our fellow men advance themselves in honor and dignity for the good of our whole country:

Perhaps you wondered why the committee in charge of the United Negro College Fund asked a rabbi to be the principal speaker at tonight's kickoff dinner. Indeed, I asked that very question myself: "Why should I go and make a plea for the United Negro College Fund? Aren't there other worthy causes? Aren't there enough pleas from Jewish organizations that need me to help rescue stricken Jews? Aren't there other people in our community vastly more qualified to make this address than I?"

As a rabbit, spiritual leader of Jews, I know that few, if any, Jewish youth are involved in the United Negro College Fund. But I also know that there are human rights involved in this great cause. I know, too, that nothing human is foreign to the Jew. Anything that involves mankind involves the moral and ethical principles handed down by the Hebrew prophets of old.

My religion of worldwide humanitarianism teaches me what Moses taught the ancient children of Israel: "There shall be one law for the homeborn and for the stranger that is within thy gates."

My religion of social justice teaches me what Amos preached in an ancient shrine of Beth El. After lashing out against the callous indifference of human rights and denouncing those who gouged the less fortunate, Amos taught that all are precious in the sight of God. Said Amos, "Are ye not unto me as the Ethiopeans, Oh, children of Israel?"

My religion of social action teaches me that what is good for one race or one people must be good for mankind, and what is good for mankind must be good for every race and people. We are all involved in mankind.

Judaism, the universal religion, the mother of great religions, has frequently declared through its prophets and sages that in the sight of God, men of all races, creeds, and nations are equal. The Bible, which begins with the creation of the universe, traces the lineage of all people to one man, Adam, who was above race and above na-

tionality. By making Adam the father of all mankind, Genesis taught the Jewish belief in the equality of races, which comes from a faith in the existence of one God. This thought the prophet Malachi had in mind when he said, "Have we not all one Father? Hath not one God created us all?"

Brotherhood such as envisaged by Genesis and Malachi can exist only among equals. It cannot exist between patrician and plebian, between lord and serf, between master and slave, between members of superior and inferior races. Such brotherhood is verified by anthropology and by history. Anthropology sees all races as mixed, notes very little between them and maintains there are no superior and no inferior races. It recognizes only that there are backward and advanced people. Backward peoples, more often than not, were the victims of environment and of history, and by a change in both, these peoples can become advanced. The story of man is the record of backward peoples advancing and advanced people regressing.

The application of this religious teaching to American life today tells me that desegregation must be more than a political issue involving just one geographical area of our country. Desegregation is a moral and religious issue.

As a rabbi, I know from the bitter and grim experiences of my own people what it means to be denied opportunity, to be discriminated against because of prejudice, to be hated and hounded and harried by ignorant whites who were both un-Christian and un-American. I have, therefore, come here tonight because everything in my soul as a rabbi and as a Jew cries out for justice for the Negro, for opportunity to underprivileged young, colored boys and girls hungering for what has always been a precious privilege to the Jewish people—the privilege of learning.

Every Jew who believes in Judaism, every man who believes that God is the Father of all men, must take up the struggle against discrimination whenever and wherever it occurs. If man is created in the image of God, no man can say to another man created in that same image that he should keep his place. We who believe that to love our neighbors as ourselves is life's highest aim must lead in the efforts to ameliorate the conditions of our colored brethren.

As a Jew and a rabbi, I cannot but feel profound shock and shame that so great a chasm lies between the ideals of American democracy and the realities of American life. While there has been a noticable amelioration in the lot of the Negro during the past few years, life in America for its minority groups, and particularly for those who are separated from the majority by differences of color, is a far cry from "the liberty and justice for all" which our citizens so glibly set as our Nation's slogan and goal.

You see, I have also come here tonight as an American. I was an Army chaplain in World War II. I saw the heroic job done by colored troops. I know the contribution they made to freedom's cause. But I also know that the cause of freedom was not won with victory. Democracy's work is unfinished business.

Right now the eyes of the world are upon the United States, to see how we live up to our pretentions about liberty, equality, and fraternity. Our State Department is under a cloud because whenever our diplomats speak out for freedom against the Iron Curtain, against colonialism, exploitation, and imperialism, they are greeted by sneers and laughter. Uncle Sam's pious pretentions are often regarded as sheer hypocrisy. We create our own vulnerability because we are afflicted with color blindness. We send billions of dollars for point 4 aid to underdeveloped and underprivileged areas, only to have native leaders in the farflung corners of the globe ask of Uncle Sam, "What are you doing for your own Negroes at home? How about practicing democracy in your own country?"

As an American I have denounced time after time the timidity of the South, the failure of certain southern leaders to comply with the letter and the spirit of the Supreme Court decision on desegregation. I have said that the Court's decision to proceed with deliberate speed does not mean stoppage. Its decree on moderation does not mean a moratorium on progress.

One of the most potent and telling answers to the white citizens councils, to the prejudice and colorblindness of the South, is the united Negro college fund, and that is why I am here tonight. The united Negro college fund represents an investment in people. That was Julius Rosenwald's philosophy. When I was a young rabbi at Sinai Temple in Chicago, where I served as assistant to Rabbi Louis L. Mann, I heard a great deal about a certain member of the congregation, who though occupying a prominent and distinguished place in the Nation, was a faithful attendant at divine services and sought with all his heart to translate the prophetic ideals of judaism into good Americanism. His name was Julius Rosenwald. He believed that investment in people, regardless of the color of their skin, was the most noble way of building democracy. To Julius Rosenwald there was no greater method of investing in people than through education. Investment in people whereby Negroes could be aided in search for education and leadership, would in Julius Rosenwald's philosophy, an investment in democracy.

But, you say, this in 1957. What about the Supreme Court decision?

As an American I know that the battle against segregation must be waged on a dozen different fronts simultaneously. It will not be won in 1 pitched engagement, nor in 1 sector—not in New York nor Chicago nor Detroit nor even in Montgomery, Ala.

The battle against segregation, for all our fervent and pious prayers, will not be won overnight. The long-neglected educational standards in southern elementary and high schools for Negroes, where the poorest, the cheapest, and the lowest standards were always good enough, now means that we need teachers and teachers of teachers to correct this situation. This will take time.

The elimination of racial restrictions, begrudgingly accepted, will not overnight remove the dollar barrier to higher education for Negro youth. This, too, will take time.

The building of a better moral and social climante before the South accepts peacefully the Supreme Court decision will likewise take time. The 31 colleges representing the United Negro College Fund are taking the lead in bringing together men of good will—Catholics, Protestants, and Jews, Negroes and whites—to work out the solutions for making democracy work. All this, however, will take time.

Meanwhile the battle for desegregation goes on. Ultimately it will be won, for no nation can remain half-slave, half-free educationally. While the time-consuming processes are going on for breaking down the "separate but never equal" schools which deny privileges to Negroes, 75 percent of all college-age Negroes continue to live in the 11 States in the South where nearly all the fund's colleges are located. Even if the legal barriers to education were miraculously removed tomorrow, the dollar barriers would still exist. Why are tuition fees and student scholarship aid necessary to close this economic gap? Because these Negro students come from the lowest income groups in America. They can't afford to travel great distances far from home, nor can they pay high tuition or room and board fees. Remember that the financial struggle for a Negro boy or girl to go to college is 2 or 3 times more difficult than for a white youngster.

I am convinced, and I have come here tonight to tell you so, that a great step forward toward real democracy can be made by supporting the United Negro College Fund. This is America's first educational community chest. These 31 colleges of the United Negro Fund today have over 23,000 students enrolled. This June they will graduate more than 3,400 batchelor and master degrees. With their full-time faculty of over 1,400 professors, they have been faced with the dollar squeeze whereby the tuition rates have had to be raised $78 back in 1944 to $273 in 1953. These 31 colleges situated in 12 States, 11 of which are in the solid South, are the very places where the battle for integration and desegregation is being waged. Ninety percent of all Negro students in America enrolled in accredited private colleges come from these 31 schools of higher education which participate in the United Negro College Fund. They are helping to build a distinguished Nergo leadership—physicians, teachers, social workers, ministers, business executives, technicians in industry and agriculture.

You will, however, be both glad and sorry that you come here tonight. On that statement hangs a tale. One night in ancient times, three horsemen were riding across a desert waste. As they crossed the dry bed of a river, out of the darkness a voice called, "Halt." The men obeyed. The voice then told them to dismount, pick up a handful of pebbles, put the pebbles in their pockets, and remount their horses. The voice then said, "You have done as I commanded. Tomorrow at sunup, you will be both glad and sorry." With that the voice was silent, and mystified, the horsemen rode off into the night. When the sun arose, they reached into their pockets and found that a miracle had happened. The pebbles had been no ordinary stones, but sparkling, shiny, diamonds. Then they remembered the warning. They were goth glad and sorry—glad that they had taken some and sorry that they had not taken more.

And that is the story of higher education.

We have come here tonight to lend our support to the United Negro College Fund. We shall be both glad and sorry—glad that we have done something but sorry we have not done more.

I want to conclude with the words of a great rabbi, quoted in the Talmund, words that have particular relevance to the United Negro College Fund. Said Rabbi Tarphon: "The day is short, the work is great, the Master of the household is urgent. It is not incumbent upon thee to finish the work, but neither art thou free to desist therefrom."

This Farmer Thinks Secretary Benson Doesn't Know What Is Going On—and Doesn't Care

EXTENSION OF REMARKS

OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1957

Mrs. KNUTSON. Mr. Speaker, letters are coming in to me from all over the country, protesting the Benson anti-farmer farm program. I'm not the only one who is receiving these protests. Just recently I was handed a letter received by the Farmers Union from a long-suf-

fering seed farmer. Like all the rest, he is very much at the mercy of the vagaries, misconceptions, ineptitude, and hostile attitude which characterize this administration's antifarmer farm program. This farmer, from Richford, N. Y., says:

Our present Secretary does not know what is actually going on in our industry, and sometimes I am led to believe he does not care.

Under leave to extend my remarks, I have requested permission to insert in the RECORD the letter from Mr. Hardison to Mr. Johnson:

CLARK SEED FARMS,
Richford, N. Y., May 20, 1957.

Mr. REUBEN JOHNSON,
Farmers Union,
Washington, D. C.

DEAR MR. JOHNSON: It is true that there are more and more growers thinking about some type of a production-control program. Potato farmers are in much more trouble than most people realize. If we had a Secretary of Agriculture who was more progressive, we could make some progress. Our present Secretary does not know what is actually going on in our industry, and sometimes I am led to believe he does not care.

Your efforts in behalf of farmers are appreciated. I hope something can be done to put the potato industry on a little more equal basis with the rest of the economy. If there is anything I can do, please let me know. At this point I am discouraged over the policies of the administration and the Farm Bureau.

Truly yours,

LEWIS M. HARDISON.

Saving Saturday's Mail

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. SIKES. Mr. Speaker, the Dothan Eagle is one of the best read newspapers of the South, outstanding in its splendid services to southern Alabama and northwest Florida, and greatly appreciated in both States.

I am glad to have inserted in the CONGRESSIONAL RECORD the following editorial which appeared in the May 31, 1957, issue of the Dothan Eagle on Saving Saturday's Mail:

SAVING SATURDAY'S MAIL

Here at the Eagle we are concerned over the possibility that Saturday mail service will be discontinued on July 1 unless Congress appropriates enough money for the Post Office Department to satisfy Postmaster General Arthur E. Summerfield.

We agree that Mr. Summerfield is a competent Postmaster General and that his intentions are good. We applaud his efforts to modernize his Department and to raise the price to his customers enough to make income more nearly equal to outgo. But discontinuing the service on Saturday or any other day is the wrong way to economize. In fact, depriving patrons on rural routes of service on Saturday would be no great savings anyway, no more than the expense mileage paid the rural free delivery carriers since their salaries, as fixed by law, must go on.

What if the FBI, or the Army, Navy, or Air Force followed Mr. Summerfield's example? Wouldn't they have as much legal right to do it as he has? Wouldn't the effect be catastrophic?

The Eagle has several thousand subscribers who live in the country and receive their papers by mail. No deliveries on Saturday and they get no paper that day. Should Friday be a legal holiday observed by the post office they would be without papers from Thursday until Monday—almost half a week. Eagle carrier service in cities and towns would continue as usual. Thus, again, it would be the farmers carrying the brunt of bad judgment in Washington.

Retail merchants, all businesses open on Saturday and people living in cities to whom mail delivery on Saturday is important would likewise suffer great inconvenience and maybe even financial loss.

If enough people protest to Mr. Summerfield he will not stop Saturday mail service in town or out of town on July 1 or at any later date. Eagle readers who want their mail delivered 6 days a week may be interested in writing the Postmaster General and perhaps enclosing this editorial. The envelope should be addressed to Mr. Arthur E. Summerfield, Postmaster General, Washington, D. C.

Trade With Red China Seems Speeding War

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, the obvious drive for trade with Red China has been accelerated since the British announced that they will trade with the Communist Chinese. The free world never seems to profit by its mistakes. Those who advocate increased trade with Red China ignore or else refuse to face the fact they are but preparing the Chinese Communists for the time when they will feel strong enough to embark on another war. The same holds true with trade with Red Russia, and for the same reasons.

Mr. Speaker, David Lawrence in his usual persuasive manner has covered this subject in his column of June 12, and under leave to extend my remarks I am including the article in question.

The article follows:

SHADES OF THE DAYS OF MUNICH—BRITISH TRADE WITH RED CHINA, AS WITH HITLER, SEEN SPEEDING WAR

(By David Lawrence)

Sometimes the biggest news is invisible, glossed over, or minimized because government itself, doesn't speak out about the dangers of what is happening contemporaneously. For something very alarming has just happened that could be one of the steps which would force a world war on the American people in the next decade.

The question might well be asked out of bitter experience—are the free nations today preparing to arm the enemy and will they not thereby accelerate the time when a third world war may sweep the globe?

The decision on the part of Great Britain to break faith with the United States and seven other nations by relaxing the embargo on trade with Red China is a sensational development. It is unquestionably a turn of affairs which spells a weakening of the position of the free governments in the "cold war."

Hitler bought his arms from British colonies and territories and kept supplying his munitions stockpile up to almost the very month when the Second World War broke out in 1939. The allies paid for that mistake—in human lives lost.

British merchants kept on trading with the enemy through nearly 3 years of the First World War at the same time that American trade with neutral countries was being interfered with by the London Government. This prolonged the conflict and the casualty lists.

Had there been an economic embargo against the dictatorships, as the League of Nations proposed in the 1930's, there would never have been a Second World War. Had the British ceased their trade with the enemy earlier than they did in the First World War, the conflict would have been terminated sooner.

Now is history to repeat itself? For the sake of material gains, are the Red Chinese to be industrialized so that they can become a menace to Japan, to the Philippines, to all of Southeast Asia as well as to Indochina and perhaps India?

The British are eager to send goods to Red China which they declare are not strategic. But this, nevertheless, will relieve the shortages that the Red Chinese must overcome in order to concentrate on articles of a strategic nature. It also will ease Russia's present burden in supplying Red China.

The Red Chinese do not have an abundance of foreign exchange with which to buy any substantial amounts from the British, but they will substitute goods of a higher strategic priority for war purposes which they need badly.

This is the biggest victory which the Communists have won since the cold war began. It has spread nervousness throughout the Far East, and it could easily lead to such a crumbling of the situation as to add materially to the cost the American taxpayers eventually will have to bear to defend the American line from Japan to the Philippines.

The story of what happened at the international conference which considered the revision of the trade embargoes has not been fully told. Eight of the 15 nations agreed with the American position of restriction. Only five sided with the British, and neither Japan nor Canada voted. This means that in the face of the majority of the free nations involved, Great Britain decided to "go it alone" and open up trade with Red China.

This victory for the Communists, moreover, comes at the very time when the United States and its allies in Asia have gotten the upper hand. It comes when Indonesia and India are more worried about Soviet intentions than they ever have been. It comes when western influence in Burma and Cambodia has been rising. It comes when a strong defense is being built up by the free people in Indochina. It comes at a time when the Chinese Communists have not shown the slightest sign of becoming peaceful but on the contrary, have manifested a greater degree of belligerency than before. They have violated the armistice in Korea and have built up airfields for jets. They have constructed new military supply lines to mount a threat against Formosa. They hold by force of arms two provinces of Laos and Cambodia.

Now the Asian nations see Great Britain weakening on the embargo and observe also lots of people in America talking naively about going along with that decision as a "practical" matter. It is all so reminiscent of Munich and the prewar days when many people thought you could "do business with Hitler."

President Eisenhower has not spoken out clearly as yet about the situation. In fact, his off-hand comments at the press conference last week gave the impression that it is up to Congress and that there is a law which prevents our trading with the Red Chinese. The embargo can be dissolved overnight by a presidential revision of the executive order now in effect. The President doubtless has been briefed by now on the implications of any weakening by America and on the dangerous consequences in southeast Asia as well as the Far East. It may be assumed that an official statement reiterating the position of the United States and expressing regret at Britain's decision to go it alone in world affairs will soon be forthcoming.

It is by mistakes arising out of a selfish materialism that the peaceful nations of the world find themselves dragged into war. To arm the Red Chinese now by letting them industrialize rapidly is to bring nearer the day of a third world war.

Split In Araby

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New York Times of June 11, 1957:

SPLIT IN ARABY

The split in the Arab world between the revolutionary, pro-Communist and at the same time imperialist elements led by President Nasser and the anti-Communist forces subscribing to the principles of the Eisenhower doctrine has now erupted into an open feud between Egypt and Jordan, with Saudi Arabia, Iraq, and Lebanon giving moral and material support to the latter. The subtle maneuvers, the open charges and countercharges, and the long-evident Egyptian-Syrian plots to bring all Araby under Nasser's control have led to drastic Jordanian action, the significance of which is further underlined by the simultaneous visit of King Saud to Jordan and the prowestern government's victory in the first round of the parliamentary elections in Lebanon.

The peremptory action of Jordan in expelling two Egyptian officials followed a previous demand for the withdrawal of all Syrian troops from Jordan, on charges that Colonel Serraj, who dominates a section of the Syrian Army, has used these troops to instigate uprisings against King Hussein. Prior to that the Jordanian Government radio had broadcast charges that Egypt and Syria had plotted to overthrow all the Arab Kings—Hussein of Jordan, Saud of Saudi Arabia, Faisal of Iraq, and Idris of Libya—as well as the prowestern Government of Lebanon; and King Hussein personally accused the Soviets of having bribed the ousted Jordanian Ministers to steer Jordan into a pro-Soviet course.

A new alinement of pro-Communist and anti-Communist forces is thus openly under way in Araby and in a manner which marks a serious setback to Nasser's ambition to erect, with Soviet aid, an Arab empire under his domination reaching from the Atlantic to the Persian Gulf. Whether this setback will also represent a final victory for the Eisenhower doctrine will depend on how effectively we can shore up the anti-Communist forces. This is especially true in impoverished Jordan, which can no longer count on the subsidies promised it by Egypt and Syria. Only King Saud has kept his promise of financial support.

It also remains to be seen what effect the Arab split will have on the Arab front against Israel, which presents an issue on which all Arabs still see eye to eye. The danger of a new immediate conflict should be reduced, but it will take both restraint and statesmanship to direct the new alinement toward the establishment of real peace in the Middle East.

Moscow's Idiot Board

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. FEIGHAN. Mr. Speaker, the Cleveland Plain Dealer carried an editorial in its issue of Thursday, June 6, entitled "Moscow's Idiot Board." That editorial skillfully analyzed the appearance of the Communist tyrant, Khrushchev, on one of our national TV networks. This editorial demonstrates clearly that an influential section of the free press in America has not been taken in by Khrushchev and his henchmen.

The Cleveland Plain Dealer is to be complimented for its exceptionally astute editorial staff which does not hesitate to expose sham, deception, and tyranny for what it is.

I commend the reading of this significant editorial to anyone who believes that the time has come when we can trust the word of the Russian Communists. I am sure that the message of this editorial conforms to the thinking of the overwhelming majority of my colleagues.

Under leave granted, I insert the editorial in the RECORD:

MOSCOW'S IDIOT BOARD

We've been rereading the transcript of Nikita S. Khrushchev's television interview and it occurred to us that the Kremlin's idiot board (that's TV slang for the teleprompter) had had a good workout and was aptly named. For in truth, some of his remarks sounded like the ravings of an idiot or, if you do not wish to accept that interpretation, the prevarications of a deliberate liar.

For instance, Khrushchev was asked if he had any apprehension about the satellites remaining Communist if Russian troops were withdrawn.

"It is a fable," he replied. "You are probably contaminated with this talk, too. You seem to think that the Communist system in some country can be held up by our armed forces. But I wouldn't defend a Communist system of that kind. The Communist system must be based on the will of the people and if the people should not want that system, then that people should establish a different system."

The will of the people! When have the satellite people ever had a chance to express their will? And what would happen to them if they tried to "establish a different system?" Well, they tried it in East Germany 3 years ago and they tried it in Hungary last October and they were slaughtered by Russian tanks.

So then one of the interviewers asked Khrushchev how long the Kadar regime would last in Hungary without Russian troops and tanks.

"Let's have a test," said Khrushchev. "Why don't you withdraw your troops from Germany and France, and we will withdraw ours from Germany, Poland, and Hungary, and you will see that the Kadar regime, which is the people's regime in Hungary, will flourish for ages to come."

So how can we even think of trusting the word of anyone who indulges in such monstrous self-deception or deliberate lying? Suppose we took Khrushchev up on his withdrawal dare? What assurance would we have that the Soviet tanks would not turn around and come right back, as they did after staging the fake withdrawal from Budapest?

At present, the Russians are conducting another big peace offensive, trying to make it appear that they are the only people who favor peace, an end to the armaments race, and the outlawing of hydrogen and atomic weapons. This was the pitch in Prime Minister Bulganin's message to the International Labor Organization yesterday. According to Bulganin, Russia "is ready to conclude an appropriate agreement on the whole problem of disarmament" and all we have to do is sign it.

In view of Khrushchev's brazen distortion of facts, we must conclude that Bulganin's words came off the same idiot board Khrushchev was reading from.

Hon. Thomas E. Murray

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith a story entitled "Atom Board Pressure" written by James M. Haswell which appeared in the Chicago Daily News on May 28, 1957:

ATOM BOARD PRESSURE—DEMS BACK MAN WHO DARES SAY BOO TO STRAUSS

(By James M. Haswell)

WASHINGTON.—A lot of pressure is building up here to keep Atomic Energy Commissioner Thomas E. Murray on the job.

Democrats say Murray is the last man left in the AEC who dares say boo to the strong-willed AEC chairman, Adm. Lewis L. Strauss.

A majority of the congressional Joint Committee on Atomic Energy formally petitioned Mr. Eisenhower to reappoint Murray when his term expires June 30.

They pointed out Murray had led the way in enlarging United States uranium resources, launching hydrogen-bomb experiments, reopening bomb tests in the Pacific, demanding small atomic weapons, creating private electric power supplies for atomic plants, and building the Shippingport reactor—the first real big industrial atomic powerplant.

Murray is a slight, energetic, white-haired inventor who made a fortune as utility engineer before he came to the AEC in 1950.

He is a devout Catholic, three times knighted by the Pope. He maintains chapels in his New York and Long Island homes, and in Washington attends mass daily.

Murray does his own thinking about atomic energy and voices some challenging ideas.

The big bombs are big enough, he says. They could destroy civilization. A United

States demand on Russia for "unconditional surrender" right now would mean the end of mankind.

So there's really no point in making any bigger bombs. The testing of the very biggest kind could be stopped. The job's done. But there's every need for further developing smaller atomic weapons, he says. The United States should arm its military forces with "tens of thousands." There surely will be a war in which they will be used.

Small nations may not obtain these weapons, but the United Nations ought to have a police force equipped with them.

The atomic power issue is not one of public power versus private power, but of when atomic power shall be produced.

American private power companies using their own money will produce it when they need it. But this will not be soon enough. It is distinctly in the public interest for the Nation to produce atomic power much sooner, for use where conventional fuel is scarce and power expensive.

The AEC could build pressurized water reactors right now that would produce wealth and raise standards of living in many parts of the world.

Giving such a reactor to Japan would be a fitting return for the Hiroshima bomb. Only foolish pride keeps the United States from experimenting with the gas-cooled type of reactor the British have chosen to develop.

In face-to-face conversation Murray belittles his feud with Admiral Strauss. They disagree on some policies, he says, but agree on many.

"We agree on the President's atoms-for-peace program, for example, and the advisability of ratifying the International Atomic Energy Treaty," he says.

"But we disagree about time schedules for producing civilian atomic power, the need for more small atomic weapons, and on publishing more information about nuclear hazards.

"The world actually learned about radioactive fallouts from 27 Japanese fishermen, remember, and I think that was the wrong way to have learned it."

Lithuanian Deportation: A Commemoration

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. FLOOD. Mr. Speaker, in mid-June 1941, a terrible tragedy befell Lithuania. At that time over 34,000 Lithuanians were ruthlessly seized by their Soviet conquerors and deported to distant parts of the U. S. S. R.

Few spectacles in the history of mankind can compare to the gross inhumanity of these deportations. And yet this mode of mass suppression is a cardinal principle in the Communist way of life.

It is sad to contemplate the future of the Lithuanian people; they have managed somehow under great odds to keep the body and soul of their nation together during this period of great national trial. How they have withstood the corrosive oppression of communism for so many years is a source of wonder and admiration to their many friends and relative across the seas. To assist and support them in every way we can is one of our most solemn and constant obligations.

On this anniversary of Baltic deportations we of the free world express the hope that the supreme tragedy of Lithuania will never be forgotten; that those who were responsible for this crime of deportation will know the wrath of God's eternal justice and that the people of Lithuania, dedicated as they are to the spirit of their nation, will never succumb to their enemies.

May the light of eternal hope forever burn within the soul of Lithuania.

Army Engineers Strive To Meet Water Problems

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I present herewith the address of Maj. Gen. E. C. Itschner, Chief of Engineers, United States Army, to the 44th annual convention of the National Rivers and Harbors Congress, held in Washington, D. C., May 17, 1957. This is a most timely address, and is as follows:

THE ARMY ENGINEERS' PROGRAM

(Address by Maj. Gen. E. C. Itschner, Chief of Engineers, U. S. Army)

It is a pleasure to address the 44th annual convention of the National Rivers and Harbors Congress. Your organization has labored long for water resources development. Under the leadership of President OVERTON BROOKS, Executive Vice President William H. Webb, and your other executives and directors, you are helping effectively to guide this development through difficult times.

The Corps of Engineers civil works construction program is progressing satisfactorily. During the current fiscal year we will place $490 million of new work, which makes it the second largest year we have had. Of the 223 projects under construction, 52 are scheduled for operation by the end of June. These include 35 navigation projects, 11 local flood-protection works, 1 flood-control reservoir, 2 multiple-purpose reservoirs, and 3 beach-protection projects.

The President's budget for fiscal year 1958 contains $632,130,000 for the Corps of Engineers' civil functions, of which $496,666,000 is for construction. This amount will permit the start of 24 highly desirable new construction projects and the completion of 35 projects. If the funds requested are appropriated, our program will continue at a somewhat greater rate in fiscal year 1958 than at present.

The requirements for future years will be even greater, unless the scheduled program is delayed.

The corps' program is most advanced in the field of waterway improvements. The main arteries of our basic systems are well established. We are now modernizing many older facilities and are welding certain waterway projects into a more serviceable network. Also, feeder lines are being developed to give interior areas direct access to the main arteries.

Soon we shall have a vast, interconnected system of highly efficient inland waterways, stretching from Montreal and Duluth on the north to Florida and the Mexican border on the south, and from Pittsburgh and beyond on the east to Sioux City on the west, provided with two main outlets to the sea: via the St. Lawrence and the Mississippi.

Such a system, combined with the advantages of a dependable water supply from partially controlled streams, will be of utmost importance to economic growth and stability. The initial effects are already obvious in the very large and continuing expansion of industry along our waterways.

Construction of the backbone of the flood control and water conservation programs is continuing, as progress is made with reservoirs and local flood protection. There are many difficult problems and a tremendous amount of planning and construction is still to be done, and the day when our principal streams will be brought under effective control is still decades away.

As projects are completed and existing works become older, requirements for maintenance and operation necessarily increase. The long term decreasing value of the dollar and the astounding increase in traffic on our waterways result in further demands for maintenance and operations funds. During the current fiscal year $110 million will be spent on routine maintenance and operation and $10 million for the reduction of a $65 million backlog of deferred maintenance, and the fiscal year 1958 budget contains $109,520,000 for routine maintenance and operation and $5 million for deferred maintenance. For future years requirements are certain to increase.

Funds appropriated recently for this purpose have not been adequate to do the complete job expected of the Corps of Engineers. We have been obliged to apply them only to the most urgent work, often maintaining channels to less than authorized dimensions. It is our policy to request sufficient funds to keep a navigation project to full authorized width and depth throughout the year, unless lesser dimensions will satisfy the requirements of navigation. Adherence to this policy may in some cases require considerable overdredging or dredging more than once a year. An exception is made in channels like the Columbia River, where it takes several months after the annual high-water period before channel dimensions can be restored. Heretofore, we have not had sufficient funds to maintain projects in accordance with such a policy.

Now I would like to discuss briefly some of the current problems and what is being done about them.

Water use for domestic and industrial purposes has increased 50 percent in the past 10 years. In many places supply has not kept pace with the demand. Obviously water storage for future domestic and industrial uses must be included in the reservoirs now under construction or yet to be built primarily for other purposes. Major problems concern the allocation of water uses and who should pay the cost; how much, and on what terms. Legislation, such as now pending in Congress, is needed to enable us to anticipate and provide for future water-supply requirements where they can be foreseen but do not now exist.

The continued growth of industry along our waterways and concomitant expansion of urban communities, stimulated by the proximity of water transportation and good water supply, are intensifying both flood and stream-pollution problems. Encroachment of new plants, homes, highways, power-lines, and other structures on authorized reservoir sites during the inevitable timelag between authorization and construction are matters of growing concern. Such encroachment increases site-procurement costs and

represents economic waste we cannot afford. I have directed that this problem be given more realistic consideration in preparing survey reports, and that the cooperation of Federal, State, and local governmental authorities be sought in taking preventive measures. I suggest that the membership of your organization support actions wherever taken to preserve our precious reservoir sites.

Public interest in water recreation has grown phenomenally. Use of corps projects for recreation has increased from 16 million visitor-days in 1950 to 71 million visitor-days last year. A new and profitable industry has grown up as a result of this development. This is a highly important factor that must be taken into account in planning, acquiring land for, building and operating reservoirs. The Congress now has pending legislation to permit the consideration of recreational benefits in the economic analysis of water resources projects, and to establish more clearly the respective responsibilities of Federal and non-Federal interest in recreational development.

As our population grows and society encroaches further upon natural environment, fish and wildlife protection and propagation are becoming increasingly important. The civil-works program offers a golden opportunity for the enhancement of this highly important, renewable, natural resource. Project development and fish and wildlife enhancement can be made compatible by good planning and mutual cooperation within the framework of our present laws. Both in the planning of new projects and in the management of project lands, the Corps of Engineers will continue to cooperate fully with the agencies charged with custody of fish and wildlife. However, legislation better delineating financial responsibility would contribute much to the advancement of our mutual efforts.

Many project facilities conceived in earlier days no longer are adequate to accommodate the healthful expansion of our country. As a result we are now engaged in review surveys to discover whether recent economic changes may require alteration of the flood-control plans for the Columbia, Ohio, and alluvial Mississippi valleys. As you know, we are already at work on recanalization of the outmoded and overburdened Ohio River navigation system. We are enlarging the Calumet-Sag connection to the Great Lakes. Work is now starting on the $136 million project for deepening the Great Lakes connecting channels. Deepening of Great Lakes harbors is under study. And there are numerous other undertakings in this category.

We long ago standardized channel depths on our waterways. We are now working toward the standardization of locks in the following sizes: 56 by 400 or 600 feet, 84 by 600 or 1,200 feet, and 110 by 600 or 1,200 feet. This is being accomplished with ample consideration to future requirements.

A recent policy change has been to grant advance approval for the construction of bridges across streams and other bodies of water where the only navigation affected is by small motor boats, row boats, canoes, and log rafts. This means that highway and bridge interests seeking to construct bridges across streams or bodies of water so designated will no longer be required to secure a permit from the Corps of Engineers. The procedure requires these waters to be precisely identified. Also, it provides for advance notification of all affected interests and a public hearing prior to making a determination, so that full protection of navigation will be assured.

I have given you, in these few minutes, a broad review of where we stand on Corps of Engineers water resources development and some of the important relationships between this and other programs. The areas in which the National Rivers and Harbors Congress can continue its traditionally helpful contribution to these programs are well known to you.

We must plan construction schedules and other activities in light of the heavy demands upon both national construction capability and the Federal budget. One of the most constructive things your organization could do would be to screen projects and activities and offer impartial advice as to those which are worthy of priority. Your broad representation of interest in these projects places the National Rivers and Harbors Congress in a most advantageous position to perform such a service.

We can best make progress to the extent that there is unity among those working toward common goals. You may count on the Corps of Engineers for our full support of all worthy projects.

Flag Day Address Delivered by Hon. Karl E. Mundt, of South Dakota

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, June 14, 1957

Mr. MUNDT. Mr. President, this evening in Constitution Hall I had the high honor of representing the Congress of the United States in the Flag Day ceremonies sponsored by the Benevolent and Protective Order of Elks. A great many Members of the House were present. However, due to the evening session of the Senate, not very many of our colleagues could be present.

Mr. Fred Bohn, the exalted ruler of the Elks, was in charge of a very educational and inspiring and patriotic program. I was privileged to deliver the Flag Day address.

I ask unanimous consent that my address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FLAG DAY ADDRESS

Officers, members, and guests of the Benevolent and Protective Order of Elks, your guests, and my colleagues from the Senate and the House, today, June 14th is Flag Day. It is also known as Elk Day. It is my understanding that the grand lodge of the order of Elks was the first fraternal order to decree that every subordinate lodge should observe Flag Day each year with appropriate services. As a result all Elk lodges have been observing Flag Day since 1911. Your enthusiastic promotion of these ceremonies is a natural endeavor for our order. Elkdom has always been an active exponent of American patriotic principles.

Time will not permit the mention of the numerous activities which our great order promotes for the good of all America. The record speaks for itself.

But may I humbly remind you of the necessity of your continued active participation in the greatest of all organizations—the United States of America.

It is 180 years since Congress authorized the use of a new flag for a new nation. The colors and design were well chosen, and this banner would be beautiful to the eye even if no meaning could be read into it. Nor have the changes since June 14, 1777, impaired its beauty, although star after star has been crowded into a field originally intended for 13.

A simple resolution was adopted by the Congress in session at Philadelphia on June 14, 1777. It read as follows:

"*Resolved*, That the flag of the 13 United States be 13 stripes, alternate red and white; that the Union be 13 stars, white in a blue field, representing a new constellation."

Unfortunately the Journal of Congress makes no mention of the Member who introduced this resolution or the committee that reported it; neither is there any record of the discussions that undoubtedly preceded the adoption of our national ensign.

Philadelphia's Betsy Ross House, on lower Arch Street, continues to give youngsters and sightseers a soul satisfying contact with the Stars and Stripes which would otherwise be denied. Philadelphia is also credited with having launched the first public school celebration of Flag Day on June 14, 1893.

A woman from our great Middle West once made a flag to be used as the prize in a State dairy contest. She embroidered a cow standing in a pasture. Then she added an eagle carrying a ribbon on which she inscribed the motto, "Our liberties and our rights we will maintain."

Whether she knew it or not, this woman was following a good old American tradition of flagmaking, for in the early days of the Revolutionary War, before we had our national emblem, there were colonial flags that expressed the same idea in much the same way. For instance, there were the famous rattlesnake flags, a sample of which we have seen here tonight, some of which bore beneath the figure of the dangerous serpent the legend "Don't tread on me." It was plain that the people who used these flags intended to maintain their rights. The flag of Virginia was a rattlesnake flag. So was a flag carried by the ships of our early Navy.

The pinetree flags, used by the New England Colonies, formed another famous group of banners. It is probable that one of the earliest was raised during the Battle of Bunker Hill at the beginning of the revolution. A later pinetree flag bore the words "Liberty tree" above the pine, and "an appeal to God" below it. The Colonists felt that they were fighting for their just rights and that God was surely on their side.

Had it not been for the War of 1812 and a certain diplomatic mission performed by a scholarly young Baltimore lawyer toward the close of that war, the attention of the whole country might not have been focused upon the flag. This was effectively accomplished while our Nation was still suffering growing pains and badly in need of a stirring symbol.

Francis Scott Key saw the first rays of dawn catch the flag over Fort McHenry on the morning of September 14, 1814, after a night of bombardment, and was moved to compose a victorious battle hymn dedicated to the flag and the land over which it waved. The hymn he wrote, The Star Spangled Banner, has inspired millions of Americans, but it was not until 1931 that Congress officially designated it as our National Anthem.

It was natural to call our flag the "Stars and Stripes" from the beginning, and the poetic inspiration of Francis Scott Key added the beloved title of Star-Spangled Banner.

It was a people of strong character who built this Nation and only a strong people can be trusted with its preservation for years to come.

May I remind you that the passage of time since the days of Washington and Jefferson has in no way lessened our responsibilities to our flag. We cannot rest on the achievements of our Founding Fathers. It is part of the price we must pay to keeep our flag as the symbol of this free Republic.

We need to instill in the minds of young America a consciousness of the forces of free-

dom which are symbolized in the red, white, and blue. As disciplined American citizens, we need to demonstrate continuously that we understand the institutions that are epitomized by our flag.

Man's emotions are most poignantly aroused by the use of the flag in war. But as the years pass, and as we hope and pray to avoid war, we should thrill to the sight of the flag flying over peaceful and humanitarian enterprises. We give the flag meaning when in our endeavors we rise above narrow partisanship or ignoble self-interest. We can give it meaning in our daily living just as others gave it meaning at Yorktown and at Iwo Jima—and during all the crises in between. Our flag is seen and recognized today in every civilized country as the banner of the world's best hope for permanent peace and for enduring progress.

The patriotism that is aroused in us on special occasions when we witness our flag must be directed to our everyday living. I sometimes wonder whether, in teaching American history, we do not over-emphasize the flavor of the spectacular and neglect to emphasize the solid foundations of hard work and continuous courage and discipline which have brought us into this year 1957.

Today is an opportune moment to stop and say, "What kind of citizen am I?"

We in America frequently use the words liberty, freedom, Republic, and democracy without thinking exactly what they mean. They are all difficult to define. Some of the ideas that these words suggest will appeal to one person and not to another. Some of the privileges of the liberty that Old Glory represents are so commonplace we take them for granted. But there are certain duties that go with the enjoyment of liberty, freedom, democracy, and the preservation of our free Republic. The duty of the citizen to protect his country with his life, if necessary, are familiar words to all of us. In times of peace the less spectacular duties are often overlooked.

Since the time of Plato, students of government have known that the greatest danger confronting a democracy or a republic is an apathetic citizenry. Indeed, the failure of a nation's citizens to exercise their political powers ultimately brings collapse. One of our great American pastimes has been to sit back in smug complacency and say "it can't happen here."

Flag Day is an excellent time to take a long, searching look at the facts, to examine the bad along with the good. It is an appropriate time to single out disturbing influences and to rise up against the forces of evil that would divide our people and sap our strength. Two forms of government are struggling for supremacy as we celebrate this Flag Day. In one form of government, the State is supreme master of the people. The citizen is told where to work, when to work, and what he is to receive for his labors. In the other form of government, the individual is the source of power. He is master of his government—a government based upon God's greatest gift to mankind, freedom of the individual and respect as well as responsiveness to the dignity of the human being.

In one form of government, worship of that government is enforced as the religion of the people. In ours, religion is the free choice of the individual. He worships God according to the dictates of his own conscience.

In the one form—the government of godless communism—all property rights have been wiped out. In the other—our form—the individual is entitled to enjoy the results of his ability, his energy, and his sacrifice.

What do we need to do in order to preserve our great Republic and to keep its flag secure and inviolate?

We must see that America is fully and correctly informed about the true objectives and methods of communism and its danger to all we hold dear.

We must take an active interest in public affairs. Always vote in elections—get others out to vote—and cast that vote intelligently.

We must be fair with our Government. In the interest of fair play and sound economy, we must promote and work for what we feel is best for our country. Our Government will be only as strong as we make it.

We must take a vital interest in the education of our children—get to know their teachers—know how schoolbooks are selected and what they contain. We must be sure that Communist poison is not being administered right under our very eyes, and supported by our own tax dollars.

We must not join groups or sign petitions unless we first investigate them. Communists have so perverted such appealing words as "peace," "freedom," "youth," and "mother" that any organization or document using these or similar words should be questioned until we know who is behind it.

We must strengthen the moral and spiritual fiber of America.

Under the shadow of the flag there is no limitation for our good works—no room for abridgment of our fidelity—no place to pause in our eternal vigilance.

America is still in the making. Its future destiny depends on the loyalty, the devotion, and the character of each citizen. To call men and women and children aside and remind them of their responsibilities to God and country on this Flag Day is the best devotion we can pay our flag.

As we count the blessings that have come since June 14, 1777, we cannot fail to recognize our debt to our flag. The high principles which it has continued to represent in war and peace should be studied, appreciated, and honored until they become part of our lives.

We can strengthen the structure of America if we work with renewed patriotism, increased courage, and firm determination to maintain high moral and spiritual standards.

On this Flag Day anniversary the love of the Stars and stripes should be our steadfast guide to better citizenship, better Americanism, and a deeper appreciation of the rich heritage and the glorious future that is ours.

Social Security for the Self-Employed Physician

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. REUSS. Mr. Speaker, I have recently received a letter from Dr. I. R. Egbert, of Arco, Idaho, which persuasively sets forth reasons why social-security coverage should be extended to self-employed physicians. Because I believe other Members will be interested in Dr. Egbert's arguments, I am glad to include his letter in the RECORD at this point:

ARCO, IDAHO, *June 11, 1957.*

Hon. HENRY S. REUSS,
United States Representative,
House Office Building,
Washington, D. C.

DEAR CONGRESSMAN REUSS: Because of the exclusion of self-employed physicians from participating in social security and because of the opposition of the American Medical Association to their inclusion, I feel impelled to present to you my ideas and feelings concerning this exclusion. I feel that my wife and I are being discriminated against and actually penalized because I am a self-employed physician in the practice of medicine. I am prompted to write to you because of your sympathy in this matter as evidenced by your sponsoring of bill H. R. 4824.

The reasons I feel that the present regulations are discriminatory and unfair are:

1. Any social or other laws enacted to benefit the citizens of the United States were originally meant to be and should be all-inclusive, and no one group should be barred from enjoying these benefits. If they are good, and I am sure they are, for 97 percent of our citizens, they should be good for all, and everyone should have the privilege of participating in them.

2. By denying me the rights and privileges of social security my wife, who is considerably younger than I, is also being denied these benefits. This should not be, and certainly is unfair and discriminatory.

3. Any physician could become incapacitated by accident or illness, and certainly should have the same privileges of social-security benefits as other self-employed citizens.

4. A great many physicians, like myself, have attained the age of 65 and feel unable to retire because of uncertainties regarding future dollar valuations and fear that their savings are inadequate to guarantee security. The same social security benefits extended to others certainly would influence a large number of us in regard to retirement.

Failure of the legislative bodies to include physicians in the social-security program merely because of opposition by certain AMA officials is not justified because:

1. A large group of older physicians of the United States are not members of the American Medical Association and certainly are not asking the American Medical Association to speak for them. I can't give the exact percent, but it is high.

2. A large number of American Medical Association members actively opposing the inclusion of physicians in social security are, themselves, already participating by being employed by corporations, clinics, groups, etc.

3. Any legislation aimed principally to benefit all should not exclude a large deserving group merely because the American Medical Association opposes their inclusion. Certainly this opposition does not justify legislation to penalize all self-employed physicians.

4. I am sure a great many members of the American Medical Association have the same convictions as here expressed, but lack the opportunity or are hesitant in expressing themselves. This is based on private conversations with a great many of them. I am a member of the American Medical Association.

5. The average general practitioner in country practice who does not now qualify for social security would, I am sure, appreciate more being given the same privilege of social security, as all others self-employed, rather than being glorified in popular magazines; and certainly it would be more practical.

6. The medical profession has no pension plan of its own.

I am calling your attention to a resolution adopted by the 64th annual meeting of the Idaho State Medical Association, held last June:

"RESOLUTION I

"*Be it resolved*, That a committee be appointed to investigate the feasibility of establishing a home to provide care for Idaho physicians who have reached the age of retirement and are unable to retire, and that

the committee report their findings at the 65th annual meeting of the Idaho State Medical Association in 1957."

It seems strange that a medical association would direct measures to exclude self-employed physicians from social benefits at retirement and compensate or justify themselves by substituting this kind of benefit. I am sure there is no other group of people, professional or nonprofessional, who gives more selflessly of its time and service, and the resolution seems like a mighty feeble substitute for the financial assurance and human dignity which every other citizen in the United States is enjoying.

To emphasize the unfairness and injustices of the setup, my wife and I are the only two people in this county unable to qualify for social-security benefits or any type of pension plan. There are other physicians here, but they qualify by being employed and receiving wages.

Certainly I am in accord with retirement benefits enjoyed by Presidents, legislators, all Government employees, all members of the Armed Forces, as well as the social security program aimed to benefit all, and I am asking only that we be allowed to enjoy these same benefits.

Because of your sponsoring of this bill in an effort to correct this injustice you are rendering a most valued service to self-employed physicians who are now excluded by law and I wish to express my appreciation of your effort, irrespective of the outcome.

Very respectfully yours,

I. R. EGBERT, M. D.

Army Provides Recreational as Well as Conservational Facilities

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I present herewith the address of Hon. Dewey Short, Assistant Secretary of the Army, CMA, to the 44th annual convention of the National Rivers and Harbors Congress, held in Washington, D. C., May 17, 1957. This is a most enlightening address, and is as follows:

CIVIL FUNCTIONS OF THE ARMY

Address by the Honorable Dewey Short, Assistant Secretary of the Army (CMA))

Ladies and gentlemen, it is a great personal pleasure for me to see so many familiar faces. Over a period of over 20 years, you tend to get accustomed to old friends. I am also happy to be here from an official standpoint, as my new duties as Assistant Secretary of the Army for Civil-Military Affairs entail, in part, the same interests as your fine organization, the National Rivers and Harbors Congress. We both are keenly aware of the urgent need for the sound development of the Nation's water and land resources for navigation, flood control, irrigation, and the many other useful purposes.

Your organization had extreme foresight in seeing, so early, the need for a coordinated, planned effort in this direction. Founded in 1901, the National Rivers and Harbors Congress has been pursuing for 56 years its goal of utilizing our natural resources to the fullest. Sad to say, many people have, even today, not recognized that our natural wealth is not endless. Your organization, composed of over 5,000 public-minded citizens throughout the Nation, has from its inception helped guide the policy of the Government in water-resource development. Today I should like to call two matters to your attention and enlist your support.

I might say that I have long been at home on one side of these issues—namely, as a Representative of Congress. My recent experience has led me to look at some problems from a little different point of view—that of the executive branch—and I have found that most issues, like cut diamonds, have many facets.

As the Army's Assistant Secretary for Civil-Military Affairs, my duties quite naturally break down into two main functions, military and civil. Under military functions, I have responsibility for all military construction for which in the coming year the Army has asked for an appropriation of $390 million.

The Alaska Communications System is handled through my Office. As you may not realize, the Army operates the only internal telephone and telegraph system in Alaska, and its facilities are utilized by military and civilians alike. My Office also handles aviation affairs. The Army has a keen interest in aviation, and in this field we have many continuing problems.

Real property is another phase of action. In continental United States alone the Army owns 7,700,000 acres of land, somewhat more than the State of Maryland. We maintain 622 million square feet of buildings, or approximately 95 Pentagons. We also handle housing and public quarters.

Under civil functions, we watch over such diverse programs as the continuity of Government operations, Army participation in the Federal civil-defense program, the national cemetery program of the Quartermaster Corps, and, largest of all at present, the civil-works program of the United States Army Corps of Engineers. You might say I'm on the constructive rather than the destructive side of the Army. To give you an idea of size, this coming fiscal year expenditures for the civil-works program will amount to about $630 million.

Let's examine for a moment or two some of the benefits to the Nation resulting from this program.

Flood control: Flood-control projects complete or in operation prevent on the average an estimated one-half billion dollars annually in flood damages, based on conditions prevailing generally in 1954.

Navigation: The total waterborne commerce of the United States in 1955 reached a record high of over 1 billion tons, an increase of 17 percent since 1954. The inland waterways, including the Great Lakes in 1955, handled about 217 billion ton-miles of freight, representing about 17 percent of all the freight traffic transported in the United States by railways, motortrucks, waterways, and pipelines. The Corps of Engineers built and now operates these waterways.

Hydroelectric power: Over 4 million kilowatts of generating capacity are installed in reservoirs constructed by the Department of the Army. The 18.1 billion kilowatt-hours of electricity generated during fiscal year 1956 represents 15.1 percent of the hydropower produced and 3.1 percent of total production of all sources of the Nation's utility systems.

Water supply: Over 1 million acre-feet of storage space has been provided in 16 reservoirs for industrial and domestic water supply. An additional 4 million acre-feet is provided either exclusively for irrigation or jointly for irrigation and other purposes. In numerous instances, reservoirs are also operated for low-flow regulation and thereby improve water supplies downstream and reduce pollution. This was a godsend during the recent drought in the Great Plains area.

Recreation, and fish and wildlife: More than 4 billion acres of land and water have been made available for the enjoyment of the 25 million estimated to have hunted or fished during 1955.

All the foregoing has been accomplished, but many urgent problems remain, before the Nation's water resources can be planned and fully utilized. Let me quote an excerpt from President Eisenhower's state of the Union address which points up the problem admirably:

"Our soil, water, mineral, forest, fish and wildlife resources are being conserved and improved more effectively. Their conservation and development are vital to the present and future strength of the Nation, but they must not be the concern of the Federal Government alone. State and local entities, and private enterprise should be encouraged to participate in such projects. * * * There are two things I believe we should keep constantly in mind. The first is that each of our great river valleys should be considered as a whole. The second is that the domestic and industrial demands for water grow far more rapidly than does our population.

"The whole matter of making the best use of each drop of water from the moment it touches our soil until it reaches the oceans, for such purposes as irrigation, flood control, power production and domestic and industrial uses, clearly demands the closest kind of cooperation and partnership between municipalities, States and the Federal Government. Through partnership of Federal, State and local authorities in these vast projects, we can obtain the economy and efficiency of development and operation that spring from a lively sense of local responsibility."

Condensed in these two paragraphs is a rich background of experience and thought concerning the development of land and water resources since the beginning of this Nation. Similar conclusions have been reached by nearly every other group that has studied water resource development objectively. The most recent studies were published in the December 1955 report of the Presidential Advisory Committee on Water Resources Policy, composed of Secretaries Wilson, Benson and McKay.

They recommended the following four changes of an organizational nature:

1. The establishment of a small Office of Coordinator of Water Resources to advise the President and to help him carry out his job of administering the many-sometimes-conflicting laws relating to water resources development. For effective water-resources planning and development, the closest possible coordination among the many Federal agencies is required. We must "tool-up" to accomplish the needed coordination.

2. An independent Board of Review be set up in the Executive Office of the President to analyze the engineering and economic feasibility of projects and report to the President through the Coordinator. In this way the Congress can be given unbiased appraisals on which it can base its actions.

3. The formation of regional or river basin water resources committees with a permanent non-voting chairman appointed by the President and with co-equal membership composed of representatives of all Federal Departments and States involved. Such groups would be invaluable in resolving the many planning problems and conflicting demands for water within the basin or region.

4. Permanently establish Federal Inter-Agency Committee, advisory in character on water resources, under the chairmanship of the coordinator, composed of principal policymaking officials of the Federal agencies concerned.

The Administration has drafted legislation on these matters and it is hoped that it can be submitted to the Congress this session. It is here that your organization

can help to improve significantly the wise development of the Nation's water resources. This can be done by actively supporting these needed organizational changes, and by presenting the facts and the sound reasoning on which this proposal is based, to the public at large.

Illustrative of the need for better coordination and planning are current problems created by one of the several purposes to be served by multipurpose development—water supply.

Droughts, such as the recent Great Plains drought, have made it all too apparent that our developed supplies are inadequate.

The Department of Commerce estimates that water usage in the United States will increase from 262 billion gallons daily in 1955 to over 453 billion gallons daily in 1975. With this almost doubling of water demand, it is becoming increasingly evident that adequate water supply depends on water conservation, and that from now on reservoirs built for river control should include storage space for water supply.

We do not have authority to provide storage space to take care of future needs where no customer is presently available to pay for the storage space. Legislation is being considered to meet this problem and its passage will help us plan and build projects best suited to meeting the needs of the future.

As you can see, planning for and developing adequate water supply in conjunction with the other purposes, such as flood control, navigation, power, and irrigation, demand close coordination. More than ever before, machinery is required to do the job. It is a joint enterprise in which all levels of government and all interests should participate from conception to fruition.

This brings me to the second point on which I ask your active support. About 4 years ago, the Department of the Army and the Department of the Interior revised their policy for acquiring real estate for reservoir projects. Here is the purpose of the new policy:

"To save money for taxpayers, and to keep from dispossessing farmers and landowners from their homes and lands any more than was necessary, it undertook to purchase only those lands likely to be frequently needed in operating the reservoirs, and to take no more than easements on lands that would seldom be used."

Some people claim that this policy is an attempt by the Army to keep the public off its reservoirs.

Nothing is further from the truth. The Army is proud of its lakes and proud of the service it renders to the public. Last year alone, more than 71 million visitor-days of recreational use were estimated at Army reservoirs. This was made possible by almost 3,000 Army-provided access points and almost 1,500 picnic areas and public campgrounds. Counting the number of boats in use during the single peak day at each reservoir, the total runs well over 70,000; and these boats are served by more than 2,000 public launching ramps and boat landings provided by the Army.

It should be understood that the law forbids us to acquire land specifically for wildlife enhancement or park or recreational uses; those are functions of other agencies. But, we can and do provide reasonable access to reservoirs. Also, we provide basic facilities such as roads, parking areas, launching ramps, drinking water, sanitary facilities, safety devices, concession, and supply services—in other words, we contribute as substantially as we can to the public enjoyment of our reservoirs.

Under the law, the Department of the Army has made available for fish, wildlife, and recreation, lands which were excess to project needs. And we shall continue to do so. But under the new policy, there will be fewer acres available for these purposes. We believe that the full recreation potential of Federal reservoirs should be developed, but that this development, especially the condemnation of private property, should be authorized by the Congress. Here is another activity where State and local interests can work with the Federal Government under the concept of joint enterprise.

I trust that these facts pretty well refute the charge that the Army is trying to keep the public off its reservoirs. It simply is not so. We believe our acquisition policy is fair and in the best interest of the public.

In conclusion, I should like to extend my congratulations to you on this excellent meeting and to extend the Army's best wishes to the National Rivers and Harbors Congress as it progresses through its 56th year of public service.

I urge you to support the forthcoming legislation setting up a working organization for the full development of our water resources, and please inform your friends that the welcome mat is out to the public at all Army reservoirs.

It has been a pleasure to meet with you. Thank you.

Communist Propaganda Against the H-Bomb

EXTENSION OF REMARKS
OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 7, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, many fine and patriotic citizens are being hoodwinked by the Communist propaganda which is directed against the H-bomb. Is it not strange that those who are determined to prevent further development of the H-bomb by our country make no protest against the development and use of the bomb to Communist Russia?

Columnist Constantine Brown, writing in the Washington Evening Star of June 12, states that the Soviet Union is driving hard toward a drastic limitation of nuclear weapons. His article follows:

SOVIETS' DRIVE AGAINST H-BOMB—CAMPAIGN IS BELIEVED BASED ON THE FACT THAT THEY LEAD IN CONVENTIONAL POWER

(By Constantine Brown)

That the Soviet Union is driving hard toward a drastic limitation of nuclear weapons and abolition of the H-bomb is the news which Harold Stassen reportedly brought back to Washington this week.

Stassen's conversations with Secretary of State Dulles are, of course, kept highly secret. But it is known that responsible military men in the Pentagon are seriously disturbed. They fear that Stassen's optimism that "we are finally getting somewhere" may lead us into some emotional-ideological trap.

The consensus of many qualified military observers is that Soviet leaders feel, despite their efforts to catch up with us, that the USSR is quantitatively behind America in the A- and H-bomb field.

The Communists have waged a relentless propaganda favoring abolition of all atomic bombs. They are using their mouthpieces in this country as well as in the rest of the world toward that end. Nobody believes the Kremlin leaders are moved by humanitarian motives. The real truth, according to those in a position to appraise the situation accurately, is that Russia with its 200 million inhabitants, nearly 100 million in European satellites and 600 million Chinese "allies" prefers to revert to conventional warfare for its own purposes.

There was a time, a quarter of a century ago, when Russia's spokesmen at the international disarmament conferences were loudly pressing for total disarmament. In those days the Soviet's military power was negligible. It hoped to win its goals through propaganda and subversion.

The question of throwing down weapons of war has been in the forefront for many years. It was the main concern of our diplomats immediately after World War I.

Geneva, then the seat of the League of Nations, was the locale of disarament meetings once or twice a year. But nothing was accomplished.

The major powers pressed for the type of arms reduction best suited to their own objectives. At one of those meetings, the witty Spanish representative, Salvador Madariaga, lost patience with the antics of his colleagues. He took the floor and said:

"The animals met to disarm. The lion looked the bull straight in the eye and said: 'Let us abolish horns.' The bull looked at the eagle and said: 'Let us abolish talons.' The eagle, eyeing the lion, suggested the abolition of claws. 'No,' said the bear, 'let us abolish everything and then just have a universal hug.' " Maxime Litvinoff, who was preaching daily for total disarmament, laughed the loudest.

Conditions are similar at present. The U. S. S. R. emerged from World War II as a first-class power insofar as ground, naval, and air forces are concerned. But the Soviets are believed by our experts to have far fewer nuclear weapons than we have. The Russian general staff is rightly convinced that America will never engage in a preventive war. Our nuclear weapons will be used only in retaliation against aggression. The Red military and political leaders also know that the loosely knit free world is in no position to match the Communist conventional forces. But so long as we posses the nuclear deterrent power, this Red superiority is inconsequential. Hence, it will be to the advantage of their ultimate objectives to have a disarmament agreement covering mainly the present nonconventional weapons. The so-called tight air inspection mentioned so frequently by our spokesmen cannot affect seriously the capabilities of the Soviet ground, air, and naval forces.

In naval warfare, destroyers hide from the enemy the movements of carriers, battleships, and cruisers with smokescreens. A similar strategy is being used diplomatically by the Soviets in their efforts to bring about abolition of nuclear warfare. Scientists, writers and a number of genuine or "front" peace organizations throughout the world have been enlisted to demand from their governments that these unbelievably destructive instruments of war be done away with.

There have been many loud protests against the recent British and American tests which have taken place in lonely spots in the vast Pacific Ocean. But it is strange that these humanitarians who denounce loudly the air pollution from fallouts have so little to say about the many tests which the Russians have carried out in Siberia and other places.

The Soviet objectives are clear to all but those who don't want to see them. The Red leaders know that the free West, once a so-called watertight disarmament agreement is signed, will live up to it. Once our main deterrent to Soviet aggression is out of the way, we will not be able to equalize the Communist conventional forces. They know that if the United States is induced to withdraw its forces from Europe and Asia they will have difficulty returning. The Red

submarine forces—at present 500 strong—will prove a handicap difficult to overcome. The present Kremlin strategy appears predicated on removing the only deterrent to Russia's unlimited ambitions. Hence, the modern version of Ambassador Madariaga's universal hug.

Resolutions of the Louisiana Legislature

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks I present House Concurrent Resolutions 57 and 58 of the 20th regular session of the Louisiana Legislature. Resolution 57 deals with the reopening of the national soil bank program to permit farmers in the disaster area to enter this program. Resolution 58 asks the Secretary of Agriculture to reopen the Commodity Credit emergency feed program in order to give assistance to the farmers residing in the 10 disaster parishes in Louisiana.

The resolutions follow:

House Concurrent Resolution 57

Whereas some 10 parishes of the State have been designated as a disaster area due to the ravages of floodwaters during the year 1957 which caused many farmers in that area to temporarily abandon their farms; and

Whereas during the period that farmers in that area were forced to temporarily abandon their flooded farms they were unable to quality for participation in the Federal soil bank program, the time for placing acreage within the national soil bank having expired on March 31, 1957; and

Whereas many cotton farmers and other farmers in that area lost their crops from inundation of their farms as well as their opportunity to participate in the Federal soil bank program: Now, therefore, be it

Resolved by the House of Representatives of the Louisiana Legislature (the Senate concurring), That the Louisiana Legislature does hereby urge and request the United States Secretary of Agriculture, the Honorable Ezra T. Benson, to reopen the national soil bank program as soon as practicable to permit cotton farmers and others farmers, in those parishes of the State of Louisiana which are declared a disaster area because of the recurring flood situation in the area during 1957, to place acreage of their farms in that area in the national soil bank; and be it further

Resolved, That the members of the Louisiana delegation in the United States Congress are hereby urged and requested to exert their utmost influence to the accomplishment of the purposes herein stated; and be it further

Resolved, That the clerk of the House of Representatives of the Louisiana Legislature is hereby directed to send a copy of this resolution to the Honorable Ezra T. Benson, United States Secretary of Agriculture, and to each member of the Louisiana delegation in the United States Congress.

ROBT. ANGELLE,
Speaker of the House of Representatives.
LETHER E. FRAZAR,
Lieutenant Governor and President of the Senate.

House Concurrent Resolution 58

Whereas 10 parishes within the State of Louisiana have been declared disaster areas because of the recurring flood situation in those parishes, necessitating the vacating of many farms in the area; and

Whereas because of the floods in these parishes, farmers are unable to plant crops and will suffer great financial loss and greatly reduced resources for the feeding of cattle and livestock; and

Whereas the Commodity Credit emergency feed program, under which farmers were able to obtain feed for livestock is now closed and its resources unavailable to the farmers living in these disaster areas: Therefore be it

Resolved by the House of Representatives of the Louisiana Legislature (the Senate concurring), That the Louisiana Legislature does hereby urge and request the United States Secretary of Agriculture, the honorable Ezra T. Benson, to reopen the Commodity Credit emergency feed program as soon as practicable in order to give immediate assistance to the farmers residing in the 10 disaster parishes in the State of Louisiana; and be it further

Resolved, That the members of the Louisiana delegation in the United States Congress are hereby urged and requested to exert their utmost influence to the accomplishment of the purpose herein stated; and be it further

Resolved, That the clerk of the House of Representatives of the Louisiana Legislature is hereby directed to send a copy of this resolution to the Honorable Ezra T. Benson, United States Secretary of Agriculture, and to each member of the Louisiana delegation in the United States Congress.

ROBERT ANGELLE,
Speaker of the House of Representatives.
LETHER E. FRAZER,
Lieutenant Governor and President of the Senate.

A Day of Memory for the Baltic Nations

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. REUSS. Mr. Speaker, for 17 years the people of the Baltic nations, Estonia, Latvia, and Lithuania, have suffered in bondage under the tyrannical power of the Soviet Union. The events of June 1940—when many thousands of men, women and children were deported from their homelands to the barren steppes of Siberia—will always be impressed on the minds and hearts of free people.

As we pause to mark the anniversary of these tragic deportations, we salute the people of the Baltic States. We in America are proud of the contributions of Americans of Estonian and Latvian and Lithuanian ancestry to making our Nation strong and free. We feel too a deep responsibility toward their brothers still behind the Iron Curtain. It is to our country's credit that the United States has never recognized Russia's forceful annexation of these independent nations.

That the spirit of freedom still burns brightly in these lands we know well by the frequent reports of renewed resistance. The Baltic peoples, like the people of other satellite nations, have proven that they will not remain passive under the Soviet's iron heel.

For 10 years America and her Western allies have been building the strength of the free world. Today we have a great opportunity before us to use that strength on behalf of a new settlement in Eastern and Central Europe which will lead to the restoration of the freedom and idependence of the captive nations. I hope, Mr. Speaker, that the memory of the deportations of June 1940 will spur us ever onward toward that goal.

Juvenile Delinquency

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the Appendix of the RECORD, I include therein an excellent statement by the distinguished chairman of the Massachusetts Youth Service Board, the Honorable John D. Coughlan, before the House Subcommittee on Special Education on the subject of combating juvenile delinquency.

Mr. Coughlan speaks with real authority on this subject because he has been an outstanding leader in education and youth service activities, as well as a distinguished exponent of wise, sound measures designed to cope effectively with current problems of juvenile delinquency.

Since Mr. Coughlan has made an outstanding record in his work in this particular field, his views are not only interesting, but will be very helpful to Members of Congress and others interested in these questions.

It is pertinent to note that in his presentation, Mr. Coughlan asserted that he "was not seeking large Federal operation grants or handouts," and that he felt his agency was able to do its full part in discharging State responsibility. In his opinion, Federal assistance should be limited to those necessary parts of the program requiring Federal participation such as demonstration, intensification of existing effort and training of professional workers.

Mr. Coughlan's statement follows:

Those of us who have official responsibilities for combating delinquency and crime have become increasingly alarmed in recent years over the dangerous increase in offenses against the law committed by juveniles. A recent analysis of the situation by Dr. Martha May Eliot, long-time Chief of the Children's Bureau, indicates that juvenile delinquency has risen 70 percent since 1950. J. Edgar Hoover, a month or so ago, presented startling figures showing not only a national increase in crime but also a shocking percentage of serious crimes committed by persons under the age of 21.

One of the most significant aspects of this situation is that the increase is not confined to any section or State or group of States,

but extends throughout the whole Nation. It is reasonable to say that juvenile delinquency is no longer contained by State boundaries and that it is no longer exclusively a State or local concern. Scarcely a week goes by that we in Massachusetts are not arranging for the return of one of our delinquents or for sending one back to another State. In California, I am informed, a special train is operated periodically to return runaway and delinquent boys and girls to their home States across the Nation. Add to this wiping out of boundaries the alarming increase both as to number and to seriousness of offenses, and the problem can be clearly seen as no longer one of infected local areas but rather as a serious and growing contamination of the whole Nation's youth. As such, therefore, it has become not only a problem for the States and the local communities, but also a problem of Federal concern because it directly affects the national welfare.

Juvenile delinquency is like a disease—almost a plague in our times. It spreads from individual to individual, from group to group, from generation to generation. It is my considered conviction that unless a nationwide effort is made in the present year and those immediately ahead to solve this social problem, or, if not to solve it, at least to arrest the increase, the consequences to American youth will be devastating. At present spreading rates, if unchecked, it is horrifying to think that this Nation may well have 2 million juveniles arrested annually by the police by 1967, only 10 years from now.

The implications of this for national defense are obvious. We are all familiar with the necessity for maintaining our manpower reserve. Let me point out that 2 million corrupted youths represent a serious lessening of that manpower because they make poor citizens and unreliable soldiers. Contrary to general belief, the Armed Services do not, except in some individual cases, reform serious delinquents. In fact, recognition of this has led to a policy of rejection by the services of those with juvenile records.

Let me point out, also, that adult criminals are largely recruited from the ranks of juvenile delinquents and that the nationwide control and prevention of crime in this and succeding generations will depend to a large extent on the development of effective measures in the prevention and control of the antecedent condition of juvenile delinquency.

Four years ago I was placed in charge of the Massachusetts delinquency control program. As each year has passed, I have become increasingly convinced that the great challenge of our times in the field of crime and delinquency is the challenge to prevention.

It is at this point that the place of the Federal Government in the total effort becomes significant.

Since the national welfare is certainly involved, the participation of the Federal Government is imperative. There is, in my opinion, an obligation to supply leadership and stimulation to the States and the localities, as well as the kind of coordination of effort and research that only the Federal Government can provide—and has in other fields provided so well.

One outstanding example of Federal action is the recent episode of the Salk vaccine to prevent poliomyelitis. I have no doubt that the efforts to validate, to distribute, and to inoculate would still be sporadic, varied from State to State, and relatively ineffectual if the Federal Government had not assumed the obligation of leadership and coordination. I submit to you that children throughout the Nation turning to crime, menacing society, corrupting others, and at 15 or 16 become wanton killers or themselves falling before police guns should be equally the concern of the Congress. It is an historical fact that the decline of the great republics and democracies of the past did not result from decrease of physical prowess, but from moral degeneration.

The Federal leadership and coordination has been notable in many other areas also—in research and setting of standards for food and drugs; in the field of mental health; in the control of narcotics; in the improvement of agriculture; in the training of clinical psychologists to handle the problems of veterans, to mention only a few.

In all these areas, the leadership of the Federal Government, recognizing the National interests involved as a justification for participation, has given direction and purpose to development and improvement, and has resulted in major accomplishments that at best would be long delayed or indifferently accomplished if left to the States alone, or, at worst, would not have taken place at all.

I am not referring here to direct operational subsidy or Federal handouts, but rather to limited funds directly tagged for service and research for the accomplishment of purposes that cannot be provided by the States acting alone or independently.

It appears to me, for example, that one important area of activity with respect to crime and delinquency for the Federal Government would be to aid the States to set up pilot projects in key areas in delinquency prevention and control that would serve to provide information that would become available to other States on what methods have validity and success and what are likely to be ineffective. It might well be that such projects would help to replace outmoded ineffective methods and programs and develop programs better adapted to meet modern needs.

I am sure, also, that, like Massachusetts, there are some other States where new type programs are having a real impact on delinquency, but which are only partially effective because they must be financed by private funds, or because State funds are limited as to amount and use.

Such projects require the hiring of highly trained professionally qualified workers for whom adequate salaries must be provided. Generally speaking, rigid State salary schedules and personnel practices do not allow sufficient latitude and flexibility to hire such persons. At least, this is true in Massachusetts. It will be a long time before such State limitations can be eliminated, if ever. In the meantime, the problem grows more and more serious, and the national welfare is increasingly jeopardized. Long established policy and Federal practice, on the other hand, allows sufficient flexibility in approving grants for such projects to enable them to be effective.

Another great need in the field of delinquency prevention and control is the development of more trained workers. This need is acute in Massachusetts, as I am sure it is throughout the Nation. Unfortunately, State money cannot be used to provide stipends and scholarships or to set up adequate collaborative training with universities, and we must look to the Federal Government to meet this national need.

This is entirely consistent with Federal aid and assistance programs—for example, in the training of clinical psychologists, training of registered nurses for supervisory positions, and the training of professional workers in the area of mental and public health.

In this connection, I wish to call the attention of the committee to the fact that funds provided for the National Institute of Mental Health can, under certain circumstances, be obtained for use in programs combating delinquency. While I recognize the need for research to be carried on by Mental Health and feel that the National Institute of Mental Health and State Mental Health authorities will play an important part in future development of delinquency control programs, I must insist that a substantial part of Federal moneys directed at delinquency should go to those public agencies whose primary responsibility is delinquency itself, not a single aspect of many and varied responsibilities. Let me make it clear that I favor continued Federal aid in the field of mental health. I am disturbed, however, over what appears to be, so far as Federal aid funds are concerned, a tendency to regard delinquency as an exclusive province of mental health authorities.

In Massachusetts, the Youth Service Board is an integrated State agency set up in 1949 to attack the problem of delinquency, including not only rehabilitation of those offending, but also its prevention. With some 2,500 delinquents under its jurisdiction in any given year, it seems to me most unwise and undesirable for such an agency to obtain Federal funds or benefits from Federal funds only on a hat-in-hand basis by going either to the National Institute of Mental Health or even, in some cases, to private agencies, through which Federal funds are being channeled. Such procedure not only limits the amount available, inasmuch as the mental health agencies will obviously take care of their own needs first, but also, it operates to bar the use of Federal funds in those instances where a legitimate delinquency prevention and control project is not slanted as a mental health project. What I am saying here is that it is time, now that delinquency is becoming so serious, for the Federal Government to recognize in its aid program law enforcement and other public agencies directly concerned with delinquency, instead of confining the Federal Government's program to the mental health field.

Recently, the Massachusetts Youth Service Board surveyed the communities of the State with respect to areas of activity where State and Federal funds could be used to greatest advantage in the attack on delinquency. As a result of that survey, we learned that our police departments are eager to provide special training for officers dealing with juveniles and to set up juvenile police bureaus within their departments.

I will recall to your mind the police training programs of the FBI and their value to State and local police in the effort to combat crime.

With Federal help, I believe that training programs of similar value could be set up in all the States to assist local police in their concerted efforts to handle the juvenile program. I believe that such programs set up in each State would have national value and important impact on the situation we face. The police are still a first line of defense in the attack on delinquency and everything possible must be done to enable them to coordinate and improve their efforts.

Fundamentally, my plea to your honorable committee is for favorable action on any one of the several bills before you, including that of the administration, or on a synthesis of the best features of all of them.

I want to make it clear that the amount of money provided in these bills is an extremely small amount in the total Federal budget, but the benefits will be large because they will mean the extra effort and the additional stimulation needed in the States in coping with this problem.

It must be understood, also, that I do not seek or favor large Federal operation grants or handouts. In Massachusetts, during the past 5 years, we have almost doubled our appropriations. We are, therefore, quite willing and able to do our full part in discharging ourselves of our State responsibility.

There are certain limited areas indicated in these bills, however, namely, demonstra-

tion, intensification of existing effort, and training of workers, where Federal participation is necessary and desirable. I am sure, also, that if this is true of Massachusetts, it must be doubly true of other States without a youth authority where the attack on delinquency is not nearly so structured and organized.

While I am happy to say that the increase in the problem has not been as great in Massachusetts, it is still large enough and significant enough for us to intensify our own efforts and to seek the Federal Government's interest and participation so that improvements of nationwide significance can be made.

With substantial deterioration of an important segment of our youth certainly and demonstrably facing us, I cannot but feel that your honorable committee and the Congress itself will give favorable action to the proposal that the Federal Government assume a position of leadership in solving this growing social problem and by limited and reasonable financial aid, as provided in the bills before you, furnish the stimulation and the help for an improved national attack.

Respectfully submitted.

JOHN D. COUGHLAN,

Bar Association Case

EXTENSION OF REMARKS
OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. ABBITT. Mr. Speaker, the Honorable Robert N. Wilkin, judge of the United States District Court for the District of Columbia, on Friday, June 7, 1957, issued a very enlightening and well-thought-out decision in the so-called Bar Association case.

Under leave to extend my remarks in the RECORD, I include herewith the opinion by Judge Wilkin.

The opinion follows:

UNITED STATES DISTRICT COURT FOR THE DISTRICT OF COLUMBIA, ALFRED F. GOSHORN ET AL, PLAINTIFFS, V. BAR ASSOCIATION OF THE DISTRICT OF COLUMBIA, A CORPORATION, DEFENDANT, CIVIL ACTION No. 2393–56

OPINION

The complaint seeks a declaratory judgment invalidating the action of the defendant association at its meeting of May 8, 1956, with reference to the proposed amendment to the bylaws of the association by deleting the word "white" from article I which fixed and classified the eligibility of members, and the Complaint prayed for an injunction restraining officers of the association from any action based on, or in furtherance of, the procedure at such meeting.

The answer alleges that the complaint fails to state a claim against the defendant upon which relief can be granted: alleges that the action taken by the association was proper and in full conformity with its bylaws, alleges that the plaintiffs have waived any objections by their failure to take proper and timely action; alleges that the plaintiffs have not suffered any injury to themselves entitling them to the relief asked; alleges that this court lacks power to interfere in the affairs of the private professional organization in the manner sought by the complaint; alleges that this court cannot grant relief to the plaintiffs without denying rights protected by the 5th amendment to the Constitution and the public policy of the United States.

Two judges of this court, acting separately, denied motions for summary judgment. The case then came on for trial on the merits to determine the disputed issues of fact and questions of law. The principal issue was the validity or invalidity of the declaration of the President, based on a voice vote, that the resolution for the amendment had carried by a two-thirds vote of active members present, and that the amendment was, therefore, adopted. The determination of that issue depends on the conditions and circumstances before, at the time of, and after the voice vote. The disagreements and differences in testimony related to details of minor or secondary importance. As to the most essential facts and circumstances, there was general agreement.

There was no dispute as to the following provisions of the bylaws:

"ARTICLE I—MEMBERSHIP

"SECTION I. Classes: The following classes shall constitute the membership of the association.

"A. Active members: All members of the association at the date of the adoption of these bylaws shall be classified as active members.

"White members of the bar of the District Court of the United States for the District of Columbia, in good standing, in active practice in the District of Columbia, shall be eligible to active membership in the association, as hereinafter provided.

"B. Associate members: White residents and nonresidents of the District of Columbia who are members of the bar, in good standing, of the highest court of any State or Territory, and who are not engaged in or attempting to engage in active practice in the District of Columbia, may be admitted to associate membership, as hereinafter provided.

"White members of the bar of the District Court of the United States for the District of Columbia, in good standing, not in active practice, may be admitted to associate membership, as hereinafter provided.

* * * * *

"ARTICLE VI—MEETINGS

"SEC. 5. Quorum: At any meeting of the association, the presence of 100 active members shall be necessary to constitute a quorum.

"SEC. 8. Parliamentary rules: The parliamentary rules of practice contained in Roberts' Rules of Order, as revised, shall govern the association in all cases to which they are applicable and in which they are not inconsistent with the bylaws or the special rules of order of this association."

And there was no dispute as to the following provisions of Robert's Rules of Order:

"The vote shall always be taken first by the voice (viva voce) or by show of hands (the latter method being often used in small assemblies), except in the case of motions requiring a two-thirds vote when a rising vote should be taken at first." (Sec. IX, p. 42, Robert's Rules of Order.)

"A division of the assembly may be called for, without obtaining the floor, at any time after the question has been put, even after the vote has been announced, and another has the floor, provided the vote was taken viva voce, or by show of hands, and is called for before another motion has been made. This call, or motion, is made by saying, 'I call for a division,' or 'I doubt the vote,' or simply by calling out 'division.' It does not require a second; and cannot be debated, or amended, or have any subsidiary motion applied to it. As soon as a division is called for, the chair proceeds again to take the vote, this time by having the affirmative rise, and then when they are seated, having the negative rise * * *." (Sec. 25, p. 95, Robert's Rules of Order.)

It was admitted that there was no count of active and associate members.

It was agreed that only a voice vote was taken.

The weight of evidence indicated that there was a substantial volume of sound as to both "yeas" and "nays." One or two witnesses indicated that the sound volume of the two votes was about equal, and most of the witnesses testified tohat it was impossible for anyone to determine positively whether those voting in the affirmative represented two-thirds of the qualified members.

It was agreed that the meeting had an unusually large attendance, estimated to be about 520 persons. The meeting was held in the Williamsburg Room of the Mayflower Hotel.

There was a dispute and disparity of testimony as to whether or not a division had been called for specifically.

The minutes of the meeting recite, at page 379 of defendant's exhibit No. 2:

"Mr. Alfred F. Goshorn rose to a point of order with reference to those persons in attendance and stated that there was no way to determine whether they were entitled to vote or not. He thereupon moved that the motion be tabled. The chair ruled the motion out of order stating that when the time came those not eligible to vote could be requested not to do so and that any member present could reqeust that there be a division so that ineligible persons could step to one side of the room and only those eligible to vote would do so."

The testimony of the president and secretary supported the statement of the minutes. Other members of the association who testified stated that the president said, with a gesture of the hand, that when the vote was taken, he would ask all associate members and guests to move to one side of the room. It was conceded, however, that no such separation occurred. After some preliminary points of order and motions, relating to presence of persons ineligible to vote and method of voting, were disposed of, the president declared that the pending action was on the motion to adopt the amendment. One member spoke in favor of the amendment and no one spoke in opposition. The minutes recite:

"Upon a call for the question the Chair asked for the 'ayes' and then the 'nays' on Mr. Moore's motion. The vote having been taken by voice the Chair ruled that the motion had been passed and that the 'ayes' were more than the required two-thirds vote of the active members in good standing present."

The minutes continue:

"Mr. Paul Lee Sweeny rose to a point of order and appeal from the ruling of the chair stating that the Chair could not rule on whether the affirmative vote on Mr. Moore's motion had been the required two-thirds. The Chair put the appeal to a voice vote, after which the chair ruled that the appeal was denied and the original ruling upheld."

The president and secretary testified that the statement in the minutes was correct. Mr. Sweeny, however, testified that he arose and objected to the method of taking the vote and that, when the Chair ruled him out of order, he then appealed from the ruling of the Chair. There was other diversity of testimony regarding the minutes on this point, some supporting the statement in the minutes and some supporting Mr. Sweeny's statement.

All the testimony, however, agreed that, after the president announced the passage of the motion, there was great confusion. The president himself referred to it as "cheering"; others referred to it as "applause" and "noise." Witnesses for the plaintiffs referred to the occurrence as "bedlam" and "hubbub." The president and the secretary and some other witnesses testified that they

did not hear anyone calling for a division, in that exact word. Many witnesses testified, however, that there were members standing and calling for recognition. A number of the witnesses said that they heard calls for division, and some witnesses said that they themselves had so called. The only member recognized by the chair, however, was Mr. Sweeny, and when his objection and appeal were disposed of, the president called for consideration of other business.

Thereafter, certain members of the association presented petitions and protests, dated May 16 and May 14, 1956, to the board of directors of the defendant association. (Plaintiff's exhibits Nos. 3A, 3B, 3C.) The board declined to take any action thereon, and no change in the minutes of the May 8 meeting was made by the Association at its next meeting, as shown by defendant's exhibit No. 3.

Another fact emphasized by the plaintiffs was admitted by the defendant—the same proposal for amendment had been submitted twice, or possibly three times, by referendum, and had failed of adoption because the votes in favor did not meet the two-thirds requirement.

This court is constrained by the admissions and the weight of the testimony to find that the objections, motions, and protests at the meeting of May 8, 1956, were sufficient to apprise the chairman that the method of taking the vote was objected to, and that a division and visible count of members for and members against the motion was desired. The Court concluded that it was a violation of the by-laws and of Robert's Rules of Order for the presiding officer to fail to call for a rising vote. The Court is impelled to such finding and conclusion especially by the fact that highly-respected members of the association testified in support of the plaintiffs, in spite of the fact that they had favored, and voted for, the proposed amendment. One of these witnesses said that, regardless of the language used, it was clearly apparent that a number of persons were demanding a division in the sense that they wanted the members who voted for or against the proposed amendment to be counted for the purpose of determining with certainty whether or not the proposed amendment had been adopted by at least a two-thirds vote of the members entitled to vote, and that such demands were not honored. In an affidavit filed in this case, that witness had said:

"I insist upon saying at this time that the board of directors of the Bar Association of the District of Columbia will represent me in my status as a member far better if they will put a speedy end to this sorry squabble which is injuring the prestige of the bar association and of the legal profession, and will resubmit the controversial amendment to the members of the association and poll a vote with respect thereto in such manner that there will be no doubt as to the result and the legality of the proceeding. I feel that the value of my membership in the association will be further impaired by the prolongation of a situation which has caused many of my respected associates to believe that their rights have been violated and which at the same time makes it embarrassing for the self-respecting Negro members of the bar to apply for membership in the association."

This court finds and holds that the allegations of the answer, in view of all the circumstances and the law, are not sufficient to prevent the relief prayed for in the complaint.

It was argued, in support of the defense, that the plaintiffs would have to prove fraud and bad faith on the part of the president and secretary in order to sustain their complaint. Counsel for the plaintiffs, however, very graciously stated that the plaintiffs neither alleged nor implied any bad faith or willful misconduct. He spoke of the officers of the association in high praise and conceded that the chairman was trying to effectuate the sense of the meeting. He placed his prayer for relief squarely on the illegality of what was done, alleging firmly that it was contrary to both the letter and spirit of the bylaws of the association and of Robert's Rules of Order.

With such statements of counsel for plaintiffs, this court concurs. It imputes no improper motives in the officers, but finds illegality in the action of the meeting. Its judgment is not against the purpose of the amendment, but against the attempted method of adoption. The tenor of all the testimony creates the impression that the meeting of May 8, 1956, was surcharged with feeling and emotion incompatible with calm deliberation and judicious action. Leaders of reform movements seem prone to become overzealous. They then think that, because their objective is commendable, any method of attaining it is justifiable. In other words, they assume that the end justifies the means. But that theory can never be sustained in a court of law. If it were approved, the law would lose its virtue as a social and political bond. We would cease to have a government of and by law. We would then be ruled by the capricious, arbitrary, and tyrannous conduct of majorities and those in office.

Discipline is an inherent requirement of human nature in the individual and in the body politic. History reveals that when discipline is not self-imposed, it must be superimposed. The life of democracy depends on its observance of the law. In determining its judgment, a court of law must consider its effect, not only on the instant case, but also on all similar cases. The affirmance of a voice vote in the circumstances of this case would reduce to a nullity the provisions for two-thirds votes by the bylaws of all associations and corporations.

This court is not unmindful that the provision for a two-thirds vote in bylaws or constitution has been severely criticized as impractical, more harmful than beneficial, and a means by which an arbitrary minority may thwart the will of the majority. Such criticism has been most prevalent against the provision in our Federal Constitution which requires a two-thirds vote for Senate approval of treaties. It has been referred to by respected authority as "an outmoded flaw in our Constitution", "a fatal defect." Edward S. Corwin, in The Constitution and World Organization, has said, "The two-thirds rule was an anomaly before it was ever put into operation, and everything that has happened since 1789, both within the constitutional system and outside of it, has contributed to aggravate its abnormity. (For further discussion and authorities, see The United States and the World Court, by Denna Frank Fleming, ch. X.)

This consideration was not advanced in this case. It is mentioned here merely to say that if those who are irked by the two-thirds rule will not move to repeal it, they should not try to evade it. As long as it is the law, it should be observed and obeyed, especially by lawyers.

The allegations of the answer that this court lacks jurisdiction and will not interfere in the affairs of a private corporation were disposed of by the ruling on the defendant's motion for summary judgment, but it seems well for the court to state here that this defendant association is an organization of members of the bar of this court. From earliest times, the courts of England and of this country have assumed, and exercised, a supervisory jurisdiction over organizations and assemblies of persons licensed by the court to practice law. It was judicially determined by Lord Mansfield that, while the courts had no jurisdiction over the inns of court "according to the general law of the land," yet, "in every instance their conduct is subject to the control of the judges as visitors."

This court, and the court of appeals of this judicial district, have taken jurisdiction of other cases questioning the action of the bar association. (*U. S. ex rel Robinson* v. *Bar Association of the District of Columbia* (91 U. S. App. D. C. 5, 197 F. 2d 408)); *U. S. ex rel Noel* v. *Carmody* (80 U. S. App. D. C. 58, 148 F. 2d 684).

While it may be conceded that the plaintiffs have sustained no pecuniary loss or direct property damage from the action complained of, yet it is the view of this court that they have acquired, by joining and paying dues to the defendant association, an interest in the association and its property, and privileges which entitle them to assert that the character or membership of the association shall not be changed except in accordance with the bylaws of the association (said to be the oldest in America).

It is the opinion of this court that the assertion of such rights and interests does not violate rights protected by the fifth amendment of the Constitution or the public policy of the United States. The Legal Register for the District of Columbia lists a number of bar associations besides the defendant, which have limited or restricted membership. In addition to the defendant bar association, there is the Washington Bar Association, the Women's Bar Association, the Federal Bar Association. There is also a Patent Bar Association and a Barristers Club or Association. The legality and propriety of such associations have not been questioned, and members who have joined such associations have a right to insist that they continue to represent the special interests for which they were organized until their purpose and objective are changed in accordance with the basic law of the organization. (*Ross et al* v. *Evert et al* (Sup. Ct., Wis., Apr. 9, 1957.)

People of any race, religion, or political faith may assemble and associate for the advancement of their interests. No sound public policy would destroy the interesting diversity of life. If the aim and end of democracy should be to reduce all men to the same shape and shade and common opinion, then it could not and should not survive. It would counter one of the fundamental principles of evolution.

It is apparent to any person of fair mind that, if the defendant association wishes to represent and to speak for all the lawyers of the district, then in all fairness it ought to make all lawyers eligible for membership. If it does not do so, then members of the bar who champion the proposed amendment ought to unite with other members of like mind and organize an all-inclusive bar association for the district which would be authorized to speak and act for all persons admitted to practice before the United States district court.

The defendant association, for a long time, has restricted its membership, and some of its members emphasize that object and purpose of the association which is "to increase the mutual imporvement and social intercourse of its members." If they feel that the social purposes of a limited membership are of more importance than being the agency of the entire bar of the district, their wishes and desires should not be overridden or denied except by action of the Association taken in accordance with the bylaws.

Judgment for plaintiffs. This opinion may serve as findings of fact and conclusions of law, and counsel may prepare and submit a final order.

ROBERT N. WILKIN,
United States District Judge.

What the Judges Say

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend and revise my remarks, I present herewith an editorial entitled "What the Judges Say" which appeared in the Evening Star, Washington, D. C., on Wednesday, June 12, 1957. It is as follows:

WHAT THE JUDGES SAY

Charles Evans Hughes once observed that "the Constitution is what the judges say it is." It would be hard to find a ruling which, in its own way, lends more support to that comment than the case of the two service wives who murdered their husbands.

Mrs. Clarice B. Covert killed her Air Force husband in England. Mrs. Dorothy Smith killed her Army husband in Japan. Both were tried by military courts, as authorized by Congress, convicted of murder and given life sentences.

Less than a year ago a majority of the judges then on the Supreme Court upheld these convictions. But now the Court has done an about-face, reversing that earlier decision and setting the women free. It is doubtful whether they can or will be tried again.

Monday's controlling decision was delivered by Justice Black, with the concurrence of Chief Justice Warren and Justices Douglas and Brennan. These four—not a majority of the Court—held in sweeping terms that the wives and children of servicemen stationed abroad cannot constitutionally be tried by military courts—whether the offense be murder or the theft of a package of chewing gum.

Justice Harlan, who was with the majority in last year's ruling, concurred on the "narrow ground" that these were capital cases. He intimated that he might take a different view with respect to lesser offenses, but he did not say where he thought the line should be drawn. Justice Frankfurter, also concurring, emphasized that he was considering and ruling on "only the trial of civilian dependents in a capital case in time of peace."

Justice Clark, joined by Justice Burton, dissented in strong terms. He deplored the overturn or impairment of precedent and condemned the reversal of last year's ruling. "In substitute therefor," said Justice Clark, "it (the Court) enters no opinion whatever for the Court. It is unable to muster a majority. Instead, there are handed down three opinions. But, worst of all, it gives no authoritative guidance as to what, if anything, the Executive or the Congress may do to remedy the distressing situation in which they now find themselves."

It is not feasible in this space to discuss in detail the several points of view set forth by the judges in the 90 pages of opinions. One point made by Justice Black is persuasive, however. Brushing aside contentions that the ruling would create a nightmare of trouble for our armed forces overseas, he declared:

"Trial by jury in a court of law and in accordance with traditional modes of procedure after an indictment by grand jury has served and remains one of our most vital barriers to governmental arbitrariness. These elemental procedural safeguards were imbedded in our Constitution to secure their inviolateness and sanctity against the passing demands of expediency and convenience. * * * If our foreign commitments become of such nature that the Government can no longer satisfactorily operate within the bounds laid down by the Constitution, that instrument can be amended by the method which it prescribes. But we have no authority, or inclination, to read exceptions into it which are not there."

Justice Black, however, was speaking for a minority. It is impossible to know what a majority might decide in another case. Thus, while the Constitution still is what the judges say it is, what they said last year is not what they say today, and what they say today is not necessarily what they will say next year. In this respect, we think Justice Clark had reason to protest that "this is disastrous to proper judicial administration as well as to law enforcement."

Prophets of Gloom Fluffed on Social Security Prognosis

EXTENSION OF REMARKS
OF
HON. GEORGE M. RHODES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. RHODES of Pennsylvania. Mr. Speaker, the event which marked the 10 millionth American to receive social security benefits indicates the great progress that has been made in the United States since the enactment of the social security law.

It recalls to many of us the scare propaganda which was launched against social security when it was first proposed and how bitterly it was fought for many years after its enactment. Social security was the very heart of what ultraconservative interests called the welfare state program.

Even today from conservative sources opposition continues to come. But public acceptance has caused criticism to be tempered and most of those who opposed the principle of social security confine their efforts to blocking improvements and further advances.

Mr. Speaker, under leave to extend my remarks, I wish to include a most excellent editorial from the Reading (Pa.) Times, which refutes the old arguments against social security and shows how the law has become a great asset in strengthening the American economy as well as doing justice to retired American citizens.

THE PROPHETS OF GLOOM FLUFFED ON SOCIAL SECURITY PROGNOSIS

When the old-age and survivors' insurance plan was enacted into law, it was anathema to many Americans. They said it was socialism. They said it robbed the individual of initiative. They said it ran counter to the American way of life. They said we were opening the goose to get all the golden eggs at once.

When the Government started paying benefits in 1940, many of the old arguments were dug up again, plus others. Throughout the years there has been one recurring plaint: The Federal Government was using the fund for other purposes and in a few years there wouldn't be any money left in it for the aged and the survivors. The prophets of gloom proved to be wrong on all counts. The social-security system has not destroyed individual initiative. And we have the word of Marion B. Folsom, Secretary of Health, Education, and Welfare, that the system is "in very sound condition and should continue to be self-sustaining."

Ten million Americans are now having their economic situation shored up by social-security benefits. Mrs. Jane Gavin, of Ozone Park, N. Y., is perhaps typical. She became the 10 millionth beneficiary on Thursday. She is 36 years old, the widow of a World War II hero, and the mother of a girl 10 and a boy 7. She will receive the maximum family benefit, $200 a month. This will last until December 1964, when the girl will turn 18 years old. Then, if she does not remarry, she will receive a monthly pension of $80.50 for life.

Will the critics of the social security system, if there are any still hiding behind the bushes, say that this $200 a month, part of which the deceased father and husband helped to pay for, is not being well spent to keep Mrs. Gavin and her children together? Will they say that the 7,420,000 retired workers and dependents and the 2,580,000 survivors of insured workers who are receiving Social Security benefits at the present time should not have got such benefits but should have been shunted to relatives (if any) or sent to institutions or be forced to live on one kind of private charity or other?

It is as Mr. Folsom said when he presented the 10,000,000th check to Mrs. Gavin and her little family: "We do not have to accept economic distress as inevitable." It also is as President Eisenhower said in a personal letter to Mrs. Gavin: "This money is not charity. In his daily work, out of his regular wages, your husband earned the monthly checks which will be coming to you while your children are growing to maturity. You can accept them proudly. By his employment, Mr. Gavin helped to achieve financial security for his family."

The argument that social security payments would undermine individual initiative has long since been scuttled. For it is plain that a family like the Gavins will not have its self-reliance undermined by a payment of about $50 a week. Mrs. Gavin—and the youngsters, as they approach 18—will be alert to every opportunity to augment their social security payments, and the incentive to do so will become even greater when Mrs. Gavin's stipend is reduced to $80.50 a month.

There is another point to be made in favor of the system. Sylvia Porter, who writes on economic and financial matters for the Times and many other newspapers, made it one day last week. Month after month personal incomes rise in the United States. They rise, principally, not because of wage and salary increases, not because of higher stock dividend payments, but primarily because of the amount of money being poured into the economy by the Federal Social Security System. Payments to beneficiaries now total more than a half billion dollars a month.

Social security has proved itself a blessing not only to millions of individual Americans but also to the American economy as a whole. It may be suspected that only the most foolhardy politician would, at this stage of its development, seek to undermine it.

Our Flag, by John Lynch

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. PHILBIN. Mr. Speaker, since today is Flag Day, it is most appropriate that I bring to the attention of my col-

leagues in the House an inspirational poem on Old Glory which has been written by a friend and constituent of mine, Mr. John Lynch, 196 Grove Avenue, Leominster, Mass.

Mr. Lynch pays a fitting and proper tribute to our flag—the symbol of hope and freedom not only in our own United States, but throughout the whole world—and I ask unanimous consent that his poem be printed in the CONGRESSIONAL RECORD.

The text follows:

OUR FLAG

Sweet emblem of democracy
Our debt is limitless to you;
No mark for aristocracy
Upon your red, or white, or blue.
You've raised a num'rous progeny,
How fast, beneath your folds, they grew.
This multitude, in harmony,
Would gladly give each life for you.

CHORUS

Our hopes shall ever cling to thee,
To guard us here from tyranny.
And help to spread democracy
O'er every land and sea.
Until the very end shall be
Our hopes shall ever cling to thee.

Your majesty with modesty
Proclaims a great—an honest trend,
You aim to make each world state
A loving and a steadfast friend.
You aim to make each child you guard
A king:—as is his rightful due.
He will—if e'er your cloth be marred
Unsheath a heart and soul for you.

—JOHN LYNCH.

Weather Bureau Hopes for Control of Weather

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I present herewith the address of Dr. Francis W. Reichelderfer, Chief of the Weather Bureau, Department of Commerce, to the 44th annual convention of the National Rivers and Harbors Congress, held in Washington, D. C., May 17, 1957. This is a most interesting and provocative address, and is as follows:

THE WEATHER BUREAU'S PROGRAM: NEW DEVELOPMENTS IN SEVERE STORM WARNING AND OTHER ASPECTS OF THE NATIONAL METEOROLOGICAL SERVICE

(By Dr. Francis W. Reichelderfer, of Indiana; Chief, Weather Bureau, Department of Commerce)

The letter of March 1, 1957, to all members of the Congress from your executive vice president mentions several meterological conditions of interest to this congress—droughts, destructive floodwaters, hurricane studies, weather control, and conservation of water resources. The work of the Weather Bureau relates directly or indirectly to all of these and to many more weather phenomena of interest and concern to you and to the general public. In fact, foul weather conditions of one kind or another cause property damage and losses in the United States in excess of a billion dollars annually. Storms and floods are responsible also for much loss of life. The problems of this congress are greatly simplified and reduced in cost when we are able to "do something about the weather." There are two general ways of doing something about it through the meteorological approach. They are (1) prediction of weather so that people can plan accordingly and take precautionary measures to prevent losses, and (2) control of the weather.

Much is being done about predicting the weather, and much is being said but little done to control it. In the few minutes available here recent progress in these two broad approaches will be summarized.

THE NATIONAL HURRICANE RESEARCH PROJECT

About 2 years ago the United States Congress provided funds specifically for the first large-scale research program toward full understanding of the origin, development, movement and dissipation of hurricanes. This is an intensive and highly cooperative undertaking now centered at West Palm Beach under the national hurricane research project. The United States Air Force operates specially equipped aircraft—two B-50's and one B-47—for penetration into the centers of hurricanes with weather observers aboard. In addition to these, there are hurricane reconnaissance flights by Air Force and Navy aircraft which furnish vital information for the regular hurricane warning services as well as for research. Central and northern South American countries are cooperating in upper air soundings for this project, and many other organizations, including university research institutions, are contributing to this all-out effort to find solutions to the problems of tropical cyclones. Real progress has been made and during the coming hurricane season we expect to gather basic data inside hurricanes so that the mechanics of their development can be thoroughly analyzed and fundamental knowledge obtained for design of better procedures for forecasting the formation and movement of these storms and for determining whether they have vulnerable spots that would permit some measure of deflection, modification or control. This national hurricane research project is a very important work and we are trying to do everything possible to attain solutions to the meteorological problems of hurricanes.

FORECASTING DESTRUCTIVE FLOODWATERS

For many years specific predictions of flood stages in the major river systems have served to reduce greatly the loss in life and property that occur whenever populous localities are inundated without warning. Flood warnings, like hurricane warnings, depend for their effectiveness on cooperation of many agencies—the Coast Guard, the Corps of Engineers, the Geological Survey, the Weather Bureau and many others. In recent years the organization for flood warnings has been extended upstream and into some of the smaller tributaries. Development of radar apparatus for storm detection opens new possibilities for flash-flood warnings. The radar provides continuous and comprehensive survey of rainfall over a radius of 150 miles or more and fills in the great gaps in observations and immediate reports of heavy rainfall—gaps that were unavoidable when we had to rely wholly on local weather observers. This system of flood warnings is being extended and improved as rapidly as available funds and personnel permit.

The growing industrial and agricultural needs for water and the continuing development of inland water transportation will be served in part by further improvements in the network of radar storm warning stations. The potential uses of radar in analysis of meteorological conditions and forewarning of severe local storms are just coming to be realized. By means of the radar the weather observer can now "see" through intervening clouds and haze and penetrate in view right to the core of the severe local storm even though it is 100-200 miles away. Future research will improve this equipment for use in measuring the amount of rain falling at remote points within range of the radar. It will speed up flood forecasting and provide more hours of warning that often mean the difference between safety and great loss of life and property. Disasters in recent years from floods in localities beyond the reach of present flood warning stations give tragic evidence of this conclusion. The radar network and the improved rainfall warning services and related hydrologic programs of the Weather Bureau open the way for more positive control of water resources and for better water management in operation of reservoirs, power stations, navigable waterways, irrigation systems and recreation areas. Some indication of these future possibilities is given in the seasonal water supply forecasts published by the Weather Bureau in some of the Western States where a major source of irrigation water is from snowmelt in the high Rockies.

DROUGHTS

In the United States weather seems destined to bring figuratively, if not literally, either "feast or famine." Many of the regions in our Southwest that have suffered for 5 years or more from desiccating droughts have in recent weeks become disaster areas because of floods. Weather records show that rainfall in the Midwest and Southwest as far back as history goes has alternated between very dry periods and very wet periods. Present patterns of atmospheric circulation and resulting rainfall indicate that we have entered one of the wetter periods although its duration cannot be predicted with certainty. Very much more fundamental research in meteorology is necessary to discover the ultimate causes of these large-scale shifts in air currents often of hemispherewide scope. Rainfall so far this year has relieved most of the localities that suffered from acute water shortage for several years, but this is not a permanent cure for water shortages in the United States. This Congress knows very well the growing problems of water resources in the face of industrial expansion and ever-increasing needs for water by the growing population of the country. This leads to the subject of weather control and rainmaking. But I do not offer this as the solution. Other more tangible means must be developed.

RAINMAKING AND WEATHER CONTROL

This subject is so involved in technical and scientific questions and is so shrouded with uncertainties and misinterpretations at the present time that it would take hours just to summarize the past experimentation in weather control and the possibilities and complexities of its present status. Millions of dollars have gone into rainmaking experimentation. Suffice to say here that most of the claims to weather modification on a phenomenal scale are without substantiation. An excellent summary of conclusions from cloud seeding and rainmaking operations in many parts of the world was published on May 20, this year, by the American Meteorological Society, largest organization of meteorologists in the world. In essence it states that there is no reason to believe that cloud seeding is a cure for drought and that although statistical evaluation indicates a 10-20 percent increase in rainfall under certain special circumstances on the up-slopes of mountains, there is little evidence of increase in rainfall by artificial means over the Great Plains; in fact, the evidence may be taken to indicate that seed-

ing decreased rainfall almost as frequently as it might have increased it. Most tests show no practical results. A few studies have indicated the possibility of suppression of clouds that develop into severe hail storms but this subject needs far more research to be certain of the causes and effects. On one point practically everyone engaged in study and experimentation in weather control appears to be agreed, namely, the urgent need for well-designed and thorough research in fundamentals of cloud physics and quantitative precipitation theory.

NUMERICAL WEATHER PREDICTION

The revolutionary advances in meteorology made possible by the weather radar have been mentioned briefly. Another major advance is represented in use of electronics computers for analyzing and predicting the major circulation patterns of the atmosphere by numerical processes. (Brief historical background.) The significance of this development is readily seen in the fact that the hundreds of thousands of different parcels of air that make up the general circulation and determine the weather each day are far too numerous and complex for man to comprehend by mental process alone. For the past 2 years the numerical weather-prediction unit at Suitland, Md., supported jointly by the Air Force, Navy, and Weather Bureau, has produced a 72-hour prognostic chart every day. In doing this the computer goes through more than 80 million additions, subtractions, etc., each day. Many meteorologists believe that the science is at the threshold of a breakthrough in knowledge of the atmosphere and its behavior through the research made possible by the electronic computer and its mathematical treatment of the mechanisms of the earth's atmospheric circulation. The computer is a sort of wind tunnel for which meteorology has long felt a vital need. It offers the hope for digesting and understanding the changes in atmospheric patterns which are translated locally into the millions of different varieties in weather conditions that occur over the surface of the earth every day.

The computer also promises to be the key to determining whether man really wants to live with the consequences of large-scale weather control. It would take too long to talk about this aspect of meteorology to the extent that it deserves. There is little doubt that it is or soon will be within the capabilities of man through the use of his available sources of nuclear power or through other means for changing the radiation balance in the atmosphere, to bring about at least some modification of weather and climate. But in many cases, it would be robbing Peter to pay Paul. For example, if huge quantities of dust were scattered in Arctic regions for the purpose of modifying the vast cold air masses that bring killing frosts to parts of our country, this action would doubtless also reduce the amount of rainfall received by some of our Southern States, and by the coastal lands of the Mediterranean, and so on. Development of the electronic computer in research into these questions is an essential step in determining the possibilities and the desirability of large-scale weather modification.

These remarks do not mean that weather modification is completely lacking in beneficial, practical uses. There are possibilities but their development and their practical utility have been delayed by a flood of exaggerated and unsubstantiated claims during the past 5 years—claims that rainfall and other results have been produced artificially in cases where these have resulted wholly from natural causes. It is time that the delays in development of meteorology and its practical applications were ended by more fundamental and thorough research programs.

LONG-RANGE WEATHER FORECASTING

This is an old and ever-pressing problem. Progress is being made but it is slow because of the many unknowns in the atmosphere. If there were time the principal difficulties could be described but I shall only summarize by saying that here again the numerical weather computer with the possibilities indicated a few moments ago, and with data to be gathered during the forthcoming international geophysical year, together with other sources of new knowledge gives us reason to expect some real progress in extended range forecasting through future research.

THE INTERNATIONAL GEOPHYSICAL YEAR

The program of the international geophysical year promises much in basic data and advancement of meteorology. As just stated, the electronic comuuter and other recent developments in meteorology hold the key to treatment of the data and solution of some of the urgent problems in weather science. Together with other meteorological agencies, the weather bureau is carrying on an expanded research program.

THE WEATHER BUREAU'S PROGRAM

In addition to these research programs, the bureau continues the regular daily services with which most of you are very well acquainted, the agricultural meteorological service, the aviation weather service, the forest fire-warning service, the marine weather service, the climatological service, the hydrological service, and the several services of severe local storm, hurricane and cold wave warning. I wish there were time to describe the great improvements during the last few years in the severe local storm warning system. The so-called SELS unit of the weather bureau centered at Kansas City and the Severe Weather Warning Service of the Air Force, one of the pioneers in this development and now operating jointly with the SELS unit of the weather bureau, have brought advances that are well demonstrated by the tornado warnings in recent days.

The Patient Marines

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. MILLER of California. Mr. Speaker, it has become the practice of late to become highly critical of the Marine Corps, a great fighting outfit.

I think the editorial by Mr. E. L. Burgess, editor of the East Bay Labor Journal, appearing in that publication under date of June 7, is worth while preserving. I therefore include it in the Appendix of the CONGRESSIONAL RECORD and I commend the reading to my colleagues:

THE PATIENT MARINES

The marines have often been accused of being unnecessarily tough, but if Marine Col. W. E. M. Williams, of Treasure Island, was responsible for the restraint shown in handling the Negro enlisted man who had killed a Navy officer, then Colonel Williams deserved some kind of a medal honoring humanitarianism and profound political tact.

You've all read about it, how the enlisted man suddenly went beserk, shot and killed an ensign, and then for some 6 hours refused to give up the murder weapon, while Navy and Marine officers pleaded with him to surrender. And all the while the guns of Navy men and marines were aimed at him from many quarters—he could have been riddled with bullets at any moment.

It gives any American new pride in the Navy and in the Marines to think of the humane spirit, good discipline, and political wisdom shown during those long, very long 6 hours. Just what the People's World will make of it as it actually happened one wouldn't know, but what they and all the other Commie publications in the world would have made of it if the "natural" thing had been done, that is, just to shoot the offender down, it's easy to imagine. It would have been played up all over the world as one more instance of "racist chauvinism," the murdering of a poor wronged Negro.

Organized labor, with its long campaign for the fair treatment of the poor and lowly, should claim some indirect credit for this wonderfully civilized performance. For despite all our failings, we have on the whole through our unions influenced the whole tone of our society wherever the relationship of commander and command, superior and subordinate, exists. This change of tone has undoubtedly affected the armed services as well as all other elements of our society.

Soviet Deportation of Baltic Peoples in 1940

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. RODINO. Mr. Speaker, the brave but unfortunate people of the three Baltic countries—Estonians, Latvians, and Lithuanians—have had long histories. But fate was most cruel to them in 1940. In that year these three countries, once the secure home of rising young democracies, were forcefully annexed to the Soviet Union and many hundreds of thousands of their inhabitants were uprooted from their homes. These innocent and helpless victims of the Soviet Union's aggression of 1940 are still suffering in some distant and desolate corner of the Soviet prison empire.

Since then the free world has heard practically nothing about them except from those few who have had the extraordinary luck to escape. And the fate of millions of Estonians, Latvians, and Lithuanians in their homeland is not much better. If they were not deported, they certainly suffered much privation and hardship during the war, and are still suffering under the unrelenting tyranny of Soviet communism. We have even heard that the native population of the coastal areas of these countries were moved to the interior in order to make room for Asiatic people brought in to settle there. Outrageous and almost unbelievable this may sound, yet the deliberate policy of the Soviet Union seems to be to colonize these frontiers exposed to the West with people from other parts of the Soviet Union. This of course adds to the misery and suffering of the native population, but since they are living in

what is little more than a concentration camp, it is not surprising.

We in the West are fully cognizant of these heart-rendering facts. We are well aware of the sad fate that befell to those deportees and of the unbelievable lot of those who are living in the three Baltic countries. I wholeheartedly sympathize with their unfortunate lot, and ardently hope that soon a way will be found to ameliorate their lot and free these deserving citizens of the free world.

Civil Rights Act of 1957

SPEECH
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 11, 1957

Mr. REUSS. Mr. Speaker, I rise in support of the civil-rights bill, H. R. 6127. I am opposed to all amendments which would weaken this measure, including the so-called trial-by-jury amendment.

It has been claimed by the opponents of this bill that its purpose is to deprive citizens of constitutional rights by punishing them without a jury trial. Nothing could be farther from the truth. The purpose of this bill is very simple: It is to guarantee the sacred constitutional right to vote of every citizen by preventing attempts to deprive them of their vote, rather than waiting to punish the offenders when it is too late to give the victims back the vote that they have lost. The bill seeks to punish no one. It is only those who would willfully defy the protective orders of the Federal courts who would choose to subject themselves to punishment for their misdeeds.

I trust that this amendment will be soundly defeated and that this House, and this Congress, will then go forward to enact a measure which will go a long way to protect our citizens, wherever they may live and whatever their race or religion, in their inalienable right to cast their ballot in freedom and dignity.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Address by Hon. Estes Kefauver, of Tennessee, Prepared for Delivery Before Tennessee Bar Association

EXTENSION OF REMARKS
OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, June 17, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address I had prepared for delivery before the Tennessee Bar Association at its meeting on last Friday. Because I was detained in the Senate so that I could vote on the mutual security bill, I could not be present to deliver it.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS PREPARED FOR DELIVERY BY ESTES KEFAUVER, DEMOCRAT, TENNESSEE, BEFORE THE BAR CONVENTION, CHATTANOOGA, TENN., JUNE 14, 1957

It is a great pleasure for me to meet today with the Bar Association of Tennessee. I have always liked to be among lawyers. When I was a very small boy my father owned the only hotel in the great city of Madisonville, Tenn. All the lawyers used to stay there, when there was a session of court, and I used to sit on the porch and listen to them spin their tales of courtroom lore. It was then that I decided to be a lawyer.

You have asked me to speak with you today on the subject of the importance of lawyers in Government. The degree and depth of that importance may be measured by a number of indications.

First of all, I want to point out that the majority of our Nation's founders were lawyers. With their unparalleled foresight, they planned and executed a civil bible for all Americans. Their work has well withstood the tests that time has applied. Lawyers, as a profession, meeting in the Constitutional Convention, were the leaders in the founding of our way of life. Lawyers, as a profession, are today trustees of the rights which their predecessors wrought.

The people look to you for leadership. Not only do they accept the fact that you supply the leadership, but they expect you to live up to the heritage first formulated by the men who founded our Nation. This entails more obligations than those of any other profession. You are a group set apart.

As proof of the continuing importance of lawyers in government during our modern day, I offer the evidence that today 60 percent of the Members of the Senate of the United States are lawyers. This should serve as a warning, as well as a compliment, to the profession. If the country is really going to the dogs, as some claim, then with this preponderance of lawyers in the Senate, the people will know where to place the blame.

They can blame the lawyers.

On the other hand, if you are essentially optimistic, as I am, then you must agree that a large part of the credit for whatever good is accomplished by our Government must go to the legal profession.

The burden of my few words with you here today is a plea for lawyers, both inside and outside the Government, to adopt the same principles that those early members of our profession held with regard to a free exchange and interchange of ideas. In my library at home I have a book which I frequently pick up in the evening and read a few passages from. It is Madison's Journal of the Constitutional Convention. It is impressive to note that among our Founding Fathers no idea was too hot to discuss rationally. I don't believe their work would have endured, as it has, if these predecessors of ours in the Constitutional Convention had been afraid of new ideas and free discussion of them. Running throughout the pages of this journal is the evidence of a devotion that is almost fierce to freedom of discussion and to the free search for ideas, and freedom of speech.

I fear that we have become much more timid as our Nation has progressed. On a Sunday afternoon not long ago, I took Nancy and the children on a drive to the home of one of these members of the Convention—Monticello. It is always an exciting thing for me to visit the home of this man who showed in everything he did a genius which is born only of intellectual curiosity. Whenever I step across the threshhold of Thomas Jefferson's home, I feel that here is a man in whose company I would have liked to spend a long evening before the fireplace. His consuming curiosity—about the law, about philosophy, about government, about the weather—showed that here lived one of the really vital men of any time.

Do you remember the words from Thomas Jefferson's first inaugural address—those wonderful words that expressed so well his devotion to the principles of liberty, even for those with whom he disagreed? At the time of Jefferson's first inaugural we were not far removed from the Revolutionary War. Many still lived in the then infant Republic who had sided with the British during that war. And we were a small Nation, just a handful of States, with the ocean to our faces and a vast wilderness to our backs—a small and weak Nation.

Yet Jefferson, unlike some men of little faith today, defended the good common sense of allowing anyone to speak freely. He said:

"If there be any among us who would wish to dissolve this Union, or to change its republican form, let them stand undisturbed as monuments of the safety with which error of opinion may be tolerated where reason is left free to combat it."

Let us consider what Jefferson's words mean to us today in our relationship to the rest of the world, and especially to the Communist nations. In our relationship with communism the dangers of ignorance have reached a high point. There are some who believe most strongly that our way of life would be contaminated by contact with the Communist ideology. And so they objected to the appearance on a CBS program a couple of weeks ago of Mr. Khrushchev. In their view we Americans are so soft and undiscriminating that we are unable to distinguish what is good from what is bad for our Nation.

I say that this is an incredible view. I say we can talk with the Russians and also with the Chinese Communists without succumbing to evil or getting the worst of the bargain. Indeed, I see no alternative but to be aware of what is going on in the world. We need not fear facts. We need fear only ignorance of them or indifference to them. We must reaffirm our faith in the people of the United States and their ability to decide what is best for themselves.

Only yesterday I was talking with Senator LYNDON JOHNSON, the distinguished majority leader of the Senate. Senator JOHNSON made a speech last week in which he proposed, now that the way had been paved by Khrushchev's appearance, that the curtain be lifted further. He proposed that there be agreements for periodic broadcasts in both the Soviet and the United States, with Soviet leaders appearing on the American stations and American leaders having the opportunity in turn to visit Soviet homes through television.

We have nothing to fear from this," Senator JOHNSON said to me. "The only man who has anything to fear is Khrushchev."

That is true. We are not afraid for the facts of American life to be exposed to the Soviet or anyone else. We have nothing to hide. I was glad to note that Senator WILLIAM KNOWLAND, the Republican leader, endorsed this proposal, and that Secretary Dulles also had kind words to say about it.

On the other hand, the Secretary objects to American newspapermen going into Communist China to report for American newspapers. This is the very opposite of a properly informed policy. These American reporters will not be there as agents of this or any other Government. They would be there simply to report to you and to me what is going on in China. We have a right to know. The Chinese have said they may enter. We have said they may not. We need not be afraid to know the truth. We need be afraid only not to know the truth.

As Jefferson further said: "I know of no safe depository of the ultimate powers of society but the people themselves; and if we think them not enlightened enough to exercise their control with a wholesome discretion, the remedy is not to take it from them, but to inform their discretion by education."

Education is the meaning of freedom under law. Informed public opinion, the greatest law enforcer of all, can come only from those who understand the problems we face. We must never forget that if we are able to give the people light, they will find their own way. Each day we are called upon to make our decisions. They cannot be honestly arrived at without deep thought and searching debate in the marketplace of ideas. And this thought and debate are made useful and informed through knowledge.

So it is with other areas of intellectual darkness. One of these is atomic power. With so many conflicting statements from the scientists, those who are supposed to know, it is difficult to be able to talk about this deadly weapon without becoming emotional. Yet it is a subject which requires the most careful and considered thought, not only among the higher echelons of technical opinion, but also down on the level of the little people, for they have as much to lose as anyone.

Yet fear and ignorance of the magnitude of such power have tried to force logical thought right out of our minds. We know so little about the dangers of fallout, and so little about the possibilities of creative peacetime applications of this enormous energy that we refuse to consider these problems as our own. But we must consider them our own, for that is what they are.

Part of this dangerous lack of information and the anxiety it breeds is due to the recent epidemic of secrecy which has found its way into our Government. Some of the operations of our Defense Department are necessarily conducted away from the public eye for obvious reasons.

But it is another matter when nonsensitive agencies adopt these same policies for no better reason than saving themselves possible embarrassment. In this category I would place much of the State Department's recent dealings in the Middle East. Some of you may recall the controversy growing out of the shipment of American tanks to Saudi Arabia, and the complete blank that Congress drew when it attempted to learn some details of the Eisenhower doctrine.

This habit has invaded the domestic affairs of our country as well. Any day in Washington you can find officials protecting the people from information which might upset them.

One of these issues is public power. I have seen the stamp of secrecy under many different forms—executive privilege, secret trades, restricted reports. We went all through that in Dixon-Yates. We are going through it again in Hells Canyon. I sometimes wonder how we were able to find out as much as we have.

It is too easy to form an opinion grounded on personal bias, insufficient interest and slanted evidence. The most dangerous aspect of this is that opinions so formed are often more powerful than those based on careful inspection of the facts, impartiality, and truth. Some of these conflicts are so basic that the mere mention of the phrase which identifies them is enough to set off a chain reaction of reflexes. Try this test on the phrase "civil rights." You will get an emotional, not a rational, reaction. Minds on both sides have been closed, and are reluctant to open, even to hear the most logical and reasonable arguments.

Ignorance may be bliss, but bliss is not the aim of a progressive and intelligent people. We cannot think straight with insufficient knowledge, but the problems confronting us in a modern world require us to learn and keep learning. We must always seek the better solution, the newer method, the greater advance.

These principles are self-perpetuating. Knowledge breeds thought; thinking leads to the conception of new ideas; new ideas result in the search for more knowledge.

For my part, I cast my belief with that of Woodrow Wilson. He said that if you give the people the facts, then they will come up with the right answer. You lawyers have a great responsibility in seeing that this is done.

Lawyers are to truth what doctors are to health, and this is your province. You must lead the way in maintaining an open mind. You must provoke the search for facts. You must encourage full and free discussion. Applying the rules of law and evidence to everyday life, you can offer leadership by example.

Resolution of Sons of the Republic of Texas on the Death of Senator Joseph R. McCarthy

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, June 17, 1957

Mr. JOHNSON of Texas. Mr. President, the executive committee of the Sons of the Republic of Texas, a distinguished patriotic organization in my State, recently adopted an In Memoriam resolution regarding the late Senator McCarthy.

I ask unanimous consent that the resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

IN MEMORIAM

The United States has lost a devoted patriot and a militant fighter for Americanism in the untimely death of Senator Joseph R. McCarthy of Wisconsin. He fought valiantly for his country on the battlefields of the Pacific as a marine officer during the Second World War. As a Member of the United States Senate and chairman of that august body's committee charged with investigating subversive activities, he revealed to America's millions the menace of communism and its insidious efforts to undermine our institutions of freedom. So intense was his love for America that he willingly sacrified health and political future to fight for the preservation of the principles on which this great country was founded.

Appearing under auspices of the San Jacinto Chapters, Sons and Daughters of the Republic of Texas, Senator McCarthy gave an inspiring address on Americanism at the battlefield of San Jacinto, April 21, 1954, anniversary of that decisive battle which won independence for Texas. Some 12,000 Texans were present for the occasion, and newspapers, radio, and television carried his message to millions throughout the country.

The executive committee of the Sons of the Republic of Texas, meeting Sunday, May 5, 1957, in the Driskill Hotel at Austin, Tex., noted with sorrow the passing of this great American and by resolution authorized the secretary-treasurer and president to draft this memorial for presentation to his widow and to the Senate of the United States.

THE SONS OF THE REPUBLIC OF TEXAS,
ANDREW DILWORTH, *President.*
FRANK E. TRITICO, *Secretary-Treasurer.*

Address by Hon. Chapman Revercomb, of West Virginia, Before Disabled American Veterans

EXTENSION OF REMARKS
OF
HON. CHAPMAN REVERCOMB
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Monday, June 17, 1957

Mr. REVERCOMB. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address which I delivered yesterday before the Disabled American Veterans in their West Virginia State convention, at Charleston, W. Va.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am happy to meet with you on the occasion of your 27th convention, for I count it a privilege to address those who have made such heroic sacrifices for their country, and who continue to labor in the interest of the Nation's security and the preservation of human liberty and freedom.

Certainly, no group of American citizens is more deeply conscious of the responsibility that rests upon the United States than those assembled here. That responsibility is thrust upon America because of our high concern for the preservation of the kind of life which has been our heritage and which you yourselves have defended so valiantly. Our security must be a primary concern as we seek in every way possible to avert open strife.

It is my conviction that our best assurance of preventing a catastrophic atomic war lies in a powerful defense force and real military alliances with friendly nations.

I need not remind you that nuclear weapons and the means of delivering them with fabulous speed over vast distances have produced a revolutionary change in our affairs. Never before has our country faced the potential danger that confronts us today and will continue to, so long as great atomic power is concentrated in the hands of a potential enemy bent on world domination.

Modern science of warfare, therefore, has left this country with but one alternative: To maintain sufficient military strength to deter aggression. Moreover, Communist aims have forced us to provide not only ourselves with strong defenses, but to extend our defense line beyond our borders into other lands.

I need not remind you that the United States is the only free nation with sufficient strength to lead in prevention of enemy domination of the world. Therefore, we must make use of this strength to deter would-be aggressors from starting a war—a war that would inevitably involve this country and threaten the destruction of civilization, our own included.

It is my conviction that if the United States took any other course, we would see one friendly nation after another fall.

We cannot close our eyes to the fact that this threat exists today, and we know quite well that, left standing alone, this country, with all its power, resources, and industrial potential, would have an exhausting experience to try to remain a free nation for long.

Nearly every American is convinced, I believe, that the leaders of this country are dedicated to the task of achieving conditions in the world that will lead to peace. In his second inaugural address, the President said it is our firm purpose to build a peace with justice in a world where moral law prevails. I quote his words: "The building of such a peace is a bold and solemn purpose. To proclaim it is easy; to serve it will be hard; and to attain it, we must be aware of its full meaning and ready to pay its full price."

The price we are paying for today's uncertain peace is high. More than 60 percent of the Federal budget is for our protection. But the price of war is many times higher, not only in dollars but in a far more priceless possession—the lives of Americans. I say to you in all sincerity that we must not lessen our efforts at a time when the western world is growing stronger and the danger of war is receding.

Our defense dollars are being spent not only for our present protection but for insurance for the future. We must think of them as buying time—time to work toward easing the international tensions, time to establish a more certain and secure peace. As long as there is loose in the world a country or a power that would destroy us, we must remain geared to meet it with force, if need be. If we falter at this point, or lessen our efforts, we run a grave risk of losing everything we hold dear.

I do not like or prefer this policy which we now must pursue; but I do not like the world situation that has necessarily brought it forth. We do not like impending danger, but we cannot ignore prevailing facts. We must act with wisdom in the light of realities. Failure to do so would bring disaster.

Therefore, the interest of our own security and self preservation, we must continue military alliances with friendly nations. We

should, I believe, out of necessity, continue military aid to our allies. But the time has come when economic aid must be placed on a loan basis.

It is heartening to me, and I know it must be satisfying to you, to know that the Mutual Security Act now before Congress provides for a development loan fund for development assistance to those friendly nations in need of economic help.

I have urged time and again that economic aid, when necessary to other lands, be in the form of sound business loans—and it must come as heartening news to Americans throughout the length and breadth of this land to know that at last Congress is recognizing the fact that while we want security, we also have a regard for our own people, their property, and their money.

Direct military aid to allies will continue. But, loans to friendly nations requiring economic aid is far better than grants, handouts, or giveaways. This is far better for the American people, and it is far better for the people receiving such assistance. There is still contained in the bill direct gifts in some instances—but a new and wholesome step has at last been taken—and I hope to see soon all economic help abroad upon a secure and sound loan basis as we now provide for development operations in the present bill.

There is increasing evidence that, together with our present allies, we are growing stronger all the time and may soon reach the point where would-be aggressors will not dare risk war.

This is the whole aim of our foreign policy. As to defense measures, I believe it to be a sound one. It has kept this country out of a shooting war for more than 4 years. It has undoubtedly kept some of our allies from falling to communism.

As the anti-Communist alliance grows stronger, as the danger of war recedes, we all look forward to the time when the billions we are now spending for defense can be diverted to internal improvements in our own country, or turned back to the people in the form of tax relief.

I am convinced, however, that the best way to avert war is to maintain strong defenses and firm military alliances until the present international tensions have eased and the threat of aggression has diminished. Any other course could well lead to our downfall.

Judicial Selection and Tenure

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, June 17, 1957

Mr. WATKINS. Mr. President, one of the most important duties of the Members of the Senate is that of the confirmation of judicial appointments. On May 10, 1957, at the mountain and plain regional meeting of the American Bar Association in Denver, the subject of Judicial Selection and Tenure was among the interesting matters under discussion.

By request of the bar association, Hon. William P. Rogers, Deputy Attorney General, delivered a very informative and brilliant address upon this topic. It contains a fine résumé, and in brief compares furnishes much information particularly valuable not only to members of the bar but of Congress.

I ask unanimous consent that the address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

JUDICIAL SELECTION AND TENURE

(Address by William P. Rogers, Deputy Attorney General of the United States, before the mountain and plain regional meeting of the American Bar Association, Denver, Colo., May 10, 1957)

I appreciate very much your kind invitation to participate in this regional meeting of the American Bar Association. It provides an opportunity to renew old acquaintances and to talk over firsthand a number of matters of mutual interest. It was suggested that I discuss judicial selection and tenure today, and I am happy to accede to this suggestion.

As you may recall, the Judiciary Act of 1789 provided for a total of 19 Federal judges, distributed as follows: The Chief Justice of the United States, 5 Associate Justices for the Supreme Court, and 13 district judges, 1 for each district. No provision was made for circuit judges for the 3 circuit courts since they were to be composed of 2 Supreme Court Justices and 1 district judge, any one of whom would constitute a quorum. In 1802, Senator Breckenridge said: "The time will never arrive when America will stand in need of 38 Federal judges." Numerically, at least, the problem of judicial selection can hardly be said to have posed a serious problem at that time.

Obviously, when the President was called upon to make so few judicial appointments, there was no necessity for establishing any regular procedure for making recommendations concerning appointments. The problem was to find men willing to serve in view of the meager salary and the arduous requirement of riding circuit.

Such points of reference as there are disclose that President Washington sought counsel from members of the Cabinet generally. We know, however, that in 1793, Randolph, the first Attorney General, had been asked to prepare a list of candidates for the bench. He reported that one possible candidate "had no just pretensions to eminence"; another "was of indifferent elocution and his knowledge of the law scarcely placed him on the roll of fame"; one "was a good country court lawyer"; one "was clear in all respects save that he might have some connection with the land companies"; and another "was a valuable man of universal esteem and a much approved practitioner." Randolph cautioned President Washington not to appoint incompetent men stating: "If such an idea gains ground, the State judiciaries will inevitably make a stand against the Federal bench."

For a time, the Department of State was given the function of making recommendations to the President concerning all appointments. However, in 1853 at the instance of Attorney General Cushing, this function, insofar as it related to judges and law officers, was transferred to the Department of Justice where it has since remained. Even so, Attorney General Bates complained in 1863 that the Secretary of the Treasury had been instrumental in making appointments to many judicial vacancies without any reference to legal and judicial qualifications.

The making of recommendations for judicial appointments is not now, nor has it ever been, an easy task. There is an immense amount of work involved in the process of appraising possible appointees and in preparing the Attorney General's recommendation to the President. As Attorney General Wickersham said: "My function, in connection with the filling of judicial appointments is quasi-judicial in itself, and I must consider all the candidates without any commitment to any one of them." Mr. Brownell, at the very outset of his tenure as Attorney General, established a procedure, which he has followed consistently. It is designed to insure the selection of judges of the highest integrity and professional attainment.

Whenever a vacancy exists many individuals and groups, including United States Senators, submit recommendations in support of various lawyers for appointment to the vacancy. These recommendations and endorsements are all gratefully received, acknowledged and given careful consideration. At the same time the Department, through bar groups and governmental sources, initiates its own study in order to secure the best available person for the office.

Sometimes, persons wishing to become judges, make known their interest in person. Not long ago, a lawyer approached me on this subject and I asked him why a man with such a large and successful practice with so many substantial clients and retainers would want to give all that up. He thought a moment, and then said, "To be perfectly frank, I'm tired." This applicant got a high mark for frankness—but he flunked his attitude test.

For the most part, however, there is widespread recognition of the fact that the duties of a Federal judge today are difficult, time consuming, and burdensome.

When the list of qualified persons is complete, the process of recommending one who appears to merit appointment begins. This process is conducted by the Department of Justice under standards which President Eisenhower has affirmed and reaffirmed at his press conferences.

First, and most important, the candidate must be an outstanding lawyer and leader in the community from which he comes. Both his personal and professional reputation must be beyond reproach.

Second, the age and the health of the candidate must be considered. This policy is designed to provide the bench with men of vigor who are physically capable of carrying the heavy burdens now imposed on Federal judges.

Third, whenever a vacancy occurs in a circuit court or in the Supreme Court, the President has expressed his desire that outstanding judges should be carefully considered. While prior judicial experience is not essential and it is possible to argue that prior judicial experience may be of little or no value on the Supreme Court of the United States, I believe all appellate courts benefit if some of its members, at least, bring an understanding of the problems of a trial judge to the conference table.

Finally, President Eisenhower has stated that in connection with judicial appointments he places considerable weight on the recognition of the American Bar Association.

On February 16, 1957, the standing committee on Federal judiciary of the American Bar Association reported that "Your committee's relationship with the Department of Justice has never been better," and that the working arrangement is excellent. The Department has welcomed suggestions from the committee, and has granted the requests of the chairman for personal conferences whenever they have been requested.

At the request of the President, Supreme Court appointments are now referred to the American Bar Association for its recommendation. The report referred to this as a precedent shattering step forward of the utmost significance.

When a name is initially agreed upon, it is submitted to the Federal Bureau of In-

vestigation for a full field investigation covering the person's entire personal and professional life. At that time the name is also submitted to the judicial selection committee of the American Bar Association which makes a thorough inquiry into his professional attainments and judicial competence.

The results of these two investigations, together with all the other information which has come to the attention of the Department of Justice, are then carefully weighed, following which the Attorney General makes his recommendation to the President. This recommendation, which the Attorney General discusses with the President, contains a complete factual summary of the candidate's background and qualifications for the President's consideration. Quite frequently, President Eisenhower will talk personally with the candidate before submitting a nomination to the Senate.

There are, at present, 335 lifetime judgeships in the Federal judiciary. This total is made up of 9 Justices of the Supreme Court, 68 circuit court judges, 239 district court judges, 5 judges of the Court of Claims, 9 judges in the customs court in New York, and 5 judges in the Court of Customs and Patent Appeals.

In addition, pending legislation, which the Judicial Conference of the United States and the Department of Justice among others, are strongly endorsing, would create 39 new District judgeships and 3 new circuit judgeships for a total of 374 judgeships.

During the 83d and 84th Congresses (covering the 4 years of the first Eisenhower administration) 101 lifetime judicial appointments were made. There were 2 Supreme Court appointments, 23 appointments as circuit judges, 71 district judges, 1 judge of the Court of Claims, 2 judges to the Customs Court and 2 judges to the Court of Customs and Patent Appeals. Eight additional appointments have been made thus far during the 1st session of the 85th Congress: 2 additional Supreme Court Justices, 1 circuit judge, 4 district judges and 1 judge of the Customs Court.

In 1953 over 80 percent of the Federal judges had been appointed during Democratic administrations. At the present time 61 percent of the judges were appointed during Democratic administrations.

Historically, and I suppose it will be true prospectively, each administration appoints principally from its own party. That, in practice, has not proven to be a serious weakness in the system of selections of Federal judges. The reason that the Federal court system has worked well is that Federal judges put aside all political consideration once they assume judicial duties.

Be that as it may, it would seem desirable as a matter of national policy to prevent a gross imbalance from occurring. Probably no fixed formula is practicable. However, I believe the public interest would be well served if the two major parties gave consideration to arranging some appropriate safeguard to prevent a gross imbalance from occurring in the Federal courts regardless of how long either party might be in office. It is my personal opinion that the 80–20 ratio is at least an undesirable imbalance.

The Constitution provides that judicial appointments shall be made "by and with the advice and consent of the Senate." This means that the nominee must be confirmed by majority vote of the Senate. A tradition has developed over the years that if a nominee is not acceptable to the Senators of the State of residence, by senatorial courtesy the Senate will decline to consent to the appointment. Thus, the practice has grown up of seeking the advice of the interested Senators at an early stage of the selection process.

Many not fully informed as to how this procedure works assume that this practice results in the selection of persons who may be politically acceptable but professionally unqualified. This is not true. The Senators, too, are concerned in seeing that the best qualified candidates be selected because they share in the responsibility if the person selected turns out to be incompetent or unsuitable. Our experience on the whole has been that the Senators' main concern is that the man selected from his State have outstanding qualifications and be beyond reproach from every standpoint.

The Department's function—and sole function—is to make recommendations. But even being involved to a small degree in this function is enlightening. I am reminded of the story of the schoolteacher who asked her class if anyone knew who Socrates was. A small child raised his hand, and on being called on said:

"Socrates was an old Greek who went around giving advice and got himself poisoned for it."

A word about judicial tenure. The Constitution provides that "the judges, both of the Supreme and inferior courts, shall hold their offices during good behavior." This provision was adopted by the Constitutional Convention unanimously and for reasons most eloquently expressed in the Federalist:

"The standard of good behavior, for the continuance in office of the judicial magistracy, is certainly one of the most valuable of the modern improvements in the practice of government. * * * It is the best expedient which can be devised in any government, to secure a steady, upright, and impartial administration of the laws. * * * That inflexible and uniform adherence to the rights of the Constitution and of individuals, which we perceive to be indispensable in the courts of justice, can certainly not be expected from judges who hold their offices by a temporary commission. Periodical appointments, however regulated, or by whomsoever made, would, in some way or other, be fatal to their necessary independence."

The high esteem in which the judicial branch of our Government is now held proves the wisdom of the Founding Fathers in providing life tenure for Federal judges. The two major occasions when, for political reasons, attempts were made to undermine this constitutional provision only served to strengthen and add further justification to it.

Wholly in keeping with this concept, the Judicial Conference of the United States and the Department of Justice have recommended to Congress several legislative proposals concerning senior judges.

H. R. 3818, which passed the House on March 19 and is presently pending in the Senate Judiciary Committee, would amend section 371 (b) of title 28, United States Code, to designate a judge who takes advantage of the retirement provisions a "senior judge" rather than a "retired judge", and to provide a roster of senior judges who are willing and able to undertake special judicial duties upon assignment by the Chief Justice. This would mitigate the present feeling of many judges that by retiring they mark themselves as useless and no longer fit for public service even on a limited basis. It would create a status whereby mature, experienced, and respected senior judges may serve with distinction and perform selective but important public service in their judicial capacity.

H. R. 3391, as introduced in the House, where it is presently pending, would provide that a chief judge of a Federal circuit or of a Federal district court shall relinquish his administrative duties upon reaching the age of 70. This proposal gives recognition to the established fact that the daily administrative problems of the courts are difficult and exhausting and that senior judges should not be called upon to handle them in addition to normal duties.

H. R. 110, which passed the House on March 21, would provide that if a judge is eligible to retire and fails to do so, upon a certification of disability by the members of the appropriate judicial council, the President may appoint with Senate consent an additional temporary judge if he finds it necessary for the efficient dispatch of business.

It should be emphasized that none of the above proposals affect tenure. They merely take cognizance of the fact that judges are human, and that as they grow older, the law should take factor into account either in the form of reduced duties or enlarged temporary judicial manpower.

We are fortunate to live in a Nation which appreciates the precious values of law and order. We know that, in large part, these can be secured only as our courts are removed as far as possible from the passion of the moment, from politics, from partisanship, from prejudice, from personal or sectional interest of any kind whatever. Public confidence in the soundness of court decisions and in their integrity is the foundation of authority. Equal justice under law is preserved and strengthened as we approach the problems of judicial selection and tenure with these principles foremost in our minds.

Problem of Radioactive Waste

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, June 17, 1957

Mr. JOHNSON of Texas. Mr. President, not all the problems growing out of the atomic age have to do with the dangers of continued tests of nuclear weapons.

It is certain that we face a problem of the first magnitude, one destined to grow increasingly serious, in the safe disposal of the radioactive waste that is a byproduct of use of the atom.

The Waco (Tex.) News-Tribune recently published a very thoughtful editorial on this subject, one that is worthy of reading by all Members of the Congress. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RADIOACTIVE WASTE TO BE WORLD PROBLEM A LONG TIME

Right now there is considerable discussion over the atoms-for-peace program whose principle was enunciated some time ago by President Eisenhower.

Britain is engaged in building from 7 to 9 reactor powerplants to reduce dependency on imports of fuel, which in wartime would be reduced or cut off altogether.

In our own country controversy has been underway as to how, and by whom, insurance can be supplied against reactor accident.

But not yet has discussion reached a high point on what to do with atomic radioactive waste matter which is the byproduct of use of the atom.

As use grows this matter will increase, and thus become a problem of the first order, and so an international agreement will be necessary to insure safe and uniform methods of waste disposal by all governments.

It must be remembered that this tremendous radioactive byproduct is manmade, that its steady accumulation and increasing concentrations represent a danger, however remote in time, to mankind.

Recent estimates show that waste matter from atomic powerplants in 15 years will contain from 20 to 40 times as much radioactivity as now is being released by the bomb tests.

As of now this waste matter is placed in heavy concrete boxes and dumped at sea, or stored in stainless steel tanks deep beneath the ground. The Atomic Energy Commission appears reluctant to disclose how effective this method is.

Our Challenging Tomorrows

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Monday, June 17, 1957

Mr. GOLDWATER. Mr. President, I unanimous consent that there may be printed in the Appendix of the RECORD the text of an address by former Governor Pyle, of Arizonia, who is now Deputy Assistant to the President, which he delivered at Peoria, Ill., on Saturday, June 8, 1957, before the Bradley National Alumni Association.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR CHALLENGING TOMORROWS

(Address by Howard Pyle, Deputy Assistant to the President, delivered at Peoria, Ill., June 8, before the Bradley National Alumni Association.)

It's always a pleasure to be given such an opportunity as I am provided here tonight.

As I understand it, this is a family affair. This makes it a very special privilege to be invited to participate and I want you to know how much I appreciate it.

Most of you are here because you love this campus. You are proud of the contribution it has made. You treasure the memories that are associated with it, and you have a profound respect for the men and women whose associations with Bradley have made it what it is today—a distinguished institution dedicated to the very highest ideals of human purpose.

If you don't mind my saying so, I envy you many of the thoughts that are so rightfully yours tonight. In your separate ways you have more than earned these happy reflection. Likewise, however, the very fact that you are here either as members of the board of trustees, faculty leaders, graduating seniors, students, or alumni means that you cannot be satisfied with the status quo. The challenge of Bradley's tomorrows is almost certain to be more demanding than all of Bradley's yesterdays. This is good because otherwise the vigor that has characterized this outstanding school to date could very well be lost in the lackadaisical attitude of him whom the parable quotes as say: "Soul, thou hast much goods laid up for many years; take thine ease—eat, drink, and be merry."

Since it is impossible to detach Bradley from the surging reality of what is going on around us, because Bradley is inevitably a part of that reality as is all education, permit me to remind you that within the last few days it has been predicted that the grandchildren of Americans "will live under socialism."

I don't believe this and neither do you, but it's dangerous to ignore what is implied here. To me it means that there is an aggressive, powerful force in the world that does believe this. Furthermore, it is a force that can be expected to lose no opportunity to prove it. This is the contest of these times and however remote it may seem to you here tonight on the campus of Bradley University in Peoria, Ill., it is a live burning issue on the horizon of our world.

At the Battle of the Pyramids Napoleon shouted to his troops: "Soldiers, 40 centuries are looking down upon you from the summit of the pyramids."

In this year of our Lord, more than 60 centuries are looking down on us from the scattered ruins of experimental failures in government.

Think of it, approximately 60 centuries of human history heavily studded with tyranny, conquest, militarism, lawlessness, mobmindedness, riot, persecution, oppression, and rebellion.

And, in all these years no government secured for its people: religious freedom, civil liberty, freedom of speech, freedom of the press, security of individual rights, popular education, or universal franchise.

Not until the Republic, to which we pledge allegiance, began to function did any people solve the kind of problems we have solved and secure the basic privileges that had baffled philosophers and statesmen for ages.

True, now and then rays of light and hope appeared in Greece, Rome, Holland, Switzerland, England, and elsewhere, but nothing that even began to compare with what has happened under the Constitution of the United States of America. Here, within a century and a half of our beginnings we had won all of the seven fundamental privileges for which government is primarily organized.

In review it all seems quite simple, but lest we forget, the peoples of more than 60 centuries of formative struggle dreamed of it before we in our great good fortune finally realized it.

Does our response to the prediction I read for you a moment ago reflect a solid recognition of the fact that Socialism could and would, more likely than not, mean the end of the freedoms I have just enumerated? Is our response to this prediction an appropriate match for the 60 long bitter centuries of struggle that gave us the priceless heritage of freedom that is ours today?

Searching for the words that might describe the nature of the sacrificial forces that energized the pioneering of our forefathers, let's put it this way—the Puritans, finding no happiness in Anglican England or Calvinist Holland, migrated to the New World in 1620. Somehow they were different from their brethren in the mother country. In the wilderness of a new world they learned independence and self-reliance. They were hardy and energetic. Lazy people did not cross the ocean in those days. The colonists hated restraint. England didn't understand them. The government annoyed this new kind of citizen and they in turn annoyed the government. The bad feeling grew. The colonists took to arms and there followed 7 long, bitter, heartbreaking years of struggle for independence.

Only men who were deeply convinced of the rightness of their cause could have found the heart to make the valorous decision that came in June and July of 1776. Then, 181 years ago next July 4, the courageous Declaration of Independence became official and the fight for independence was on.

In retrospect it all sounds quite simple—but we forget perhaps that this was treason to the Crown of mighty England. Every man in the chamber of the steepled brick State House in Philadelphia that day understood that it meant life or death to the men who signed.

Mellow with his 70 years, Benjamin Franklin, the oldest man present, observed to a friend:

"The novelty of the thing deters some; the doubt of success others; the vain hope of reconciliation many."

The night before John Adams wrote to his wife: "I am well aware of the toil and blood and treasure it will cost us to maintain this Declaration and support these States."

There were rich men present with great fortunes at stake.

There were appointees of the Crown present, whose influential positions were at stake.

One Francis Lewis was to live to see his home burning and hear the cries of his wife in prison.

John Hart of New Jersey was to see his farm wasted and his mills damaged.

Richard Stockton, a brilliant lawyer, loaded with honor already, was to die in total poverty from the hardships that were to come.

Lives—fortunes—honor.

All of it went on the block in the Declaration itself—and then the agony was compounded for 7 long years by the tortures of Lexington, Concord, Ticonderoga, Valley Forge, and the innumerable other equally bloody testing grounds of the Revolution.

More often than we like to remember defeat seemed inevitable, but always the unquenchable spirit of Washington stood guard over the cause of the colonists. Meanwhile, the diplomatic triumphs of the ingenious Benjamin Franklin produced the money it took to keep the cause alive.

Finally, victory, and the adoption of our famous Constitution, said to be the first of all written constitutions.

Little did those intrepid leaders in 1787 realize that they were fulfilling a destiny that was to make of this new land the living hope of free men everywhere.

It was the beginning of the end of experimental failures in government. No longer were tyranny, conquest, militarism for militarism's sake, lawlessness, mobmindedness, riot, persecution, oppression, and rebellion to be a threat to the general welfare. The foundations were laid for rights and privileges that no people had ever before known and enjoyed.

It didn't just happen any more than Bradley just happens to be what it is today.

More than 60 centuries of trial and error, injustice, bloodshed, shattered hopes and stumbling along from century to century went into it. Approximately 800 wars of varying significance and intensity rocked the centuries along the way. Civilizations rose and fell. The Dark Ages saw the church rise up out of the ruins of Rome. The lusty voices of Charlemagne and William the Conqueror led the way to the Crusades and the Magna Carta. Magellan and Columbus became unforgettable stars in an age of great discoveries. Napoleon stormed across the face of the earth while we were busy, busy with our reason for being, proof for the peoples of the world that at last we had found a basis for the seven fundamental privileges that had baffled philosophers and statesmen for ages: Religious freedom, civil liberty, freedom of speech, freedom of the press, security of individual rights, popular education, and universal franchise.

It didn't just happen and what is even more important to our posterity, these classic and priceless privileges will not continue to secure the future welfare of our children unless we are as vigilant in their protection as our Founding Fathers were wise in creat-

ing the Republic that has guaranteed those freedoms.

Under the solid provisions for individual security that are inherent in our Republic the fruitful initiative of our citizens can continue to grow and grow. Our free enterprise system can continue to provide unparalleled opportunity for labor and management alike.

Our advances from the wooden spade to the tractor-drawn gang plow * * * from the ox-cart to the airplane * * * from the blacksmith shop to an incomparable genius for industrial production and so on through hundreds of equally significant transitions proves beyond the question of a doubt that our forefathers gave us the best form of government mankind has ever known.

But today, as 181 years ago, the challenge to believe in it—work for it—and if need be fight for it—still must have willing hearts and hands.

What would your reactions be if the press, the TV, and the radio were to announce to the world on Monday morning that the grandchildren of the great State of Illinois would find the campus of dear old Bradley University a shambles.

You would come out of your corners like the "Braves" that you are. In fact, I seem to remember that you did just this when a certain national magazine was thought to have neglected a certain championship basketball team not so long ago.

Why?

Because Bradley is your pride and joy. Her heroes are your heroes, both past and present.

Would that we had more of such college and university spirit in the big contest of our times where the latest prediction is that the grandchildren of Americans will live under socialism.

I am reminded that in this very city on October 16, 1854, the immortal Abraham Lincoln gave an immortal answer to all such observations. Said he: "If there is anything which it is the duty of the whole people to never entrust to any hands but their own, that thing is the preservation and perpetuity of their own liberties and institutions."

In the light of this wisdom, compare, if you will, the results of the American Revolution in 1776 and the Russian Revolution of 1917. One produced for a deserving people religious freedom, civil liberty, freedom of speech, freedom of the press, security of individual rights, popular education, and universal franchise.

Did Russia's deserving millions gain any such privileges?

On two blocks of granite that bound the main entrance of one of Washington's great buildings are chiseled these unforgettable words: "The past is prologue—study the past."

This we have done during these few minutes and to our mutual benefit, I hope. Briefly summarized, what we have been encouraging you to remember on this 60th anniversary of the founding of this great university constitutes a historic cycle that has too often ended like this: From bondage to spiritual faith, from spiritual faith to courage, from courage to freedom, from freedom to abundance, from abundance to selfishness, from selfishness to apathy, from apathy to dependency, from dependency back to bondage.

This is the answer we don't want to the prediction that America's grandchildren will live under socialism.

Now you know why I reminded you in the beginning that the challenge of Bradley's tomorrows is almost certain to be more demanding than all of Bradley's yesterdays.

From the college and university campuses of America must come the future of America and it must not fail to be worthy of the 60 centuries of struggle that gave us the Constitution of the United States.

Research Grant to Prof. Charles E. Dibble for Aztec Translation Work

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, June 17, 1957

Mr. WATKINS. Mr. President, I received a letter recently from the distinguished head of the Department of Anthropology of the University of Utah in Salt Lake City, Dr. Jesse D. Jennings.

In it he revealed such a unique appreciation of the work being done by our National Science Foundation that I wish to take this opportunity to call it to the attention of all Members of Congress, and others who may be interested.

Dr. Jennings particularly comments on a recent award to Utah's Prof. Charles E. Dibble, made by the foundation, which will enable him to complete a first full translation of 400-year-old documents revealing the history and customs of that great American people, the Aztecs.

But beyond the purely personal rewards that ensue to such a recipient as Professor Dibble, as valuable as they may be, Dr. Jennings notes aptly the far more widening values that such a grant may truly engender. For instance, in his letter written to me Dr. Jennings remarks in part:

Grants for chemistry, nuclear physics, higher mathematics, and similar fashionable studies are commonly associated with the National Science Foundation. Less dramatic but equally important studies like Professor Dibble's do not so often come to your notice.

My purpose, therefore, in writing to you is simply to express my appreciation, on both the personal and departmental level, to you and the rest of our national legislators for the continuing and increasing support which you give the National Science Foundation annually through appropriations * * *.

Mr. President, I feel Dr. Jennings' full letter deserves careful reading by all Members of Congress and therefore at this time request unanimous consent that it be printed as a part of my remarks in the appendix of the CONGRESSIONAL RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNIVERSITY OF UTAH,
DEPARTMENT OF ANTHROPOLOGY,
Salt Lake City, April 22, 1957.

The Honorable ARTHUR V. WATKINS,
The United States Senate,
Washington, D. C.

DEAR SENATOR WATKINS: We have just received word that Prof. Charles E. Dibble has been awarded a National Science Foundation research grant for a continuation of his Aztec translation work. Professor Dibble, of this department, has, in the past 10 years achieved worldwide notice in this very special study, a study to which he has dedicated all of his spare time since about 1946. The grant he has just received will permit him to finish the monumental task of translating Fray Bernardino de Sahagún's immortal General History of the Things of New Spain, the Nahuatl document of the history and customs of the Aztec people; the complete translation has never been attempted in the 400 years since the document was written.

The honor paid to Dr. Dibble's achievement through the award of the National Science Foundation grant will have far-reaching results over and above making available to scholars this ancient manuscript. First of all, Dr. Dibble's stature will increase and recognition of him will be extended. In consequence the department of anthropology and the University of Utah will gain prestige with a specialist of Dr. Dibble's strength on the campus.

But the long run advantages for the University of Utah students who work with Dr. Dibble throughout the rest of his teaching career are the greatest of all. His increased competence will enrich the technical skills and cultural appreciation of his students. My point is that this grant, apparently made simply to assist a scholar do a job, has many other overtones and implications which are not immediately apparent.

Grants for chemistry, nuclear physics, higher mathematics, and similar fashionable studies are commonly associated with the National Science Foundation. Less dramatic but equally important studies like Professor Dibble's do not so often come to your notice. My purpose, therefore, in writing to you is simply to express my appreciation, on both the personal and departmental level, to you and the rest of our national legislators for the continuing and increasing support which you give the National Science Foundation annually through appropriations.

There is no way to measure the full benefits and implications of these modest individual grants. I am sure that every scholar who receives a grant in any field of science brings new richness of subject matter and greater teaching skill to his work as will be true in Dr. Dibble's case. The Congress should take great pride in this program.

Sincerely,

JESSE D. JENNINGS,
Head, Department of Anthropology.

Mutual Interchange of Views and Philosophies Between the United States and the Soviet Union

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, June 17, 1957

Mr. NEUBERGER. Mr. President, on June 14, 1957, the noted author and political analyst, Samuel Lubell, contributed a letter to the editorial page of the New York Times which tends to support those who feel that there should be a mutual interchange of views and philosophies permitted between the United States and the Soviet Union.

Mr. Lubell has no patience with the backward administration attitude that the Columbia Broadcasting System interview of Mr. Khrushchev was a mistake. Mr. Lubell feels this afforded a splendid opportunity for President Eisenhower to ask Soviet officials to permit him to talk directly to the residents of Russia. Mr. Lubell, unlike the ad-

ministration, has faith that, in any such exchange, democracy's views would surely triumph.

Because the ideas expressed by Mr. Lubell synchronize so appropriately with the open air proposal voiced in New York City in a memorable speech by Senator LYNDON B. JOHNSON on June 9, 1957, it is my request that Mr. Lubell's letter to the editor of the New York Times be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

INTERVIEWING KHRUSHCHEV—FEAR THAT MISCHIEF WAS DONE BY TV PROGRAM IS REJECTED

(The writer of the following letter is a political reporter and author, whose latest book is The Revolt of the Moderates.)

To the EDITOR OF THE NEW YORK TIMES:

The reaction that has been stirred in this country by the CBS interview of Nikita Khrushchev is worth some calm analyzing.

Some critics, for example, have suggested that CBS should have followed the interview with a denunciation of Mr. Khrushchev's views. A number of political leaders, including the President, seem to feel the interview gave Moscow some insidious opportunity to propagandize the American people. The charge is being repeated that much mischief has been done.

Most of these reactions, it seems to me, reflect a feeling that Americans are fools or children.

In every election campaign since 1950 I have interviewed thousands of typical voters all over the country. The notion that the attitudes of the American people to Soviet Russia could be affected significantly by a single broadcast, or even a series of broadcasts, strikes me as almost incredible.

QUERY ON HUNGARY

Of course, the program gave Mr. Khrushchev a chance to try to be disarming and charming. But I think Daniel Schorr of CBS exposed the Khrushchev performance for what it was with the question whether Mr. Khrushchev felt the present Hungarian Government reflected the will of the Hungarian people. When Mr. Khrushchev blandly insisted that it did, he exposed himself. Letting Mr. Khrushchev lay himself bare was far more effective than to have denounced him after the interview.

One weakness in the CBS questioning was in their followup on Mr. Khrushchev's airy proposal that we and the Soviets should both withdraw our troops from Europe. The CBS interviewers should have pressed Mr. Khrushchev on just what the proposal meant. Did it mean that Russia was prepared to guarantee that the troops would not be moved back into the countries from which they had been evacuated? Also how the existence of a Germany divided in two was to be resolved so that it did not become a pretext for such reoccupation in the future.

Questions of that kind would have focused on the real difficulty that obstructs a troop withdrawal from Europe—how to bring into existence the conditions that are necessary so a troop evacuation would not encourage aggression.

On this score, however, in justice to the CBS interview, it should be pointed out that our own Government has not done much better in exposing the faults in Mr. Khrushchev's proposal.

The CBS interview did ask whether Mr. Khrushchev's proposal did not mean the Soviets would be withdrawing only a few miles, while the United States would be withdrawing across an ocean. Even with this question Mr. Khrushchev did not do too well. He responded by talking of the distances between Vladivostok to Poland, ignoring the Soviet garrisons stationed in East Prussia.

I must confess to being puzzled over the reasoning behind the White House's antagonism to the suggestion that the President of the United States be given a similar opportunity to speak to the Russian people. One can understand the doubts of our officials that the Soviet regime would permit the Rusian people to hear a direct, uncensored talk by the President, but surely in principle at least this is an opportunity that would be worth taking if it could be realized.

REPORT ON A-BOMB PROPOSAL

As far as I know, for evample, the Russian public has never been informed of the details of the original American proposal to give up the atomic bomb if an effective control could be established over atomic weapons. It would be worth something to make our true position known—the more the Soviets denounced the proposal afterward the more they would advertise the fact that we made this proposal.

The basis of any propaganda effort of this country should be first of all to make certain that we are right in the policy we are pursuing. If we are not right, we should change the policy. If we are right we ought to be able to explain it.

Instead of arguing among ourselves whether Mr. Khrushchev should have been permitted to say over television what he has repeated so often in speeches and printed interviews, should we not be asking ourselves why our officials could allow themselves to get so upset over so minor an incident? Is it that they have so little confidence in the essential rightness of our foreign policy? Is it that they have so little confidence in the good sense of the American public?

SAMUEL LUBELL.

NEW YORK, *June 12, 1957.*

St. Lawrence Electricity

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, June 17, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial, published in the New York Herald Tribune, which deals with the need for action in Niagara power, and compares it with St. Lawrence power.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune of June 17, 1957]

ST. LAWRENCE ELECTRICITY

The development of electric power in connection with the construction of the St. Lawrence Waterway has already brought considerable benefits to the north country. Construction has boomed in Massena, Ogdensburg, Potsdam, Carthage, and Watertown. Nearly 300,000 tourists visited the site of the power project last year and 500,000 are expected this year. There are new shopping centers, more service stations, an increase in the number of telephones and television sets, new hotels and motels—all indications of increased prosperity in the region since construction was started in 1954.

Yesterday's groundbreaking ceremonies for a new industrial complex based on St. Lawrence electricity in the Massena region constituted another step forward in increasing productivity. Power attracts industry, and because this new source of power is available the Reynolds Metals Co. is building an $88 million plant to produce aluminum, while the Chevrolet division of General Motors Corp. is building an adjacent $12 million foundry to cast the aluminum into parts used in manufacturing its automobiles. The Reynolds plant will probably employ 1,000 persons, the Chevrolet foundry an additional 700, a fact which will benefit all business in the area from grocery stores and soda fountains to such heavier industries as home construction.

These two facilities, of course, will not use all the power which will be generated at the first installation. Some of it will go east to the city of Plattsburgh, some of it even farther into Vermont. Eventually the transmission lines will be hooked up with those of the proposed Niagara power development plan to serve an area as far away as Pennsylvania. What has been accomplished here in providing more prosperity for New York State underlines the necessity of proceeding with the Niagara project, which thus far has been hamstrung by the refusal of Congress to designate an agency to develop the power. A compromise bill now pending in Congress apparently is acceptable to all concerned—the State power authority, the private electric companies, and the backers of cooperative users of electricity. The Massena development is an example of what can be accomplished in this field, and Congress should not delay in permitting the power authority to get going on the Niagara potential.

Taxes

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, June 17, 1957

Mr. MARTIN of Pennsylvania. Mr. President, we all talk much about high taxes. We are making every possible effort to cut Federal spending. While we are doing this, local governments and State governments are increasing expenditures. Local governments are asking grants from the State governments; State governments are asking grants from the Federal Government. In addition to the direct taxes, there are many hidden taxes. It would seem that it would be fair to the American public if all taxes were out in the open so the purchaser of an item, because he is really the one who pays the taxes, would know just what he is paying.

In a recent issue of the Philadelphia Inquirer there is a very good editorial on the subject, entitled "Those Painless Taxes."

The Washington Star of Sunday contains an editorial entitled "50,000 Hidden Taxes." I ask unanimous consent that these two editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Philadelphia Inquirer]

THOSE "PAINLESS" TAXES

Much is heard about cutting the Federal budget these days. But the Wall Street

Journal reports that half of the 48 States of the Union will probably increase their own taxes this year, in some cases by as much as 20 percent.

Municipalities, in many cases, are boosting their taxes, too. And, while most of these increases are going for education, we still hear complaints that we are not spending half enough for that purpose.

In any case, estimates now hold that the American taxpayer is now paying one-third of his entire income in Federal, State, and local taxes, with a lot going out in hidden levies which are supposedly "painless."

This drain on people's incomes is being met with backfires in some States. Nebraska and New Hampshire legislatures have passed resolutions calling for a halt in Federal aid to the States. They complain that matching fund requirements, as in the highway program, pushes many States into expenditures they can't afford. And, while States may refuse Federal aid, they hesitate to do so because the Federal taxes they pay for that purpose would then go entirely to other States.

So the cycle operates. The Federal Government gives aid to States. That pushes up Federal taxes. The States give aid to municipalities. That pushes up State taxes. This accounts for at least part of the jump in taxes all around. Thus even if the tax collector has to chase the taxpayer round Robin Hood's barn, he catches up in the end. And the longer the chase—the bigger the take seems to be.

[From the Washington Sunday Star of June 16, 1957]

FIFTY THOUSAND HIDDEN TAXES

An economist has estimated that there are at least 10,000 and probably 50,000 hidden taxes reflected in the cost of a 20-cent loaf of bread. This sounds farfetched, and the gentleman may have been kidding, although it isn't very funny.

The automobile provides a better example. If a $2,000 car is bought in Michigan the total tax on it would be $559.83. (The tax would be greater if purchased elsewhere because of the levy on shipping costs, etc.) Of this total, $71.02 would be direct taxes—the ones the buyer can see. The balance, $488.81, would be hidden taxes, and how many of these there are we don't pretend to know.

At a time when the total tax bite in this country is averaging about $600 a year for every man, woman, and child, it is possible to become a bit exercised about these so-called hidden taxes. One corporation president is demanding that all of them be brought out in the open so that the victim can know precisely what taxes he is paying. But perhaps this is not such a good idea. If the taxes have to be paid, perhaps it is better to leave the hidden ones in hiding. At least, it is less painful that way.

Policies of the New Republicanism

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, June 17, 1957

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Beaumont (Tex.) Enterprise for June 12, 1957.

The Enterprise editorial page is one of Texas' best, and its editorials are unusually thoughtful and penetrating.

The subject editorial examines the current attitudes of the Republican Party, and takes note of the apparently deep gulf which yawns between segments of that party.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DID THE PRESIDENT FORGET?

When President Eisenhower gave the Democrats such a verbal blistering at the Republican rally in Washington, we wonder if he had a lapse of memory and thought for the moment that he was back in the 1952 campaign.

It just didn't seem to fit in this year of 1957—and partly because of the Chief Executive himself. This is the case, even when one assumes that there is a lot of truth in the nasty things he said about the Democratic Party.

Mr. Eisenhower declared, for instance, that the Democrats are paternalistic, surely forgetting that his new Republicanism caps the New Deal and the Fair Deal in its support of welfare state ideas.

He said the Democratic Party was hopelessly split. Well, hopelessly split or not, it managed to gain control of Congress in the last election and is given a whopping good chance of winning the White House in 1960.

The President was under no obligation to point out conditions in his own party while he was hopping on the Democrats, but we seem to have gotten the impression somewhere that the GOP isn't exactly engaging in a love feast these days. And, incidentally, he didn't make much of a contribution toward healing the breach when, at that same rally, he denounced the Old Guard and make it clear that he intends to fight to the finish to make the party over in his own image.

Mr. Eisenhower knows about how much chance he has of making disciples of new Republicanism out of such persons as Senators KNOWLAND, BRIDGES, BRICKER, JENNER, and MALONE—and dozens of other persons in important positions of leadership in the GOP.

The Chief Executive denounced the Democrats as being too free with the taxpayer's money; in fact, he charged them with just plain old fiscal irresponsibility.

Perhaps he also forgot that it's his budget they're damning in Washington and throughout the length and breadth of the land.

Not only that, the Democratic Party is out to punish business.

Well, we have no hope of the National Association of Manufacturers and the United States Chamber of Commerce ever being converted to the Democratic Party but, in view of Mr. Eisenhower's denunciations, it is interesting to note that these voices of business are among the Chief Executive's most painful thorns in the flesh right now.

Secretary of Defense Wilson, it will be recalled, even got so irritated at the chamber's budget-cutting capers he angrily denounced his rich cronies in that organization.

And guess what. The Democrats are a bunch of nasty old inflationists.

This is extremely interesting—as Senator MONRONEY of Oklahoma points out—in view of the fact that the cost of living has gone up for 14 consecutive months.

Frankly, we have a certain amount of sympathy for some of the things Mr. Eisenhower is trying to do in the Republican Party. But in this new blast at the Democrats, he is denouncing some of his own concepts of government and some of the principles that he is desperately trying to ingrain in the GOP.

It was a loose-jointed, irresponsible sort of a speech—even for a political rally.

The President must have been in a hurry to get off to Gettysburg.

Status-of-Forces Agreements

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, June 17, 1957

Mr. CARLSON. Mr. President, a recent issue of the Christian Science Monitor carried a very fine article, by Neal Stanford, on our status-of-forces agreements. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

STATUS-OF-FORCES AGREEMENTS—AN INTIMATE MESSAGE FROM WASHINGTON

(By Neal Stanford)

It is no secret that the Government is worried over the mounting attacks on the status-of-forces treaties that it has with many of its allies. It considers these treaties essential to friendly relations with its overseas allies, a necessary consequence of America's global responsibilities. But it is obvious that an increasing number of Congressmen are having doubts about these treaties, touched off by the controversial case of Army Sp3c. William S. Girard, charged with homicide in the death of a Japanese woman.

Status-of-forces agreements, just to refresh our memories, are agreements made with foreign governments which provide that United States military authorities have legal jurisdiction abroad for any offense arising out of an act or omission by a serviceman on duty. Foreign courts are given the right to try and punish American servicemen for nonmilitary offenses committed while off duty. But in such cases it is promised that the accused will have certain legal safeguards—speedy trials, information on charges, legal aid, and interpreters, etc.

There have been other attacks on status-of-forces cases in the 4 years that such treaties have been in force, but none equaling this arising from the Girard case. The reasons for this are two: One, this is about as borderline a case as could be imagined, it being extremely difficult to decide whether Specialist Girard was on or off duty when firing the empty cartridge that killed the Japanese woman; two, the vacillation in Washington, where officials first decided for Japanese trial, then against it, then for it. The result was that on top of congressional criticism of such treaties was congressional denunciation of the administration for appeasing Japanese public opinion. This combination of circumstances has built up the Girard case into the greatest threat to the status-of-forces program since its inception—and one that the administration is not too sure it can successfully weather.

The relevant details of the Girard case are as follows: Specialist Girard had been ordered to guard a machinegun between firing sessions at a range at Somagahara. Some Japanese women appeared, looking for spent brass-shell casings to sell as scrap. When they failed to leave after warning, Specialist Girard fired an empty shell case from the grenade launcher on his carbine. It killed Mrs. Naka Sakai.

The Army insisted Girard was on official luty at the time and so came under its jurisdiction. The Japanese argued he was not on official duty, it being a rest period at the time, and, anyway, it was not his duty to fire at scavengers. On second thoughts the Army decided to surrender jurisdiction over Specialist Girard to the Japanese. But then Defense Secretary Charles Wilson rescinded

the Army order. Later the Pentagon came to the conclusion that Specialist Girard's action was not authorized and therefore was not in performance of duty. President Eisenhower approved the decision.

The storm that has broken over the Girard case has made rational discussion of the status-of-forces treaties increasingly difficult. Yet the fact is that these treaties are a necessary corollary to America's numerous defense obligations the world over. Theoretically it would be possible for the United States to station troops abroad without status-of-forces agreements. Actually it did so during the war and for a few years after. But America's allies, despite their appreciation of the presence of United States forces, chafed under this exhibition of extraterritoriality. They did not question the right of United States military courts trying United States soldiers for offenses against foreign nationals when on duty, but insisted that local courts should have jurisdiction over off-duty incidents.

From America's point of view there was merit in such an arrangement, for Washington could hardly ask for jurisdiction over any foreign troops in this country for off-duty offenses if it would not grant a comparable right to its allies. This matter of reciprocity played a large part in America's original decision to negotiate these status-of-forces treaties.

Actually many foreign courts have waived jurisdiction over United States servicemen who have committed crimes off duty. In the last year, for example, 14,394 American servicemen committed crimes abroad, putting them under the jurisdiction of foreign courts. The foreign courts waived jurisdiction in 9,614 cases. Some were dropped. A total of 4,437 cases reached trial, resulting in 275 acquittals, 3,876 fines or reprimands, 178 suspended sentences, and 108 confinements, 12 of them for more than 5 years. Of the more than 14,000 cases arising last year, though, only the Girard case has reached the proportions of a cause célèbre.

Tax Cut and Inflation

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, June 17, 1957

Mr. CARLSON. Mr. President, there appeared in the June 5 issue of the Dodge City Globe a very timely editorial entitled "Tax Cut and Inflation." The editorial stresses the fact that while a tax cut would be welcomed by everyone, it would, in reality, add fuel to the already heavy pressures of inflation and would result in a further devaluation of the dollar.

Our No. 1 problem, in my opinion, is to prevent an inflation which would destroy the savings of our people and would further increase the cost of living.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TAX CUT AND INFLATION

Much as everyone would enjoy tax reductions, it is interesting to note that businessmen and economists yesterday testified before a Senate-House economic subcommittee against an immediate cut.

The hearing was the first of a number which will last for 2 weeks. Doubtless the point of view which advocates an immediate tax cut also will be presented.

After the first batch of witnesses was heard, Representative WILBUR D. MILLS, of Arkansas, the subcommittee's chairman, is quoted as having said: "The testimony clearly indicates that the buoyancy of the economy is somewhat reduced, but there is enough zip left that the relaxation of monetary policy (credit curbs) or reduction of taxes would serve only to intensify inflationary pressures."

The fear of inflation and the desire to prevent it, MILLS said, is shared both by business and labor leaders.

It certainly is to be hoped that Congress will do nothing to give impetus to inflation. In fact, it would be better if the price level could be held at its present position. Everybody knows from experience in the postwar years that inflation does things to the pocketbook which are painful after the exhilaration of the early stages wear off.

The steps taken by the Eisenhower administration in 1953–54 to check inflation proved of great benefit to most persons So if tax cuts would be inflationary, we should be willing to wait for them.

As to the effect of Federal spending on the national debt of more than $273 billion, it would seem desirable to use any surpluses which may accrue to reduce the total. There is no thought that the debt ever will be cut to zero, nor is it considered desirable that this be the case. However, according to G. K. Hodenfield, an Associated Press correspondent, Government economists "want to knock the debt down to a more manageable level and devise better ways to manage it." The writer doesn't name the figures for a "manageable level." It might be well for Congressmen and economists to agree on what the amount should be, then set that figure as a goal to determine when the time has come for tax cuts.

The United States—World Leader

EXTENSION OF REMARKS
OF
HON. WILLIAM A. PURTELL
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Monday, June 17, 1957

Mr. PURTELL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled, "Not the Same Mistake," published in the Farmington Valley (Conn.) Herald of June 6, 1957. I commend this well-considered and thought-provoking editorial to the attention of my colleagues.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NOT THE SAME MISTAKE

The Senate of the United States made a mistake after World War I that penalized these United States in its dealings with Europe and the other countries of the world for many, many years afterward. The Senate is again in the position where it can make the same mistake again, and once again, penalize us in our foreign affairs for many years to come.

The President of the United States at the time of the first mistake was Woodrow Wilson, who dreamed of and conceived the first League of Nations. Coming at the time it did, the concept of a group with all nations represented sitting as a world-governing body, brought the United States into the position of being world leaders. The chaotic condition of Europe and the prior absence of a sound, representative body to settle problems of global impact brought a feeling of confidence to the nations of Europe, and placed Wilson in the position of being the "world's leader" when he suggested the League of Nations concept.

When the Senate of the United States refused to ratify the membership of this country in the League, the confidence the world had in Wilson evaporated, and the United States was looked upon for many years afterward as being "not genuinely interested in the welfare of the world." This point of view persisted in Europe until America's intervention in World War II and its entry into the United Nations began to restore the confidence that existed in Wilson's time.

It wasn't until Dwight Eisenhower became President of the United States that the countries of Europe began to experience full confidence in the United States as a "country genuinely interested in the welfare of the world, and, willing to sacrifice to preserve freedom throughout the world."

This confidence in the man and the nation has been, in a large measure, one of the foremost factors in stimulating courage and a will to resist among the enslaved peoples of Europe. It is certainly the major factor in the world leadership enjoyed by the United States today.

We are paralleling the situation that existed in Wilson's day, since Eisenhower, like Wilson, is the man chiefly responsible for the respect and confidence we enjoy as a nation among nations. Eisenhower, like Wilson, is in danger of having his leadership hamstrung by his political and philosophical opponents in the Senate. While there is room for honest debate over an honest difference of opinion, there is no room for opposition simply for the sake of opposition. Our future in the world, and to a large degree, the future of the world itself, lies not only in the hands of the President and his administration, but also in the hands of the United States Senate. Let us hope that they are of sufficient stature to avoid the mistakes they made 35 years ago.

The Medically Indigent: Our No. 1 Health Problem

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mrs. KEE. Mr. Speaker, are we fast becoming a Nation of the medically indigent? The danger, I feel, is imminent as the number continues to increase frighteningly of those people who simply cannot afford the luxury of falling ill—who cannot meet the financial burden of adequate medical care.

In her column which appears regularly in the Washington Post and Times Herald, Miss Malvina Lindsay, one of our noted Washington newspaperwomen, recently dealt at length with this problem in an article entitled "Chance for Health Chief Need of Aged."

Mr. Speaker, under leave to extend my remarks in the RECORD, I include Miss Lindsay's article:

CHANCE FOR HEALTH CHIEF NEED OF AGED

This Congress apparently intends to ignore the No. 1 problem facing the Nation's grow-

ing number of senior citizens; namely, how they can pay for the health care they need.

The increase of chronic disease, found largely among older persons, was emphasized at last week's meeting of the American Medical Association in New York. It was reported that more than half the clinical part of western medical practice was now concerned with health problems of the middle aged and elderly.

How do the 14 million people of this country past 65, most of whom are unemployed and living on small incomes, meet the cost of such treatment? Only about one-third of these are covered with any kind of health insurance. Most companies do not sell individual health insurance to persons past 60, or if they do, premiums are excessively high and benefits greatly curtailed.

Part of the chronically ill older population gets charitable or public care. But there is a large segment that must meet medical expenses out of small fixed incomes constantly being shrunk by inflation.

Dr. Wilma Donahue, chairman of the division of gerontology of the Institute for Human Adjustment of the University of Michigan, says that many old people neglect chronic illness—with greater cost later—others obtain medical care by sacrificing other essentials of healthful living, or turn to relatives for help.

She believes the mounting number of admissions of older patients to mental hospitals is one evidence of the effects of worry and lack of preventive and restorative medical care of this group. Many of the elderly and even middle aged today are beset by fears of becoming ill and not being able to pay for medical care. This insecurity, believes Dr. Donahue, is the basis for what is called widows' disease, in which an older woman becomes obsessed with the fear that her money won't last until the end of her life.

These fears also cause many of the elderly to lead cheese-paring lives, neglecting nutrition and other elements of health, hoarding what funds they have and keeping them out of circulation.

Health insurance that the retired can pay for is more essential to them than any expansion of social security benefits. It would also save society money in the long run since preventive medical measures would make unnecessary much of the prolonged expensive custodial care of older persons.

Insurance companies are making studies and experiments in the field of health insurance for the retired, but are up against the problem of providing such insurance without at the same time raising rates for all groups.

Attachment of health insurance to social security was recommended by a commission set up by the Pennsylvania Medical Society to study the problem. In this, the citizen, during his earning years, would buy health insurance with the usual commercial carrier, and at the same time pay a small increase in social security to cover health benefits during his after-65, retired period.

Some help from the Federal Government to meet this need seems essential. Dr. Joseph W. Still, research psychologist at the George Washington University School of Medicine, who has studied the needs of the retired, suggests a plan that would avoid increase of Federal administrative machinery.

He would have Congress provide a fund to reimburse private insurance companies for excess costs of insuring those past 65. Then the companies would be free to sell insurance to customers regardless of age, but would base rates on the average costs of providing insurance for those under 65.

This would leave the major administrative machinery to the insurance companies and the medical profession. It would provide medical care for the elderly at a price they could afford. It would end the present wasteful system whereby minor disabilities of the aged are neglected until they become major ones.

Mr. Speaker, if America is to remain a Nation of strong and vigorous people, we must, I profoundly believe, meet this problem head on and now.

For the past 6 months I have been at work on the preparation of legislation which would provide a program of Federal aid as a partial answer to this urgent need of the growing numbers of the medically indigent among our people. The legislative roadblocks in the path of such legislation are manifold, as I am well aware. Nevertheless, I am hopeful of having a bill in final form for introduction in this session of the Congress, at which time I most earnestly trust that other Members will join me in an all-out effort to meet this No. 1 challenge to the Nation's health and well-being.

Flood Disasters in Texas and Oklahoma

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, June 17, 1957

Mr. YARBOROUGH. Mr. President, Mr. Thomas L. Stokes, a distinguished commentator on national affairs, has made a telling point in a recent column titled "Local Disasters Add to Calamity for Whole United States."

I ask unanimous consent to have the column, as published in the June 12, 1957, Austin, Tex., Statesman, printed in the Appendix of the RECORD.

Mr. Stokes points out that this spring's natural disasters in Texas and Oklahoma must be considered as of more than local significance, and that these disasters, and others occurring throughout the Nation, add up to a national problem. He suggests that the long-range answer is proper control and regulation of our rivers through dams and reservoirs.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOCAL DISASTERS ADD TO CALAMITY FOR WHOLE UNITED STATES

(By Thomas L. Stokes)

WASHINGTON.—We are all familiar with the ghastly and often terrifying scenes of raging floodwaters, spreading desolation, and damage to homes and small businesses, that have appeared before us lately in our newspapers and on our television, and newsreel screens.

To the people in the flooded areas, from Texas to Oklahoma, this is disaster and a costly one running into many millions of dollars.

A few months ago it was some other section of our country that was hit, and last year it was another area, and next year it will be still another.

These are local disasters but add up over the years to a national calamity.

For what hurts one part of the country eventually hurts others.

The long-range answer is proper control and regulation of our rivers through dams and reservoirs. That, it sometimes seems, moves very slowly.

Meanwhile, there is the problem of losses of homes and small businesses which can't wait for river control, if that ever can be entirely guaranteed.

Last year Congress finally got around to taking measures to protect people from losses in recurrent floods by passing a flood-insurance law.

It was signed by President Eisenhower on July 7, 1956. Its enactment followed exhaustive public hearings by both House and Senate committees.

The only hitch is that Congress, though authorizing flood insurance, has done nothing to put into effect the comprehensive and detailed plan of operation worked out since by the Federal Flood Indemnity Administration under the direction of Commissioner Frank J. Meistrell, a New York insurance lawyer.

Meistrell took this new assignment after previous service as General Counsel of the Federal Housing Administration which, like the flood insurance agency, is one of the several units in the overall Housing and Home Agency headed by Albert M. Cole, former House Member from Kansas. Commissioner Meistrell also served as an assistant to Cole.

What the flood insurance operation needs to put it to work is an appropriation of $14 million requested by the FFIA for inclusion in the third supplemental appropriation bill.

The House rejected that item, 127 to 97, but the Senate approved it and inserted it in the supply measure.

The issue is expected to come before the House this week in the report of the House-Senate conference committee after disposition of the civil-rights bill.

This appropriation is to pay commissions to insurance agents and brokers who, under the law, are to write the policies; to pay expenses of insurance carriers for issuing and servicing policies, underwriting, accounting, and statistical work for the Government, and to pay expenses of claim adjusters, for their services in settlement of claims.

The total amount of insurance that can be written for homeowners and small-business men is $3 billion, with another $12 billion permissible, however, if approved by the President. There is a limit of $250,000 on the amount of insurance that can be sold to any person or corporation and a limit of $10,000 on a dwelling and its contents.

The Government guarantees 40 percent of the cost of the insurance with 60 percent being borne by those insured. The expectation is that the insurance premiums will match the losses once the program is well underway. Nationwide selling of contracts should give sufficient spread to minimize losses.

The program has been worked out carefully in cooperation with insurance companies who recognize that there is nothing new in initiation by the Government of insurance in fields where private companies cannot take the risk.

One example is Government guaranty of bank deposits in Federal Deposit Insurance Corporation; another is the Federal Housing Administration.

The Government is not competing with private insurance companies, as the law specifies that after a 5-year trial run, the flood-insurance program will be turned over to private insurance if it proves feasible.

Once Congress approves the $14 million appropriation, the insurance program can get underway. Everything is ready, including fiduciary agreements for the several thousand fire and casualty companies, insurance applications, contracts, rates, underwriting rules and regulations, etc.

This is something that should be spared in the fantic economy drive, for it is something to help people help themselves and to

meet in a business-like manner what now is met, helter-skelter, by relief organizations and local, State and Federal Governments. In the end the latter is more costly—and cannot meet adequately what insurance can at much less cost.

The Power Structure of the South

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mrs. GREEN of Oregon. Mr. Speaker, in many ways, in the debates going on in this House during the past days on the civil-rights bill, there has, it seemed to me, been a reflection of the forces underlying and engaged in a constant interplay in the South. During the course of her second lecture at the North Carolina State conference, National Student YWCA, on March 2, 1957, Miss Frances H. Williams of St. Louis, Mo., long an astute observer of racial problems in the United States, discussed the power structure in the South. Under unanimous consent I include pertinent portions of that lecture in the Appendix of the CONGRESSIONAL RECORD:

THE POWER STRUCTURE OF THE SOUTH

(From a lecture by Miss Frances H. Williams at the North Carolina State conference, National Student YWCA, March 2, 1957)

I must remind you that it is my belief that the basic power structure in our country is found in our economic arrangements, not in our political institutions. Let us look at this side of our life for a moment. When the first Europeans came here, they found this continent abounding in natural resources—but resources not yet harnessed for many potential usages. The rugged individualism which marked much of our initial economic period was a natural response to the presence of abundance and the needs, both real and fancied, of the newcomers to this continent.

With economic growth and maturity, a vague but haunting notion also arose which has modified and, to some degree, regulated the manner in which these needs can be met. This notion is summarized for the layman in the phrase "the American standard of living." This phrase implies the existence of a certain kind of inalienable right to food, shelter, and security to a degree and in an amount that makes living respectable and perhaps even luxurious. This is not a concern for economic equality but rather a demand for fair opportunity and free scope for individual effort, with limitless rewards for those who persevere.

The National Resources Planning Board phrased this goal once when it reported: "We look forward to security, through planning and cooperative action, a greater freedom for the American people * * * the right to work, usefully and creatively through the productive years * * * the right to fair pay, adequate to command the necessities and amenities of life in exchange for work, ideas, thrift, and other valuable services. The right to adequate food, clothing, shelter, and medical care. * * * The right to security, with freedom from fear of old age, want, dependency, sickness, unemployment, and accident. * * * The right to live in a system of free enterprise, free from compulsory labor, irresponsible private power, arbitrary public authority, and unregulated monopolies * * * the right to rest, creation, and adventure; the opportunity to enjoy life and take part in an advancing civilization."

The American Negro gathered little or no benefits from his work in that period of our history which was characterized by rugged individualism. As a slave, he contributed to making this period successful but, in most instances, the slave could not work for himself and his family. The fruits of his labor were the property of his owners.

However, freedom came to the slave in a period when the American economy was dominated by the notion that an American does not want. If the Negro's share in the total wealth of the country is small today—he is at least supposed to have a share. If he is the first one fired and the last one hired—he at least is included by the Nation when it speaks of the American standard of living.

This is the type of economy we now live in. There is private property. There are great industrial and financial institutions. There are labor unions—and perhaps a future in which labor unions will be stronger—we have freedom of mobility, common access to a certain amount of information, and freedom of speech and assembly.

But within this economy, both in the North and in the South, there has been and is economic discrimination based on race and religion.

No one quite says that it is to the economic interest of the white community to keep the Negro community as a source of cheap labor. But some people do say: "This is a white man's country" or "We don't have money enough to pay our white workers decent wages" or "Actually, Negroes live on us white people," or "The whites pay all the taxes."

Then there is the concept, prevalent in the South, that this economic inequality has to be maintained, for it is the barrier against social equality. You know the argument: "You wouldn't let your sister or daughter marry a Negro." At times we have even heard that "It is God's will that the Negro should have a low income."

These are the justifications which the North and South are using to convince ourselves that there is no conflict between the equalitarianism in the American creed and the economic discrimination against Negroes.

Sometimes, however, the speakers for this point of view get carried away with their own words, and they say: "It is a marvel how Negroes can get along on almost nothing." This statement really implies that the Negro is a careful consumer—but the implication is seldom stated this way. To my notion, this kind of thinking is not only false, but vicious.

Poor people of any color get along on less only because they have to.

We who are women should remember that some of these same arguments were used time and time again in the battle for equal pay for equal work for women.

In fact, I heard this argument as late as 1944, when I worked for the Office of Price Administration. We were discussing candidates for a certain job, when all of a sudden I heard a bright young man, newly arrived in Washington from New England, say: "No woman is worth $4,600 a year." I was making that myself at the time, so I laughed at him with merry amusement. For at least the Federal Government did not agree with him on this point.

Turning now to political structure, it is my belief that here we find reflected the strengths and weaknesses of our economic life. But the political structure is something more than this reflection, for it is affected to even a greater degree by the ideas and ideals which dominate our culture. So, the war which arises from the inevitable conflict between our economic and cultural inheritance and goes on in each of us as individual southerners is present not only in our economic structure, but also in our political life. Here the notions of the brotherhood of man and the fatherhood of God intervene in what might otherwise be a reflection of harsh economic aggrandizement.

Political power in our democracy begins with and abides in the individual citizen but ends in legislative action, Executive directives, and judicial decisions.

When the Supreme Court of the United States, on May 17, 1954, said: "We conclude that in the field of public education the doctrine of separate but equal has no place," North Carolina had as a part of its State constitution, 3 sections of which were related to this decision.

Article IX of the North Carolina constitution states that "The general assembly shall provide by taxation or otherwise a general and uniform system of public schools * * * the children of the white race and the children of the colored race shall be taught in separate public schools, but there shall be no discrimination in favor of, or to the prejudice of, either race."

Article XIV states that all marriages between a white person and a Negro are forever prohibited.

And, finally, article I, section 33 states that "slavery and involuntary servitude, otherwise than for crime shall be forever prohibited within this State."

In addition to these provisions of the constitution of North Carolina, many provisions of the general statutes were also quite pertinent to the Supreme Court decision:

Item: Even in death the races were not to be mixed for by statute provision was made for cemeteries for Negroes and separate cemeteries for whites.

Item: The law made it a misdemeanor for officials to provide schools for one race and not for the other race.

Item: Under pain of criminal penalties, school books are not to be interchangeable between white and colored schools but must be continued to be used by the race for which they were first purchased.

Item: The line of demarcation was drawn between Negro and white children in the establishment of separate schools for each race's delinquents and feeble minded.

Item: Local boards of trustees are strictly forbidden to make any discrimination on the basis of color in the payment of employee benefits by firemen.

* * * * *

I could multiply these items manyfold. But to me they at least show one moral especially significant in the light of the present attacks on the law as a regulator of social relations. That significance is this: These statutes and constitutional provisions show definitely the use of law as a force to separate the races.

Now I have hurried over these legal provisions and tried to express them in nontechnical fashion. However, I think it is clear that, while they regulate a great deal of our life, they do not regulate all of our lives.

What we are to do racially speaking, within the home, the church, the courtroom, professional offices and on the street seems not as yet to have been defined by the State. In addition, it is important to note that while legally there is segregation, there is not supposed to be less equal treatment based on race. Finally, in a few instances, the State strictly forbids discrimination as in the practices of insurance companies and in the administration of firemen's benefits.

Nevertheless, the general frame of reference found in these statutes is that one of separate but equal. No one needs to look very far into the practices within the State under these statutes to see that equality has seldom existed even in the material side of the institutions described.

So it was that on May 1954, when the Supreme Court said that in the field of public education the doctrine of separate but equal had no place, North Carolina found her statutes relating to public education in direct conflict with this doctrine and her practices in conflict with her own State statutes. The question of the hour was: If the Court's decree in public education can be made to stick, what will happen to all the other areas of our ocmmon life for which segregation is provided by State law?

No one, I suspect, will ever know just what went on in the minds and hearts of the people of North Carolina the night the Supreme Court's decision was publicized in the public press, over the radio and television. There was, we know, shock, surprise, rejoicing, and indifference. But we do not know the degree of these emotional reactions. Public and private events that have followed indicate that all these reactions with varying shades in between were present that night.

On March 30, 1955, the State as a political unit made its first answer in the passing of the North Carolina Placement Act, in which city and county boards of education were authorized and directed to provide for the enrollment of each child.

On May 31, 1955, the Supreme Court spoke again. This time the Court said: "The fundamental principle that racial discrimination in public education is unconstitutional is incorporated (in this decision) * * * all provisions of Federal, State, or local law requiring or permitting such discrimination must yield to this principle * * * it should go without saying that the vitality of these constitutional principles cannot be allowed to yield simply because of disagreement with them."

North Carolina responded through a report of an advisory committee on education on April 5, 1956, upon which 3 Negro members served with 4 white members. The report said in part: "We are in a very dangerous situation * * * the steady and healthy progress which we have been making * * * has been suddenly stopped * * * we are of the unanimous opinion that the people of North Carolina will not support mixed schools * * * we are sure that the saving of our public schools requires action now * * * the white race has been almost wholly responsible for the creation, development, and support of our education system which has been and is now educating the Negro children of the State, all of them * * * the decision of the Supreme Court of the United States is binding upon us * * * defiance of the Supreme Court would be foolhardy * * * the Negro leaders appear to be totally indifferent to the fact that their attempt to use Federal punishment * * * will prevent Negro children from getting a public-school education in North Carolina * * * the advancement of our economy and the preservation of our democracy depends in large part upon the understanding and the morality of the Negro as well as the whites. If there prevails ignorance in either race our economy will stall, our society will wither, and our democracy will degenerate."

On June 19, 1956, the Governor of North Carolina called an extraordinary session of the North Carolina General Assembly to consider the measures recommended by the advisory committee. On July 23, 1956, the general assembly meeting in extraordinary session voted to provide for an election to consider the adoption of several constitutional amendments. This election was held on September 8, 1956.

At this time the State added to its constitution an amendment under which a local community by majority vote could close its schools if an intolerable situation should result from integration. Local communities, however, were left free to handle the matter as they thought best. A tuition plan was also made possible. Thus, it was that, according to the thinking of those North Carolinians who furnish the State political leadership and those additional North Carolinians who cast the majority vote, the State was equipped to prevent both enforced integration and violence.

Yet, somehow or other, this plan which was to resolve our problems has not done that. There is an overall sadness in the air which no preceptive person can deny. Where there was peace, now there is no peace. Yet everyone is being very polite, that is, almost all. A few violent, strident voices are heard here and there. But what seemed to be a friendly land is now a cold and barren country. It is a kind of coldness which is not easy to live with or to understand.

Few there are who would say that all which has been done by the State has not been done without observing the outward forms of propriety. There was an advisory committee, interracial in membership. The legislature did meet and acted according to democratic precepts. A special election was called and the people voted. If the results are not pleasing to all, there are none who can say that the State did not follow our democratic processes. The people have spoken, or did the people speak?

Students of voting statistics tell us that in most elections in North Carolina less than a fourth of the potential voting population participates. Social analysts add that the relative unimportance of North Carolina's plantation economy has enabled the industrial forces in the State to create a financial and business elite whose influence is all prevailing. These interests ar handled by men who have a desire to be fair to all but not at the expense of their own power. They maintain effective political control not through graft and corruption—though some of this may exist—but rather through seeing to it that those elevated to high public office are fundamentally in harmony with their own economic point of view. Campaign money is available to those who agree with those who have the money to give. And everyone knows how much even the simplest election costs these days.

However, these analysts add that political life in North Carolina is not without its opposition. Divergent claims are frequently raised by the rural counties. Here the proportion of the adult population that votes is often twice as great as that in the larger cities. For rural people are actively interested in the struggle for better markets, roads, and schools. Also, unlike city folks, rural people vote for or against some persons whom they know, not just a name they see in the paper or a man they heard speak over the radio. Racially speaking, though, the rural areas have been less willing to change than the more heavily populated centers. Themselves deprived, they have at least had the release which comes from having someone lower down the ladder than they are—namely, the Negroes.

But the economic elite has also had a stake in the Negro disenfranchisement of the past and in its long lingering aftermath which has resulted in approximately 20 percent of the adult Negro population being qualified to vote under existing laws. This means an exclusion from the ballot of a large proportion of the lower half of the State's economic structure and, thus, the elimination of not only the racial but the economic problems which would furnish political headaches for the ruling elite. Therefore, the nonvoting of the majority of the Negro population is essential to the preservation of the present hierarchy of economic and political power.

Added to these facts is another one which, I believe, accounts for this sadness in the air—which if moved in one direction would mean greater peace—but if which moved in the other direction would bring only physical death to many in the Negro community but something far worse to the white community—namely, living death. What is this facet? I think something one once had now seems to be lost and the vital question which I think should concern us is this: Just what have we lost? Just what was it that the Supreme Court jeopardized?

But there was still a hurt feeling. This arose from the fact that the Negro community said that it was not happy to have the white community run its life. This was not nice of the Negroes, nor was it kind. After all the white community wanted the Negro community to be happy and, therefore, presto, it should be happy.

But the white community is grown up and though they were sorry that the Negro community was unhappy, they knew that happiness is something one must get for oneself and so if the Negroes were not happy there was not much the white community could do about it. There remained also that acking loneliness in the night. What was the source of this vague feeling of incompleteness—this lack of cleanliness? Many knew nothing of the nature of this internal conflict, so felt that somehow or other the source or release was to be found outside of themselves. These men said the Negro will stay in his place, Supreme Court or no Supreme Court. He will not only stay in his place, but he will like it. And herein lies the tragedy. Those members of the white community who solved their personal dilemma in this fashion will in the end be like the maiden lady who said he will love me whether he wants to or not and then after the marriage finds that even the marriage license can't make love flow or keep her warm when Mondays are cold.

But sadness is not confined to members of the white community. The Negro community is also sad. This segment of the State's population wanted also to believe that progress was being made. Negroes dealt in fantasy too. They said to themselves things are getting better. But the Court's decision tore away the illusion and lay bare the facts which had always been there. It really does hurt to march past empty seats to the rear of the bus. It really does hurt to march past a school for children of your own age to another one further, one for Negroes only. Yes, the Negro community, like the white community, lost in these events the protective coat it has woven around itself with the years, a coat which said tomorrow some things will be different. But suddenly things were different, and Negroes as well as whites felt lonely, afraid and disconcerted.

The answer is very simple. The white community lost the right to deny the Negro community on the basis of race its right to be human. The white community no longer has the power to designate this school shall be for whites and that school for Negroes. All schools are to be merely schools. But you say it has been many years since we labeled many things in North Carolina Negro and white. For the most part we just understand. Racial crudence is not necessarily a part of the southern way of life. One can discriminate and humiliate in a polite and ladylike fashion. The front door of the station can be preserved for whites without a sign and yet everyone still understand that Negroes are to move to the side door.

Yes, the great loss has been the right to deny to others that which we want for ourselves—the right to decide what the Negro's place in the bus, the school, the station shall be.

The tragedy of the white community lies in the fact that fantasy led so many of its members to think that this sort of arrangement was not only constitutional, but that the Negro community found these conditions acceptable. Had the Negro community found these pleasant, they would not be quite human; for it is only human to want to decide for yourself where you shall sit in

the bus, in the station and to determine what school you should attend.

Not many in the white community actively want anyone to be unhappy—they just wanted to provide for what they considered their own happiness. This happiness they have supposed was inevitably coupled with the separate but equal doctrine. The decision of the Supreme Court was therefore a shock to most white North Carolinians. It declared that segregation was unconstitutional.

However, on second thought, some in the white community thought, well, maybe this is not too bad, perhaps just disagreeable. After all, we have lawyers and that is just the first round. No, they said, the Court's decision was not a death blow. There were ways, so men busied themselves to find them.

For the great expectation in a democracy is that the Government will do those things which we cannot do for ourselves as individuals. This is what we pay taxes for, be we white or black, or be the taxes direct or indirect. We pay taxes that the Nation, the State be a hearth from which all can expect to take comfort. The criminal can expect justice, the child education, the adult lights, streets, the aged security from want. And what has happened in North Carolina is that the fire on our hearth has gone out and no one knows how to get it going again. We are pretending that we do not care. We deny that we want respect and friendship from all God's children. So we are afraid and men who are afraid do things they do not like to do. These actions create hatred not only for others, but, far more significant, hatred for ourselves and when you hate yourself you are lonely, desperately lonely.

Deep within ourselves we know that in the long run, and even in the short run, if we are to inherit the warmth of our cultural traditions, we must rise and harness our economic and political processes anew so that they will serve our larger ends, so that peace and good will toward all men will abound. To solve our racial problems will not remove all problems but it will lift the burden. Then, our productive energies can be used for the fulfillment of the American dream. Then no longer will the South be the Nation's No. 1 economic problem. Deep within us we want the dream even more than anything we now have. My friends, I believe that the Jim Crow car, the Jim Crow school, the Jim Crow way of life will give way and that the white and Negro South will play its part in these departures—not only because the Supreme Court says so or because the Negro community does not like Jim Crow, but because in the end white North Carolina also is tired of its chains; the white man's burden, it wants to be free, free to inherit its own cultural background complete with the brotherhood of man and the fatherhood of God. For when the saints go marching home, North Carolina, black and white, wants to be in that number when the saints go marching home.

Humanitarian Point 4 for Amputees

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, June 17, 1957

Mr. WILEY. Mr. President, I was pleased to read in the Sunday, June 2, issue of the New York Times, an article by the noted physician and rehabilitation expert, Dr. Howard A. Rusk, dealing with a new-type humanitarian point 4 program.

Dr. Rusk suggested a prosthetics-for-peace program.

He estimated that for the cost of one-half cent per American citizen per year, our Government, by the use of $1 million for 2 years, could supply invaluable services to foreign government with regard to prosthetic equipment for rehabilitation of the disabled abroad.

Few persons are better qualified to comment on this subject than Dr. Rusk. In addition to his work as medical editor of the New York Times, he is president of the International Society for the Welfare of Cripples, chairman of the board of the American Korean Foundation, and consultant in rehabilitation to the World Veterans Federation, to name but a few of his varied public service projects.

In previous testimony before the Senate Foreign Relations Committee, Dr. Rusk had pointed out how, for a relatively tiny sum, America's private and publicly supported rehabilitation efforts can, and could, pay immeasurable dividends to our people, and to recipient foreign peoples.

I am referring to spiritual dividends, the dividends which come to our own great and generous people from knowing that we have lent a helping hand to those in need, those who ask only for the opportunity to be enabled to stand on their own feet, to be gainfully self-supporting.

Toward that end, there has been established the World Rehabilitation Fund, at 400 East 34th Street, in New York. Its directors are an outstanding group of American leaders; and it was more than fitting that a New York Times editorial of last Monday greeted the fund, and wished it well.

I, for one, would like to urge both our Government and our private citizens to give their most sympathetic attention to the many types of constructive activity which are possible in the field of world rehabilitation. I send to the desk four items which I ask unanimous consent to have printed in the Appendix of the RECORD.

The first is the article by Dr. Rusk, entitled "Point 4 for Amputees." The second and third are the New York Times news article and editorial on the subject of the World Rehabilitation Fund.

Finally, there is an excellent article from Think magazine, entitled "They're Learning To Live Again." This article, also by Dr. Rusk, describes the excellent rehabilitation work being performed at the Institute of Physical Medicine and Rehabilitation of the New York University Bellevue Medical Center:

There being no objection, the articles and editorial were ordered to be printed in the RECORD, as follows:

[From the New York Times of June 2, 1957]

POINT 4 FOR AMPUTEES—A VIEW ON THE NEED FOR THE UNITED STATES TO SHARE WITH OTHERS ITS ADVANCES IN PROSTHETICS

(By Howard A. Rusk, M. D.)

When our first casualties in World War II came home, those who had suffered amputations strongly criticized the quality and efficiency of the artificial limbs they received. Many remarked bitterly, "It doesn't seem right that a nation capable of producing the atom bomb and radar should not be able to give us better artificial limbs."

Congress held a series of hearings on their complaints and found them justified. In the past the development of artificial limbs had proceeded through the years without the benefit of an organized, scientific approach. However, since 1946 the Veterans' Administration, with a special congressional appropriation of about $1 million a year, through the Prosthetic Research Board of the National Academy of Sciences, has conducted an extensive artificial limb research program through nonprofit contracts with universities.

In addition, the Army and Navy cooperate by supporting prosthetic research laboratories within their medical services, and the Veterans' Administration also conducts direct programs.

Earlier last month, congressional committees saw a spectacular demonstration of the achievements of the last 10 years' effort. All types of amputees dramatically showed their modern artificial arms and legs in action. Today without doubt our Nation has the finest prosthetic devices in the world.

CONTRIBUTIONS SHARED

We in the United States are interested in sharing the technical advances in nuclear energy for peaceful purposes with the rest of the world. We could make a significant contribution to the effective understanding of American ideals of democracy and the high value we place on human worth and dignity if, as a part of our mutual-security program, we would share these advances in prosthetics with the rest of the world. This is truly a people-to-people program.

Concurrently, some international voluntary organizations such as the World Veterans Federation, the International Society for the Welfare of Cripples and the new World Rehabilitation Fund are attempting to do this. Important as their efforts are, however, they are meager in relationship to both the need and the opportunity to advance American ideals.

As with other aspects of technical assistance uder the point 4 program, the potential values of this prosthetics for peace program are too great for voluntary effort. Yet the estimated fund of $1 million a year required over a 2-year period, if supplied by our Government, would cost each American but one-half cent a year. It would require but .027 of 1 percent of the total foreign aid proposal.

With this relatively small sum, highly qualified American consultants could be sent, at the invitation of interested governments, to visit all parts of the world to survey their needs. Four completely equipped mobile prosthetic shops, each staffed by a qualified American prothetist and physical therapist could be sent to southwest Asia, the Near East, north Africa, and South America.

These units could spend 4 to 8 weeks in a given community working with local surgeons in giving direct service to amputees by fitting them with prosthetic devices and training them in their use. It is ironic that a similar and highly successful project, which had a great political impact, has recently been conducted in Okinawa by the Japanese Government. It is even more ironic that the director of the project had his advanced training in prosthetics in the United States.

CENTERS ESTABLISHED

The one-half-cent-a-person-a-year program would also permit United States assistance in establishing permanent demonstration prosthetic shops and training centers at strategic points throughout the world. Sufficient artificial limb components to provide modern prosthetic devices for 40,000

amputees could be distributed globally. All of the available technical literature and visual aids in prosthetics developed here in the United States could be translated and published in the necessary languages.

Lastly, the most important part of the project, more than 400 trainees from parts of the world lacking prosthetics services could be brought to the United States for prosthetic training. These prosthetic trainees would then join with the 600 health workers receiving professional training in the United States under the auspices of the International Cooperation Administration and the hundreds more trained here by voluntary groups and their own governments.

Nowhere else could we get permanent ambassadors to spread the ideals of democracy as well, as effectively, and as cheaply as these dedicated rehabilitation workers who would return to their own countries to teach the lame and the halt to walk and to work.

Prosthetics for Peace is a program the man in the street can see and feel and understand. He may not know who built the dam in the hills or the roads or factories, but he will know who taught his neighbor to walk and his child to play.

We in the United States have received a rich dividend on our investment in prosthetic research in vastly improved artificial limbs for both veteran and civilian amputees. Further political, social, and humanitarian dividends would accrue if we would take these advances to the amputees of the world. Never could more good will, understanding, and dignity be purchased for so little.

[From the New York Times of May 29, 1957]

NEW FUND AIDING WORLD DISABLED—REHABILITATION UNIT, SET UP IN 1955, NAMES HOOVER AND TRUMAN HONORARY AIDS

Former Presidents Herbert Hoover and Harry S. Truman have been named honorary chairman of the World Rehabilitation Fund, Inc., a relatively new organization. The aim of the group is to sponsor international projects and understanding for the physically handicapped.

Dr. Howard A. Rusk, president of the fund, said yesterday that the new enterprise hoped to rally American corporations, foundations, and individuals to contribute $1 million a year for fellowships and other programs. Dr. Rusk is also associate editor of the New York Times.

Thus far, 20 have contriubuted $150,000. Out of this, about a score of projects have been completed since the fund got underway without announcement in December 1955. No general public fund-raising appeal is planned.

"So many things need to be done that Government apparatus is too big or clumsy to do," Dr. Rusk said. "There's a place for a voluntary organization. It gets an awful lot of milage for its money."

Last November, for instance, Dr. Rusk found that some patients had languished for 10 years in the overcrowded Orthopedic Hospital in Manila. They had no braces and the hospital's brace shop had no patterns or materials. Dr. Rusk was able immediately to promise shipment of used appliances. In 2 months, the program was underway. Cost: $1,000.

The new fund is crossing ideological frontiers. Periodicals and books already have been delivered to the Soviet Union and Poland. Arrangements have been made for two Polish physicians to take a 6-month course at Western Reserve University, while another has visited here. Four Soviet physicians are about to come here for study. Dr. Rusk has brought back Soviet publications—"pound for pound."

The fund has the endorsement of President Eisenhower. Bernard M. Baruch, and Dr. Albert Schweitzer are the other honorary chairmen.

The fund's headquarters is at 400 East Thirty-fourth Street. Among the financial supporters so far have been the Albert and Mary Lasker Foundation, the Smith, Kline, and French Foundation, the Mount Ararat Foundation, American President Lines, the Radio Corporation of America, the New York Times Foundation, the Monsanto Chemical Company Charitable Trust, Lilly Endowment, Inc., and the Bulova Watch Company Foundation.

The directors include John S. Allard, Elmer H. Bobst, Donaldson Brown, Arde Bulova, Ralph K. Davies, William J. Donovan, Mrs. Bernard Gimbel, David M. Heyman, Paul G. Hoffman, Dr. Henry H. Kessler, George L. Killion, Mrs. Albert Lasker, Dr. Russell V. Lee, Dr. Charles W. Mayo, Dr. Leonard W. Mayo, James Wesley McAfee, Rev. Norman Vincent Peale, Edgar M. Queeny, Mrs. Anna Rosenberg, Beardsley Ruml, Dr. Rusk, David Sarnoff, Walter Bedell Smith, Eugene J. Taylor and Arthur K. Watson.

Dr. Rusk said that the work so far had enabled study here for personnel from Haiti, Greece, Great Britain, Thailand, Poland, Belgium, the Philippines, and Brazil, provided a consultant for Korea, Burma, Thailand, India, and Jordan, and materials, publications, and demonstrations in 15 countries.

[From the New York Times of June 10, 1957]

VOLUNTARY FOREIGN AID

The World Rehabilitation Fund, which was quietly established about 2 years ago, is doing an important job of pioneering in the field of private and strictly voluntary foreign aid. Its purpose is to give medical and technical help for the physically handicapped or disabled. Its work in this needful area has been warmly endorsed by President Eisenhower, and former Presidents Hoover and Truman are honorary chairmen of the fund.

The fund operates in a simple, and for that reason perhaps unusual, way. There has been no fund-raising campaign and none is planned. There has been no appeal for Government help. Private persons and foundations have been quietly asked if they cared to contribute. Twenty have already responded with a total of more than $150,000. Much more can confidently be expected.

With these contributions the fund has initiated and carried out specific projects all over the world. Twenty-nine have already been completed, 5 more are in operation at the moment and 3 are pending. These projects include the shipment of artificial limbs to areas where they are desperately needed, supplying books and periodicals (some of these have been sent to Poland and Russia as well as to many other countries), grants-in-aid for specific study or the actual provision of technicians, and the promotion of planned exchange of scholars and doctors.

In this last field, for example, an interesting success has been ainounced. The American President Lines, operating to the Far East, has just offered a fellowship that will enable a Filipino doctor to come to the United States for advanced and extended study of rehabilitation techniques. The fund also expects to provide postgraduate training for physicians from Great Britain; and it has already provided short study courses for persons from Greece, Brazil, Haiti, Thailand, and Belgium.

These things add up to a rapidly expanding humanitarian service that can be of immense importance in the promotion of international good will and understanding. In Manila, for example, the press greeted with the greatest enthusiasm the announcement of the fellowship and rejoiced that the scientific advances that had been made in this field could be shared by the Philippines.

In other other field can foreign aid be a more effective instrument for good than in the field of health. It is our feeling that the share of health projects in the whole mutual security program has been considerably less than it might well have been. But World Rehabilitation is proving that a vast amount of good can be done in this field without relying upon appropriations from governments.

THEY'RE LEARNING TO LIVE AGAIN

(By Dr. Howard A. Rusk)

The time is late April of last year; the place, New York's Idlewild Airport. As a Pan American clipper glides in for a landing, Trudy Vis, a young Dutch girl, stands by, her face tense, her hands trembling slightly. Anxiety mounts as she watches each debarking passenger. Suddenly, her lips break into a wide smile when she sees a stretcher carried from the plane.

On the stretcher is her fiance, Henk Gulek, a 31-year-old disabled veteran from The Hague. He has come to New York for rehabilitation training at the Institute of Physical Medicine and Rehabilitation, New York University-Bellevue Medical Center.

The two had met in 1953 at a military rehabilitation center in Doorn, Holland, where she was a nurse and he a Dutch army patient. An automobile accident in 1946 had left him paralyzed from the chest down.

As they became more and more attracted to each other, she became more and more interested in rehabilitation. When the International Society for the Welfare of Cripples held its sixth world congress at The Hague in September 1954, Trudy went to see if there were new techniques in rehabilitation which would help Gulek. She heard many world authorities discuss paraplegia and rehabilitation problems, and was particularly impressed by a film produced at the Institute of Physical Medicine and Rehabilitation titled, "Living With a Disability." It dealt with the rehabilitation of a coal miner whose case was almost identical with that of Gulek. Trudy made up her mind to come to New York, learn the new techniques and teach them to her fiance.

At the institute she soon learned that rehabilitation is a teamwork job which requires the integrated services of physicians, physical and occupational therapists, and other specialists. Her fiance must come to the States.

Through a special fund contributed to the institute by its friends, Henk was brought to New York. He learned to lead an independent, self-sufficient life with his braces, crutches, and wheel chair; and he and Trudy were married. Henk returned home in September to await completion of one of 24 specially designed bungalows being built for Dutch paraplegics by the Union of War Victims. Trudy continued her training at the institute until the new house was finished and returned, in May, to join her husband.

Such heart-warming stories are not unusual at the institute. Like its more illustrious neighbor to the north (the U. N.), the institute is virtually a "United Nations" for rehabilitation. Its patients have come from all parts of the world: A French jockey paralyzed from a racing accident at Longchamps; a bright-eyed Bolivian youngster, born with malformed limbs; a business executive from South Africa, paralyzed on one side from a stroke.

Physicians, nurses, and specialists from all over the globe also come for advanced training so that they may return to their own countries to start rehabilitation services. In 1951, Dr. Miguel Augilera came on a United Nations fellowship. Assisted by two Finnish physical therapists provided by the United Nations, Dr. Augilera now directs an active rehabilitation program within the Institute of Social Security in Guatemala,

has started a physical therapy school, and has sent two of his colleagues to the institute in New York for training.

Four physicians, two brace and artificial-limb makers and two administrators from Korea have been trained with the help of the American-Korean Foundation. A team consisting of a physician, nurse, social worker and prosthetic technician returned to Thailand last fall, after 2 years of training, to initiate rehabilitation services in Bangkok. They are being aided by an American physician trained at the institute and married to a diplomat stationed in Bangkok. Their places at the Institute were filed by a similar team from Burma financed by the Rockefeller Foundation.

Many more specialists from as many nations have been trained at the institute: the physician who is directing a new program for crippled children in Turkey; the specialist in the neurological clinic at the University of Rome; a physical therapist in the rehabilitation center for disabled veterans in Israel; a doctor caring for polio-crippled children in Cuba.

One of the institute's most illustrious trainees was Mlle. Geneviève de Galard-Terraube (now Mme. Jean Heaume de Beutsocq), the "Angel of Dienbienphu," who spent 8 months learning modern rehabilitation nursing techniques so that she might help develop services for disabled French veterans.

In addition to the scores of specialists from foreign countries who come for long-term, formal training programs at the institute, hundreds of others come for short-term courses. There are also several thousand visitors each year. Among such visitors have been Prime Minister U Nu of Burma; Rajkumari Amrit Kaur, India's Minister of Health; Queen Frederika of Greece; and members of the Economic and Social Council of the U. N.

The institute's staff is motivated in its international work by both humanitarian and political implications. Rehabilitation to them is an international language of service which is one of America's most potent instruments for making friends. They believe that rehabilitation of the disabled is one of the best ways to demonstrate the high values which western democracy places upon individual dignity and human worth, and upon the belief that man's mission on earth is to heal and not to hurt, to build and not destroy.

Trainees from abroad are not limited to the technical aspects of rehabilitation. They are also given a broad view and understanding of all aspects of American life. They visit Washington for weekends, attend concerts and theaters in New York City, spend weekends in American homes; and each spring they can be found in the front row of the balcony at Madison Square Garden, watching the circus.

Nor are the international activities of the institute limited to its quarters at 400 East 34th Street in New York City. Hardly a month goes by that a senior staff member is not in some other nation conducting a training course, conferring with officials of medical schools, government agencies, or voluntary organizations on the development of rehabilitation services. Many of its publications have been translated into French and Spanish for global distribution by the International Society for the Welfare of Cripples.

The slogan of the Institute of Physical Medicine and Rehabilitation comes from an obscure English philosopher of three centuries ago, who wrote, "If every man would but mend a man, the world would soon be mended."

Lady Philanthropist: Mrs. Albert D. Lasker

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, June 17, 1957

Mr. NEUBERGER. Mr. President, in this era of stress on commercialism and exploitation, there is too little appreciation of beauty and of the grandeur of nature. Occasionally, however, a person comes along who tries to call to our attention the marvels of the wonderful world of flowers and wildlife and scenic majesty which lies beyond our buildings of stone and brick.

Such a person is Mrs. Albert D. Lasker, widow of one of the most famous advertising men of our time. Mrs. Lasker has made an avocation of providing tulips and daffodils for the parkings and dividers along some of the busiest streets in downtown New York. This novel effort on her part has been recognized by the New Yorker in its issue of June 8, 1957, in an article entitled "Lady Philanthropist."

Mrs. Mary Lasker, a charming individual in her own right, is interested not only in botany and its beauties, but also in human health. She has devoted her fortune to encourage research and discovery in the fields of such grim diseases as cancer, heart disease, mental difficulties, arthritic ailments, and other areas. In this effort, she has worked closely with the distinguished senior Senator from Alabama [Mr. HILL], who has been so successful in maintaining funds for the National Institutes of Health and its various projects.

I have a special further interest in asking unanimous consent to have printed in the Appendix of the RECORD the New Yorker article praising Mrs. Lasker, because it is my hope that it will call to the attention of my colleagues the need to emphasize outdoor beauty as we make ready to debate S. 963, which is the bill sponsored by the junior Senator from Tennessee [Mr. GORE] and myself to control billboards along our 41,000-mile Interstate Highway System.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LADY PHILANTHROPIST

We've just had a talk with Mrs. Mary Lasker, who gave the city all those tulips and daffodils that came up this spring in the middle of Park Avenue between 50th and 72d Streets. The daffodils and the tulips have died, but Mrs. Lasker, whom we visited in a beautiful beige office she occupies in the Chrysler Building, is flourishing. "I'm an avid lover of flowers and greenery," she said, "and so was my mother before me. I was born in Watertown, Wis., where the Watertown goose comes from—no connection, you understand—and where mother helped found 2 of the town's 3 parks. Mother was Mrs. Sara J. Woodard. Just before I married my late husand, Albert D. Lasker, in 1940, he gave his Lake Forest estate to the University of Chicago; its chrysanthemum gardens—10 acres—were developed by the university, and I arranged for seeds from there to be grown in parks department greenhouses and nurseries here, and for plantings to be made, in memory of my mother, in Central Park at 102d Street, as well as in four other park areas in New York. The city has renewed them ever since. In the fall of 1955, I persuaded the parks department to let me contribute tulip bulbs for planting in front of the public library and the Metropolitan Museum, and on 4 blocks of Park Avenue—50th to 52d, and 70th to 72d—and in the Grand Army Plaza, at 59th Street and 5th Avenue. The department was afraid they wouldn't thrive, what with gas fumes from cars, but they did, the following spring. So last fall I added daffodils and a lot more tulips on Park Avenue—about a hundred and fifty thousand, all told, with each kind of flower grown on alternate blocks. An early heat spell killed the daffodils, but I think they did as well on Park Avenue as in Dutchess County, where I have a country place and grow tulips, roses, and lilacs. The Park Avenue tulips were fine. I think there should be a three-season festival of flowers in New York, with tulips and daffodils in the spring, begonias and salvia in the summer, and chrysanthemums in the fall. My 3 stepchildren and I gave 300 Japanese cherrytrees to the United Nations, in memory of my husband, and I wish someone would give 10,000 lilac trees to Central Park. New York should be full of flowers and flowering trees, our buildings should be lighted at night, and all the fountains in town should play. Washington Square and the borders of the West Side Highway should be alive with flowers. This sort of thing makes a city gay and pleasant, and is good commercially. We should make joy and pleasure for ourselves, and attract new business to New York."

Mrs. Lasker, a very pretty lady philanthropist who was wearing a flowering hat—little pink lilacs—handed us a fan letter from Mr. Nathan Spindel, of 2813 Ocean Avenue, Brooklyn 35 ("I am a New York City taxicab driver and I was struck with the beauty of the thousands and thousands of daffodils and tulips which are blooming [on Park Avenue]. It is with a great sense of pride that I point out this mile of beauty to so many of my out-of-town passengers who are always telling me how unfriendly and mercenary New York is"), and said that was one of many responsive letters she had received. "The flowers are a side issue with me," she said. "I just hope that I am spark-plugging a movement that the city will carry on. What I'm most interested in is the expansion of medical research. Syphilis is now completely curable. Cancer, tuberculosis, heart disease—the major diseases can be conquered."

Mrs. Lasker is helping expand medical research through the Albert and Mary Lasker Foundation, which she and her husband, an advertising man who was part owner of the Chicago Cubs, established in 1942. She has run it since his death, 5 years ago; it gives annual awards to physicians and scientists for medical research and to writers who have done outstanding work in medical journalism. "Successful medical research has resulted in a 34-percent decline in the number of t. b. patient days in municipal hospitals here between 1953 and 1955," she said. "Between 1944 and 1955, antibiotics and other new drugs brought about a 90-percent decline in the national influenza death rate, a

74-percent decline in the appendicitis death rate, and a 77-percent decline in mortality from acute rheumatic fever. Hypertension, as a killer, is on the wane. What did the major voluntary health agencies allocate for cancer research in 1955? Under $8 million. What did the American people spend for chewing gum that year? $282,360,000. For shampoos? $122,650,000. For ball-point pens? $111,090,000. For lipsticks? $64,770,000. For powder compacts? $47,930,000."

Mrs. Lasker gave us some medical-research literature, and as we left, we remarked that we admired her view of the East River. "I used to be able to see those U. N. cherry trees from here," she said, "but someone has put up a building that cuts me off."

The Revolution in the South

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mrs. GREEN of Oregon. Mr. Speaker, during all this discussion on the civil rights bill, it is well for all of us to bear clearly in mind what it is that is happening in the South. Recently at the North Carolina State conference, National Student YWCA, a series of presentations were made in an analytical vein by Miss Frances H. Williams, most recently on the staff of former Senator Herbert H. Lehman and previously a member of the staff of President Truman's Commission on Civil Rights. Her first lecture was delivered on March 1, 1957, and contains many pungent observations on the present "revolution" going on in the South. Under unanimous consent I include pertinent excerpts from this first presentation in the appendix of the CONGRESSIONAL RECORD:

THE REVOLUTION IN THE SOUTH

(From a lecture by Miss Frances H. Williams, at the North Carolina State conference, National Student YWCA, March 1, 1957)

The economy of the South up to comparatively recent times was primarily agricultural. It was built on slave labor. The political structure developed within the region was therefor one which was designed to preserve the economic life of the region. Culturally speaking, though, the region is European. From this continent, the South inherited the Christian religion, a love of leaning and some inclination to foster the arts. This inheritance embodied the ideas of the rights of man, the fatherhood of God, and the brotherhood of man. Thus, those in the South who were born in the most favorable circumstances—economically and culturally speaking—were born in the midst of a dilemma.

The dignity of man—the Christian ideals—these people found were daily violated in the home, the church, the highways and byways of ordinary living. A privileged southerner, therefore, be he white or black, had to adopt early in life a double standard, one for whites and one for Negroes, and therefore supported within himself a daily war.

Such an individual finds the struggle to complete and unify his own personality a difficult task. His learnings—both emotional and intellectual—has to be modified constantly and warped to fit a pattern, called the southern way of life. The less privileged have a similar dilemma, but they were offered more immediate outlets for their frustrations. The society allowed them to hit and hate with only limited stopgaps. These facts I think were true whether the child was white or Negro. But this very release deadened growth in the great virtues toward which men everywhere struggle—kindliness, imagination, creative activity.

Now, because all of you were born in the midst of privilege, all your lives, to a greater or lesser degree, you have faced the dilemma of two ways of life, one for whites and one for blacks. Society has asked of you a great price. You have been told to be a lady under all circumstances—but being a lady to a white child who stumbles in the street before you means one thing, and being a lady to a Negro child who experiences a similar jolt means another. This two-pronged system has so occupied your mind and heart that there has scarcely been room for you to grow. Certainly not to grow as rapidly as a person upon whom no such burden is placed.

Some historians have placed this truth before us in statements such as these: The South has produced no great national leaders, no great music, no great books, no great scientist. In fact, greatness in universal terms is so scarce that any mild exception found in the South, be it white or Negro, is frequently overrated and given public notice far and beyond its deserts.

But within this society which we call the South, there have always been those souls who would not and could not on all occasions conform.

It may be your good fortune one day to read some of the diaries of slaves who ran away to freedom, and in practically each diary you will find that there was some member of the slave-owning aristocracy who either directly or indirectly helped the escapees. Yes, there has always been the Negro who would not conform, and the white man or woman who revolted and would not put down his heel when the situation was supposed to demand it. These are the people who have kept the light of freedom burning in the South, and these are the people today who are making the changes that are with us and upon us.

These people are not always brave, or consistent, or holy—they fight, I think the social analyst would say, to preserve themselves—their inner integrity—their own wholeness of mind. Their acts benefit others and society, but the fight is really for their own salvation, whether they consciously or unconsciously recognize it or not. When you meet these people and talk with them, you find that for them, at the moment they moved toward a single standard for themselves—there was no other way. In these moments they experienced freedom, peace, and the love of God. But usually society has demanded such a price for these precious obtainment that many faltered, and it has been only human to do so.

The slave owner who freed his slaves—Mrs. Rosa Parks, who, recently in Montgomery, Ala., allowed herself to be arrested, found, I think, in these acts freedom, peace and self-love. Without self-love, there can be peace, prayers, hopes, dreams, but not love for others or for God. This is what so many in the South have missed.

The first great battle of the South for its own soul in which the Nation participated was the War Between the States. Here history as written has obscured the facts—at least some of the more important facts. The abolitionist movement had its roots in the South. The slaves who preferred death to slavery lived in the South. The vote to secede was a very close vote. The war was bitter, tragic, and long. It provided all, rich and poor, with a legitimate chance to hit, and so for moment released all from the burden of the dilemma. But not for long. Peace was followed by compromise and the old forces went to work once more. These forces said if slave labor is impossible, then cheap labor is possible. So the political and social structure was modeled to make cheap labor possible. Today, we in the South live in a region where labor is counted cheap.

Lynching in such an environment became a useful outlet for overwrought emotions. But the South was again brought up short by one of its own sons and forced to view itself in the blazing limelight of national public opinion. Walter White, a southerner, risking life and limb, time and time again, got the facts on lynching and brought these facts to the attention of the Nation and the world.

The majority of the South, once having seen the facts, could not live with them. There was something about it that could not quite be stomached. So lynching went underground and took on other guises. But out of sight was not out of mind and dilemma went right on.

The court fight for the right of Negroes to serve on juries followed. Then began the attack on the iniquities existing in the educational system. The battleground was national once more, and it is on that battleground that we now find ourselves—we who individually are neither wholly good nor wholly bad. We ourselves, who long for a simple life, a single code, stand at the crossroads within our own minds and hearts. What our answer will be no one knows. But many people care and care deeply. And those who await the answer are not alone the people of our own country. Millions of people in Asia, in Africa, and in Europe care and care desperately what our answer will be.

For the essential struggle is worldwide in nature. Men and women everywhere living in complicated and simple civilizations long for inner peace—a chance to love, to work, to have children, to reach old age with a degree of clarity and peace. Modern electronics and its associate handmaidens have enabled them to hear and know about our struggle and they care desperately what the outcome here will be. For they know that victory is contagious. But they are equally aware that defeat is also contagious. Precedents count, and count heavily.

So the burden we were born into widens and deepens and we who are a part of the South cannot escape it—even if we would.

Secretary Seaton Changes Assumptions on Trinity Power Proposal

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. ENGLE. Mr. Speaker, a few days ago Secretary Seaton submitted additional information to Congress supposedly correcting earlier Interior Department errors in the studies supporting his recommendation for P. G. & E. development of the Trinity power facilities. In an attempt to reduce the magnitude of the errors previously made, Secretary Seaton has not just corrected the errors but has redone the study using altogether different assumptions.

This fact is obvious although my efforts over the past 6 weeks to get backup data supporting Seaton's figures have brought forth not one bit of information. Secretary Seaton is certainly tak-

ing some unusual measures to try to justify this scheme. One of the new assumptions resorted to relates to P. G. & E. service to the Sacramento Municipal Utility District. Mr. James E. McCaffrey, general manager of the Sacramento Municipal Utility District, states that the district has not been approached on this matter. I am including at the end of my remarks an article and editorial from the Sacramento Bee relating to this matter. It seems to me that any assumption on which the Secretary bases a decision as important as this one on construction of Trinity power facilities should be known to all parties involved or affected. The article and editorial follow:

SMUD DENIES BEING OFFERED TRP POWER RATE

James E. McCaffrey, general manager of the Sacramento Municipal Utility District, today said the district has not been approached regarding any special power rate from the Pacific Gas & Electric Co.

McCaffrey had reference to a letter written to Congress by Secretary of the Interior Fred A. Seaton in which he mentioned such a plan under the proposed partnership arrangement between the private utility and the Federal Government for joint development of the Trinity River project.

SEEKS TO BOLSTER STAND

Seaton told of the plan in an effort to bolster his stand favoring joint development of the project.

His letter pointed out errors in calculation of extra costs to preference customers under the joint development plan. The Secretary admitted the extra costs would range between $115,002,000 and $149,940,000 over a 50-year period, depending on whether the San Luis unit is added to the Central Valley project, instead of the $86 million cited in his previous report.

Seaton said the extra cost figures are based on sales totaling 650,000 kilowatt hours to preference customers under all Federal development and 400,000 under joint development.

"It also assumes," Seaton wrote, "that the Sacramento Municipal Utility District would be served under a schedule R rate of the Pacific Gas & Electric Co., with a 9 percent discount for bulk sales which the Pacific Gas & Electric Co. assures us would be available to the Sacramento Municipal Utility District."

The schedule R rate is a special uniform rate PGE offers in wholesaling power to municipalities and utility districts.

POWER RESTRICTIONS

However, Peter E. Mitchell, head of the State public utilities commission, points out SMUD would be unable to buy power from the PGE under schedule R because of PGE provisions customers under it must buy all their power from it. SMUD at present purchases energy from the CVP and plans to generate its own supplemental power.

"The district," McCaffrey said, "would not be in a position to say if the rate is better than in the present contract with the company until additional engineering studies are made."

SMUD holds a special contract with PGE to supply supplemental and firming power SMUD expects it will need in the interim before the district completes construction of its upper American River project.

SMUD expects it will use its entire allotment of Central Valley's project power by 1959 and it is estimated the upper American River project will not begin to produce power until 1961.

SEATON SHOULD BACK UP NEW PARTNERSHIP DATA

Secretary of the Interior Fred A. Seaton has sent to Congress a new report on the proposed Trinity River "partnership" under which the Government would build the dams and other appurtenances and the Pacific Gas & Electric Co. would build and operate the power houses.

This supposedly corrects an earlier Interior Department report which showed the "partnership" in a much more favorable light than the true facts justify.

While the second document tones down the alleged economic advantages of "partnership," Seaton reiterates he still is for the plan.

Seaton's supplement makes some flat claims which are not supported in the report by any substantiating data except the assertion that the Bureau of Reclamation and representatives of the PGE are now in agreement on the savings which public agencies and Federal installations would realize from an all-Federal operation of Trinity.

There is no indication the preference power customers, who are the ones directly and vitally concerned, are in agreement or that they even were consulted.

Seaton's revised report reckons these preference customers would pay $115,002,000 more for power over a 50-year period if the PGE operated the generators than under Federal operation.

But United States Senator THOMAS H. KUCHEL has stated the differential is something like $200 million.

This is a very large spread and makes the difference as to whether the so-called partnership would be financially favorable or unfavorable for the Government.

Certainly, where there is such a disparity on a matter of this importance Seaton ought to produce his supporting data and assumptions.

One assumption he does relate is that "the Sacramento Municipal Utility District would be served under a schedule R rate of the PGE, with a 9 percent discount for bulk sales which the PGE has orally assured us would be available to SMUD."

The fact is SMUD could not qualify for schedule R rates as long as it buys power from the Central Valleys project, or develops its own as it proposes to do. SMUD was not consulted by anyone from the Interior Department nor was any offer made to SMUD by the PGE, orally or in writing.

It appears plain that Seaton reached out very far in all directions to try to bolster his partnership recommendations and the report was assembled through cozy negotiations between the Reclamation Bureau and the PGE.

If all of Seaton's assumptions are as faulty and groundless as this one, the revised report too can be thrown into the wastebasket along with the original, which Seaton has admitted was in error.

The Responsibility of the Individual in the South

EXTENSION OF REMARKS

OF

HON. EDITH GREEN

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mrs. GREEN of Oregon. Mr. Speaker, the responsibility of the informed individual in the South in these troublous times is one which should come in for great thought and analysis. Such a cogent analysis was contained in a lecture given on March 3, 1957, by Miss Frances H. Williams, herself from the South, at the North Carolina State Conference, National Student YWCA. Under unanimous consent I include excerpts from that lecture in the Appendix to the CONGRESSIONAL RECORD:

THE RESPONSIBILITY OF THE INDIVIDUAL IN THE SOUTH

(From a lecture by Miss Frances H. Williams at the North Carolina State conference, National Student YWCA, March 3, 1957)

First and foremost, I think we must understand what, if anything, we are about to lose with the inevitable removal of legal segregation. We must come to understand, whether we are northern or southern, whether we are black of white.

Now, at first glance, you may say to yourself I have nothing to lose, only all to gain. But that is not so. For no man is an island until himself, so do not ask for whom the bell tolls, it tolls for thee. If any man is to lose, then all are to lose. Now it may be that we are losing something we do not want, but it is a loss just the same.

And it is this loss which we must first come to understand. To suggest something of the nature of this search, may I illustrate from the same field but another day in history.

Once we in the South thought of lynching as a sad but inevitable necessity. Dreadful things happened—something had to be done—and that something was lynching. I grew up in a South that felt this way.

As a child in Kentucky, I either heard or thought I heard through the streets the hoofs of the night riders—Kentucky's form of the Klan—riding forth to preserve something that our system of justice seemed unable to preserve.

I was terrified on these nights and the terror has never completely left me. I could not even read about lynchings. But one day I said to myself: Well, there are lynchings and if you are to be of any use as a responsible citizen of the South, this, too, you must come to understand. There is no way to hide from the facts of life—except in fantasy. As an adult you must choose therefore whether to look at the facts or stay in a self-woven cocoon all your life.

So I decided to look. When I started to look at lynchings I knew only one thing, namely, that I believed strongly in the American system of justice. I believed that the police force could find and stop wrongdoers. I believed that the courts would give every man his day in court, and that those who could not function in a constructive manner within our society could find a simpler environment within our walls of confinement where they would do neither themselves or others any harm. So I started the search believing that lynchings were unnecessary, mankind had devised a better way. But I also knew that this was not all there was to the problem. The Night Riders did not trust our police or our courts. They trusted their whips and guns. Luckily for me, at this moment of history I had as my close friends the powers that be in the National Association for the Advancement of Colored People. I knew that their files contained the most authentic records in the country. So I asked to read the record, the raw data. This reading was not easy. But I read. I had to take rest periods in between, but I read page after page, until, in my mind's eye, I began to see it all.

The events prior to the lynching, the lynching itself, and the aftermath.

And through it all I saw a terrible fear, in fact there was little else but fear. The victim was afraid, those who did the lynching were afraid, the part of the white community that would have no part in the deed itself was afraid, and the Negro community, that stood by in silence was also afraid.

As I read on I saw there was something else, hate, hate of white people for Negroes and hatred of Negroes for white people.

And then, finally, a long time after I had stopped reading and was just thinking, I came to see that there was hatred of white men for themselves and hatred of Negroes for themselves. I began then to see that this self-hate perhaps was the most difficult problem of all. I began to understand that when men and women hate themselves they cannot extend to anyone else the leeway, the time-space, in which our system of justice might work. They had to take the matter in their own hands and to relieve themselves of their own hate. They had to be brutal to someone else and, having been brutal for a moment, they then felt safe.

The truth of this I found in the records, a town that experienced a lynching for a time was a safe town. Wrongdoing of all sorts continued to take place in that town, but no one had to take the law in his own hands.

Having read and thought a lot, I began to be less frightened. I began to put myself in the place of the victim of a lynch mob. I saw that, though it would be painful, for the victim this was just one more event. A terrible accident could be equally painful.

I even thought of men condemned to die in prison. What was this like? Through my imagination I marched myself to the gas chamber, the scaffold. I saw to be killed was not so bad. It did not last too long. And, by and by, I saw that to be the victim was something one could take.

Then I thought about the lynchers. What was the experience for them? Had I myself ever lynched anyone? Had I ever felt that I had to inflict pain? Here the most difficult part was holding myself to the situation as selected. Then it occurred to me that I, who had never had a gun in my hand, could shoot a mad dog if he were about to attack a child or another person. From this the transfer was easy. I could also shoot into a mob that was heading for the Negro community, my community, to shoot and burn at will.

But still I was not at the end of the trail.

* * * * *

For 2 years I talked with people about their experiences with the phenomenon of lynching. Once I talked with a young man who rode a whole night in a car with a group of men and a rope. It was to be his last ride. I asked this young man, "How did you feel?" "Well," he said, "really O. K. I had had a good life and this seemed to be the end. The end comes to everyone. What I thought most about was the men who had me physically in their possession. They were such sad men. There was no joy in them."

Another time I talked with a member of a mob. He did no violence himself, but he did go along. On his return home he was sick—physically sick—he could hold nothing on his stomach.

Again, I talked with a girl who had ridden past a jail one night and saw the lynch mob standing there. She said, "Frances, it was the stillness that got me. They were deathly still." Again a young white girl told me of a night when she and her sister had just returned from dates and were sitting on the front porch. The village banker came by. He stopped to chat and they asked what the news was. He said, casually, "tomorrow at 3, there is to be a lynching." My friend told me that when he said these words, she could not speak. "Up to that moment," she said, "I thought lynchings were just things that happened and no one could stop them and here was my mother's friend calmly announcing even the hour a lynching was to be and it was still a night and a half a day away. Yet, our friend, the banker, planned to do nothing."

But this journey that I took in an effort to understand for myself the phenomenon of lynching, many men and women, northerners, southerners, whites, and blacks have taken. And that which we all found, we did not like. So, collectively, we decided to give up lynching and we have. We are all proud that we have done so. For the problems of hate and fear in this instance, we have found a better answer.

And so it is with segregation. We must first come to understand what this phenomenon is—then see if we like it—and finally ask ourselves if we lose it, will we be proud?

I think we will.

I think we will find—and the "we" here is all of us, white and black, northerner and southerner—we will find a simple fact, namely, that we do not like segregation and that there is a better answer to the fears that trouble men.

But the search to understand will not be easy. It will be time consuming but not nearly as time consuming as the perpetuation of segregation.

Have you ever thought how much time and energy goes into this business of preserving white supremacy? Have you ever thought how costly it is not only in dollars and cents, but in happiness?

If you decide to take up this search, do not try to cover the whole field at one leap. Select one segment: Segregation in schools, or segregation on buses. Or, take a field where there is no legal segregation, but segregation by custom, like the unwillingness to call adult Negro women Mrs. or Miss. And try to find all the facts of this field of activity—and the meaning of the facts to those who participate. Be sure to take an area where you yourself have some first-hand data. And remember, don't let yourself off easy. At the same time, do not berate yourself.

* * * * *

You set the stage and then the good, the bad, the indifferent all behave in a manner which leaves them all more pleased with themselves. Where there was a cold and barren land, you will make once more a friendly country.

And setting the stage is frequently so simple, once you understand just what it is you are dealing with.

May I illustrate once more: When I worked for the Office of Price Administration as the race relations adviser, Mr. Chester Bowles was the Administrator. The day came when he was going to visit our southern regional office which was located in Atlanta. Now Mr. Bowles had an assistant in charge of all regional offices who was a very nice gentleman from South Carolina. Naturally, therefore, he got all worked up over this visit and came to see me. He asked what would we do about this and that, all situations involving racial factors. I listened politely and saw that the poor man was suffering. He, of course, had stated that he had no personal prejudice against the Negroes. He just wanted everything to go right. But I saw that he just did not know what he was dealing with. So, after hearing him out, I asked him what did he usually do when Mr. Bowles made a visit to a regional office.

He said, "Well I just wire and say he is coming."

I then said, "Why not do that this time. Why prejudge the people in the regional office?" Then to comfort him, I said: "I think everything will come out all right."

* * * * *

Now it is my belief that no one should act against the segregation pattern of the South except under two conditions: One, when the law requires it and, two, when you desire to do so. In either case the action will bring you a new experience and sometimes the experiences which follow may fill you with strange and poignant emotions. These will have to be digested and incorporated into your total framework.

Let me suggest something of what some of these feelings may be. A good friend of mine who was born and brought up in the South said to me one day, "You know, if you are white it is not so hard, once you make up your mind, to act against the southern code. But the act itself leaves you feeling exposed—like you just dropped your petty in the middle of the street." As I listened, I remembered that at times I too felt exposed, as on that day when I waited on the railroad platform in Knoxville, Tenn. I was waiting for a young white student who was to chair 1 of the 3 first interracial conferences we ever had in the South, where there was no segregation. I was the YW regional secretary in charge and I had to go over the conference plans with this young man before proceeding on to Chattanooga to make arrangements for a place to house the conference. I knew no place in Knoxville where the two of us could meet and talk, since he was a white student and I was a Negro secretary. I finally decided on the platform of the railroad station, one of those as yet unassigned places. He arrived, we talked, my train came. He picked up my bags. But I said, "Never mind, you go on, I will attend to them."

I walked down the platform. It was night. I saw the pullman conductor. I asked if I could have a berth. Hearing in my voice my own recognition of his right to refuse me, he said, "Get on ahead." I did. I entered the "Jimmie" and sank down. A few minutes later there came the clanking of chains. A large man carrying a shotgun arrived and ordered all passengers to sit on one side. Then came the chain gang. But even there the southern way of life was not ignored. The white prisoners were chained in front and the Negro prisoners in the rear, but a single chain held them all. I had seen prisoners chained together before, but I had never been so close to them for such a long period of time. They were quiet enough people that night, except for one white lad notably disturbed.

For myself I was not only longing for a bed and clean sheets, but I was hungry. A waiter from the dining car came through. I asked if he could get me something to eat. He said the dining car was closed. I said, "Well, bring me a sandwich." He seemed indifferent. He was indifferent. So I sat throughout the night with $100 cash in my pocketbook. But I was unable to buy food or a proper resting place.

But this is not all that happened that night. At 4 in the morning, after a long taxi ride, I awoke a Negro family who had never seen me. They asked who I was. They took me in on faith and shared what they had with me. The next day I secured a church for the conference, and that night found me again in the Jim Crow waiting room, waiting for a train. The waiter who had come into the "Jimmie" the night before passed by. He stopped, looked at me, then he said, "You are the lady who wanted something to eat last night." I said, "Yes." And that was that.

However, in the years that have passed since that Chattanooga conference, I have had student after student who was there say to me, "Of course, you know him, Frances. He hit the sawdust trail to Chattanooga."

So I knew then, and I know now that in that conversation at the railroad station and all that followed I helped build the kind of world I believe in, I want, and I love. I think now as I retell this story that my life has been rich in spite of the hardships. I have had opportunities to create that which is good.

I have worked for things that count, and, having done so, I know that I shall always do so; there is but one requirement, and that is to rise and greet the day. The work is always there.

My young friends, in this last story I have suggested the final thing I wish to say to you—namely, something about the nature of the rewards that come to those who venture to build creatively against the hard, rigid, and destructive lines of segregation in the South.

Some of these rewards are suggested by Tolstoy in his War and Peace.

I quote from two sections:

The first is when a prisoner is standing a captive before one of Napoleon's generals. Tolstoy writes: "At the first glance, when (the general) had only raised his head from the papers where human affairs and lives were indicated by numbers (the prisoner) was merely a circumstance, and (the general) could have shot him without burdening his conscience with an evil deed, but now he saw in him a human being."

The second quote concerns itself with the hero of this great novel, Peter, who is supposed to be the richest man in the Russian Empire. During the French invasion Peter is taken prisoner and dragged through much of the retreat. Tolstoy writes: "Here only, and for the first time (Peter) appreciated, because he was deprived of it, the happiness of eating when he was hungry, of drinking when he was thirsty, of sleeping when he was sleepy, and of talking when he felt the desire to exchange some words * * * Later in life he always recurred with joy to this month of captivity, and never failed to speak with enthusiasm of the powerful * * * sensations, and especially of the moral calm which he had experienced at this epoch * * * He learned that man is meant for happiness and that this happiness is in him, in the satisfaction of the daily needs of existence, and that unhappiness is the fatal result, not of our need, but of our abundance * * * When calm reigned in the camp * * * The woods and the fields roundabout lay clearly visible * * * Then Peter cast his eyes on the firmament, filled at that hour with myriad of stars. 'All that is mine,' he thought. 'All that is in me, is me. And that is what they think they have taken prisoner. That is what they have shut up in a cabin.' So he smiled and turned in to sleep among his comrades."

William James in commenting upon this passage wrote: "The occasion and the experience, then, are nothing. It all depends on the capacity of the soul to be grasped, to have its life currents absorbed by what is given."

Emerson also speaks about this kind of excitement in life when he said: "Crossing a bare common in snow puddles, at twilight, under a clouded sky, without having in my thoughts any occurrence of special good fortune, I have enjoyed a perfect exhilaration. I am glad to the brink of fear."

So the real decision as to what you as an individual shall do—granted you are a southerner and live in the South—lies in the answer to another question: What do you want from life? The ease and comfort of a silken cocoon woven out of the tears and heartbreaks of others—or in the inner calm of knowing that the stars are yours because you paid the price to claim them for your own. Of this—no prison—not torture—can deprive you. What you really want, you get. Make no mistake about this. Life will not deny you your own purchase in its market place. This choice is unlimited.

Just be sure you know what you want and where your happiness lies.

Chief Justice Arthur T. Vanderbilt

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. FRELINGHUYSEN. Mr. Speaker, on June 16 one of the most prominent figures in New Jersey, Chief Justice Arthur T. Vanderbilt, died just 2 days after suffering a stroke. In his passing our State, and indeed the Nation, has lost one of its leading jurists. A man of many interests, Justice Vanderbilt not only transformed New Jersey's judicial system but he exercised decisive leadership for many years in education and governmental fields. The example of good citizenship which he so brilliantly exemplified will serve as an inspiration to many others, far beyond the borders of New Jersey.

I should like to include an article from the New York Times of June 16 regarding Justice Vanderbilt, as well as an editorial of June 17 from the New York Herald Tribune:

[From the New York Times of June 16]

LEADER IN COURT REFORM

Justice Vanderbilt was a leader in court reform, legal education, and good government. As lawyer, teacher, and judge he was an outstanding defender of civil liberties.

He was in the front rank of the country-wide movement in the last half century to improve court structure, administration, and procedure in State and Nation. Unification of court systems, modernization of court administration, and simplification of court rules were his main goals in public service.

Cooperation between bar and public, he held, was essential to enable the law to adapt itself to changing conditions. He insisted that the courts were big business and should be run in a businesslike manner. Every case should be handled promptly on its merits, he asserted, rather than on the basis of procedural technicalities.

Justice Vanderbilt played a leading part in a long, hard fight that led to the adoption of a new State constitution in New Jersey in 1947 and to reorganization of its court system the next year. He was then appointed chief justice of the New Jersey Supreme Court. In this capacity he served as head of the State's judicial system, and was able to put into effect ideas of court reform that he had advocated for many years.

His program was credited with putting New Jersey among the most advanced States in raising the efficiency of the courts and reducing congestion and delay in bringing cases to trial.

As chief justice he held annual conferences of judges, lawyers and legislators to revise court rules, making them more flexible and less technical. He introduced modern administrative and personnel methods. He took steps to increase the prestige and dignity of the municipal courts, which he held to be most important because of their closeness to the people.

Justice Vanderbilt was born in Newark on July 7, 1888. He attended Wesleyan University at Middletown, Conn., and the Columbia Law School.

In 1913 he received his law degree, was admitted to the bar in New Jersey, and got a clerkship in a Newark law office. He became an instructor in 1914, a professor in 1918 and dean in 1943 at New York University Law School.

He set up his own law office in Newark in 1915. He taught and practiced in all fields of law, but also specialized in insurance and corporation law, administrative law and trusts.

COUNSEL TO NORMAN THOMAS

One of his best-known cases in private practice was as counsel for Norman Thomas, Socialist leader, after the late Mayor Frank Hague, of Jersey City, had barred him from speaking at public meetings there. The case went to the United State Supreme Court on constitutional issues, and a Jersey City ordinance under which Mayor Hague had acted was declared void.

Justice Vanderbilt went into politics in 1919 as president of the Essex County Republican League, which gained control of the County Board of Freeholders in 1920. He became Essex County counsel in 1922.

The Essex County Republican League developed into the Clean Government League, which won control of Essex, Bergen, and Union Counties for Justice Vanderbilt and his associates.

Justice Vanderbilt was president of the American Bar Association in 1937. During his presidency he led the association in demands for simplification of the Federal court system. Between 1938 and 1946 he was chairman of advisory committees that helped the United States Supreme Court and the United States Attorney General's office to reorganize the Federal courts.

His campaign for court reform in New Jersey included service as chairman of the State judiciary council from 1930 to 1940. He was also a member of the New Jersey State Constitutional Revision Committee in 1941 and 1942, and a special assistant to the State attorney general in 1942 and 1943.

Justice Vanderbilt wrote several books on legal subjects and delivered many lectures at law schools and universities throughout the country that were published in book form.

[From the New York Herald Tribune of June 17, 1957]

ARTHUR T. VANDERBILT

The death at 68 of Chief Justice Arthur T. Vanderbilt, of the New Jersey supreme court, closes one of the most disinguished and valuable judicial careers in modern-day America. His monument is the New Jersey judiciary, which Justice Vanderbilt transformed from an archaic, tortuous, overburdened institution into one of the Nation's most effective and respected court systems And the New Jersey constitution, whose adoption in 1948 came about largely through Justice Vanderbilt's efforts, similarly stands as a model of its kind.

Justice Vanderbilt was a jurist whose attainments and outlook went considerably beyond narrowly legalistic considerations. He was a leader in education and good government, no less than in court reform. As an attorney in private practice, he showed particularly deep concern for civil liberties, even at the risk of espousing unpopular causes. To him, the protection of the law was the right of every American citizen.

With this underlying basic approach, it was no surprise that Justice Vanderbilt was in the forefront of the battle to make the courts serve the people with the utmost efficiency and speed. He labored unceasingly

to bring about improvements in court structure, administration, and procedure, and the results he achieved in New Jersey served as an example and goal for jurists in other States.

Judges like Arthur T. Vanderbilt, courageous, hard working, and farseeing, are a credit to America and its legal profession. He will long be remembered as one to whom the administration of justice was a sacred trust.

Now That Khrushchev's on TV, Here Is $64,000 Question

EXTENSION OF REMARKS
OF
HON. W. R. POAGE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. POAGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Waco News-Tribune of June 11, 1957:

NOW THAT KHRUSHCHEV'S ON TV, HERE'S $64,000 QUESTION

Senator LYNDON JOHNSON'S dramatic call Saturday for an open curtain of exchanges of opinion and views between Soviet Russia and the United States could be used as a springboard to put new pressure on the Commies.

It is difficult to believe that the Russians would permit such wide interchange of personal views on nationally broadcast programs as Senator JOHNSON suggests, but since we have now allowed their chief spokesman, Nikita Khrushchev, to use a United States television program to go through his deceptive paces, we ought to keep publicly demanding equal time on the Russian radio and TV for an American spokesman. We ought to tell the world repeatedly of Senator JOHNSON'S proposals and insist that the men of Moscow answer it. It is the kind of a situation that strikes the Communists in their most vulnerable spot—their inferiority complex.

Senator JOHNSON restated a fundamental truth when he said he was not afraid of what would happen if Russian leaders were allowed, as they already have been allowed, to argue their case before the American people so long as the other side of the coin is also presented. He quoted Thomas Jefferson's famous statement:

"I know of no safe depository of the ultimate power of society but the people themselves; and if we think them not enlightened enough to exercise their control with a wholesome discretion, the remedy is not to take it from them, but to inform their discretion by education."

Right there is the difference between the so-called people's democracy of communism and our own. The people are given no custody of their own destinies or of their own government in Russia.

Senator JOHNSON perhaps was calling for the millenium when he urged a public exchange of views on a continuing basis between the American people and the Russian people. But for the first time in history it is mechanically possible. The only thing that stands in the way of its happening is the same Communist mentality that fashioned and maintains the Iron Curtain. The Texas Senator has posed a question to the Communists that they should be compelled by force of world opinion to answer.

Cotton: Average Value in Dollars per Cotton Allotment by Counties

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. BECKWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following tabulation recently received from the United States Department of Agriculture:

Cotton production in the United States by cotton State, by cotton county, 1955 (counties were used for each State in the cases where complete information was available)

State and county	Number of cotton allotments	Total cotton acreage allotted	Number of cotton bales ginned	Total value of cotton (thousands)	Average acreage per allotment	Average number of bales per allotment	Average value per allotment
(1)	(2)	(3)	(4)	(5)	(6)	(7)	(8)
Alabama:							
Autauga	996	10,222	11,200	$1,910	10.3	11.2	$1,918
Baldwin	811	3,136	2,730	466	3.9	3.4	575
Barbour	1,574	14,254	10,800	1,842	9.1	6.9	1,170
Bibb	631	4,403	4,370	745	7.0	6.9	1,181
Blount	3,200	20,486	19,900	3,394	6.4	6.2	1,061
Bullock	753	9,669	7,800	1,330	12.8	10.4	1,766
Butler	1,632	10,417	9,500	1,620	6.4	5.8	993
Calhoun	1,238	8,457	6,400	1,092	6.8	5.2	882
Chambers	1,037	11,123	8,200	1,399	10.7	7.9	1,349
Cherokee	1,811	23,708	25,600	4,367	13.1	14.1	2,411
Chilton	2,169	11,597	11,600	1,979	5.3	5.3	912
Choctaw	1,614	7,099	5,850	998	4.4	3.6	618
Clarke	1,599	6,490	4,890	834	4.1	3.1	522
Clay	1,208	5,530	3,860	658	4.6	3.2	545
Cleburne	646	3,836	2,260	385	5.9	3.5	596
Coffee	1,971	19,058	16,700	2,848	9.7	8.5	1,445

Peace Posse

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Miss Malvina Lindsay, which appeared in the Washington Post and Times Herald of June 17:

ARMS TREND MAKES PEACE POSSE URGENT

(By Malvina Lindsay)

Here is a strangely ironic situation. The big powers are stripping themselves down to fight ever more annihilative wars—which at the same time they want to avoid. Yet little is being done to prevent the brush-fire wars that would be the most likely genesis of greater conflicts.

The most practical step toward such prevention would be for the United States to give leadership to the movement to establish a permanent United Nations peace supervision force.

Five concurrent resolutions for such a force have been introduced in the House of Representatives and one in the Senate. Backers of the resolutions are seeking congressional hearings that would stimulate nationwide discussion of the project. If Congress would back such a proposal chances for creation of a permanent emergency force by the next General Assembly of the United Nations would be greatly increased.

Recent reports from the Middle East give much credit to the present United Nations Emergency Force for lessening tensions in that area. Dag Hammarskjold, Secretary General of the U. N., has just reported a "fundamental change for the better" in the Middle East and has credited part of this to the presence of the U. N. force along the Israeli-Egyptain borders.

After this force is disbanded, the United Nations will be unprepared again—as it was at the time of the Suez crisis—should another trouble spot develop.

Proposals have been made in England, Canada, and this country for creation of a permanent corps—not a continuation of the present one—which, in the words of Lester B. Pearson, Canadian Minister for External Affairs, would be a peace supervision force—not to fight but to insure that fighting not be resumed.

Mr. Pearson, who proposed the organization of the present U. N. emergency force, has urged that Mr. Hammarskjold now draw up administrative, legal, and financial machinery for a peace supervision force so that organization on it could start as soon as the project was approved by the General Assembly.

The force envisioned in the House and Senate resolutions would be a symbolic "sheriff's posse" of a relatively small group of men drawn from members of the United Nations other than the big powers and not armed for combat. In the words of Representative A. S. J. CARNAHAN, Democrat, of Missouri, chairman of the House Foreign Affairs Subcommittee on International Movements and Organizations, it would "not be expected to fight wars" but to "step into situations that threaten the peace."

Other House sponsors of U. N. force resolutions besides Representative CARNAHAN are: CHESTER E. MERROW, Republican, New Hampshire; STUYVESANT WAINWRIGHT, Republican, New York; ROBERT HALE, Republican, Maine; PETER FRELINGHUYSEN, Republican, New Jersey; HENRY S. REUSS, Republican, Wisconsin. The Senate resolution is back by Senators SPARKMAN, FLANDERS, WILEY, KENNEDY, and SMITH, of New Jersey.

In speaking for the resolutions some of the Representatives pointed out that the existence of a United Nations patrol in the past might have averted the aggression that led to the Korean war and might have prevented the fighting between North and South Vietnam. If such a force could have been flown into Hungary when the Hungarian Government asked for help it might have been a psychological deterrent to the occupation of Hungary by Soviet forces.

The present trend of world armaments makes creation of a U. N. force ever more urgent. For an atomically armed power cannot interfere at a local trouble spot without great danger of starting a major conflict. Moreover, the Western powers are cutting their armed manpower and conventional armaments and making themselves less able to take action in a small war. This leaves the possibility of intervention largely to Communist "volunteers."

In This Corner—Slums

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mrs. BOLTON. Mr. Speaker, a graphic illustration that city slums not only are inhumane but also a drain on taxpayers' pocketbooks is pointed out in an editorial of the Cleveland Plain Dealer of June 11, entitled "In This Corner—Slums." Under leave to extend my remarks I include the editorial herewith:

[From the Cleveland Plain Dealer of June 11, 1957]

IN THIS CORNER—SLUMS

In 1934 a thought-provoking analysis was made of a condition which had arisen in a half-square mile area on Cleveland's East Side. The study, undertaken by Rev. R. B. Navin, of the Cleveland Catholic diocese, with the counsel of Howard Whipple Green, was made for the Cleveland Metropolitan Housing Authority to ascertain whether an old belief was based on fact.

The belief was this: That slum areas, in addition to being inhumane, actually were luxuries to communities in that their especial costs in service demands, disease, and crime were much higher than their tax collections.

Monsignor Navin's analysis examined dollars-and-cents costs and proved without doubt that the belief was true. The area scanned, bounded by Central and Woodland Avenues and East 22d and East 55th Streets, brought in $225,035 in all real-estate taxes in 1932; its total costs in all city and county services, disease, relief, and other charges were more than $1,972,437, representing a drain on the rest of the community of $1,747,402.

Even worse were the statistics which showed that whereas the area had 2½ percent of Cleveland's population, it had 21.3 percent of its major crime, 26.3 percent of the vice, 6.8 percent of the delinquency, 10.4

percent of the illegitimate births, and 12½ percent of the tuberculosis deaths.

In 1948, a thesis by Warren P. Phelan studied almost half of this area, the section between Central and Scovill Avenues, part of which had been rehabilitated with a housing development. He found that the new housing, where rents actually were less per family than in the slum rubble, resulted in less crime, less disease, and less drain on city resources.

On Thursday, work will begin on the rebuilding of another 5 blocks within that area analyzed in the Navin study—about one-sixth of the whole section. At long last, the land has been leveled of the dilapidated and dispiriting eyesores in which thousands had lived because they had no other place to go and from which slum landlords had reaped a harvest.

The first of three private construction companies which will dot the streets with apartments will break ground Thursday amid special ceremonies. As another example of private enterprise cooperating with public agencies in doing a job for urban redevelopment, it is worth a civic celebration.

But it's worth a few moments' meditation, too, on what these few blocks in area B have cost the city. It has helped keep its crime rate high, its police and fire protection costly. It has given many children, by accident of birth, a bad start in life. It has crushed the moral fiber of many a person, and no wonder, since 10 minutes there would have depressed almost any outsider.

If you shrug off these facts as having nothing to do with you, think of the economic side: The streets to be rehabilitated are roughly one-sixth of the section survived by Monsignor Navin in 1934; by rule of thumb it may be estimated that it cost the community one-sixth of the annual $1,750,000 drain cited at that time, or nearly $300,000 a year. Even at the depression rates of the 1930's and without allowing for any inflation, that loss to the city and county can be gaged at $6 or $7 million since the city was advised of the facts.

So while the city has something to be thankful for, it will be well to keep this fact in mind about Thursday's ground-breaking ritual. There are still row after row of slum houses in Cleveland. Some of them just across the street from Thursday's ground breaking.

Three Questions for Congress

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. DEROUNIAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I would like to include a very sensible editorial on the timely subject of spending, which appeared in the Long Island Daily Press on June 5, 1957.

The editorial follows:

IS ALL THIS NECESSARY?

An advisory committee has come up with the idea that the White House staff needs a $32,350,000 office building.

It also proposes turning the west wing of the White House, now used for offices, into a guest house for foreign visitors. Distinguished visitors now stay at Blair House, a comfortable establishment, on Pennsylvania Avenue.

The new office building would be on the site of the old State-War-Navy Building which would be demolished. Besides this building, another office structure for agencies connected with the White House already has been approved by Congress.

Meanwhile Congress has some rather imposing building plans of its own, new office buildings for the Senate and the House with three-room suites for every Congressman. This will cost the taxpayers an estimated $121,700,000.

There is much talk in Washington about saving dollars. Understandably back home, all these building projects sound rather grand.

When a taxpaying homeowner wonders whether he can finish off that room in the attic or put in a new bathroom, he asks himself:

Is it absolutely necessary?

Can we afford it?

Can we hold off for a while?

The same taxpayer can rightfully ask the White House and the Congress to ask themselves the same questions.

Bankers Endorse Statehood

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. BARTLETT. Mr. Speaker, opponents of Alaska statehood contend in season and out of season that Alaska cannot afford statehood, that whatever added costs it would bring would act as an economic anchor.

That view is directly contrary to the one held by the Alaska Bankers Association. Meeting recently in annual session at Mount McKinley National Park, the bankers of Alaska unanimously adopted a resolution calling for immediate statehood. Most assuredly these men would never have taken any such action if for a moment they believed statehood would hinder Alaska's development. On the contrary, they believe and know it will help. In my opinion, this resolution is especially significant and I take pleasure in presenting it here together with an editorial from the June 9 issue of the Juneau (Alaska) Independent regarding the resolution.

The resolution and article follow:

RESOLUTION OF ALASKA BANKERS ASSOCIATION

Whereas our great land of Alaska has long since served its apprenticeship as a Territory; and

Whereas statehood is needed and deserved as a basis for Alaska's full economic development; and

Whereas the struggle for statehood for Alaska has now been waged by far-sighted Alaskans and friends of Alaska for full four decades; and

Whereas the people of Alaska have time and again expressed their will for statehood; and

Whereas the period of adjustment, and of trial and error must inevitably be faced regardless of when statehood is granted: Now, therefore, be it

Resolved, That the Alaska Bankers Association in convention assembled do hereby endorse wholeheartedly statehood for Alaska—now.

[From the Juneau Independent of June 9, 1957]

BANKERS BACK STATEHOOD

It is with great pleasure that we publish the story of the Alaska Bankers' Association backing in a proclamation the statehood cause. Great pleasure indeed, for it gives the last kick out the window of the cry that statehood would be too expensive. Opponents of statehood have long used the gimmick that we could not afford statehood.

Do you think that the entire convention of bankers, themselves conservative in their actions, and themselves having the best knowledge of the economic condition of the Territory, would endorse statehood unanimously if it were not economically feasible?

Have you ever tried to get a loan from these men without proving that you were a good risk?

We welcome the support of the bankers of Alaska with open arms.

Let's look at some of the arguments that have gone down the drain:

First, all statehood backers are Communists. The American Legion has backed statehood for Alaska.

Second, that all statehood backers are reactionary. Then the majority of Alaskans are such, for they have time and time again proved they desire it.

Third, that all statehood backers are economically pressured to ask it. The ballot box is still, thanks to our Constitution, a secret ballot.

Fourth, that statehood is economically unsound. Thank you, Mr. Bankers of Alaska.

What next? They are bound to try something else. But just as surely, it will be refuted with truth and commonsense.

Jury Trials Denied

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. HUDDLESTON. Mr. Speaker, under leave heretofore granted, I insert in the appendix to the CONGRESSIONAL RECORD editorial comments from the Washington, D. C., Sunday Star of June 16, 1957, regarding the action of the House of Representatives last Friday in defeating the jury trial amendment to the pending so-called civil-rights legislation.

The Star's editorial follows:

JURY TRIALS DENIED

The attempts to add a jury-trial amendment to the so-called civil rights bill has been beaten down in the House by a vote of 199 to 167. This 32-vote margin, according to Representative WILLIS, Democrat of Louisiana, resulted from White House pressure on Republican House Members.

We do not know whether this is correct. If it is, it means that the President, who carried five Southern States last year, does not trust southern jurors to live up to their oaths. For the real reason behind the drive against the jury-trial amendment was the fear, real or professed, that southern juries would not convict defendants in civil rights contempt trials, regardless of the evidence.

Whatever the case with respect to the President, it is clear that the House has prejudged, and adversely prejudged, an entire area of the country. In effect, this was a vote of no confidence in the South, and that, we think, is a high price to pay for some

supposed political advantage among Negro voters outside the South.

The jury-trial amendment was offered by Representative KEENEY, a freshman Republican House Member from Illinois. He said he submitted the amendment because as a judge in Illinois he had always considered a jury trial as an integral part of any court.

It required political courage for Mr. KEENEY to take this stand, and, with respect to cases in which punishment for criminal contempt is comparable to punishment for other crimes, we think he is right. We do not believe that considerations of expediency, especially considerations based on speculation, justify bypassing the jury trial, and we trust that this matter will receive more earnest consideration in the Senate.

Illinois Farmers' Earnings in 1956 Are the Highest Since 1951

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. ALLEN of Illinois. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD an article appearing in the June 13, 1957, issue of the Davis Leader, Davis, Ill., entitled "Illinois Farmers' Earnings in 1956 Are the Highest Since 1951."

ILLINOIS FARMERS' EARNINGS IN 1956 ARE THE HIGHEST SINCE 1951

A farm record summary just completed by the University of Illinois department of agricultural economics shows that Illinois farmers' 1956 earnings were the highest since 1951. A. G. Mueller, in charge of summarizing farm records, explains that record-high corn, soybean, and wheat yields and improved cattle and hog prices were largely responsible for this increase.

Mueller emphasizes that net farm earnings can be figured in several ways. The method they consistently use is to deduct cash expenses, depreciation, and allowances for operator and family labor from total earnings. The amount that remains is net farm earnings. Total earnings include cash sales, adjustments for change in value of inventories, and allowance for value of products consumed by the family.

In 1956, increases in amounts of grain and values of livestock inventories on hand at the end of the year added materially to the increase in net earnings. For example, the inventory change on northern Illinois hog farmers averaged $4,300.

In southern Illinois, net earnings averaged $31 an acre on grain farms, $23 on hog farms, and $28 on dairy farms. On these same farms in 1955, earnings ranged from $2 to $14 an acre.

In northern Illinois, grain farms averaged $35 an acre, hog farms $38, feeder cattle $36, and dairy farms $30. In 1955 these same farms averaged only $16 an acre on grain farms and $3 to $4 on livestock and dairy farms.

Soil bank payments added gross earnings of $2.60 an acre on a small sample of central Illinois farms that qualified. Very few hog and dairy farms in northern Illinois received payments.

Mueller reports that cash operating expenses increased on all farms. Northern Illinois farmers spent 1 percent more for operating expenses in 1956 than the year before. Southern Illinois farmers spent 12 percent more, but 1955 expenses were below normal because of recent drouth years.

The records used in this study came from the 4,700 farms cooperating in the Illinois Farm Bureau Farm Management Service. Members of the service will receive a complete summary of the reports so that they can compare the earnings of their farms with earnings of other farms with similar soil type and enterprises.

Too Many Americans Too Long in Japan

EXTENSION OF REMARKS
OF
HON. ERRETT P. SCRIVNER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. SCRIVNER. Mr. Speaker, the Girard case in Japan demonstrates that we have too many Americans in Japan, and that we have had them there too long.

The Girard case, which has caused so much comment, was recently discussed in one of my weekly newsletters, which follows:

TOO MANY AMERICANS TOO LONG IN JAPAN

The Girard case in Japan, and the Formosa riot, proves that we have overstayed our welcome and clearly demonstrates that we should bring American military personnel home just as soon as we can, and the sooner, the better.

The Girard case has created much confusing comment, and is now subject to inquiry by at least three congressional committees and one Federal court.

Let's go back and look at a few facts. Our troops are no longer in Japan as victors, or in time of war. We are there at the invitation of the Japanese Government under a treaty entered into under Truman's Secretary of State, Dean Acheson, by the United States and Japan in 1951, and ratified by the United States Senate.

This treaty did not specifically refer to the status of our troops, but left that open for agreement to be reached by our Ambassadors as a diplomatic transaction. The first agreement gave the United States exclusive jurisdiction over our troops until NATO agreements were made. In September 1953 a later agreement, similar to agreements with NATO countries, provided that off-duty offenses by American soldiers should be tried in Japanese courts, and on-duty offenses would be tried by United States military courts. A two-man commission—one American and one Japanese—was created to determine whether the offenses were on-duty or off-duty. Sometime prior to the Girard incident, it was further agreed by this commission, that if there was any dispute as to whether an incident was on- or off-duty, the decision would be made by a Japanese court. Why this was agreed to by our American representative, I cannot understand.

At first, after the trespassing Japanese woman was unintentionally killed following a disregarded warning shot, American authorities refused to turn Girard over to Japanese authorities. Japan claimed it was an off-duty event, since the incident occurred during a lunch period, and that the use of the empty cartridge case was outside the line of duty and unauthorized. We claimed—and still claim—it was on-duty, since he had been placed on guard by a superior officer. The 2-man Commission was deadlocked for 3 or more weeks. Someone, as yet not identified, somewhere decided that the agreement having been made should be kept, and that since there was a deadlock, a Japanese court should decide. (Had I been on this assignment, some mighty hot places could have frozen over before I gave in.) Delivery of Girard to Japanese authorities was held up, due to protests from Congress and other sources. After much discussion, our American representative was finally authorized to turn Girard over to the Japanese. Secretary of State Dulles and Secretary of Defense Wilson jointly decided that to avoid an international breach, we should keep our promise, and the Japanese court should be allowed to take jurisdiction.

I cannot, for the life of me, understand how there could be any doubt about the fact that Corporal Girard was on duty and acted in line of duty. Any soldier who has ever been on guard knows that his general orders require him to take charge of and protect all Government property in view. There is some question in my mind as to why and how, in view of the fact that Girard had been issued blank cartridges to frighten off trespassers, he had a cartridge case in his grenade discharger. However, that is a question that should have been left to the determination of a United States military court.

The petition filed for habeas corpus here in Washington has served to hold up immediate physical delivery of Girard to the Japanese and will provide an opportunity for development of facts and the constitutionality of the agreement. At this writing, no decision has been made.

It is too late for Congress to remedy the Girard situation, but the case will serve to demonstrate the need for treaty revision, amendment to the agreements and laws relating to the status of our military personnel overseas so such incidents cannot again arise.

Veterans of Foreign Wars Back Statehood

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. BARTLETT. Mr. Speaker, the Veterans of Foreign Wars, Department of Alaska, recently assembled in annual convention at Kodiak adopted as Resolution 1 an endorsement of Alaska statehood. The Veterans of Foreign Wars stated in strong terms its desire for prompt action on the Alaska statehood bill. I take pleasure in presenting Resolution 1 as approved on June 5, 1957, and signed by Department Commander Joseph S. Hong and Adjutant James J. Brunette:

RESOLUTION 1, STATEHOOD FOR ALASKA

Whereas Alaska has endured Territorial status since its purchase from Russia; and

Whereas statehood is no longer a political issue, but a moral right endowed by the original purchase agreement with Russia, in which it stated that the new citizens of Alaska should enjoy all rights and privileges granted to the citizens of the United States; and

Whereas Alaskans have shown their willingness and readiness to assume Statehood by their overwhelming approval of the Constitution composed for the State of Alaska: Therefore be it

Resolved, That the 12th encampment of the department of Alaska, Veterans of For-

eign Wars of the United States, go on record endorsing immediate statehood for Alaska, and that copies of this resolution 1 be sent to the President of the United States, the Vice President of the United States, Members of Congress, the Governor of Alaska, and the Alaska Delegate to Congress.

Approved and signed this 5th day of June 1957 at Kodiak, Alaska.

JOSEPH S. HONG, *Commander, Department of Alaska, VFW.*
JAMES J. BRUNETTE, *Adjutant, Department of Alaska, VFW.*

Wiretapping: Violation of the Privacy of the American People

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, June 17, 1957

THE VIOLATION OF THE PRIVACY OF THE AMERICAN PEOPLE

Mr. WILEY. Mr. President, as senior Republican on the Senate Judiciary Committee, it has been my hope for a long time that our committee would successfully recommend legislation to the Senate on a vital issue, affecting the privacy of the American people.

Such legislation would deal firmly with the growing and alarming tendency for the privacy of vast numbers of Americans to be violated by wiretapping and other devices. I refer not only to telephone eavesdropping, but to tiny wireless broadcasting microphones, to wall-listening devices, and a wide variety of other electronic bugs and gadgets which are now being used in wholesale violation of numerous Federal, State, and local laws.

TWOFOLD OBJECTIVES OF ANTIWIRETAP BILL

Thus, the much-needed legislation of which I speak would have the twofold objective of:

a. Absolutely banning invasions of privacy by private wiretappers and other electronic eavesdroppers;

b. Providing for restricted use of the electronic devices by Federal agents (like FBI men) under careful safeguards in national security, kidnaping, and a limited number of other type cases.

Unfortunately, antiwiretapping legislation has been stalled year after year in the Senate and House Judiciary Committees because of the complexity of constitutional and other problems involved.

EAVESDROPPING SCANDALS ALL OVER AMERICA

Meanwhile, however, hardly a week elapses in which there is not some new scandal in some American city involving outrageous electronic eavesdropping by private individuals through telephone tapping and the like.

In case after case, so-called private detective agencies have been found to be the perpetrators of the vicious eavesdropping. Such agencies have often become instruments of blackmail and of the most unscrupulous and unconscionable behavior imaginable. There has been widespread extortion of individuals as a result. There has been wholesale pilferage of the secrets of American businesses.

The cheap, dishonest private detective agencies have tarnished the good name of those private organizations which have been followed infinitely higher ethical standards in private investigation work.

To me, it is obvious that the States and cities should crack down to prevent abuse of the licenses of private detective agencies. Only individuals of unimpeachable record and of appropriate experience should have the right to secure and keep a license.

In the meanwhile, it is my earnest hope that the overall issue of electronic eavesdropping will be met successfully before the 85th Congress has concluded its sessions next year. If a man's home is truly to be his castle, we must effectively smash the disgraceful snooping which is growing by leaps and bounds.

GIVE FBI NECESSARY AUTHORITY

Meanwhile, if the great FBI is to continue to do its vital job, it must have a clear mandate under the law, spelling out its necessary legal prerogatives to protect the security of our country. To get evidence on and to catch a Soviet spy is difficult enough without having the FBI hobbled in its work by a fuzzy law.

I send to the desk the text of an article from the May 29 issue of Labor's Daily. It is entitled "The Snoopers Around Us—Is Your Privacy Invaded?" I ask unanimous consent that the text of this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SNOOPERS AROUND US—IS YOUR PRIVACY INVADED?

(By William L. Roper)

How private is your home?

Do you know that every conversation, yes, almost every sound in your home during the past 12 months could have been taken down on a tape recorder?

Just how widespread electronic snooping by means of concealed microphones and telephone wiretapping has become is indicated by several recent happenings. In Portland, Oreg., a big-shot gambler was arrested on a charge of using wiretapped recordings in an effort to blackmail an official's wife into paying him $10,000. While in New York, teamster leader James R. Hoffa was charged by a grand jury with having conspired in wiretapping his own union aides. And in Sacramento, Calif., a State legislative committee, headed by State Senator Edwin J. Regan, was winding up a 2-year investigation of electronic snooping in the Golden State.

EVERYTHING

Regan reported he had found a shocking situation in California, and that unless something was done to stop the wide-scale practice of invading the privacy of homes and other snooping, human relationships would be reduced to the jungle level.

"Our committee," Regan said, "found wireless broadcasting microphones, wrist-watch mikes, pin mikes, pocket recorders, detectographs that can hear through walls and even shotgun mikes that can pick up sounds through open windows or from a boat on a lake."

He explained that the committee had also discovered that the listening devices had been used by business organizations to check on their employees and by private detectives spying on the private lives of motion picture celebrities and others.

One of the revelations was that certain firms had installed listening devices in the rest rooms of their plants and offices, so that they could keep a record of what their employees were saying while relaxing and letting off steam.

During the committee's hearings in Los Angeles, a North Hollywood sound recording engineer admitted that he had helped law enforcement officers bug 1,000 or more homes and places of business in the Los Angeles area.

Russell Mason, the 52-year-old electronic expert said that he had not only helped install the listening devices in private homes, but also in apartment houses, motels and even a Beverly Hills mansion.

Much of his work, Mason insisted, had been for law enforcement officers investigating criminal cases. He testified he was on the payroll of the Los Angeles County District Attorney's office from 1940 to 1942, and that during that period, he planted as many as seven microphones a week.

CRAWLING AROUND

The Attorney General's office and other California State agencies had also employed his services, Mason said.

"How did you gain entrance, for example, when you were bugging private residences?" Senator Regan asked.

"Sometimes," the expert replied, "I would crawl under a house, sometimes go into an attic through a hole in the roof, or by other means such as a burglar would use."

He explained that once the installation was done, he would usually leave the job of listening or recording to the persons employing him. Mason, at the committee's request, brought several new eavesdrooping devices with him. One was a wireless microphone, another a shotgun microphone, capable of picking up a conversation nearly a block away.

He also exhibited a briefcase recorder. In it the microphone is located near the keylock. This can be used by the man sitting beside you on a bus or streetcar.

While Mason was letting the California senators in on a few of the secrets of electronic snooping, sensational information was coming to light in other parts of the country. Deep in the heart of Texas, a fast operator disclosed how he had accumulated a small fortune by tapping the telephone line of an oil company geologist, and then selling his hot tips to a land speculator. And New York police, still trying to solve the mysterious murder of Serge Rubinstein, Manhattan's internationally famed financial genius, learned that he had boasted of making smart business deals after getting inside information by tapping the wires of his business competitors.

In Los Angeles, the recent death of Private Eye Harry J. Raymond recalled a sordid era of police spying and a murder attempt by members of the police spy squad once used in hounding labor.

On the morning of January 20, 1938, Private Eye Raymond got into his car which had been parked overnight in the garage of his home, and stepped on the starter. A nitroglycerin bomb, wired to the starter, exploded. In spite of 186 shrapnel wounds, Raymond survived, and the snooping story behind the bombing was made public. Raymond died only a few weeks ago.

FIRST CLEAR VIEW

Before becoming a private detective, he had been the police chief of Venice and San Diego. A reform group had employed him to investigate the Los Angeles Police Department's spy squad, headed by Capt. Earl E. Kynette. Kynette and officer Roy J. Allen were subsequently convicted of bombing Raymond. During the trial, Los Angeles got

its first clear view of wiretapping and bugging.

Nevertheless, the sneaky practice continued to grow. Many persons, as Senator Regan discovered, have grown complacent about the menace, believing they are protected by State laws.

In California, for instance, there is common misconception that a State supreme court decision in what is known as the Cahan case has outlawed the use of secret microphones and similar methods. Actually, all the court decision did was to condemn the illegal entry committee in installing the hidden bugs. Evidence obtained by such illegal methods was held inadmissible.

Wiretapping in California is especially forbidden by section 640 of the California Penal Code. Section 653–H of the penal code governs other kinds of electronic snooping.

Obviously, more stringent laws are needed, however, to stop this form of spying. Regan's committee urged:

1. Require the permission of the occupant or person having immediate possession of property before any eavesdropping equipment can be installed.

2. Prohibit the installation of eavesdropping equipment on private property without the owner first publishing a notice, so that persons coming onto the premises may know.

3. Ban private investigators and others from using any such equipment in public places without first giving notice.

4. Compel private detectives to file an annual report, under oath, detailing their bugging and wiretapping operations, or any they know about.

WORST FORM OF TYRANNY

5. Require the State Public Utilities Commission to take specific steps to assure that telephone companies in the State protect the privacy of their communication systems.

The committee also expressed opposition to legalized wiretapping by the police.

The late Justice Brandeis and others have spoken clearly on this subject.

Justice Brandeis once said, "Even general warrants are but puny instruments of tyranny and oppression when compared to wiretapping."

Justice Hofstadter, of the supreme court of New York County, said on January 12, 1955: "A tapped wire is the greatest invasion of privacy possible."

Alaska Women for Statehood

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

DELEGATE FROM ALASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. BARTLETT. Mr. Speaker, I take especial pleasure in calling to the attention of my colleagues a resolution endorsing Alaska statehood adopted by the business and professional women of Alaska when they met at Kodiak this month for their annual convention:

Whereas the National Federal of Business and Professional Women's Clubs have long supported equal rights for women; and

Whereas women in Alaska are doubly discriminated against, in that they cannot enjoy the protection of full citizenship accorded the citizens of the States; and

Whereas the women of Alaska, together with all of her citizens, have demonstrated their desire for statehood, by ratification of a constitution for the State and the election of their Senators and Representatives; and

Whereas the progress and development of Alaska, and the best interests of her citizens, cannot be obtained until statehood is achieved: Now, therefore, be it

Resolved, That the Alaskan Federation of Business and Professional Women's Clubs in convention assembled in Kodiak, Alaska, this 1st day of June 1957, reconfirm our previous endorsement of statehood for Alaska; and be it further

Resolved, That our delegates to national convention request that convention adopt and support a program, through the National federation, to assist us in this great endeavor.

DORIS BARNES,
President.
VIRGINIA B. POST,
Secretary.

Des Moines Register Scholarships—Address by Mr. Vincent Starzinger

EXTENSION OF REMARKS

OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, June 17, 1957

Mr. MARTIN of Iowa. Mr. President, one of the outstanding leaders of Iowa, Mr. Vincent Starzinger, has taken tremendous interest in helping the young people of Iowa along the road to higher education, as is evidenced so strongly by his address at the Des Moines Register scholarship presentation banquet in Des Moines recently. His message is so impressive that I want to share it with my colleagues in the Senate, and I am therefore asking permission to have it printed in the Appendix of the RECORD.

I have known Mr. Starzinger many, many years. He is one of Iowa's leaders in the matter of service to community, State, and Nation.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY VINCENT STARZINGER, GENERAL COUNSEL, SECRETARY, AND DIRECTOR OF DES MOINES REGISTER AND TRIBUNE CO., AT THE SCHOLARSHIP PRESENTATION BANQUET, DES MOINES, MAY 10, 1957

(Mr. Starzinger is general counsel, secretary, and director of Des Moines Register and Tribune Co. and Cowles Broadcasting Co. He was admitted to the Iowa bar in 1913, Federal courts in 1914, and United States Supreme Court in 1925. He is a member of the executive committee of Drake University, a member of the Greater Des Moines Committee, director of the Des Moines Housing Corp., vice president of the Des Moines Club and a past president of the Polk County Bar Association, Des Moines Rotary Club, and Des Moines Pioneer Club.

(Attending the 25th annual scholarship presentation banquet were the sixteen 1957 winners of the $300 scholarships, their parents, school superintendents or principals, and members of the circulation department who had furnished counsel and guidance; plus many top executives of the Register and Tribune, State of Iowa, Des Moines Board of Education, Education Association, and PTA.)

The people of Iowa need boys on newspaper routes. It has been demonstrated clearly that the use of newspapers in homes depends in large measure, first, upon having a newspaper at a regular time and a convenient reading time, and, second, upon having the cost fit the family budget. To provide such service, boys are available and willing to work part time at convenient reading times, morning and afternoon, without interference with their schoolwork. They call at the home weekly to collect a small amount in payment, so that everybody can afford such newspaper service. There is no other known method of newspaper delivery so effective, so timely, or so economical.

It follows that newspapers need boys for carrier work. It is only by enlisting a vast army of boys, in our case more than 7,100 throughout the State, that the whole distribution of a newspaper can be started and completed within 30 to 40 minutes.

The boys themselves need route work. As a boy reaches his teen age, he needs work to do, responsibility to assume, some measure of independence from his parents, and a feeling of self-sufficiency. Route work supplies all of those needs. It is a real business enterprise, requiring regular work and continuing responsibility to the newspaper and the route boy's customers. It gives a boy a chance to prove to himself that he is worthy as an individual on his own, and an opportunity to earn his own money to appreciate its value, and to learn how to handle it. It provides him with invaluable practice in learning to communicate and deal with adults outside the family and school circles.

I have attended most of these scholarship presentation banquets during the past 14 years, and I am always amazed, as I am tonight, to hear the remarkable records of achievement of the scholarship winners, in the various areas considered by the judges, such as academic progress, activity and leadership in extracurricular school activities or in church or community affairs, quality of service to customers, sales record, and effectiveness in collecting, keeping accounts paid, and management of earnings.

Parents, too, need newspaper route work for their sons. What is good for the boy is obviously good for his parents. The home of today does not have enough chores, enough responsibilities, or enough youthful enterprises within the interest and capacity of a boy to give him an adequate opportunity and incentive for individual devlopment or to give him the thrill of individual achievement. Newspaper route work answers this need.

Schoolteachers and school officials are interested in newspaper route work. The challenge of route work, the mathematics, the bookkeeping, the study of bulletins and other guidance material, the experience of dealing with adults outside the family and schoolroom, all give practical meaning to the lessons learned in school, and promote directly the objectives of teaching, which is to enable the student to get along without his teacher. Route work almost inevitably means better schoolwork. This scholarship program encourages greater school effort.

Society needs newspaper route work for boys. Our strength tomorrow will depend upon the development of strength in youth today. They need opportunities to work and earn and save, to learn how to meet and deal with adults, and to develop their own self-reliance. In our zeal to furnish protective care for those in need of it, and to protect our youth against the possibility of dangerous or premature workloads, we must be very careful not to shut the door of opportunity and experience for a boy to fulfill his early urge to become self-reliant in work activities which are within his capacity, wholesome in character, and generally good for him.

Employers know the value of newspaper route work. Many of our most prominent

business and professional people give much credit for their success to their early experience in newspaper route work.

As typical of the expression of countless employers, Mr. Harry G. Wilson, vice president and cashier of Iowa-Des Moines National Bank, made the following statement last March:

"When hiring new employees, we are always looking for boys who have had experience as paper carriers. We find that the experience they have had in this kind of work makes them better employees. I have watched them develop, and I cannot recall one in whom we have been disappointed."

J. Edgar Hoover, Director of the Federal Bureau of Investigation, has praised newspaper boys many times. In an article in Family Weekly, September 30, 1956. Hoover said:

"To my great gratification, many find that (their) future in the Federal Bureau of Investigation. When we select men to become special agents of the FBI, we do our best to secure intelligent, competent men. We want young men, but men for whom work is already a habit. We have found that if a boy learned how to work, the man he is to become will also know how to work. In one brief check, I found that 9 out of the 15 special agents were former newspaper boys."

In this era of the great struggle for the minds of men, the boys who get effective early lessons in responsibility and loyalty to publisher and customer, who learn how to work, to make their own decisions, and to rely upon their own efforts, are well on their way to stable citizenship.

No doubt you have read or heard the story of the message to Garcia, the story of the young man who turned out to be the greatest hero of the Spanish-American War. But it is worth recalling.

When war broke out between Spain and the United States, it was very necessary to communicate quickly with the leader of the insurgents in Cuba. The leader, Garcia, was somewhere in the mountain fastnesses of the island—no one knew where. No mail or telegraph message could reach him. The President must secure his cooperation, and quickly.

Someone said to the President, "There is a fellow by the name of Rowan who will find Garcia for you if anybody can."

Rowan was sent for and given a letter to be delivered to Garcia. He took the letter, sealed it up in an oilskin pouch, strapped it over his heart, in 4 days landed by night off the coast of Cuba in an open boat, disappeared into the jungles, and in 3 weeks came out on the other side of the island, having traversed a hostile country on foot and delivered his message to Garcia.

This story, told by Elbert Hubbard, gained a circulation of more than 40 million copies. It had a spontaneous, explosive appeal to everyone who read it. The real hero is the person who assumes responsibility, who does his work despite obstacles, and does it promptly.

The newspaper route boys, like young Rowan, are carrying the message to Garcia, not once in an emergency, but each day, in every kind of weather, fair or foul, a vital message, a daily chapter in the textbook of the people's school, to all of the people all over the State of Iowa. They complete the whole purpose of these great newspapers, and they do it magnificently. No part of the work is any more important or any more dramatic.

An Address by H. B. Cantor to Faculty Members and Postgraduate Students in Naval Architecture, Massachusetts Institute of Technology

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. McCORMACK, Mr. Speaker, under permission to extend my remarks, I include an address given by H. B. Cantor on May 24, 1957, to faculty members and postgraduate students in naval architecture of the Massachusetts Institute of Technology. Mr. Cantor is a very successful businessman, and for any man to be successsful in business he must have a very practical mind.

The address of Mr. Cantor is very interesting in connection with the construction of superliners that will make possible transatlantic ocean voyages at a fare of $50 by constructing the world's two largest and fastest superliners, and Mr. Cantor's determined intention to do so. I have discussed this matter on several occasions with Mr. Cantor, who himself is willing to put several millions of dollars of his own money in such an enterprise. The proposal of Mr. Cantor is a challenge to our imagination.

The address follows:

CONSTRUCTION OF 2 TRANSATLANTIC OCEAN SUPERLINERS TO INAUGURATE OCEAN TRAVEL TO AND FROM EUROPE AT A 1-WAY FARE OF $50

(An address by H. B. Cantor to faculty members and postgraduate students in naval architecture, Massachusetts Institute of Technology, Friday, May 24, 1957, Department of Architecture, Massachusetts Institute of Technology, Cambridge, Mass.)

FIFTY-DOLLAR FARE TO EUROPE

Professor D'Arcangelo, members of the faculty, students, may I express my appreciation to you for your very kind invitation to come to the Massachusetts Institute of Technology to discuss a project which, I feel, is so dramatic and of such far-reaching dimensions that it touches upon every phase of our daily living.

Briefly, it is my determined intention to make possible transatlantic ocean voyages at a fare of $50 by constructing the world's 2 largest and fastest superliners. The vessels would be operated as floating commercial hotels rather than as luxury liners. They would cater to the wage-earning masses, a group whose opportunities of sailing to Europe are almost nonexistent at present passenger rates.

As for the physical details of the ships, each will be 90,000 tons and 1,152 feet long. Each will carry 6,000 passengers and a crew of 1,350. They will be constructed with 20 airtight compartments, a safety feature designed to make them unsinkable. The cruising speed will be 34 knots and crossings will be made in 4 days. In time of war the ships will be convertible to aircraft carriers or troopships. Emphasis will be placed upon operating the ships on a motel policy, eliminating the frills and luxury items, yet providing every facility for complete ocean-going comfort.

Negotiations have been in progress to use Boston as the home port. According to present plans, the ships may be constructed at Quincy shipyards. The foreign port of call will probably be Zeebrugge, Belgium.

I feel that this project is of such vast proportions that it will have an all-embracing effect on our modern civilization. It will vitally affect our country's shipping and shipbuilding industries; the increase in ocean travel between America and Europe will serve as an important good-will factor; it is of tremendous value to our defense efforts due to the ships' convertibility to aircraft carriers or troopships; it will provide a veritable shot in the arm to the tourist industry; and it will make possible the cherished dream of every man, woman, and child to sail across the Atlantic at a passenger fare within their budget.

On a local level, the significance of these vessels and of low-cost ocean travel becomes readily apparent when we consider the effect this project's achievement will have upon commerce and industry in the State of Massachusetts and, in particular, the port of Boston, should it become the home port for the ships.

How will the Commonwealth of Massachusetts and the port of Boston benefit from this project?

Massachusetts has traditionally been a maritime State and, at one time, shipping and shipbuilding was one of its greatest sources of income. However, in recent years, these industries have dwindled to a point where they bear little resemblance to their former prominence. The tremendous passenger and freight shipping possibilities have not been realized.

Boston possesses one of the finest harbors in the world; Commonwealth pier, the world's largest passenger pier, was built in 1912 by the State, at a cost of $15 million, to stimulate passenger and freight business. Yet, today, it is practically idle. In 1953 there were only 1,547 embarkations from Boston to the North Atlantic. This is an extremely low figure when one considers the port's possibilities.

The advantages of Boston's harbor become evident at a glance. Boston is 174 miles closer to Europe than New York, making it 1 day's sailing closer to Europe than any other port. It is a distance of only 5 miles to open ocean, thus requiring less slowdown time for large passenger liners and freighters. The Commonwealth pier, to cite another advantage of the harbor, has a mean low water depth of over 40 feet alongside. Add to this the proximity of railroad and air travel facilities and one easily recognizes the admirable suitability of the port of Boston.

The harbor, as well as the airports of New York, are wholly inadequate and overtaxed. Why shouldn't this burden be eased by directing this immense load of traffic to Boston?

As to the benefits Massachusetts and the city of Boston will enjoy from such a project, let me offer a few figures. If the ships are to be built at Quincy shipyards, immediate employment will be created for 4,000 shipyard workers. Since the vessels would be manned by merchant seamen from the Boston area, jobs would become available for 2,700 merchant marines. The use of Boston as a port would result in the passing through the area of an additional 500,000 people every year, thus creating a tremendous

spurt in retail income. Approximately 400,000 tons of additional freight would move through the port, resulting in added commerce and shipping revenue for the city and for the State.

There has long been a very definite need for low-cost ocean travel. Bus lines offer a cross-country fare of $69.50; nonscheduled airlines offer cross-country fares of $88. With new jet air travel, via DC-8's, scheduled for 1959–60, airlines will be able to reduce their operating costs by 40 percent. In June of last year, at a meeting in Cannes, France, the airlines announced that tourist-class fares would be reduced by 20 percent by April 1958. This means that a round-trip flight between London and New York will be available for approximately $360. This rate is less than the cheapest present steamship passage.

Since water transportation is known to be less expensive, why isn't there some form of ocean travel to match the rates of the land and air travel?

Perhaps the answer lies in the fact that the steamship lines are so steeped in tradition that they have failed to keep abreast of modern times.

I envision a mass-housing, mass-feeding operation which will open a 95 percent untapped tourist market. News of this project has reached all corners of the world and my office has been flooded with requests for passage bookings. This universal response assures me that passage reservations could very easily be filled for 3 to 5 years in advance.

You, as educators and students concerned with naval architecture, will be more directly affected by a project of this nature. As designers of the vessels of the future, I think you will recognize the significance of my plans. The proposal to construct superliners for low-cost ocean travel is one that can introduce a new age in marine designing.

Some of the features of the vessels should be of particular interest to you.

The liners will be 132 feet beam, with a draft of 34 feet. The top deck will be a flat-top with a clear space of 450 feet by 80 feet, to the rear of the smokestack. This area would be used as a sports deck for outdoor activities and a swimming pool. Below this will be a double-decked, glass-enclosed aircraft hangar space, which will be used as a convention hall for business groups, with a seating capacity for 4,000 persons. This hall will feature roll-away doors to make it divisible into meeting rooms for smaller groups. There will be a one-class service, with a large kitchen at the center of the ship servicing a 1,500-seat cafeteria and a 1,200-seat formal dining room. There will also be self-service canteens, bars, and cocktail lounges. Passenger cabins will be laid out in 2- and 4-berth staterooms, each with private bath, television, and air-conditioning. There will be skating rinks, outdoor sports equipment, a concert hall, and facilities for religious services. Also planned are shopping centers where goods from both sides of the Atlantic could be purchased at reasonable prices.

During offseason travel periods, business groups in this country and abroad will be contacted for passage bookings to hold convention junkets, providing a novel type of business and pleasure trips.

I realize that this is an institution of learning and that, at this point in your careers, you, as students, are primarily concerned with your studies. Your present interests are in transferring your creative talents to the drawing boards. As a businessman my concern is in getting these ships into the water. I think that our interests are in agreement. Together we can challenge the ship designing concepts of tomorrow.

Together we have an opportunity to restore the glory of the American passenger fleet. My project will accomplish passenger ship supremacy for the United States.

The Maritime Administration in Washington is considering this project; Governor Furcolo has expressed his interest in the ships; the Nation clamors for low-cost travel; Europe is awaiting developments.

May I say to you, gentlemen, that I am determined, yes, determined, to achieve my plans.

These ships will be built.

An Affirmative Policy Toward the Soviet Satellite Nations

EXTENSION OF REMARKS

OF

HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mrs. KELLY of New York. Mr. Speaker, on June 17, the Honorable ARMISTEAD SELDEN, the Honorable FRANK M. COFFIN, and the Honorable ALVIN M. BENTLEY and I introduced identical concurrent resolutions expressing the sense of Congress on the need for an affirmative policy toward the Soviet satellites. The text of the measure follows:

House Concurrent Resolution 189 (by Mrs. KELLY), House Concurrent Resolution 190 (by Mr. SELDEN), House Concurrent Resolution 191 (by Mr. COFFIN), House Concurrent Resolution 192 (by Mr. BENTLEY) expressing the sense of the Congress on the need for an affirmative policy toward the Soviet satellites.

Whereas the Hungarian freedom revolution which broke out October 23, 1956, was catastrophic in nature and caught the free world totally unprepared; and

Whereas its tragic finale left a feeling of bitter disappointment and regret that the governments of the free world were not ready to take effective action; and

Whereas the barbaric action of the Soviet Union in Hungary demonstrates that the Soviet Union is determined to go to any and all lengths to maintain its empire of enslaved peoples by the most brutal forms of armed subjugation and repression, when permitted to do so; and

Whereas the crisis and foment created by developments in the satellite nations require a reevaluation of and revision in strategic policy to meet changed conditions: Now, therefore, be it

Resolved by the House of Representatives (the Senate concurring), That it is the sense of the Congress that the United States should establish and implement an affirmative policy toward the satellites to utilize fully and effectively the position of leadership of the United States through all proper means within and without the United Nations, including the use of economic and political sanctions and the establishment of a clearly defined satellite refugee program.

SEC. 2. It is further the sense of the Congress that the President, through the United States Representative to the United Nations, should immediately request the convening of a special session of the General Assembly of the United Nations to consider the report of the United Nations Special Committee on the Problem of Hungary and other available information on the brutal action of the Soviet Union in Hungary and other satellite nations.

The concurrent resolution is intended to give congressional expression to the major recommendations which we made recently in our special study mission report on policy toward the satellite nations (H. Rept. 531, 85th Cong.).

Our report demonstrates that we are now in the midst of a new era on satellite relations which constitutes as vital a challenge to the interests of the free world as the situation in the Middle East. This new era requires a reevaluation of and revision in United States and free world strategic policy to meet changed conditions.

The absence of United States and free world effective action with respect to the Hungarian revolution last fall, when the Hungarian freedom fighters believed that such action would be forthcoming, dealt the whole free world and the hopes and expectations of the millions of captive satellite peoples a heavy blow.

During our study mission to Europe there was everywhere apparent bewilderment, confusion and skepticism about free world action, particularly by the United States, in the event of future satellite outbreaks. It is therefore essential that the people of the United States, through their elected Representatives in Congress, take the lead in expressing, in the words of the resolution, "that the United States should establish and implement an affirmative policy toward the satellites * * *", so that it will be known to the executive branch of our Government where our country stands in this issue. This is the first essential step in formulating and implementing an effective policy.

The resolution further calls for the full and effective utilization by our Nation of its position of leadership, both within and without the United Nations. We must be prepared with measures and programs to cope with a future outbreak, including the establishment of a clearly defined satellite refugee program.

In section 2 of the measure the President is called upon, through the United States Representative to the United Nations, Ambassador Lodge, to request at once, upon the adoption of this resolution, the convening of a special session of the United Nations General Assembly. It would be the sole function of the special session to consider the report of the United Nations Special Committee on Hungary and other available information which has been accumulating on the brutal activities of the U. S. S. R. in Hungary as well as in other satellite nations. The purpose of this section is to direct the attention of the world to the inhumanity and ruthlessness of Soviet imperialism and to put the Kremlin on the defensive at a time in history when peoples are bursting with a yearning for independence and freedom from the yoke of imperialism. It is further the objective of section 2 of our resolution to make it possible to demonstrate before the world forum that the true imperialists are the Soviets with their new brand of imperialism never before equaled in brutality and savagery.

The resolution looks to the future. Its purpose is not to criticize past failures but rather to profit from those failures in the future.

He Belongs in Washington

EXTENSION OF REMARKS

OF

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. CRETELLA. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include a news story announcing that my Connecticut colleague, AL MO-

RANO has decided not to seek the Republican gubernatorial nomination in Connecticut, and an editorial comment on this decision by one of the State's leading newspapers. The news story is from the weekly Greenwich Life, June 14. The editorial appeared in the Danbury News-Times on June 13.

Although many of us are disappointed that the able, energetic, and popular Fairfield County Congressman has removed himself from the gubernatorial race, we are extremely happy that his decision means he will continue his conscientious service as a valued Member of the Connecticut congressional delegation here in Washington.

The article and editorial follow.

[From the Greenwich (Conn.) Life of June 14, 1957]

WON'T RUN IN 1958 FOR GOVERNORSHIP, MORANO STATES

Congressman ALBERT P. MORANO, of Greenwich, announced this week that he will not seek the Republican nomination for Governor of Connecticut. Mr. MORANO considered among some party circles as the man most capable of defeating incumbent Abe Ribicoff if the latter chooses to run again, said this week:

"During the past few months, I have weighed carefully in my mind the many considerations and responsibilities in making such an important decision.

"'I have decided," he said, "not to be a candidate for governor."

Mr. MORANO, who carried the Fourth District by a record majority in the last elections, said he was "highly flattered" when informed by friends of the "widespread private and public speculation about the possibility of my being a candidate * * * in 1958."

Mr. MORANO said the governorship "would be a great honor and a privilege" and for him the fulfillment of "the American dream."

In making his decision not to run, however, he said he hoped to "pursue my career as a Member of Congress, representing the people of my district in the continued quest to maintain economic stability and to achieve international understanding and world peace."

[From the Danbury (Conn.) News-Times of June 13, 1957]

HE BELONGS IN WASHINGTON

Congressman ALBERT P. MORANO has made it clear he does not intend to seek the Republican nomination for Governor in 1958. Instead, he wants to seek a fifth term from the Fourth District, Fairfield County.

His declaration removes one name from the list of possible Republican candidates for the seat now held by Gov. A. A. Ribicoff, Democrat.

It also makes it likely that Republican hopefuls for a chance to go to Congress will have to wait at least 2 more years. There is little likelihood Mr. MORANO will have difficulty in obtaining renomination.

And, if the election were to be held tomorrow, there is little likelihood he would have trouble winning reelection by a wide margin. He has been building up majorities of increasing size and in 1956 his victory figure ran well over 100,000.

His work for his district earns him friends in all 23 towns and among Republicans, Democrats, and independents.

His work on congressional committees, especially the Committee on Foreign Affairs, also has attracted wide attention.

For instance, as a member a special study mission to Central America, Representative MORANO addressed the legislative bodies of Nicaragua, El Salvador, and Guatemala in fluent Spanish, thereby enhancing the prestige of the United States in those countries and increasing good will.

Perhaps, someday, "AL" MORANO will seek the nomination for Governor. But right now, we feel, he is doing a good job in Washington for Fairfield County, for Connecticut, for the Nation, and should stay there a while longer.

Civil Rights

SPEECH
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6127) to provide means of further securing and protecting the civil rights of persons within the jurisdiction of the United States.

The CHAIRMAN. The Chair recognizes the gentleman from Michigan [Mr. MEADER].

(Mr. MEADER asked and was given permission to revise and extend his remarks.)

Mr. MEADER. Mr. Chairman, this is my first discussion of this bill. I rise particularly to call attention to the debate yesterday following the statement of the gentleman from Pennsylvania [Mr. WALTER], who had to leave because of work with the Committee on Un-American Activities.

The gentleman from New York [Mr. KEATING], in remarks that appear on page 8093 of the CONGRESSIONAL RECORD of June 13, 1957, listed a number of statutes providing a criminal remedy but where, at the same time, the Government was given the right to proceed by injunction. He mentioned the enforcement of the antitrust laws, the Atomic Energy Act, the Natural Gas Act, and various others.

Statutes authorizing the United States Goverment to seek injunctive relief are as follows:

Antitrust laws, restraining violation—by United States attorney, under direction Attorney General—title 15, United States Code, section 4, July 3, 1890.

Associations engaged in catching and marketing aquatic products restrained from violating order to cease and desist monopolizing trade—by Department of Justice—title 15, United States Code, section 522, June 25, 1934.

Association of producers of agricultural products from restraining trade—by Department of Justice—title 7, United States Code, section 292, February 18, 1922.

Atomic Energy Act, enjoining violation of act or regulation—by Atomic Energy Commission—by Attorney General—title 42, United States Code, section 1816, August 1, 1946.

Bridges over navigable waters, injunction to enforce removal of bridge violating act as to alteration of bridges—by Attorney General—title 33, United States Code, section 519, June 21, 1940.

Clayton Act, violation of enjoined—United States attorney, under direction of Attorney General—title 15, United States Code, section 25, October 15, 1914.

Electric utility companies, compliance with law enforced by injunctions—by Federal Power Commission—title 16, United States Code, section 825m, August 26, 1935.

False advertisements, dissemination enjoined—by Federal Trade Commission—title 15, United States Code, section 53, March 21, 1938.

Freight forwarders, enforcement of laws, orders, rules, and so forth, by injunctions—by Interstate Commerce Commission or Attorney General—title 49, United States Code, section 1017, May 16, 1942.

Fur Products Labeling Act, to enjoin violation—by Federal Trade Commission—title 15, United States Code, section 69g, August 8, 1951.

Enclosure of public lands, enjoining violation—by United States attorney—title 43, United States Code, section 1062, February 25, 1885.

Investment advisers, violations of statute, rules and regulations governing, enjoined—by Securities and Exchange Commission—title 15, United States Code, section 80b-9, August 22, 1940.

Gross misconduct or gross abuse of trust by investment companies, enjoined—by Securities and Exchange Commission—title 15, United States Code, section 80a-35, August 22, 1940.

Use of misleading name or title by investment company, enjoined—by Securities and Exchange Commission—title 15, United States Code, section 80a-34, August 22, 1940.

Violation of statute governing, or rules, regulations, or orders of SEC by investment companies, enjoined—by Securities and Exchange Commission—title 15, United States Code, section 80a-41, August 22, 1940.

Fair Labor Standards Act, enjoining of violations—by Administrator, Wage and Hour Division, Department of Labor, under direction of Attorney General, see title 29, United States Code, section 204b—title 29, United States Code, sections 216 (c), 217, June 25, 1938.

Longshoremen's and Harbor Workers' Compensation Act, enforcement of order by injunction—by United States attorney, see title 29, United States Code, section 921a—title 33, United States Code, section 921, March 4, 1927.

Import trade, prevention of restraint by injunction—by United States attorney, under direction of Attorney General—title 15, United States Code, section 9, August 27, 1894.

Wool products, enjoining violation of Labeling Act—by Federal Trade Commission—title 15, United States Code, section 68e, October 14, 1940.

Securities Act, actions to restrain violations—by Securities and Exchange Commission—title 15, United States Code, section 77t, May 27, 1933.

Securities Exchange Act, restraint of violations—by Securities and Exchange Commission—title 15, United States Code, section 78u, June 6, 1934.

Stockyards, injunction to enforce order of Secretary of Agriculture—by Attorney General—title 7, United States Code, section 216, August 15, 1921.

Submarine cables, to enjoin landing or operation—by the United States—title 47, United States Code, section 36, May 27, 1921.

Sugar quota, to restrain violations—by United States attorney under direction of Attorney General, see title 7, United States Code, section 608 (7), and title 7, United States Code, section 608a–6, May 9, 1934.

Water carriers in interstate and foreign commerce, injunctions for violations of orders of ICC—by ICC or Attorney General—title 49, United States Code, section 916, September 18, 1940.

Flammable Fabrics Act, to enjoin violations—by Federal Trade Commission—title 15, United States Code, section 1195, June 30, 1953.

National Housing Act, injunction against violation—by Attorney General—title 12, United States Code, section 1731b. This code citation was repealed.

Defense Production Act—title 50, United States Code, appendix 2109, July 31, 1951.

National Labor Relations Act (Taft-Hartley Act)—title 29, United States Code, section 160(L), June 23, 1947.

Rent Control Cases—title 50, United States Code, appendix 1896, March 30, 1949.

Federal Food, Drug, and Cosmetic Act—United States Code, title 21, section 332, June 25, 1938.

Trademark Infringement—United States Code, title 15, section 1116, July 5, 1946.

Rubber Act of 1948—title 50, United States Code, appendix 1933, March 31, 1948.

International Wheat Agreement Act—title 7, United States Code, section 1642, October 27, 1949.

Natural Gas Act—title 15, United States Code, section 1717s, June 21, 1938.

Perishable Agricultural Commodities Act—title 7, United States Code, section 499k, June 10, 1930.

Shipping Act of 1916—title 46, United States Code, section 828, September 7, 1916.

I call attention, in addition, to the large number of administrative tribunals created in the last few decades whose orders are enforced by the contempt powers of the courts.

The discussion of this jury-trial amendment, I think, has served to alert the Members of Congress to the growing tendency to use the extraordinary remedy of injunction and contempts of courts for the enforcement of the policies and programs of the Federal Government.

It may be that in this instance the criminal remedy, that is, punishment through prosecution for violation of a statute, is not adequate to enforce the 15th amendment, which of course is a part of the Constitution; and that this extraordinary remedy is the only effective way of accomplishing the objective of the 15th amendment. But let me warn those who want the easy way that if we extend government by injunction from this field to another field, pretty soon we will be living under a police state, and the protection of individual liberties, which are the very essence of our form of government, will be gone.

I suggest that a comprehensive survey be made of the use of these extraordinary remedies of injunction and the contempt powers of the courts to execute national policies where rights of the individual, constitutionally available to him in criminal and civil legal proceedings, do not exist.

Let us see when this trend began. The abuses which led to the Norris-LaGuardia Act were injunctions sought by individual citizens and corporations. In the instances cited by the gentleman from New York [Mr. KEATING], it is the Government itself using this unusual power of the sovereign in derogation of the rights of its citizens and circumventing the protections of their liberties which we have built up at great cost over a long period of time.

In the labor field, National Labor Relations Board orders to cease and desist issued against employers are enforced by the decree and contempt proceedings of the circuit courts of appeal.

The Federal Trade Commission combats unfair trade practices with court injunctions. Many other recently created boards and commissions have been given similar authority by the Congress.

Does this mean that the historic method of compelling observance of national policy, in which inhere the protections of the Bill of Rights, is no longer efficient and workable in the complicated society of our time; or, does it mean that the proponents of the new activities which the Federal Government is increasingly undertaking are impatient at the delays and difficulties attending criminal and civil legal proceedings where alleged violators are guaranteed due process of law and, in criminal cases, the presumption of innocence and the requirement of admissible proof establishing guilt beyond a reasonable doubt as found by a jury of his peers?

All students of law know that chancery courts developed only because the common law had become so rigid and inflexible as to result in miscarriages of justice simply because no forms or procedures existed to grant relief. This gave rise to the unusual and extraordinary intervention of the King, which came to be exercised through his chancellor, in granting relief to individuals on their petition for equitable and just redress, which they were unable to obtain in the law courts. Thus was established the basic principle that no action in equity will lie where there is an adequate remedy at law.

Many equity cases have held that a crime will not be enjoined by an equity court because the punishment for the crime should be an adequate deterrent to the wrong sought to be prevented. Some courts have added a refinement to the principle of adequacy of the remedy of law in that the remedy at law must be as adequate as the remedy possible in an equity proceeding.

There is no question of the constitutional power of the Congress to authorize the Attorney General to commence injunction proceedings to enforce the 15th amendment or of the power of Congress to grant jurisdiction to the Federal courts to issue injunctions in this field. Whether the Congress should do so or not, in my judgment, should be determined as a matter of policy. In determining for myself this question of policy, I am guided by the basic principle of adequacy of existing legal remedies, that is to say, criminal prosecution, under sections 241 and 242 of title 18, United States Code, and civil suits for damages under section 1983 of title 42, United States Code.

The 15th amendment to the United States Constitution became effective March 30, 1870, and provided:

Section 1. The right of citizens of the United States to vote shall not be denied or abridged by the United States or by any State on account of race, color or previous condition of servitude.

Section 2. The Congress shall have power to enforce this article by appropriate legislation.

The basic laws Congress passed pursuant to the 15th amendment were adopted shortly thereafter.

For over 80 years, therefore, we have had on the books legislation in addition to the 15th amendment to the Constitution designed to prevent the denial of voting privileges for reasons of race, color or previous condition of servitude. Yet, the evidence is overwhelming that in many sections of the country Negroes, even today, are being deprived of the right to vote. One need not look further than the statistical section of the Congressional Directory to find that there were total votes cast in the congressional election of 1956 as low as 18,000 or 19,000 for some congressional districts where many congressional districts cast votes in excess of 200,000, or 10 times as much. In this connection, it should be remembered that Representatives in Congress, as the direct representatives of the people under article I, section 2, and the 14th amendment, section 2, each should represent approximately equal segments of our population.

There is, of course, other evidence before the Congress that the 15th amendment is not being observed, and that the amendment itself and the laws passed pursuant thereto have not been effective in the past and will not be effective in the future. Believing that the 15th amendment, which is just as much a part of our Constitution as the Bill of Rights, ought to be observed, it is my judgment that a case has been made for the intervention of the courts and their extraordinary remedy of injunction to prevent an integral part of our Constitution from being nullified.

I, therefore, intend to vote against the so-called jury-trial amendment.

The granting, however, of the power of injunction in this field for the first time in our history points up the necessity for taking stock of the distance we have traveled on the road of government by injunction and should give us warning that this unusual and autocratic remedy must not be lightly granted in the future. We in the Congress should scrutinize with extreme care representations by those advocating some new program by the Federal Government involving regulation of our citizens in which

enforcement is sought through injunction rather than the traditional criminal and civil remedies in which constitutional guarantees of procedural rights are granted to defendants. This is particularly true where a mandatory injunction, as contrasted to a restraining order, is authorized.

As I view our philosophy of Government, we prohibit citizens from doing those things which are thought to be against the public interest, but in all other activities not so prohibited, the individual is free to do as he chooses. This is the reverse of a system of government where the citizen is ordered by his Government affirmatively to perform certain actions. The latter method is typical of totalitarianism and tyranny.

Because of the recent growth of the use of court injunctions and contempt prcoeedings for carrying out national policy, I believe a review of such special grants of authority should be made, including a reexamination of the basis for authorizing the injunctive remedy. Such a study would form a foundation for resisting further growth of government by summary proceedings and might possibly lead to repeal or modification of some such grants of authority in the past.

Alaska Statehood Endorsed by American Legion

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
DELEGATE FROM ALASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. BARTLETT. Mr. Speaker, the American Legion, Department of Alaska, has long supported statehood for Alaska. The American Legion met recently in annual convention at Skagway and reaffirmed its endorsement of statehood by adoption of Resolution No. 57–1. It is with pleasure I present here the resolution as signed by Department Commander Wardie W. King and Adjutant Joseph M. Briones:

RESOLUTION NO. 57–1, STATEHOOD FOR ALASKA

Whereas the United States of America stands irrevocably for the principles of self-government and for the granting of such rights to the peoples of the world; and

Whereas the residents of Alaska have officially registered, by their ballot, their desire to become a member of the United States of America, and have unmistakably proven their ability to assume the responsibilities of such self-government; and

Whereas the said residents have proven their loyalty to the United States by their actions and behavior in recent world conflicts; and

Whereas statehood will prove a tremendous incentive to the development of Alaska, which said development is essential to the defense of Alaska and the United States; and

Whereas the American Legion has long supported statehood for the Territory: Now, therefore, be it

Resolved by the American Legion, Department of Alaska, in regular convention assembled at Skagway, Alaska, these 22d, 23d, 24th, and 25th days of May 1957, That the Congress of the United States be urged to grant statehood to Alaska; and be it further

Resolved, That copies of this resolution be forwarded to the Delegate to Congress from Alaska, the Speaker of the House of Representatives, the President of the Senate of the United States, Chairman of the Senate Interior Committee, the Chairman of the House Interior Committee, Chairman of the House Rules Committee, to the 39th Annual National Convention of the American Legion, to be held at Atlantic City, N. J., and to any other interested parties.

WARDIE W. KING,
Commander, Department of Alaska,
1956–57.

Attest:

JOSEPH M. BRIONES,
Adjutant.

Yankee Homecoming

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. McCORMACK. Mr. Speaker, New England will have a great homecoming during the year of 1958. Its official designation is Yankee Homecoming. It will cover the entire year of 1958. This will afford a fine opportunity for all Americans to visit New England during the homecoming year—not only descendants of New Englanders in other parts of our country, but for all Americans to see New England; to see its industry, its countless places of beauty and summer resorts, its many historic places where events took place that played an important part in the settlement of the Western World and the independence of our country; to sap in, so to speak, its historic atmosphere, and to see and to meet and to know the people of New England and to receive their warm hospitality. In other words, to make a pilgrimage to New England, the section of our country that is second to none in the establishment of our Government and in its preservation and growth.

In my extension of remarks I include a statement recently made by Jack Frost, president of Yankee Homecoming, together with editorials and excerpts from other editorials relating to the Yankee Homecoming plans; also, an article written by Alice Burke, appearing in the Boston Traveler of March 19, 1957.

The statement, editorials, and excerpts follow:

STATEMENT BY JACK FROST, PRESIDENT OF YANKEE HOMECOMING

A billion dollars will be expended in New England in 1958 by visiting tourists.

This estimate was made today by artist Jack Frost of Orleans, Cape Cod, president of Yankee Homecoming for 1958.

"Our program," he said, "aims to bring 2 million more tourists than usual to New England next year. The 1957 total will be about 2,150,000.

"Add 2 million to 2,150,000; this makes 4,150,000. Now, multiply this total by $250 which is the average—probably too low an average—the New England visitor will spend here in 1958 and one can see that the billion dollar total is a reasonable and probably a conservative total.

"Yankee Homecoming stands ready to help in any way other organizations working to increase the New England tourist business. In our Yankee Homecoming campaign we are stressing the industrial advantages of New England as well as the recreational, and cultural, but all of us should make every tourist welcome regardless of the reason that brought him or her here.

"The Massachusetts Traveler Promotion Committee of 44 School Street, Boston, is carrying on an especially effective campaign for this year.

"This committee is working with the American Automobile Association and many other organizations to increase the 1957 tourist business in Massachusetts. This business is estimated by Robert S. Kretschmar, secretary of the group, to be the third largest in Massachusetts.

"Congresswoman EDITH NOURSE ROGERS, of Massachusetts, is waging her own campaign to bring more visitors to New England in 1958. In a recent address to the National House, she emphasized the industrial importance of her own district, recalled she had been born in Maine, and added:

" 'We have a wonderful section of the country, Mr. Speaker. I hope all the Members of the Congress will encourage their constituents to visit New England during the Yankee Homecoming of 1958.' "

Frost said the Back Bay Leader-Beacon Hill Times of Boston recently made a point "which cannot be stressed too strongly."

The newspaper in an editorial note said: "That New England 'homecoming' idea and plan, originated by the New England artist, Jack Frost, gives evidence of developing into one of the really great things that has been done in this section. The idea would be one which would be in effect throughout 1958 and would bear fruit for many years to come. Gov. Foster Furcolo has given it his enthusiastic endorsement and it has the warm approval of many of the leading business and professional men and women of the city and of the New England States."

"That is happily correct," said Frost, "we are building not merely for 1958 but for the years beyond that."

[From the Portland (Maine) Press Herald of March 18, 1957]

Maine, especially of all the States in "Yankeeland," must have been interested in the meeting of New England Members of Congress last week when they heard about the Yankee Homecoming movement planned for 1958, and threw their support behind it.

The resolution passed in the meeting sufficiently explains the purpose of Yankee Homecoming: To bring more visitors than usual to New England next year to enjoy our recreational attractions, to view our historical shrines, and to learn of our industrial progress and opportunities. To this end it was voted to call on all New Englanders to join in this great enterprise, and to urge their relatives and friends outside New England to come and visit us next year.

The originator and principal sponsor of this homecoming is a Massachusetts artist, Jack Frost. He estimated that the program, though it may cost a million dollars, would not involve any new appropriations from the States, Congress, or the communities, but could be met by pooling already authorized outlays toward the regionwide effort. He took pains to point out, too, what a Yankee is, and found that it is not a race, a religion, or geographical designation, but a creed, a belief in American ingenuity, free enterprise, respect for another's rights, property, and personal liberty.

That seems to serve very well as a definition. It may be accepted by the vast armies of New Englanders who carried the Yankee culture as emigrants to the West in covered wagons, but who would be returning to New England next year by automobile, plane,

and streamlined train, a migration in reverse.

Maine and all the rest of the New England States will hope for the success of Yankee Homecoming and work for it. Sometimes one hears that we think too much about the recreational industry. Maybe so, but we certainly do not blow our own horn enough, and we may not be keeping in mind that acquaintance with what Maine, and all New England, has to offer, not infrequently contributes to the building of new industry, which is what we need. It would be reasonable to predict that this great Yankee Homecoming will be a boon to New England. We should all work for it.

[From the Bridgeport (Conn.) Telegram, March 21, 1957]

A novel tourist promotion program to woo visitors to the New England States is gaining acceptance in many quarters. A region-wide effort, it is called the Yankee Homecoming movement for 1958.

The New England Members of Congress last week threw their support behind the project and urged all New Englanders to join in this great enterprise to bring more tourists than usual to the region next year to enjoy its recreational attractions, view its historical shrines and learn of its industrial progress and opportunities.

The Congressmen got a briefing on the homecoming theme by Jack Frost, Orleans, Massachusetts, artist, and president of the movement. "To Europeans," Mr. Frost said, "any American is a Yankee; westerners call people east of the Mississippi Yankees, and some southerners call all northerners Yankees. But we feel Yankee is not a race, religion, or geographical designation; that it is a creed, a belief in American ingenuity, free enterprise, and respect for another's rights, property, and personal liberty," Mr. Frost asserted.

Inasmuch as New England was the birthplace of most of what now is regarded as Yankeeism, the artist said he felt that all Americans would be interested in visiting the region in curiosity, if nothing else. New Englanders emigrated from the region by covered wagon and clipper ship, but in 1958 the aim is to have Americans visit in our area by automobile, streamline train and plane. "We hope," the artist said, "to make it a reverse migration in 1958."

Connecticut has much to offer to tourists in the Yankee Homecoming. Next year visitors will have the Connecticut Turnpike for their use in touring historic sites, recreational areas, festivals, and strawhat theaters, among several of the State's attractions.

Yankee Homecoming promises to be a gay, happy and profitable time for tourists and natives alike.

[From the Armenian Mirror-Spectator (Boston) March 30, 1957]

Two million additional tourists are expected in New England next year due to an aggressive program initiated by Jack Frost, a celebrated Cape Cod artist. It is a project which will allow the world to refresh themselves in the New England climate while bringing back for a visit descendants of New Englanders from other parts of the country.

The six State area offers just about everything in any part of the year. It abounds with recreational facilities in the winter and summer, it offers advantages which other sections of the country must travel miles to reach, all within 1 day's drive of the hub city of Boston.

The project, called Yankee Homecoming, will be in full force in 1958 and as House minority leader JOSEPH W. MARTIN, JR., says, "Those who visit New England for the first time will find peace of mind, contentment, and most hospitable neighbors."

The area is showing a new progressive feeling steeped in the traditional and the opportunity to enjoy this is being extended to all. People will be surprised at the changing nature of industry in the area, at the plentitude of skilled workers, at the changing shoreline, at the mountain resorts, and even the desert of Maine. The principal art colonies and the world's unrivaled major symphony are in the area and the schools are the envy of other parts of the country.

[From the Marlboro Enterprise and the Hudson (Mass.) Sun, March 15, 1957]

Governor Furcolo has endorsed a plan known as the Yankee Homecoming for 1958. The plan is to induce former New England residents and other tourists to visit the New England area during the year.

The plan originated with Jack Frost, an Orleans artist. It is one that will and should command marked attention and action.

It could bring many into New England during the year, many who might not otherwise visit the six-State area, which offers so much, in both variety and interest for the tourist.

For the former New Englander it would be something of an old home week, or rather better than that, perhaps an old home year.

The Governor's endorsement of Mr. Frost's plan should give it important impetus.

NATIONAL PILGRIMAGE TO NEW ENGLAND IN 1958 TEST FOR YANKEE INGENUITY

(By Alice Burke)

They're fattening up the calf and laying down the cider for the goldarndest, biggest family reunion ever staged in these parts.

It is the 1958 Yankeee Homecoming. And that means an invitation to every New Englander and every descendant of a New Englander everywhere in the world to come home during a year of fun and frolic.

Yankee Homecoming is frankly a boost-New-England project, aimed at bringing into the area next year at least 2 million more visitors than ordinarily come. The hope is that they will spend their vacation money here.

But in the mind of Artist Jack Frost, who originated the plan for this national pilgrimage to New England, we'll give as much as if not more than we get.

What the six States will offer their vacationing guests, he says, will be a sort of patriotic rebirth.

The visitors will come in close contact with concepts of individual liberty and free enterprise which began in New England and which their ancestors carried forth to build a great nation.

They also brush up against Yankee ingenuity, particularly that brand of it devoted to producing a good time.

Frost and his Yankee Homecoming Founders' Council expect that at least half the cities, towns, and villages, from the New York line to Canada, will welcome back native sons and daughters.

Special celebrations — games, contests, pageants, and every sort of wing-ding—are planned for each of the 52 weeks of 1958.

The jubilee will begin January 1, on the final stroke of 1957's last midnight, with big, old-fashioned New Year's parties.

Long before that, however, there'll be a national advertising and promotion campaign inviting folk to New England's homecoming.

Frost plans a reverse trip of the covered wagons that left for the West during the last century. Some time this summer, a caravan of prairie schooners will set out from California, hitting the homeward trail and urging those along the way to follow after.

Also scheduled for late this summer is a dress rehearsal for one event in Cape Cod's 1958 celebration. This is a combined regatta and open house in old sea captains' homes from Provincetown to Sagamore.

Open houses, open churches, and school and college reunions will be important links in next year's chain of festive events to renew old ties and old memories.

There will be historic tours, literary tours, scenic tours, industrial tours, a wide variety of trips for those interested in particular aspects of New England, past and present.

For those concerned with food—and who isn't—church suppers, strawberry festivals, clambakes, corn roasts, and those oldtime Yankee baked-bean and apple-pie breakfasts will be on the menu.

Although many of the celebrations planned are special for 1958, the core of Yankee Homecoming entertainment will be festivities, contests, and ceremonies that are held here regularly every year.

Things like the Boston Art Festival, the blessing of the fishing fleets at Gloucester and New Bedford, music at Tanglewood, Marblehead Race Week, the Seafood Festival at Rockland, Maine, the Deerfield, N. H., Fair, the Indian Pow-Wow at Lafayette, R. I.

And, of course, the winter carnivals and scores of other community fun fests; fishing derbies, rug-hooking bees, square dances, and the like.

In other words, we'll dress up, spruce up and put on parties especially for the visitors. But they'll know that is just packaging for the homespun product of fun, hospitality, and a high historic heritage they will find anytime they want to come back after 1958.

The general idea is to make 'em want to come back, time and again.

Frost, author and illustrator of a series of successful sketch books, has been working on the 1958 Yankee Homecoming plan for the past 5 years.

A native of Eastport, Maine, a former Boston newspaper artist, and now a Cape-Codder, he is sold on selling New England to the rest of the country, for both recreation and industry.

He has sunk his money, his time, and his artistic talent into promoting the idea.

Last month, Governor Furcolo indorsed it. The other New England governors are expected to follow suit.

Industrial and civic organizations have indicated their willingness to help finance the big promotion program from here on in. It will cost an estimated $1 million.

A 30-member founders' council of religious leaders, public officials, advertising men, newspaper executives, and businessmen is behind the project.

They're setting the stage to welcome home the sons, the grandsons, the great grandsons, and all the "great greats" of those who made New England strong and then went out to spread that strength throughout the Nation.

The United States Corps of Army Engineers

EXTENSION OF REMARKS

OF

HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. GATHINGS. Mr. Speaker, June 14 marks the 182d illustrious birthday of the founding of the United States Corps of Army Engineers.

The Corps of Engineers dates from June 1776, when the Continental Congress authorized Gen. George Washington to appoint a Chief Engineer for his Army. General Washington designated Col. Richard Gridley to that post, and

from that date, July 3, 1775, until now the United States has been served by 40 Chief Engineers. Holding that post with honor and distinction at this time is Maj. Gen. Emerson C. Itschner.

June 14 also marked the observance of the 76th anniversary of the establishment of Corps of Engineers offices to serve the Mississippi River and its tributries. On February 1, 1881, the Corps of Engineers set up the Little Rock River and Harbor office with authority confined to the Arkansas, White, and St. Francis Rivers and tributaries. However, in 1882, the Mississippi River Commission established districts with headquarters in Cairo, Ill., and Memphis, Tenn., and these offices were consolidated in the Memphis office in 1890.

A separate district, with responsibility for dredging operations was established at Memphis in 1918, and 3 years later the Little Rock office was moved to the Mississippi River city and the name was changed to the Memphis River and Harbor District.

In 1928, with adoption of the first comprehensive plan for flood control on the lower Mississippi River, the Memphis River and Harbor office, the river and harbor district, the Mississippi River Commission's first and second districts, and the dredging district, were all consolidated to form the United States Army Engineers District, Memphis.

The Mississippi River, wildly temperamental in its 1,000-mile trip to the Gulf of Mexico, drains 40 percent of the Nation, an area lying across the northern reaches of the United States from New York State to Wyoming. Enough rain falls on this area in a normal year to fill a tank 8 miles wide, 8 miles long, and 8 miles high. During an average flood year a million tons of water passes down the river.

This tremendous power supports the mighty Mississippi, the main artery of the Nation's 28,000-mile inland waterway system. And more than 80 million tons of important commodities move each year on the river.

To control this mighty river and to protect the valley against floods is the task of the Corps of Engineers and the Mississippi River Commission. Today a 1,600-mile system of giant levees 200 miles longer than the Great Wall of China are maintained by the corps to harness the powers of the river. Cutoffs have straightened the river where Mark Twain was pilot, and the river has been shortened by about 170 miles.

Col. E. B. Downing is the district engineer for the Memphis district, and he has given valiant service to the work on the Mississipi and its tributaries. Today Colonel Downing is making certain special awards to employees of the district, and I am sure that other Members of Congress whose areas are served by this office will desire to join in commending Colonel Downing and all of the men and women of the office there for the fine service they are continuing to render. Since the location of this office, almost 2,000 man-years of work has been given to controlling the turbulent floodwaters of the lower Mississippi and its tributaries.

That much work continues to be done is evidenced by the floods that still beset this vast area. However, it should be pointed out that these floods result from rainfall equal in many places to the total annual averages and but for the great structures created to handle the Arkansas and the other tributaries, the present disaster would be extended throughout the entire lower valley and over the Midsouth. Millions of dollars, untold acres of farm and forest lands, and thousands of lives were saved by the work of the Mississippi River Commission and the Corps of Engineers.

It is fitting, therefore, on this day to celebrate the 182d anniversary of the founding of the Corps of Engineers and the 76th anniversary of the Memphis district to salute the peacetime work of the corps in preserving for us and for our posterity that great heartland of America.

Secretary Benson Exposes Half-Truths About Agriculture

EXTENSION OF REMARKS
OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. JUDD. Mr. Speaker, under leave to extend my remarks I include the following address by Secretary of Agriculture Ezra Taft Benson before the Minnesota Bankers Association meeting in St. Paul, Minn., on June 12. Perhaps no major problem has been subjected to as many half-truths during recent years as occurred with respect to the farm problem. Secretary Benson, in his speech to the Minnesota Bankers Association, clearly and effectively and in his characteristically straightforward way has told the whole truth about a number of these half-truths. There are enough difficulties in this field even when only the facts—all of them—are considered. It is essential to eliminate these difficulties and differences which are based on beliefs or charges that are not in accord with the facts. Secretary Benson's address contributes greatly to making clear the real facts.

The address follows:

ADDRESS BY SECRETARY OF AGRICULTURE EZRA TAFT BENSON BEFORE THE MINNESOTA BANKERS ASSOCIATION, JUNE 12, 1957

This is a great pleasure, a signal honor, and a challenging responsibility. I welcome the opportunity to meet with you and share my thoughts regarding the agricultural problems of this great State and this favored Nation.

One might wonder what a Secretary of Agriculture would have to say to a group of bankers. At first thought, our respective fields might appear remote from one another.

Yet the Secretary of Agriculture must be concerned with financial matters. Our Commodity Credit Corporation is the second largest corporation in the world, exceeded only by the Federal Reserve Bank of New York. We now hold loans on farm commodities totaling $2.3 billion, and we own $5.5 billion worth of commodities taken over through nonrecourse loans. We hold about $3.7 billion worth of loans made to farmers for financing the purchase of real estate, for production credit, for building farm storage, for supplying electricity and telephones, for construction of facilities to conserve soil and water resources, and for various other purposes. This $3.7 billion does not include loans of the Farm Credit Administration, which was made an independent agency in 1953 in accordance with the recommendation of this administration.

So, along with you, I am concerned with interest rates, terms of repayment, and other financial matters.

I am also concerned about Government competition with private business. I believe that Government should not be in competition with its own taxpaying citizens. I believe we should leave to private enterprise those things which private enterprise is able and willing to do.

You, on your part, must be interested in agriculture. You have an outstanding record in staying with your farmer borrowers in spite of drought and other economic reversals. You are in a key position to counsel with farmers on important business decisions.

The financial needs of our farm people are great indeed. Farmers require extensive financial services. They have borrowed almost ten billion dollars, secured by real estate, and they have borrowed another $8 billion of short-term credit of one kind or another. Private sources supply the bulk of farmer borrowings; it will be my unfailing purpose to keep it so.

Not only must our farmers be financed; the many industries which serve agriculture have their special credit needs. Implement factories, petroleum refineries, fertilizer plants, feed mills, facilities for processing, storing, transporting, refrigerating, and merchandising farm products, these all require financing. The food business, in its many phases, is the largest single business in the country. It takes 25 percent of the consumer's dollar. It takes a goodly share of your services. We do indeed have a community of interest.

Because the farm and financial community are interdependent, they should understand one another. Certainly the financial services which you provide are not always well understood by farm people; I am likewise sure that the problems of our farm people are not clear to all of you. The air is filled with statements, denials, allegations, and half-truths regarding your field and mine. The problem is to distinguish between the truths, the half-truths, and the untruths.

You could easily prepare a list of half-truths about the banking fraternity; ideas that are somehow plausible, yet take undue liberty with the facts.

One half-truth that comes to mind is the belief, widely held by farm people, that bankers work only from 10 o'clock in the morning until 3 in the afternoon. Some people don't stop to think that there is work to do after the cashier's cage is closed.

Another popular misconception is that the banker hopes the borrower will be unable to repay his loan so that the banker can take over the collateral.

Statements which are totally false cannot long survive.

Statements that are wholly true may be resisted for a time, but the truth must ultimately triumph.

The troublesome statement is the half-truth, which has some visible basis in fact, the statement which has enough truth to make it plausible and enough untruth to make it dangerous. Such a statement can be used by the uninformed or the unscrupulous to convey an entirely erroneous impression.

I should like to enumerate nine widely-held ideas about agriculture. All of them can be made to sound more or less plausible,

but they contain only a fragment of truth. All of them stand in the way of sound solutions to farm problems.

The first half-truth is that there is a single farm problem or a single solution.

How we long for simple explanations and simple remedies.

How easy the answers become when we oversimplify the problem.

Shall we say the farm problem is the level of price supports for the basic commodities? This ignores most of the problems in agriculture; only 12 percent of Minnesota's farm income is from the basic commodities. It ignores the hardships resulting from drought, flood, frost, and other natural causes. It ignores the true cause of low income, namely the fact that many farms are too small and lack sufficient resources.

There are many problems, not one. And for each problem there are many potential remedies, not just one. Most of these remedies are in the hands of individual farmers and their organizations. Better farming methods, improved marketing, power production costs, better choice of enterprises, these are solutions which may lack political appeal, but they are effective.

Beware the man who paints agriculture as having one problem and one solution.

Another half-truth is that agricultural production can be controlled with acreage allotments.

Acreage controls can, to a degree, restrict the output of a particular crop. But controls have little effect on total production.

When a farmer is restricted on the acreage of a particular crop he picks his best land, fertilizes heavily, uses modern methods, and increases the yield per acre. And he uses the acres taken out of one crop for the production of other crops.

It might be possible to work out regulations which would be stiff enough really to control production. But the evidence of 25 years is that farmers do not want them. The Congress will not enact them and even if they were enacted it would be difficult to enforce them.

You read in the papers, occasionally, that farmers have voted production controls on themselves as a means of getting a particular level of price support. What you do not read is that these controls have been watered down by law to such a point that they don't control production. A whole battery of fudge factors has been introduced; permission to plant on acres diverted from the basic crops, minimum national allotments, minimum individual allotments, legislative action to boost allotments or keep them from falling, and control on the basis of harvested rather than planted acres.

The number of acres of wheat actually needed, according to formula, to bring supplies into line this year was only about 12 million. Yet the number of acres offered to farmers in the referendum, by law, was 55 million, 4½ times as great.

The alternative to a vote favoring quotas has been made unattractive by law. Instead of offering reasonable alternatives, the choice offered is between quotas and virtually no program at all.

Farmers have voted favorably on acreage allotments and marketing quotas, but such a vote cannot be correctly interpreted as indicating that farmers favor controls which will actually control.

It is clear that we have no other choice than to live with abundance. Experience indicates that we cannot effectively legislate scarcity. Nor should we want to do so. Abundance is a blessing if our programs are sound.

A third belief, embracing only a fragment of truth, is that farm prices, over the long pull, can be made in Washington.

When a farmer sells wheat or soybeans or hogs he is paid a price. Why that price? Why not a higher price? He needs an answer that he can understand, and there are plenty of people ready to supply it.

What answer is easier to accept than that farm prices are made in Washington? If farm prices are rising, the ins will be supporting this view and the outs will be denying it. If farm prices are falling, the reverse will be true. So the issue always has a considerable number of people who will keep it alive. To those who must have a simple explanation for prices, this is both the simplest and the most readily available.

Are farm prices really made in Washington? Certainly for a crop like corn, the level of price support set in accordance with law has an important influence, at least in the short run. But if the price is set too far from where the buyers and sellers themselves would set it, the forces of the market will ultimately reassert themselves.

The belief that farm prices are made, or should be made or could be made in Washington is particularly dangerous because it leads to pressures for unworkable programs, the final results of which are harmful to farmers.

A fourth half-truth is that farm prosperity depends directly on farm prices.

I want to see farm prices as high as we can have them, consistent with retaining and expanding our markets.

My concern, and the farmers' concern, is more with net farm income than with price per unit. It is income that farmers spend, not price. Income is the result of production times price per unit minus costs.

Certain of our farm products have been supported continually and substantially above the levels that would prevail if producers and consumers were free to bargain together. It is my belief that lower prices for a number of these crops would have the long-run effect of expanding markets and increasing net form incomes. Markets would be regained. Production could be increased. Production costs per unit would be decreased. And farm people would be better off.

For other commodities, or with other market conditions, prices could and should go up. We have raised price support levels, on occasions when we thought it would be helpful to do so, above the minimum levels specified in the law and above the levels of previous years.

I think our price structure in agriculture should have flexibility in it, flexibility to go up or down in accordance with market conditions.

Another half-truth is that farmers alone are exposed to the competitive system, while everyone else is protected from it.

It is true that, compared with certain other groups, farmers occupy an exposed economic position and lack bargaining power.

Much has been attempted, through Government programs of one kind or another, to provide more economic security for farm people. The net realized cost last year of Federal programs primarily to support farm prices and farm income was $1.9 billion, a sum equal to 16 percent of our net farm income. This year the cost will be much larger. Costs are high because we are now picking up the tab for losses experienced in moving commodities accumulated in earlier years.

Nonfarm enterprises do not completely escape competitive forces. Only about three-fourths of the wholesale trade firms survive their first full year of operation; only about 30 percent survive more than 10 years. Only about three-fifths of the retail trade firms survive their first year and only about one-sixth reach the age of 10 years. Labor has a minimum wage, it is true, but no job is assured at that minimum wage. And the guaranteed minimum is only about 50 percent as high as the average hourly earnings of factory workers. This is something like a support price at 50 percent of the market level.

One of the most important components of economic security is the opportunity to change freely from one enterprise to another. Fortunately this opportunity continues for all groups with fewer impediments in this country than in any other country in the world.

The economic hazards of our farm people constitute a series problem. These can be at least partly counteracted by farmer cooperatives, sound agricultural legislation, improved farming methods, and sound fiscal and monetary policy. They cannot be remedied by invidious and erroneous comparisons.

The sixth half-truth on my list is this: That price supports protect the small farm operator.

Suppose a farmer has only a few cows and a few acres of land, with total sales of less than $1,000 a year. There are a million and a half such farm families in the United States. How much will it help a farmer like that to have higher price supports? His problem is volume, not price; 200 percent of parity wouldn't give him a decent level of living.

Most of the dollars put out to support farm prices go to the large producers. Here, crop by crop, for a recent year, are the percentages of the total loan funds going to the 1 percent of the borrowers who took out the largest loans:

Barley, 24 percent of the dollars to 1 percent of the borrowers.

Wheat, 12 percent of the dollars to 1 percent of the borrowers.

Oats, 11 percent of the dollars to 1 percent of the borrowers.

Grain sorghums, 11 percent of the dollars to 1 percent of the borrowers.

Soybeans, 8 percent of the dollars to 1 percent of the borrowers.

Flaxseed, 8 percent of the dollars to 1 percent of the borrowers.

Corn, 6 percent of the dollars to 1 percent of the borrowers.

Some loans to a single producer have run as high as a million dollars in a single year.

For every dollar that goes to a small-farm operator, many dollars go to the large unit.

A seventh fractional truth is that farmers increase production when prices fall, in order to maintain income.

There are some farmers, with few alternative opportunities, who operate in this manner. Most of them do not.

Why have hogs recently risen above $19.00 per hundred pounds? Because the low prices of a year and a half ago caused farmers to reduce farrowings. If we had supported hog prices then, as some people wanted us to, we would now have heavy supplies and low prices instead of a good market.

Why are hatchings of replacement chicks running 21 percent below a year ago? Because of low egg prices this past winter.

There is no competent research that I know of which supports the belief that farmers in the aggregate increase production when prices fall, other things being equal. On the contrary, a large number of scientists have affirmed the fact that a high price generally stimulates production and a low price either reduces output or retards expansion.

If farmers increase production when prices fall, then the Congress should have lowered price supports during the war, when added production was needed. Instead, supports were raised, indicating that the Congress, by its deeds if not its words, recognizes the true nature of the relationship.

The belief that farmers increase production when prices fall is little more than a rationale for high price supports.

No matter what the diagnosis is, the practical prescription is the same:

Is there a general depression? Raise price supports.

Is there inflation? Raise price supports.

Do we need more production? Raise price supports.

Do we need less production? Raise price supports.

Farm problems need better diagnosis and better prescription than that.

The eighth on this list of misconceptions is the belief that the family farm is on the way out.

The family farm is undergoing changes, but it is not on the way out. It has had to change in order to survive. It is becoming larger, it requires more skills, it takes more capital. But still, as has always been the case in America, most of our farm production comes from farms on which the capital, the labor, and the management are supplied primarily by the farmer and his family.

The percentage of our agricultural production which is turned out by family-sized farms has not changed appreciably in the last 15 years.

Three-fourths of our farms are operated by those who own them.

Two out of three farms have no mortgage debt.

The family farm has withstood inflation, depression, war, drought, and other disasters. It is withstanding the impact of a technological revolution. It will outlast the pessimists who predict its extinction.

The men who laid the foundations for our agriculture had faith in the family farm, not only as a good place to raise crops and livestock but as a good place to raise American citizens. Their judgment has been thoroughly vindicated.

The family farm has great adaptability and staying power so long as management is kept free to make needed adjustments. To freeze the family farm into a rigid, preconceived pattern would be the quickest way to weaken it.

A ninth and final item on this list is a complete untruth and one that especially arouses my ire. It is the suggestion that farmers are just a lot of goldbrickers who want Government handouts.

Anyone who makes such a statement simply does not know farm people and does not know farm problems.

Farmers have genuine problems. They are on a cost-price squeeze. They are adjusting from wartime to peacetime markets. They feel the impact of a technological revolution. They are subject to great natural hazards. Their markets suffer from huge surpluses due at least in part to programs of the past. To say that they have no real problems is outright folly.

Farm people need the sympathetic help of their Government, something they have not always had. A loose purse string is not the answer. The need is for solid facts and an understanding heart.

A great majority of our farm people want no special favors. In the race they must run they want only a fair place at the starting line. Sometimes they are overrepresented, to their disadvantage, by well-meaning self-appointed spokesmen.

These nine half truths were the foundation for some of the farm programs of the past. On this shaky base was erected a great superstructure of production controls and price supports, with rigid formulas and detailed schedules.

The superstructure is now beginning to sag and creak at the joints. Increasingly, farm people are becoming convinced that some changes need to be made. The architects are assembling to draw up new plans.

My plea is that we not just consider patching up the superstructure, but that we take a good look at the foundation itself. If we simply patch up the building without fixing the foundation, we can be sure that before long we're in for trouble again.

I know no better foundation than one which will support an agriculture which is prosperous, expanding, and free.

We have been moving in that direction. The Agricultural Act of 1954 was an important first step. It reestablished the essential principle of price flexibility. The Agricultural Act of 1956 defended the ground gained in 1954 and in addition provided useful tools for dealing directly with surplus problems.

Now we are ready for another step. We should move away from formulas in the old basic law which require that price supports be raised as soon as surpluses are moved. If we do not, the stage will be set for surplus number 2 as soon as we dispose of surplus number 1. We should move toward more freedom of decisionmaking on the part of the individual farmer. I so indicated in recent letters to Senator Ellender and Congressman Cooley, Chairmen of the Agricultural Committees of the Senate and the House of Representatives.

There is much that is good in our present farm laws. What is good should be saved. What is not good should be changed. I do not propose to eliminate price supports. We have programs that are working well; examples are the programs for soybeans, oats, rye, barley, and grain sorghum. These successful programs can be a pattern for the programs that are now causing difficulty.

Years from now, the historian will write the history of the present day. What will he write? That the winning of abundance resulted in the loss of freedom? That this generation had so little faith in its free institutions that it surrendered them without firing a shot?

Or will he write that these free institutions were put to the test, that they survived, intact and strengthened, ready to serve as an inspiration to liberty-loving people everywhere? This is what he must write. This is what he will write, if we are equal to the opportunity which confronts us.

May God grant us wisdom, faith, patience and courage to see the opportunities which lie beyond our problems. May we willingly accept the responsibility which will forever be the counterpart of freedom.

No Justification for Kinzua Dam

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. OSTERTAG. Mr. Speaker, under leave to extend my remarks, I include in the RECORD a copy of a telegram I have just received from Gov. Averell Harriman, of New York, with respect to the Kinzua Dam on the upper Allegheny River. Governor Harriman points out that there is an alternative to this $101 million project which has not received adequate consideration and study.

"Until that study is made," he wires, "there is no justification for going ahead with a plan that will deprive the Seneca Indians of their reservation lands, in violation of long-standing treaty rights."

Mr. Chairman, I applaud New York's Governor for taking this stand on a matter which will come before the House later this week as part of the public-works appropriation bill. A careful study of this project, as it has been presented to the House committees over the years shows that it is only in small measure a flood-control project and, therefore, a Federal responsibility. It is a water-supply project and, in fact, is so described in House Document No. 491 of the 83d Congress, and it is a pollution-control project, designed to dilute Allegheny River pollution in Pennsylvania, with waters impounded in New York State.

Neither water supply nor pollution control is properly a responsibility of the Federal Government and the taxpayers of this country, under the terms of the flood-control statutes and programs.

Yet this project is being pushed as a 100 percent Federal liability under the guise of flood control.

Mr. Speaker, this is one of the most questionable projects ever to come before this House. It cannot be economically justified within the framework of existing legislation.

It certainly cannot be morally justified, for in order to build it, virtually all of the habitable land on a reservation granted to the Seneca Nation of Indians under the Presidency and signature of George Washington will be preempted, and most of it will be flooded.

Governor Harriman rightly challenges the validity of this project. I hope his political colleagues in this House will support him.

The full text of his telegram follows:

HON. HAROLD C. OSTERTAG,

House of Representatives, Office Building, Washington, D. C.:

I am advised that an amendment to strike from the public works appropriation bill $1 million to start the Allegany Reservoir project will come up on the floor of the House tomorrow or Wednesday. I hope you will support the amendment. The Seneca Indians have presented an impressive series of documents on an alternative proposal which has apparently not received careful study by the Corps of Engineers. Until that study is made there is no justification for going ahead with a plan that will deprive the Senecas of their reservation lands in violation of long-standing treaty rights.

AVERELL HARRIMAN.

States Rights

EXTENSION OF REMARKS

OF

HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. ROGERS of Texas. Mr. Speaker, I am in receipt of House Concurrent Resolution No. 33 from the Legislature of the State of Texas. This resolution, I believe, points up vibrantly and forcefully the incumbency of the several States to vigorously insist on their sovereign constitutional rights.

So that all the Members may have the benefit of this expression, I insert herein this document and commend its contents to each of my colleagues.

HOUSE CONCURRENT RESOLUTION 33

Whereas significant events have occurred in the course of contemporary history under our government of laws which call for a rededication of our constitutional theory of self-government and State sovereignty as established by our forefathers, and guaranteed in the 1st and 10th amendments to our Federal Constitution; and

Whereas unbiased examination reveals that an appeal to reason and judgment is necessary as to all issues wherein the Federal Government has transcended its delegated authority and has encroached upon the rights of the citizens of the sovereign State of Texas and of her sister States, and this invasion of our reserved powers must not be unchallenged; and

Whereas the Legislature of the State of Texas is the appropriate body under mandate from the people of Texas to intervene between Federal encroachment and State sovereignty; and

Whereas article V, section 1, of the Constitution of the United States prescribes the only method of reestablishing those sacred constitutional principles affecting the very sovereign existence of the several States; and

Whereas the Texas Legislature explicitly affirms and declares that the powers of the Federal Government in all its branches and agencies are limited by the terms of the Constitution creating the Federal union to which the States are parties and by the plain sense and intended construction and interpretation of its provisions; and

Whereas the basic concept of the Federal Constitution apparent upon its face is that the ratifying States, parties thereto, agreed voluntarily to delegate certain of their sovereign rights to a Federal Government thus constituted and that all powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the respective States or to the people; and

Whereas failure of this State to emphasize her clearly reserved powers could be construed as tacit consent and acquiescence in the surrender thereof; and that submissive acquiescence to palpable, deliberate, and dangerous encroachment could in the end lead to the surrender of all powers reserved to the States and inevitably to the obliteration and destruction of the sovereignty of the States contrary to the concepts and ideals embodied in the sacred compact by which this Union of the States was created: Now, therefore, be it

Resolved by the House of Representatives of the State of Texas (the Senate concurring), That the soverign State of Texas intervenes and registers officially its objection on behalf of its people to the effort of the Federal Government to assert an unlawful dominion over her citizens and humbly appeals to her sister States for their help and guidance in protecting the inalienable rights and cherished freedoms; to join in taking appropriate steps for submission of a constitutional amendment which clearly and unequivocably defines State rights as understood by our forefathers, the framers of the Texas constitution, and the United States Constitution; and that, until the question of States rights here asserted by the State of Texas be settled by clear constitutional amendment, Texas declares her firm intention to take all appropriate measures honorably, legally, and constitutionally available to the State to resist illegal encroachment upon her sovereign power, and to urge her 47 sister States to the north, to the east, and to the west to join in protecting these inviolable rights and cherished freedoms of their people and to urge the Congress of the United States to exercise prompt and deliberate efforts to curtail further encroachment by the Federal Government upon the reserved powers of the respective States; and be it further

Resolved, That a copy of this resolution be transmitted by his excellency, the Governor of Texas, to the Governor and legislature of each of the other States, to the President of the United States, to each of the Houses of Congress, to Texas Representatives and Senators in Congress, and to the Supreme Court of the United States.

BEN RAMSEY,
President of the Senate.
WAGGONER PORR,
Speaker of the House.

I hereby certify that House Concurrent Resolution No. 33 was adopted by the house on February 19, 1957.

[SEAL] DOROTHY HALLMAN,
Chief Clerk of the House.

I hereby certify that House Concurrent Resolution No. 33 was adopted by the senate on March 6, 1957.

CHARLES SCHNABEL,
Secretary of the Senate.

Remarks of Commissioner Thomas E. Murray at Dedication of Site for Dresden Atomic Power Reactor of the Commonwealth Edison Co. on June 12, 1957

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include therein remarks made by Hon. Thomas E. Murray, Member of the Atomic Energy Commission, June 12, 1957, at dedication of site for Dresden atomic power reactor of the Commonwealth Edison Co.:

REMARKS OF COMMISSIONER THOMAS E. MURRAY AT DEDICATION OF SITE FOR DRESDEN ATOMIC POWER REACTOR OF THE COMMONWEALTH EDISON CO. ON JUNE 12, 1957

The Dresden station represents an important contribution to the Nation's atomic power program and toward realization of the promise inherent in industrial atomic power. It will be the world's first large-scale power reactor to take advantage of the valuable characteristics of the so-called boiling water principle. As such it represents a major step in the development of industrial atomic power reactors. Moreover, it demonstrates the willingless of private industry to contribute both substantial funds and manpower to the industrial reactor effort.

Commonwealth Edison and its associates in the nuclear power group manifest foresight of a high order in entering the atomic field at Dresden. It is the kind of vision that is characteristic of the utility industry of this country in making advances in technology serve the public. This traditional dedication to serving the public inspired my former associates in the old New York Edison Co. to invent the phrase "at your service."

But the Dresden station represents service of a broader kind. It is a substantial advance toward the creating the necessary support for an American atomic power industry. By such an industry I mean a broadly based manufacturing capacity and a highly developed industrial nuclear know-how. Without the establishment of such an industry this Nation cannot hope to fulfill those responsibilities which derive from the present and mounting shortages of power throughout the world. Unless such an industrial base is established, American manufacturers will not be the suppliers of atomic powerplants in the near future to growing world markets.

The problem is how best to further the creation of such an industry. The building of small experimental prototypes will contribute to this objective. But the task today is a much larger one. It is primarily dependent on the early construction of large-scale power reactors along soundly conceived technical lines. It was on just such a basis that the Dresden plant was conceived.

In a 1953 Chicago speech, I stressed the vital contribution of large reactor construction as the necessary support of an atomic power industry. On that occasion I was privileged to announce the Commission's decision to finance and construct a large-scale pressurized water reactor. The wisdom of that action is now generally recognized. The Shippingport project is making a most important contribution to the development of industrial atomic power. Its construction is providing substantial technical support for many other reactor projects. Yet, at that time, the decision to go ahead encountered considerable opposition from those who insisted that "economics" did not justify such a step. However, the only way I know to get valid economic answers is by building and operating large reactors.

That is why I continue to urge the immediate construction of two or three additional large reactors. The national interest in the development of industrial atomic power on an urgent basis is so great that this step should be taken using the necessary Government funds.

The use of Government funds as a temporary measure to build large reactors in support of an atomic power industry, can and must be carried out without altering the traditional patterns of American industry. As I said in the Chicago speech, and repeated many times since, "any task that can be satisfactorily performed by private industry should be left to private industry." However, the task of establishing support for an atomic-power industry on an urgent basis commensurate with the national interest is too large today for private industry alone. Nevertheless, I agree with Willis Gale that any expansion of our power-reactor program deemed necessary in the national interest should be accomplished in such a way that public power is not favored over private power. The question of the methods and rate by which industrial atomic power is developed in furtherance of the national interest transcends the issue of public versus private power.

Today we are accustomed to call the American system "responsible capitalism." The Dresden station conceived by Willis Gale is a concrete manifestation of responsible capitalism at its best.

The Tragedy in Lithuania

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. BARRETT. Mr. Speaker, 16 years ago the world was shocked by the conduct of our then ally, the Soviet Union. Sixteen years ago, on June 13 and 14, the deportation of 60,000 Lithuanians from their beloved homeland to the frozen steppes of Siberian and other labor camps was carried out. Their fate remains unknown. The horrible practice

of mass deportation has been condemned in numerous international agreements and treaties since the end of World War II. Few other crimes are more onerous.

The hardships and martyrdom of these people, friends and relatives of many of us here in the United States, is worthy of our deepest tribute and homage. The pain and inequities of Lithuanian satellization bore mute testimony to the future destiny of those who fought in conscience for their liberties, their freedom, and their homeland, against the Soviet Union. Their uncommon bravery remains a source of inspiration and education to all of us of the powerful "quiet strength" of the small nations opposing the expansionisms of Russian communism.

Hon. James A. Farley

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. James A. Farley at the Belgian Chamber of Commerce luncheon held at the St. Regis Hotel in New York City on June 13, 1957.

ADDRESS BY HON. JAMES A. FARLEY, CHAIRMAN OF THE BOARD, THE COCA-COLA EXPORT CORP., BELGIAN CHAMBER OF COMMERCE LUNCHEON, ST. REGIS HOTEL, NEW YORK CITY, JUNE 13, 1957

Those of us who are my age consider it a privilege to strengthen the contracts with the people of the Government of Belgium because we have learned that there is powerful historical connection between that country and our own. In my own lifetime, the German invasion of Belgium played a major part in convincing the United States that it must enter World War I. I like to remember that Americans rebuilt a part of the University of Louvain as a tribute to the heroism of Belgians in that struggle. Again in World War II Americans and Belgians fought side by side in a common defense. Today we are united in the North Atlantic Treaty Organization and in many common enterprises for the welfare of the world.

It is commonly said today that the United States is unpopular in Europe. There is some truth in that but I do not think either Americans or Europeans believe that this indicates any permanent change in relations. The fact is that all of us together are trying to do a job that has never been done before in the world's history, and it will be strange if we do it without some irritation.

A couple of years ago I tried to state my feeling, as a politician, which I am, that America had a world mission—a mission moral rather than military. We were the first country to attempt a free republic in which the rights of individuals were guaranteed. This was based, rightly, on a deep religious feeling which is still the driving force in the United States. We believe that all men are children of God and, by consequence, human dignity is to us not a phrase but a fact. We can have no confidence in any system which denies that fact. Further, we think that this insistence on human dignity is universal. It exists in the minds and hearts of every human being. America's mission has been to maintain that conception of human life wherever it can.

It was easier to do this a century and a half ago when we were thinking only of our own territory. It is harder now that we must think in terms of a great many other countries as well. Human dignity cannot be imposed by force. It cannot be created by any power. It is the result of endless forces which come from the wellsprings of national life and take different forms. Freedom and human dignity in Belgium will be written in terms and traditions of history of Belgian life, not of ours. The combination of nations which defends it will have a great number of traditions. The North Atlantic Treaty Organization, for example, which defends the United States in Western Europe includes traditions as diverse as those of Mohammedan Turkey and those of Great Britain. Our jobs is to understand and assist every country in giving the full benefits of freedom to its own people, as they understand it. Their understanding will, of course, differ from ours. Nevertheless the result has to be a center of common action, capable of letting us all work together for our common defense and our common welfare.

One of the ways by which we reach a common understanding and so can agree on a common policy is the commercial interchange represented by business contacts throughout the world. The chamber of commerce, businessmen's meetings, and ordinary business contacts all contribute. It has taken the United States a good while to learn that everything we do here is not appropriate for other countries, for instance, Belgium. The businessmen of other countries perhaps are also coming to understand why in the United States we discard certain European practices. A huge market like the United States, for instance, can have a free competitive economy and profit by it. We are coming to learn that in countries the size of the Netherlands and Belgium, for example, this is not possible, though it may become so as Europe increasingly builds a common market and a huge trading area. While there are endless points of difference my feeling is that in business life which is the raw material of economics we are increasingly finding that we understand each other. Today this may be merely sentiment. But tomorrow if we have to struggle with worldwide conditions it will be the basis which permits us to work out common arrangements by which we all can live.

In my case this is not theory but practice. My own company not only exports to great parts of the world but draws its raw material from great parts of the world. We could not exist if the United States were suddenly shrunk to its continental limits any more than Belgium could keep her standard of living if her business and economics were suddenly confined within the Belgium frontiers. We, all of us, are internationalist whether we like it our not and whether we say so or not. So, freedom of commerce is not merely a phrase, it is a necessary fact of life, just as the open road outside the door is a necessary fact when a meeting has to be held.

As we found democracy among individuals 200 years ago we are finding democracy among peoples today. We are making a community of nations in which the equality and sovereignty of each is scrupulously recognized but in which each country contributes to certain common institutions which safeguard the necessary facts of life by which we all exist.

These facts have not changed very much. They are a common defense, a continuously functioning transport system, a growing area of open commerce, and an increasing guaranty of access to the necessities of life. For all I know, my grandchildren may see the day when we have a coordinated banking system and a really working international court though we have not reached that stage.

Both the ideal and the practical result therefore suggest the gradual creation of a community of nations. This also means a community that has military strength. We shall not, of course, achieve a community of nations at peace merely because of military strength, neither in any one country nor in the combination of all of them. But it is equally clear that we shall not get a result without strength. The Western World must be able to defend itself and share in the defense of other like-minded peoples. That is why if the North Atlantic Treaty Organization were to fold up tomorrow, it would have to be reinvented.

More important perhaps even than strength are the cooperative institutions which make it possible for countries to work together. These institutions are presently in existence, though we hear too little about them. Planes go many times a day between New York and Brussels, for example, but they can do this chiefly because the International Civil Aviation Organization provides for uniform regulations and service. Someday we will have cooperative currency and credit arrangements so that moneys are readily convertible. Eventually, we may have a form of common market covering the whole Western World. At the moment we stress defense because there is an imperialist threat to the world. But the force which is bringing us together is not the fear of a common enemy, but rather the need of good working relations which is being forced on us by modern technology, population growth, and economic necessity.

In the long run, I think, there is no fear that the United States will go isolationist again.

The men, there are still a very few noisy ones, who talk loosely about going it alone and who want to pull out of cooperative arrangements like the North Atlantic Treaty Organization and who want to torpedo the United Nations have not learned an important lesson. Fortunately, few in this country agree with them.

It is barely possible, of course, that the United States could make itself into an empire and organize an American century. But if we did we would slowly and steadily find our cherished freedom disappearing. There would no longer be freedom of speech and freedom of assembly and free inquiry, and fair trial and the right of every American to look all these ideas in the face. Even as we are fighting the Communist menace at home and abroad we must be sure that we do not betray our own traditions. Under free institutions America grew. By free institutions America forged her position. Under free institutions she defended herself against totalitarian enemies and by virtue of free institutions she has become the senior free Nation of the world. We do not want a police state, or thought control, or rule by hysteria of fear in our system.

The success of the United States is largely due to one fact. We have discovered the art of throwing thousands of free minds against a problem. We do this in politics, we do it in business, we do it in education and we do it in science. As a result, we have come up with the right answers more often than those who depend on a small group of party officials, politburos or police chiefs. This is often confusing to foreigners. They hear the noise of our debates and discussions and do not realize that out of these discussions come firm decisions. The result has given America the most stable Government and the most stable economy of our time. It is respected by our enemies, hence their sound and fury. The fact is that most of the countries under Communist domination would like to achieve what America has achieved and will try to do so as soon as they are free to make the attempt. Because of this, I do not think a third world war will

be attempted, and if it is attempted I have no doubt of the result.

In the past few months the European nations especially have been treated to a barrage of threats from Moscow: "Are we not able to blow you off the map with a single well-placed hydrogen bomb?", ask the Russian militarists. Therefore, say they, be "peaceful"—don't defend yourself. I am old enough to have heard this language before. Hitler said the same thing in almost exactly the same words to everyone in Europe in 1938–39. He was talking about what he would do with his airplanes as Moscow is talking about what it will do now with its newly found hydrogen bombs. Anyone who undertook to set up a defense system was assumed by Hitler to be a "warmonger", just as Moscow says today that no one who prepares to defend himself is a friend of peace. But that we have to answer that no one need fear war who does not attack. In the American continent 21 countries live within close range of the United States which is militarily capable of wiping out any of them. They have no reason to fear and they do not fear. When, therefore, Moscow threatens other countries because they build up their own self-defense you can be sure that it is a guilty conscience speaking for Moscow. If she had not thought of attacking she would have no concern with other people's defense.

The same thing is true of the attacks made also from Communist sources against common market arrangements which Europe is working out now. If Moscow were a friend of 200 million men, women, and children in Europe she would be helping, not hindering, their march toward common institutions.

My own belief is that in time the Soviet Union herself, will come to see that free men and women working together offer more chance of peace and prosperity than do Iron Curtains, cold wars, and attempts to impose revolutions by armed forces. When that happens, the time will have come to make a real peace, and we all of us hope that it may come soon.

Belgium is a small country, the United States a large one. But both of us are heirs to a great history. Both of us are proud of our habits of life, both of us have proved our willingness to scrupulously respect ourselves but to join with others in creating the larger world in which we all must live. As businessmen we try to work at it in season and out. We must strike hands with the statesmen, the school teachers, the writers, the musicians, the artists, the men of good-will in both our countries. We may not live to see the result but I think we shall play our part in building a world at peace.

The Republican Party's Attraction to Youth

EXTENSION OF REMARKS
OF
HON. J. HARRY McGREGOR
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am including an essay written by one of the Young Republicans, Mr. G. Russell Pipe, who is a student at Ohio Wesleyan University in Delaware, Ohio. I am of the firm conviction that as long as we keep the youth of today, the manhood and womanhood of tomorrow, interested in our Government we need have no fear of them being taken over by foreign ideology. I am most happy to see that these young people are so interested. We certainly wish them every success.

The essay follows:

THE REPUBLICAN PARTY'S ATTRACTION TO YOUTH

(By G. Russell Pipe, Ohio Wesleyan University, Delaware, Ohio)

New Republicanism, however it may be defined, greatly contributes to the Republican Party's attraction to the youth of America. The charges of antiquity made against the Republican Party no longer apply; today the organization is proudly termed "new," "the party of the future."

Why might a young person be attracted to the Republican Party? The connotation "new"; in service and in management of government; realization of peace, progress, and prosperity under Republican administration; leadership shown both in the party organization and in its candidates; have conclusively influenced today's youth, the first voters of America, to be Republicans.

Good government, sound policies, thoughtful judgments and informed decisions mark Republican administrators with distinction. To support a party and its candidates requires the efforts of all thoughtful Americans. Yet after election day the party and individual workers must continue to contribute and assist their newly elected officials. It is this continued support and assistance which exemplifies Republicans everywhere.

Mature young people are not easily deceived, they look to the past, give an discerning awareness to the present, and contemplate the future. Politics requires this inquiring attitude. Today's youth have inquired, have investigated all political parties, and have chosen their party,—the Republican Party.

President Eisenhower has promoted, "The never ending task to make our party responsive to the needs and aspirations of all the people." Such executive leadership advances greater participation in government by every citizen, youth and adult. By placing responsibility in the hands of young people, the Republican Party expands their contribution to the political life and well-being of our nation.

Thus, youth are attracted, can participate and share the responsibilities of government and continue the growth in vigor and strength of their "new" party—the Republican Party.

Dairy Industry Vital to South Dakota Economy

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. McGOVERN. Mr. Speaker, a most vital segment of agriculture to the American people is the dairy industry. The dairy farmers of the Nation, the dairies; processors, and distributors provide us with nature's most wholesome and perfect food. In a matter of only 2 or 3 decades, the dairy industry has made tremendous improvements. Dairy farmers who once milked their animals by hand in dank, lantern-lit barns now milk their dairy cows by machine where the milk is piped directly to electrically cooled tanks, and the animals are cared for in well lighted, fully equipped buildings. This modernization which has swept the dairy industry has meant great protection to the consumer. It has also meant more abundant production of those fine dairy products which mean so much to every American family.

I wish to submit the following editorial from the Aberdeen-American News of June 9, 1957, as a salute to the dairy industry:

DAIRY INDUSTRY VITAL TO SOUTH DAKOTA ECONOMY

In observing June Dairy Day, Monday, the Aberdeen area is taking part in a month-long recognition of the dairy industry.

The program here is part of one in which South Dakota and the Nation are joining to celebrate the 350th anniversary of the first permanent English settlement in America. It was there at Jamestown Colony in Virginia that the dairy industry got its start in America.

Today, of course, the dairy industry is a business that accounts for 20 percent of the total food business, on a dollar basis, yet contributes about 30 percent of the nutrition in our diets.

The Jamestown dairy herd of 3½ centuries ago was smaller than most of the herds found on a South Dakota farm nowadays. The dairy cow herself has changed a great deal, too, from colonial days. Now her milk producing record is carefully tabulated, her blood line is carefully controlled and hed feed rations are scientifically supplemented to boost her yearly milk production even higher.

During colonial days and the early westward movement the dairy cow served a triple purpose—she was used for work, milk, and meat. Today, she is used primarily for the production of milk.

The dairy industry in the Midwest developed slowly. The first cows were brought to this area tied behind wagons in the pioneer days. They were depended upon for nourishment and refreshment, much in the same way they were by the Virginia colonists and as they are today.

However, poor transportation and lack of markets beyond family needs prevented dairy expansion, even though the land was abundant with grass and water.

The growth of industry and cities and the development of transportation put the land and water facilities of the Midwest to use. Then came a large-scale increase of strictly dairy herds.

Importers began bringing in blooded stock—Holstein-Friesan cows from the province of Friesland in Holland; Ayrshires from southwest Scotland; Guernseys and Jerseys from the islands of Guernsey, Alderney, and Jersey in the English Channel, and the Brown Swiss from Switzerland. Milking Shorthorns, originated in England, are now the prominent breed used in producing both beef and milk in South Dakota.

It was only natural that immigrant Americans started manufacturing the dairy products so popular in their European homelands. The resulting cheese factories, creameries, and butter plants flourished and supply much of the demand for milk produced in the State today.

Health and sanitation controls connected with the dairying industry gradually became stronger with State and Federal laws.

Today the dairy plants in South Dakota are a maze of stainless steel and glass, processing, and packaging milk and dairy foods by automation, untouched by human hands. Cows are milked by machine, their milk immediately chilled to control bacteria, and later that milk is pasteurized, homogenized, and supplemented with additional vitamins and nutrients.

The dairy industry is important to South Dakota's economy and it is appreciated by all.

Good Government Is the Issue

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. FASCELL. Mr. Speaker, I would like to call to the attention of the membership, excerpts from an address recently delivered by my close friend and colleague, from Florida, PAUL ROGERS, to the members of the third national reorganization conference sponsored by the Citizens Committee for the Hoover Report.

These remarks were made by an outstanding Member of the House whose interest we should all share in promoting good government on an economical and efficient basis.

The excerpts follow:

GOOD GOVERNMENT IS THE ISSUE

(Excerpts from speech by Congressman PAUL G. ROGERS, Member, United States House of Representatives from Florida since 1955; formerly member of Burns, Middleton, Rogers & Farrell law firm; member, House Public Works Committee)

Permit me, first of all, to express my great pleasure to you for this opportunity to participate in the program of the third national reorganization conference, by the Citizens Committee for the Hoover Reports. I am sure that all of us here this morning are conscious, as I am, of our deep responsibilities toward our Government, and of the splendid opportunity which this conference provides for promoting the cause of good government.

Good government is indeed the issue. It is an issue that is never fully resolved and laid to rest. It is an issue that needs constant attention, reexamination, and hard work. In a society of growing complexity, such as our own, the maintenance and preservation of good government makes increasing demands upon our diligence, vigilance, and common sense. * * *

As basic objectives, the Hoover Commissions have sought to achieve greater economy and efficiency in the Federal Government. These objectives are not, perhaps, identical, but they are certainly so closely related that the study of one strongly invites the study of the other. The problems of both are largely the outgrowth of the size of the Government and the scope of its activities, factors which are of legitimate and continuing concern not only to members of the Hoover Commissions but also to every thoughtful citizen as well.

One of the great services of the Hoover Commissions has been to inform the American people about the staggering size and cost of running their Government. No dramatic effects or histrionics are needed here. The facts speak for themselves, and the Hoover Commissions have presented these facts. All of us must be made to realize the possible consequences of the progressive expansion and growing operating expenses of the National Government; and all of us must work together to control these forces which, I believe, could seriously threaten our democratic society and our free economy.

I know that we are a big, powerful nation of nearly 170 million people; I know also that we are a productive and wealthy Nation. I know that the Government has many obligations it must meet, both at home and abroad. I know, too, that there are many expensive services which the people expect the Government to provide—services which in many cases only the Federal Government can provide.

A large budget is understandable, and extensive Government activities seem to be inevitable, under these circumstances. What must be done, therefore, is to see that the Government gets its money's worth for every dollar it spends. * * *

It is axiomatic that big, expensive government places a heavy tax burden upon the people. It cannot be otherwise. It is likewise true that costly government and heavy taxes have contributed in some measure to the weakening or downfall of many governments, both ancient and comparatively modern. * * *

The disastrous effect of a crushing tax load upon the people of the Roman Empire is one of the great lessons of history. * * *

The history of the struggle of the English people against arbitrary taxation is the history of the English Constitution. One cause of the great 17th century revolution in England, which established many of the constitutional rights of the English people, was the question of taxation. * * *

"No chapter in history is more replete with interest and instruction than that which exhibits the system for exacting contributions for the support of the state which characterized the fiscal policy and administration of France during the 17th and 18th centuries, and which is now acknowledged to have been mainly instrumental in bringing on the memorable revolution in the closing years of the latter century." * * *

Finally, we certainly ought not to overlook our own experiences with excessive taxation. It is certainly true that the attempt by Great Britain nearly 2 centuries ago to tax her American colonies without their consent was a primary cause of the American Revolution. * * *

Our task is to eliminate waste, duplication, and extravagance from the operations of the Government without impairing its essential functions.

I am particularly interested in the budget and accounting report and the 25 recommendations it contains. The task force has shown that tremendous savings can be realized if the Government's budgeting and accounting methods are revised along the lines of its recommendations. These savings could amount to some $4 billion a year, more than 5 percent of the new budget. This is the largest estimate of possible savings made by any of the task forces. * * *

Congress has already taken some action, I am happy to say, with regard to the budget and accounting proposals. * * *

Last May I introduced a bill (H. R. 11526) into the 84th Congress which would have placed the entire governmental financial structure on an annual accrued expenditure basis. It provided for a much closer supervision by Congress over the expenditures of the executive branch and made possible a more complete and meaningful understanding of the financial operations of the Government.

This measure was the same as the Senate bill (S. 3897) which, after being amended, was enacted as Public Law 863. Although Public Law 863 contains many provisions that will greatly improve our financial management, I am of the opinion that the amendments, insisted upon by some of my colleagues in the House of Representatives, removed a major provision of the original bill by eliminating the provision for adoption of the accrued expenditure appropriation procedure. * * *

One of the first things I did after the opening of the 85th Congress last month was to introduce a new bill (H. R. 2494) calling for the determination of appropriation estimates on an annual accrued expenditure basis. The President, in his budget message to the Congress, has requested that this legislation be passed. There is widespread agreement among the budget and financial experts that this method of appropriating funds would be much superior to the present system. Exact dollar savings that might result from the use of this procedure cannot be determined, but it surely seems safe to say that they would be substantial. * * *

Of course, there is opposition to some of these recommendations. It is doubtful if they would be worth much if they did not engender some opposition. It is certainly normal in the United States for controversies to arise over matters affecting the Government, and for this controversy, we can indeed be grateful. It is a sign of the health of our free and democratic system of government. * * *

This conference is important. It can serve as a forum for the exchange and dissemination of ideas and information.

I am most grateful to you for the privilege of participation in these proceedings.

Mystery in Stassen's Boner

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include an interesting article written by David Lawrence and appearing in the Evening Star of Washington, D. C., on June 14, 1957:

MYSTERY OF STASSEN'S BONER—WHY NEGOTIATOR DISREGARDED ORDERS IN TALK WITH RUSSIANS IS QUESTIONED

(By David Lawrence)

The most sensational story behind the scenes in Washington today has an element of mystery—why did Harold Stassen pull a boner in London by showing to the Russians an American proposal on disarmament before it had been cleared with Britain, France, and West Germany?

What Stassen did was in disregard of orders. He had been instructed orally before he left Washington that when he put on paper the substance of the discussions held here in the National Security Council—representing a kind of compromise of differing views on disarmament—he was to talk things over with the British and French and the representative of Adenauer in London and explore their viewpoints before transmitting any proposals to the Soviets.

To make assurance doubly sure, Under Secretary of State Christian Herter sent a message to Stassen in London repeating in writing the instructions which had been given orally before the disarmament specialist left Washington.

Notwithstanding all these precautions, Stassen wrote out a memorandum which he gave to the Russian Ambassador in London, presumably because he wanted the Russian reaction. When the heads of the governments of the Western Allies heard of Stassen's procedure, they were shocked. Telephone conversations ensued back and forth across the Atlantic between high officials of the Western governments and the United States Government. The White House and State Department were busy for 2 days trying to straighten out the tangle, and it was decided to summon Stassen for personal conference last week in Washington.

The question of relieving Stassen of his post was naturally discussed, but it was de-

cided that to do so might break up the whole disarmament negotiation and give the Russian propagandists a chance to argue that the United States was backing out of the discussions.

So an alternative plan was developed to guard against a recurrence of this kind of mistake. Julius Holmes, a diplomat of experience in delicate negotiations, was selected from the career service in the State Department to be associated with Stassen in London so as to make sure that what Secretary Dulles referred to in his press conference on Tuesday as "procedural complications" in the disarmament negotiations would not happen again.

Also two United States Senators will shortly join Stassen in London to represent the congressional point of view. It is reported that Senator MANSFIELD, Democrat, of Montana, and Senator HICKENLOOPER, Republican, of Iowa, will be invited to go to London, or other Senators if these two members of the Foreign Relations Committee of the Senate find they cannot go.

What did Stassen have in mind when he sat down with the Russian Ambassador and showed him a written document on the American point of view before he had talked things over with our allies? In these days of sensitiveness in London, especially about the need for allies to consult one another, this was a mistake in tactics that seems incredible. Also with the delicate situation that Chancellor Adenauer faces in the coming elections in West Germany, it was particularly tactless to do anything which could give the impression that West Germany and the reunification issue were being ignored.

The only plausible explanation is that Stassen was overzealous or that he thought an informal sounding out of the Soviet point of view first would aid him later in getting agreement from the British and French and West Germans. But a Special Ambassador should not take such chances without first consulting his superiors—in this case the Secretary of State and the President. Maybe Stassen thought it wouldn't make any difference.

But the fact remains that Stassen's clumsiness in London stirred up considerable confusion as well as anxiety among the Western allies, because it isn't easy to explain that a special emissary of long experience in these disarmament negotiations just pulled a "boner." Stassen was later instructed to go back to the Russian envoy and tell him the memorandum was not in final form and that it had not yet been cleared with the allies.

Certainly President Eisenhower, whose military career has been based on the doctrine of obedience of specific orders given by a superior, will have a hard time forgetting what has happened, though he may be forgiving.

Four New Domestic Prelates

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times Leader Evening News of June 13, 1957, on the occasion of the elevation of four Roman Catholic pastors from Luzerne County and Lackawanna County, Pa., to the rank of domestic prelate with the title of right reverend monsignor.

FOUR NEW DOMESTIC PRELATES

Elevation of 4 Roman Catholic pastors, 3 from Luzerne County and 1 from Lackawanna, to the rank of domestic prelate with the title of right reverend monsignor is recognition that is easily understood when their backgrounds and current responsibilities are examined.

Msgr. Joseph S. Gagion, V. F., pastor of St. Ignatius Church, Kingston, and dean of West Luzerne Deanery, is a native of Wilkes-Barre with an impressive record as an administrator and spiritual leader. It is the second time the west side parish has been singled out by Rome, the late Monsignor M. E. Lynott, who was pastor for three decades, having had this distinction.

Msgr. Cyriac A. Staib, pastor of St. Nicholas Church, Wilkes-Barre, and a native of Williamsport, follows in the footsteps of his two predecessors, the late Monsignor Charles J. Goeckel and the late Monsignor Peter Nagle, founder of the parish, both of whom were honored by previous popes. Assigned to the South Washington Street church in 1935, he has had a distinguished career, climaxed by this high personal tribute which the congregation shares.

Msgr. Francis F. Molino, pastor of the Most Precious Blood Church, Hazleton, is now in his 80th year and has been a priest for 55 years, 35 of which have been in his present charge to which he was assigned when he came to America from his native Italy. Widely known as a zealous priest, gifted preacher and patriotic American, he was acclaimed the outstanding naturalized citizen of the year at Hazleton in 1955 at a community celebration.

Msgr. Thomas J. McHugh, LL. D., pastor of St. Mary of Mount Carmel Church at Dunmore, is known in this area largely through his work in the field of education, having served as professor at the University of Scranton and Marywood College. His pastoral assignments have taken him to churches in other counties.

The newest additions to the papal household are clergymen who have devoted many years to the service of the Roman Catholic Church. They will wear their honors well.

Tungsten Stockpile Program No Longer Needed

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. PELLY. Mr. Speaker, I have in my hand a clipping from this morning's Washington Post. This article refers to two programs for which funds will be voted up or down tomorrow, when we consider the House-Senate conference report on the third supplemental appropriations bill.

My purpose in calling this newspaper article to the attention of Members is because it reports a possible trade between the advocates of two expenditures which are in the report, but which previously were not included by the House.

While this is not the first reference to such a floor trade of votes that I have heard about, I have never believed that any Member would vote other than on the basis of the merit of the items. And, therefore, I am led to extend these remarks, since a careful reading of the original report of the House committee, together with the record of the debates held at both ends of the Capitol, firmly convinces me that the other body was wrong when it inserted $30 million for stockpiling tungsten. In other words, in opposing the item of $30 million, as I do, it is my thought hereby to review the facts with the hope that the membership here will not overlook them.

I wish, Mr. Speaker, that the taxpayers of this great Nation of ours could have the full information that is available to Congress on the present situation having to do with the stockpiling of strategic minerals and especially tungsten. Public opinion would never support such a subsidy to private mining interests. In fact, I fail to see how anyone can justify an expenditure of an additional amount of $30 million when the Office of Defense Mobilization has testified we have already stockpiled more than would be used in 5 years of a hot war—and some even say we have an 18-year supply. In any event, the Defense Department says our stock is sufficient. So what we will be debating is a pure subsidy.

The price which the Government pays, it will be recalled, is $55 a ton, while the domestic market for imported tungsten is $33 a ton. Testimony shows that one big steel company with its own tungsten mines uses the foreign mineral costing $33 for its own use, but sells the product of its own mine to the Federal Government at $55 a ton. That does not seem right.

How are we going to effect a tax reduction if the Federal Government undertakes to subsidize industry in this way? We are overburdening the small-business man, in particular; $30 million may not seem much in the overall picture, but it is from the combination of many such proposed expenditures that substantial savings can be effected. In the national interest we have to face up to the situation. We must economize; and, based on the information and background of the tungsten program, I believe here is an item on which Members of the House can stand pat.

We should not overlook that the United States Government was paying $63 a ton from 1951 until 1956, and the open-market price dropped from $64.63 in 1952 to $35 in 1956. Yet our Government continued last year paying $63.

I hope Members will reread the committee report and the discussions in this Chamber on February 5, 1957. It seems to me, if one has a sense of trusteeship and responsibility in handling other people's money, in all conscience one is bound to oppose the continuation of the subsidy program.

Let us reject this item in disagreement. If enough Members remain firm on this and similar boondoggles, we can stand up one of these days and vote for a tax-relief measure without increasing inflation because it will be within the honest framework of a balanced budget.

Let us cut out subsidizing fish ponds for farmers and giving free fertilizer

and supporting the price of peanuts and other products at above the housewife's ability to pay. These many opportunities to cut Federal spending, along with the $30 million for tungsten the Government does not need, are the way to smaller budgets and lower taxes.

For Outstanding Service

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. JOHNSON. Mr. Speaker, justly deserved recognition for his efforts in developing and conserving the natural resources of the United States was given last month to Congressman MICHAEL KIRWAN, of Ohio. The honor was awarded him upon an inscribed plaque at one of the most important public resources meetings in modern times at Salt Lake City, Utah. The presentation was made by the honorary chairman of the conference, James G. Patton, president of the National Farmers Union. Under leave to extend my remarks I would like to insert in the RECORD, Mr. Patton's remarks:

REMARKS OF JAMES G. PATTON, PRESIDENT OF THE NATIONAL FARMERS UNION, ON PRESENTING A PLAQUE TO HON. MICHAEL J. KIRWAN AT THE WESTERN STATES WATER AND POWER CONFERENCE, SALT LAKE CITY, UTAH, MAY 10, 1957

There is no Member of Congress, either in the House or the Senate, who has done more to bring about regional development of natural resources, than Congressman MICHAEL J. KIRWAN of Ohio.

Despite the fact that Congressman KIRWAN does not live in the West, and therefore has no direct interest in reclamation projects, he has worked hard and long to bring water to arid areas and electric power to the people of the Western States.

MIKE KIRWAN is a Member of Congress from the 19th Congressional District of Ohio, at Youngstown, the citadel of the Mahoning Valley steel district.

His interest in helping small farmers and working people generally began early in his active life. As a boy he worked in the coal mines, joining the miners union in 1898. Later he went to work for several railroads in the East and on the west coast. He has been a monthly dues paying member of the miners union and the Brotherhood of Railroad Trainmen for over 50 years.

Congressman KIRWAN'S understanding of Western problems is the partial result of his travels. During his youth he travelled extensively—particularly through the West, working in wheat fields, on ranches, in lumber camps, and steel plants. After World War I, during which he served as an artillery sergeant in France, he settled in Youngstown, Ohio.

Congressman KIRWAN'S venture into politics began as precinct committeeman, a job which he considers a most important function, after which he was a city councilman in Youngstown. He was elected to Congress in 1936 and to each Congress since then.

When first elected to Congress, Mike KIRWAN served as a member of the Rivers and Harbors Committee. In 1942 he was appointed a member of the Committee on Appropriations and now is chairman of the powerful Subcommittee on Interior Appropriations.

A Democrat of great conviction, MIKE KIRWAN is chairman of the Democratic Congressional Campaign Committee, a job in which he was successful last fall, especially west of the Mississippi.

Mr. KIRWAN is one of those who believes that any development in one State is of indirect benefit to the other 47.

During the last few years, he has pointed out several times on the floor of the House of Representatives that Congressmen who would build projects in their own State or area should help development of other areas.

Congressman KIRWAN has decried the efforts of those who have atempted to convince the American people that development in the West is only brought about through subsidies and at great expense to eastern regions. He is a great exponent of investing in the West as a sound policy for all the country.

For all of these reasons, and many more, I am pleased to present the Honorable MICHAEL J. KIRWAN this beautiful plaque containing the following inscription:

"Presented to Hon. MICHAEL J. KIRWAN, Member of Congress, for outstanding service to the people of Western States for leadership in developing and conserving our natural resources. From the Western States Water and Power Conferences, Salt Lake City, Utah, May 10, 1957."

Polish Aid Agreement Characterized as a Sound Gamble

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Star of June 16, 1957, commenting on the economic and technical-aid agreement between this country and Poland:

SOUND GAMBLE

The aid agreement between our country and Poland is not going to accomplish any miracles. Indeed, conceivably, it may even work out to our disadvantage. Nevertheless, as Vice President NIXON has declared, it is "a gamble worth taking" because it demonstrates to the world that "we are not writing off the Polish people" but are instead ready to help them, through peaceful means, to maintain and enlarge upon the limited independence they have won from the Kremlin.

To that end, the agreement, which will operate on a long-term-loan basis, makes available the nationalist-minded Communist regime in Warsaw $48.9 million for the purchase of American wheat, cotton, soybeans, fats, oils, and coal-mining machinery. Further, we have promised to advance an additional $46.1 million when and if Congress enacts the necessary authorizing legislation. Accordingly, since such authority is expected to be forthcoming in due course, the Poles can look forward to a total of $95 million in aid designed to take care of their most pressing economic needs.

This sum, which may be the forerunner of considerably more American assistance if the initial agreement achieves good results, is obviously not enough in itself to rehabilitate Poland's dangerously strained economy. But it can do much to ease the country's present stresses and strains. Hence, to that extent at least, it promises to play an important role in helping Wladyslaw Gomulka, chief of the Polish Communist Party, to strengthen his footing on the tightrope he must walk as he and Warsaw's anti-Stalinist Red government strive to do business with the United States without bringing down upon their heads the wrath of the Soviet Union.

Nikita Khrushchev and other key tenants of the Kremlin have already made clear that they look with great disfavor on what Mr. Gomulka and his group have done in this respect. But the Soviet attitude, though suspicious if not resentful, appears to be reconciled to the kind of agreement that has been worked out—a fact confirming numerout other indications that the Poles have really won a measure of release, no matter how small, from Moscow's dictate. Certainly, if our aid will in any way help them to increase that freedom, it will be worth every cent we invest in it.

Why Money Is So Tight

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. MULTER. Mr. Speaker, the following article by E. F. Tompkins, which appeared in the New York Journal-American of June 12, 1957, makes most interesting reading:

THE GOP DILEMMA—WHY MONEY IS SO TIGHT

(By E. F. Tompkins)

The Republican National Committee is alarmed, and the White House seems vexed, because of a decline in contributions to the party's funds.

Big contributors are said to be withholding or diminishing their customary grants: and their action is viewed as a protest against the Republican administration's big spending policy, as exhibited in its pending big budget from which the Democratic Congress is eliminating a few billion dollars.

The subject came up at a White House press conference.

In defense of the budget, the President said:

1. "It might be better for some of these people who are complaining so bitterly to look up the actual facts instead of listening to partisan speeches"; and

2. "Some of the facts that would be interesting is what would be the budget today * * * if we had adopted some of the programs presented by the opposition * * * that involved a lot of spending."

A brief survey of the facts, past and present, shows several things.

It shows that the 1958 budget includes virtually every nondefense expenditure program that existed under the Democratic regimes, and adds a number besides—for example, Federal aid to education.

In several of the retained programs, the Republican 1958 budget proposes larger expenditures than were made by the New Deal-Fair Deal administrations.

The survey shows that the Republican administration was elected on campaign pledges to reduce and balance the budget and to provide tax relief.

The survey shows that this administration pursued an economy policy in its first term.

The administration inherited a $74.3 billion budget for fiscal year 1953.

For 2 years, the budget was reduced—to $67.8 billion for fiscal 1954, and $64.6 billion for 1955.

In the third year (1956) the Republican budget went up to $66.4 billion, but that was the first balanced budget in years.

The budget for fiscal 1957, ending June 30, stands at $68.9 billion, another increase, and with a prospect of a deficit instead of an anticipated surplus due to declines in tax revenues.

Now the Democratic Congress has before it the pending 1958 budget, listing expenditures of $71.8 billion, the third increase, and carrying again the threat of a deficit.

The 1958 budget is described as the biggest peacetime budget in our national history.

Producing such a budget can hardly be regarded as a fulfillment of Republican campaign pledges. Moreover, a reversal of the administration's own first-term performance can hardly comfort citizens who voted for Federal economy.

Bigger budgets necessarily imply tax increases, not tax relief. Big contributors to political funds are big taxpayers. And maybe they have taken time to look up the actual facts.

End of the Road for Another Lead-Zinc Mine

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. DAWSON of Utah. Mr. Speaker, until Congress acts to give our domestic lead and zinc industry some protection against low-wage foreign producers of these metals, we may expect our mines to close down one by one. Unless we give them the protection they need for survival, let us hope the day never comes when we need domestic sources of these strategically important metals.

In Utah, another of the mining operations has been forced out of production by continued low prices. The typical circumstances surrounding this operation were related in an article in the Salt Lake Tribune of June 13, which I herewith insert into the RECORD:

END OF THE MINING ROAD, UTAH'S CHIEF CON CLOSES

(By Robert W. Bernick)

Chief Consolidated Mining Co., producer of lead and zinc for the Nation since 1909, Wednesday announced "indefinite suspension of operations," effective June 15.

This date thus marks the "end of the road" for the last operating metal mine in the historic Eureka-Tintic district of Utah, which has produced $500 billion worth of strategic metals during two world wars and the Korean war for the United States.

Cecil Fitch, Jr., president and general manager, said Wednesday, "We have been fighting an economic battle against foreign imports for 11 years. The mines that are closing now, including the Chief Consolidated, are not 'marginal' mines. They all closed 5 years ago.

"It is simply that under the impact of inflationary costs and low-wage produced foreign metals coming into the United States, every mine in America will become 'marginal' at a certain price," the Utahan said.

Some 70 milers and their families will be affected immediately by the closure.

But for the miners in the Eureka-Tintic district, the process of economic struggle has been a losing one since the start of active promotion and subsidization by successive Washington administrations of metals produced in foreign nations and imported to this country.

Where thousands once labored in the creation of wealth for Utah there remained only hundreds in this district in the postwar period.

In September 1954 the mining company pulled its pumps in the main ore-producing areas of the Chief No. 1 mine. From 286 miners employment was reduced to the presente 70 whose jobs end in a few days.

The miners of yesterday have now found other work, many outside the industry.

Mr. Fitch paid high tribute Wednesday to the men who have worked for the Chief.

"They have been a very faithful crew. They have produced as no other miners, even though in recent years wage reductions were necessary if any jobs were to be had at all. The United Steelworkers of America (AFL–CIO) has recognized our peril and our labor relations have been excellent.

"But we just cannot carry on any longer," the Eureka district spokesman said.

The Chief Consolidated Mining Co. was founded by the late Walter Fitch and his son, Cecil Fitch, Sr., both Michigan miners.

Mr. Fitch, Sr., on Wednesday marked his 72d birthday.

Lobbies

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. MACK of Illinois. Mr. Speaker, the Office of Armed Forces Information and Education of the Department of Defense has furnished each Member of Congress with a copy of a pamphlet entitled "Congress at Work." This pamphlet was prepared by Scholastic magazine and is being used by the Defense Department to keep service personnel informed on the activities of their Government.

I have read this pamphlet and consider it an excellent and easily understandable description of the legislative procedure. Especially interesting, I thought, was the article on Lobbies, which I am including as part of my remarks:

LOBBIES: THE THIRD HOUSE OF CONGRESS, WHICH WORKS BEHIND THE SCENES

In a session a year or two ago, the United States Senate was nearing the end of a long and stormy debate. The debate was over a bill which would exempt producers of natural gas from Federal price regulation. The House of Representatives had already approved a similar bill by a close vote.

Senator FRANCIS CASE (Republican, South Dakota) stood up to speak. When he finished, the Senate was in a tumult.

Senator CASE told the Senate that he had intended to vote for the natural gas bill. Now, he said, he would oppose it. Why? Because a man interested in the bill's passage had offered to contribute $2,500 to a campaign fund for the Senator's reelection.

The entire Senate, including backers of the bill, was shocked by this revelation. Senator J. WILLIAM FULBRIGHT (Democrat, Arkansas), sponsor of the bill, said: "Any Senator who votes for this bill * * * may be suspected of having received one of these contributions to his campaign."

LOBBIES FOR AND AGAINST

Accusations flew thick and furious for days. Some persons recalled that for more than 2 years natural gas producers had been lobbying for the bill on a scale rarely seen in Washington. The producers had hired lobbyists—people skilled in influencing public opinion—to persuade Congressmen that the bill was in the public interest. The lobbyists had written countless leaflets for distribution to the public. They had organized letterwriting campaigns to stir up support for the bill.

At the same time, people who did not favor the bill were "lobbying" against its passage. They, too, had hired lobbyists to persuade Congressmen to vote against the bill. They, too, had prepared leaflets and organized letterwriting campaigns to Congressmen.

Despite the hullaballoo over Senator CASE'S revelation, the Senate passed the natural gas bill. On February 17, 1956, however, President Eisenhower vetoed it. The President told Congress that he agreed with the bill's basic objectives, but he could not sign it because of "highly questionable activities" by some persons interested in seeing the bill passed.

In April 1956, a Senate committee censured the men who had offered the campaign contribution to Senator CASE. The committee said it did not find evidence of "a bribe nor attempt to bribe," but it condemned the men "for failure to act as responsible citizens."

The committee went out of its way, however, to defend the right of lobbyists to continue to work for or against congressional bills. It said that activities of lobbyists in the Case affair should not be used as a yardstick by which to judge all lobbies.

Exactly what are "lobbies" and how do they work?

HOW LOBBIES WORK

The first amendment to the Constitution guarantees all citizens the right "to petition the Government for a redress of grievances." A petition may be a written statement with many signatures. Or it may be expressed—perhaps more effectively—through an "organized" group.

An organized group which tries to influence Congress is called a lobby. Years ago, people with special favors to ask would stop Congressmen in the Capitol lobbies to talk to them. Thus, they became known in political slang as "lobbyists."

There are lobbies for and against nearly everything. There are lobbies for low tariffs, lobbies for high tariffs; lobbies for Federal aid to education, and against Federal aid to education; lobbies for rigid farm price supports, lobbies for flexible supports.

PRESSURE GROUPS

Most lobbyists are lawyers, publicity experts, former Congressmen, and others versed in lawmaking and the shaping of public opinion. Most of them work for large organizations or associations representing such groups as farmers, businessmen, labor unions, real estate owners, physicians, veterans, women's clubs, etc.

They are often called pressure groups because they attempt to exert "pressure" on Congress to pass or defeat certain bills.

Most lobbies make no secret of their identity or what they stand for. In fact, many serve a useful civic purpose in bringing out facts not generally known to the public.

On the other hand, there are lobbies that operate less openly. They sometimes organ-

ize mail and telegram campaigns to Congressmen—trying to create the impression that vast numbers of voters support their position. Some deliberately distort facts to serve their purpose.

Accordingly, Congress passed a special Lobbying Act in 1946. This act requires the registration of all organized groups and their agents who seek to influence legislation. An agent must file a report four times a year of his activities and expenditures. The clerk of the House of Representatives and the secretary of the Senate release to the public a summary of these reports. Maximum penalties for violation of the act are set at a $5,000 fine, a year in prison, or both.

THE BIG SPENDERS

A few months ago Congress released its most recent report—covering the first 9 months of 1956.

Biggest spender for this period was the Association of American Railroads, reporting expenditures of $118,121. Other big spenders included: American Federation of Labor and Congress of Industrial Organizations, $108,242; American Farm Bureau Federation, $88,418; Southern States Industrial Council, $77,062; American Trucking Association, $76,005; American Legion, $64,703; United States Cuban Sugar Council, $61,022.

Some observers call lobbies a "third house" of Congress. The Washington telephone directory takes 13 columns to list the names of registered lobbyists. That is quite a sizable "third house."

Congressman Michael Kirwan

EXTENSION OF REMARKS

OF

HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. CANNON. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I am including a report on the national conference of the Rural Electric Association at which the award of a plaque was made to our colleague, Representative MICHAEL KIRWAN, for his contribution to water and power needs. The article follows:

REPRESENTATIVE KIRWAN HONORED

A highlight of the conference was the award of a plaque to Representative MICHAEL KIRWAN (Democrat, of Ohio) for his contributions to water and power needs of the Western States. Representative KIRWAN is chairman of the House Subcommittee on Reclamation Appropriations.

The Ohio Congressman said that his only regret "is that we can't spend more on reclamation. We've only spent about $3 billion in the past half century, yet minerals and water are the wealth of the Nation," Representative KIRWAN declared.

He noted that progress has been made in the upper Colorado development, but pointed out that the project lacks the necessary transmission lines for making its power benefits available to the public.

Unless public transmission lines are built, he warned, the low-cost power from the project can be used only by private utilities and not by municipal or rural cooperative power systems.

"In the extreme form," Representative KIRWAN declared, "this means erection of tollgates for private profit between the public and the generators their tax money will build."

CBS Presents Khrushchev

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. MULTER. Mr. Speaker, I wish to direct the attention of our colleagues to the following editorial which appeared in the New Republic of June 10, 1957:

CBS PRESENTS KHRUSHCHEV

It is said that 10 million Americans watched Mr. Khrushchev perform over CBS last Sunday. What did they conclude? No doubt what struck many most forcibly was the Soviet leader's bland contradiction of settled American opinions. For what American can take seriously Khrushchev's claim that the Kadar regime is solidly supported by the Hungarian people? And who can accept his verdict that capitalism has "enslaved" us? Words, in such moments, do not connect; they separate.

But there is another gulf that was only suggested by Mr. Khrushchev's remarks; this other gulf has yet to be seen clearly, let alone bridged. American opinion itself—and that includes opinion in high places—is divided between what we might call for convenience the Radford School and the Stassen School. The first school pins its faith finally on ever-greater scientific ingenuity, translated into weapons development. Security to the Radfords is synonymous with military superiority. But the competition for superiority produces, inevitably, something less than security, for two are playing the same game.

On the other side of the divide, the one we assume is occupied by Mr. Stassen, are those who fundamentally accept the Khrushchev assumption; some means must be found of limiting the arms race, not merely because of its economic cost, but because unlimited military competition in this nuclear age could mean mutual annihilation.

These two approaches—one cannot call them fixed positions—are as yet unreconciled in America.

But let us assume that the Stassen viewpoint prevails—that Russians and Americans are compelled by the same logic of tax burdens and atomic hazards to follow a path of peaceful coexistence. Is American opinion prepared for that eventuality? Not at present. It will remain for us to learn the skills by which we can, in practice, refute Mr. Khrushchev's theory that history is on the side of communism. In fact, the challenge to our intelligence, imagination, and patience may be greater in a world of nonmilitary but competitive coexistence than it was during the cold war.

If the armaments race is slowed down or stopped, if fear of Russian military aggression subsides, what incentive will move the Congress when subsequent foreign aid or USIA budgets are under review? In place of the negative policy of containment, enforced by bases and bribes, shall we be able to devise and maintain a foreign policy that competes successfully with the Communist world? Will the American people, once fear lifts, be willing to help less developed areas because those areas need help, and not because economic aid is the price we must pay for a defense pact or an overseas airbase?

And how will be in an era of nonmilitary but competitive coexistence, reconcile our democratic habit of permitting every Senator, Representative (even mayor) to sound off as if he were Secretary of State with the need for restraint and wisdom in the conduct of foreign affairs? In some ways, the Russians have a built-in advantage. Decisions are made, things are done.

An equally tantalizing implication of Mr. Khrushchev's interview is whether heads of state will in the future spend more time in our living rooms. Something new in diplomatic history has happened, and we have hardly noticed it. We have recently seen TV interviews with the Prime Minister of Burma, with the President of Egypt, and the Prime Minister of Israel (on the same program), with the Prime Minister of India and the Foreign Minister of Communist China.

Why should not the Russians now invite President Eisenhower to answer questions of Russian correspondents—from his office in the White House? Would the President be willing? And would we have Mr. Khrushchev's assurance that such an interview without script would be broadcast over every Russian TV and radio station, with the full text printed in Pravda?

Express Roads Versus Business Alleys

EXTENSION OF REMARKS

OF

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. CRAMER. Mr. Speaker, it was my recent pleasure to speak before the Good Roads Association of the State of Maine. My appearance was at the suggestion of my good friend and colleague, the Honorable ROBERT HALE. At that time, I had the honor, as a member of the Public Works Committee, to explain and report on the progress of the Federal Inter-State Highway program. The planning of this program and its relation to the State of Maine is brought out in the editorial appearing in the Daily Kennebec Journal, of Augusta, Maine, which I asked be included in the RECORD at this time. Most important is the comment pointing out the benefits both to business and the traveling public through development of limited access highways.

[From the Daily Kennebec Journal, Augusta, Maine, of May 25, 1957]

EXPRESS ROADS VERSUS BUSINESS ALLEYS

The public's mind is having trouble in keeping up with the modern concept of road building.

Express highways free of grade crossings and distractions are appreciated by most motorists, but the minute they get near home and post a threat to some local interest they generate opposition.

If all such protests were honored, the big Federal Interstate Highway program would degenerate into a twisting, cluttered network of supermerchandising alleys. "The biggest public works program in the world," as Congressman CRAMER of Florida described it to the Good Roads Association, would be just so many more billions thrown away.

If people would only take a broad view of what limited-access highways mean to the entire program they would be more tolerant of the temporary setbacks they fear for local interests. They would also realize that the total effect everywhere is going to be the same and that just as much business has got to be transacted (in fact more), after roads are built for the convenience of through traffic.

As John Burnham, Maine good roads executive secretary pointed out, roads are intended

for the good of the State and Nation as a whole and not just a particular area. He pleaded for wider representation at highway hearings, now usually attended by only the residents of a community directly affected by a proposed project.

An example is the controversy over the interstate highway route around Waterville. Local pressure will probably force up to 1 mile of extra travel over a compromise route, which means the public will spend many millions over the years to satisfy the whims of a relative few.

The best nearby comparison between a limited-access highway and an unprotected express road is found on the approach to Boston. As you leave the Newburyport bypass you enter a section of divided highway that amounts to a shopping street nearly 20 miles long. Nearly every conceivable type of business is located along this route bidding for the driver's attention with garish signs, open-air and window displays. Shopping traffic dodges in and out of the express lanes, and the driver's nerves become suddenly tightened to the limit after the relative relaxation of the limited-access road.

Representative CRAMER congratulated Maine for its foresight in building a toll expressway along the interstate network. Maine will receive some extra consideration if plans now being studied for the interstate network are carried out.

It is to be hoped that this State's head start in limited-access highway construction won't be nullified by shortsighted pressure from local interests as the program develops.

Statement on the Situation of the Jews of Egypt

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following statement issued by the American Jewish Committee at a meeting of its administrative board on May 7, 1957.

STATEMENT ON THE SITUATION OF THE JEWS OF EGYPT—THE AMERICAN JEWISH COMMITTEE MEETING OF THE ADMINISTRATIVE BOARD, MAY 7, 1957

It is clear that the Jews of Egypt are being deprived of their civil rights, their property, and their citizenship, and that they are being ruthlessly driven from their country. The nations of the world, individually and as members of the United Nations, have so far taken no effective measures to counter the tyrannical action of the Egyptian Government.

At the time of the outbreak of Middle Eastern hostilities in October 1956, the Jews of Egypt numbered some 50,000. Some of them, with antecedents reaching back for many centuries, had participated in all phases of Egyptian life, business, finance, industry, and agriculture, and in the political and cultural activities of the country.

Since November 1, 1956, Egyptian Jews have been confronted with arrest and imprisonment, economic strangulation, revocation of citizenship, and expulsion from the country. By May 1 of this year, some 17,000 Jews had to leave Egypt and they sought refuge in other lands. This expulsion is continuing, and the indications are that the Jews who still remain will also become refugees, dependent on the aid of other countries and of charitable organizations. The Jewish population of Egypt appears to be doomed to despoilation and enforced exile.

In carying out this ruthless policy, the rulers of Egypt have been deaf to all humanitarian appeals. We are thus faced once again with a dictatorship openly persecuting a minority group.

The American Jewish Committee emphasizes the danger of this situation to the peace of the world. The lessons of the past quarter of a century clearly indicate that the free nations must not remain silent in the face of such a challenge to international morality.

It may still be possible to save some of the Jews of Egypt from the consequences of the action of that country's present rulers. We appeal to our Government, to the United Nations and to enlightened world opinion to give this matter urgent attention, to the end that determined efforts be undertaken to avert the consummation of this human tragedy. We call upon our Government to intervene with the Egyptian Government to put an immediate end to its persecution of Jews.

Twenty-fifth Anniversary of DAV

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. TEAGUE of Texas. Mr. Speaker, on this 17th day of June 1957 the Disabled American Veterans, that unique and patriotic veterans' service organization, is celebrating its 25th year of chartered existence, and I am happy to pay my respects in this public manner. The DAV was actually organized 37 years ago for the express purpose of aiding and assisting worthy wartime disabled veterans, their widows, orphans, and dependents.

In addition to the character of discharge requirement, it is necessary that the applicant for membership be shown to have been wounded, gassed, injured, or disabled in line of duty while in the service of the Armed Forces of the United States during a war or the Korean conflict. The fact that such person is still in the United States Armed Forces does not preclude eligibility for membership. Citizens of the United States who became disabled from conditions incurred in or aggravated by service in the armed forces of those nations associated with the United States as allies during any of its war periods, and who were honorably discharged from such service, may also join the Disabled American Veterans.

The act of Congress—title 36, chapter 6–A, section 90a through section 90k, United States Code—chartering the DAV was approved June 17, 1932. Public Law 668, 77th Congress, approved July 15, 1942, deleted the words "of the World War" in the title and shortened the name to "Disabled American Veterans." The present national commander is Joseph F. Burke, a combat amputee of World War II.

The DAV is third in size of the major veterans' organizations but because of its restrictive membership eligibility requirements it does not approach in mere numbers the two leading groups. It does, however, make up in enthusiasm and constructive achievements what it lacks in size. This year will see the largest membership in the history of the Disabled American Veterans and its officers look forward with confidence to the future. Full credit should be given to the auxiliary, its officers and members, in promoting the progress and success of the parent organization.

The national headquarters is located at 5555 Ridge Avenue, Cincinnati 13, Ohio. The DAV national adjutant, Mr. Vivian D. Corbly, and his staff have their offices at national headquarters.

The national service headquarters is located at 1701 18th Street NW., Washington 9, D. C., and there the national director of legislation, claims and employment, with their staffs, have their quarters. It is believed that a special word of explanation is due in regard to the DAV claims activities. That service has trained and expert claims representatives on duty in the VA central office, the Washington, D. C., VA Benefits Office, and the Department of Defense. Contacts are also made with other Government agencies. In addition to these claims officials located in the Nation's Capital, the DAV has national service officers in all the regional offices of the Veterans' Administration and the VA district offices. There they render great assistance to many thousands of veterans and their families regardless of whether the veterans concerned are members of the organization. This valuable service is freely given without charge or recompense of any kind.

The national executive committee and national finance committee play major parts in the transaction of important organization business and in guiding the operations and destinies as to DAV policy.

The record of the past augurs well for the future of this up-and-coming veterans' association of the war disabled, so aptly named the Disabled American Veterans, and it is my hope, and I am sure all Members join me in hoping, this historic 25th anniversary will mark a nationally important milestone in a long and honorable career of loyal and outstanding service.

Third Supplemental Appropriation Bill for 1957

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. FEIGHAN. Mr. Speaker, tomorrow the House will consider the conference report on the third supplemental appropriation bill for 1957—H. R. 7221. There will undoubtedly be an effort to have a rollcall vote on amendment No. 17 which provides for a $30 million give-

away to the producers of tungsten. The Senate and House confereees are in disagreement and a motion will be made to recede and concur in the Senate amendment No. 17.

I strong urge that the Members read House Report 24, dated February 1 of this year—pages 11 and 12, and also House Report No. 145, dated February 21 of this year—pages 3, 4, and 5. Perusal of the pages of these two reports should certainly convince every Member of the House that we should support the House conferees and vote against the motion to recede and concur in the Senate amendment No. 17. I will vote against such an amendment and I sincerely hope that the vast majority of the Members of the House will do likewise for the reasons set forth in the reports.

A Pious Phrase on a Yellowed Document

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. EDMONDSON. Mr. Speaker, under leave to extend my remarks, I am pleased to place in the RECORD a speech by our distinguished colleague from California, the Honorable JOHN E. MOSS, which was delivered before the New England Associated Press News Executives' Association in Boston.

JOHN E. MOSS is one of this body's great leaders in the fight for freedom of the press, and his outstanding work as chairman of the House Government Information Subcommittee of the Committee on Government Operations has shown him to be a zealous champion of the rights of the press as opposed to arbitrary Government secrecy.

This speech, which follows, is another fine example of the contributions he has made in this field, and reflects the same great principles which have made this Nation a land of freedom and democracy:

A PIOUS PHRASE ON A YELLOWED DOCUMENT

That the press must be free goes without saying. It is equally obvious that the Constitutional guarantee of press freedom is rendered meaningless if the press is shackled by arbitrary Government secrecy. This basic concept, however, is continually in danger.

A contrary principle recently espoused by Secretary of State John Foster Dulles, for instance, would emasculate freedom of the press. In a recent letter to Mr. Arthur Hays Sulzberger, publisher and chairman of the board of the New York Times, Mr. Dulles stated: "The constitutional 'freedom of the press' relates to publication, and not to the gathering of news."

This is an appalling statement from the man who is leading the United States in the titanic struggle to preserve our basic rights against the threat of world communism. Under such a principle, no matter how laudatory the motives, freedom of the press would be nothing more than a pious phrase on a yellowed document in the National Archives.

Yet Mr. Dulles has gone even further in his crazy-quilt policy. At a recent press conference he seriously suggested that American newspapers and news agencies hire foreigners to cover the news for them in Red China. Such a suggestion shows a complete lack of understanding of freedom of the press. The arbitrary refusal of passports for American newsmen to travel in Red China is bad enough. But the thought that Americans are thereby to be forced by their own Government to view news through the eyes of foreign nationals is inconceivable in 20th century America. Surely Mr. Dulles doesn't suggest that American news agencies hire Chinese Communists as their reporters.

News agencies, of course, do hire foreign nationals for overseas coverage. But they are primarily supplemental and their work is closely supervised by American newsmen, usually in the country of origin. There is no substitute, however, for on-the-spot coverage by an American reporter. When Americans abdicate their right to see for themselves, we have lost a major battle in the struggle to defend our hard-won freedoms. These freedoms must not be chipped away by Mr. Dulles or anyone else for the sake of expediency.

Mr. Dulles makes it clear that he believes the American press should be made an instrument of foreign policy. Reporters traditionally have gone abroad as free agents, reporting the news as they saw it, without fear of what the State Department may think or do. Under Mr. Dulles' policy would the stories of American newsmen be viewed as objective reports or as stories intended to bolster foreign policy as part of a reporter's loyalty and patriotic duty?

Mr. Dulles fails to realize that in a democracy the people have a vested right to seek and obtain information in order to govern themselves. This right is not vested solely in the press but in all the people. The press is merely a vehicle to provide information to the public. I, therefore, sharply question any policy which denies the right of any American to seek information at home or abroad.

Government officials, on the local, State, and Federal level, usually agree readily that the public has a right to know about their government. But all too frequently, these same officials adopt the attitude that they, and they alone, are to decide what facts the public shall get about the public's business.

This attitude is probably best exemplified in a directive issued a few years ago by Secretary of Defense Charles E. Wilson. Mr. Wilson has been plagued by rivalry between the armed services, a rivalry which he apparently believes should be confined to the Pentagon and withheld from public debate. It was against this background of service rivalry and "leaks" that Mr. Wilson issued the directive stating that no information of any kind shall be released from the Military Establishment unless the material is a "constructive contribution" to the mission of the Defense Department. In simple language, Mr. Wilson tells the vast military organization: "If it doesn't make us look good, boys, don't release it."

This directive is an insult to the intelligence of our Nation's military leaders. It is amazing that such a directive was ever issued. The absurd results of this directive have been documented in cases aired by the subcommittee in public hearings. It is amazing that the directive still stands.

Last summer, Mr. Wilson was disturbed by a new rash of leaks involving the fight between the Army and the Air Force over control of the missiles program. He appointed a special committee to find a way to stop leaks. He named former Assistant Defense Secretary Charles A. Coolidge, an eminent Boston attorney, to head the committee, and named four retired military leaders as the other members.

The Coolidge Committee found, in effect, that arbitrary secrecy led to the very leaks that Mr. Wilson sought to prevent.

As a result of the Coolidge Committee recommendations, Mr. Wilson on March 22 issued four new directives. Only one of them, however, is aimed at freeing information. It would set up an Office of Declassification Policy in the Defense Department. It fails, however, to give the director specific authority to declassify or to force others to declassify. The directive even fails to tell the director specifically what he is to do. Such a directive appears to be a very weak David for the Goliath of classified material piling up in warehouses out of reach of scientists and historians who have been pleading for access to this important information.

Mr. Wilson's second new directive provides for prompt investigations and a disciplinary crackdown on leaks. Such a directive might well be warranted if it were directed solely at leaks of security information. Nothing but the strongest efforts must be made to protect true military secrets. But the new directive spells danger because it is directed as well at leaks of nonsecurity information. An oppressive investigative machine is ready to bear down on an employee who releases plain administrative information, either in good faith, deliberately, or through inadvertence, if the release displeases higher authorities.

A third new directive is perhaps the most repressive. It covers nonsecurity, administrative information only. It does not involve military security whatsover.

Mr. Wilson's fourth new directive included high-sounding language, apparently bowing to the right of Congress to have information. But the new directive incorporates the other new directive on administrative secrecy and leaves it up to the Defense Department to determine what Congress shall and shall not have.

Mr. Wilson's directives are thus highly restrictive, highly improper and ultimately very dangerous. They impose penalties or the threat of penalties for the release of nonsecurity information, but fail to provide even a threat of reprimand for arbitrary and unjustified withholding.

They bolster the attitude that public officials are to decide what the people are entitled to know and that public officials must justify release rather than justify withholding. Thus, the public, reporters, and Congressmen must justify their requests for information just as if they lacked any right to know.

The question of attitude is vital. Congress could pass 100 laws aimed at the release of public information. But the best laws and the best regulations can be rendered completely ineffective by the man who administers them. Recently, Mr. Murray Snyder, former assistant presidential press secretary, was appointed as Assistant Secretary of Defense for Public Affairs. That is the top information job in the Military Establishment. He calls the tune not only for the Defense Department itself but for the military services as well. Even the Secretaries of the Army, Navy, and Air Force must submit their speeches for Snyder's clearance before they can make them. Mr. Snyder checks those speeches not only for security, but also for policy.

Mr. Snyder repeatedly assured the subcommittee that he was taking over the new post in an effort to get out the news. He said he would do this despite the subcommittee's concern that he would be hampered by Mr. Wilson's restrictive directives.

I understand that Mr. Snyder did not participate in the drafting of the new Wilson directives. But because of their restrictive

language, it is, in my opinion, a Herculean task which Mr. Snyder faces. On the other hand, despite the doubts raised by the unfortunate wording of the directives, Mr. Snyder, by adopting a straightforward and enlightened policy, can materially aid in freeing the flow of information from the Pentagon. If he is determined to do so, he can change the attitude of those in the Military Establishment who regard information as something to be managed or kept out of sight. Certainly he is entitled to additional time before any attempt is made to evaluate the job he has taken on. However, let us hope that an incident reported in a recent Associated Press story illustrates an exception rather than the rule which Mr. Snyder will follow. I quote from the AP story dated May 9, 1957:

"Reporters got shooed out of a Pentagon meeting today—by an official who says it is his job to get information to the public.

"The official was Murray Snyder, Assistant Secretary of Defense for Public Affairs and former Assistant Press Secretary to President Eisenhower.

"The incident came at a meeting in which Ralph J. Cordiner, chairman of military pay study committee, presented the Committee's final report to Secretary of Defense Wilson.

"If either Mr. Wilson, or Mr. Cordiner had any ideas they wanted to express to the newsmen assembled for the ceremony, they were stopped by Mr. Snyder.

"Mr. Wilson took the report from Mr. Cordiner, eyed the newsmen, then asked: 'Do you men of the press know what this is all about?'

"A reporter started to ask a question. Mr. Snyder turned to the newsmen, interjected quickly, 'that's all, gentlemen,' and shooed them out."

A recent news magazine story praising Mr. Snyder's avowed aim to uncork the news at the Pentagon was written before Mr. Snyder shooed the reporters away from Mr. Wilson. The story made a point of the fact that Mr. Snyder had moved his office from the third floor in the Pentagon near Mr. Wilson's office, to the first floor near the press room. This was interpreted as a move to make him more conveniently available to the working press.

Newsmen at the Pentagon now have some other theories about the move. Shortly after the shooing-out incident, they report that Mr. Snyder passed the word to the press room "suggesting" how reporters write their stories about the Cordiner report. You can rest assured, however, that the Pentagon reporters use their own judgment on what is news, Mr. Snyder's "suggestions" notwithstanding.

Arbitrary secrecy inevitably leads to an effort to "manage the news". This effort is nothing new. It was one of the first complaints received by the subcommittee.

Land Forever Wild

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. METCALF. Mr. Speaker, the Public Lands Subcommittee of the House Committee on Interior and Insular Affairs will hold hearings on June 20 and 21 on bills, among them my H. R. 1960, to establish a National Wilderness Preservation System.

Cosponsors of this legislation, of vital interest to conservationists concerned over encroachments upon the remaining wilderness areas, including the gentleman from Illinois [Mr. O'HARA], the gentleman from Pennsylvania [Mr. SAYLOR], the gentleman from California [Mr. BALDWIN], the gentleman from Wisconsin [Mr. REUSS], the gentleman from California [Mr. MILLER] and the gentleman from Oregon [Mr. PORTER].

These bills designate certain units within some national forests, some national parks, some national wildlife refuges, and certain Indian reservations (the latter subject to approval by tribal councils or other duly constituted authorities representing the Indians).

They declare national policy (1) to secure an adequate system of wilderness areas to serve our recreational, scenic, scientific, educational, and conservation needs, and (2) to provide for protection of these areas in perpetuity and for the gathering and dissemination of information regarding their use and enjoyment as wilderness.

The bills provide for administration of wilderness areas by the same Federal agencies now exercising jurisdiction over the affected lands.

The bills create a National Wilderness Preservation Council, composed of the Chief of the United States Forest Service, Director of the National Park Service, Director of the Fish and Wildlife Service's Bureau of Sports Fisheries and Wildlife, Commissioner of Indian Affairs, Secretary of the Smithsonian Institution, and six citizen members appointed by the President.

The Council shall serve as a nonexclusive clearing house for exchange of information among the agencies administering areas within the system. It could sponsor and coordinate surveys of wilderness needs and conditions and would be directed to consult with, advise, and invoke the aid of the President, the Secretaries of Interior and Agriculture, and other appropriate officers of the United States Government and to assist in obtaining cooperation in wilderness preservation.

Mr. Speaker, the case for this legislation is well stated in Land Forever Wild, an article in the current issue of Audubon magazine, publication of the National Audubon Society, one of this country's leading conservation organizations.

The author is Mr. Edwin Way Teale, distinguished writer, naturalist, and photographer, whose recent best seller Autumn Across America fired the imagination of conservationists from coast to coast. His appraisal of the wildnerness bill follows:

LAND FOREVER WILD
(By Edwin Way Teale)

One early October day, 2 miles above sea level near the Montana-Wyoming line, I stood on the lofty tundra of Beartooth Plateau. To the north the peaks and forests of the Montana Rockies extended away as far as my vision reached. Here was wilderness unmarked by man. Here was wildness untouched by civilization. Here was the land as Nez Percé braves had known it crossing Beartooth Pass for centuries before the first white man. In one vast panorama here was a vision of original America, of the wilderness of old—roadless, cityless, billboardless—as wild as the early pioneers saw it.

And just so future generations may also observe it. For at least part of the inspiring vista that spread before me that October day is now designated as a primitive area. It is included in the wilderness preservation program of the Federal Government.

When the Pilgrim Fathers landed in New England, the whole continent extended away before them in one continuous wilderness. Only a century and a half ago, when Meriwether Lewis and William Clark started up the Missouri on the first overland journey across the United States to the Pacific, the western half of the continent was still wilderness. Even a generation ago, the homesteading era was not yet over. During all the early history of this country, the wilderness stood in the popular mind as the great enemy, barring progress. Our heritage of wildness was merely something to subdue, to tame, to conquer, to destroy. Its material resources—its gold and timber, furs and fertile valleys these alone had value.

But more and more in recent years, with the swift shrinking of space and the compression of mounting population, another side of the wilderness has become increasingly recognized. For lands that have been forever wild provide spiritual as well as material resources. Wildness itself offers something of value that needs protection.

Among the recently published letters of William Blake, the English poet, there is the sentence, "The tree that moves some to tears of joy is in the eyes of others only a green thing that stands in the way." The wilderness, like the tree, produces such diverse reactions. During the history of our land, in the main, human activity has reflected the viewpoint almost entirely of those who saw only something standing in the way, something to eliminate. As mechanization has increased, the power to destroy has become magnified. As the population has multiplied, the pressure on wild lands has mounted. Every 12 seconds our population is increased by one. The figure now stands at 170 million; it is estimated it will be 200 million only a decade hence. Indicative of the consequence is one small scene I recall from a part of Long Island once famed for its violets and its upland plover, the Hempstead Plains. Last spring, on one tiny tract amid spreading subdivisions, a single upland plover perched on a sign. The sign read, "a supermarket will be erected on this site."

During the past few years, in gathering material for recent books, I have visited all 48 States of the Union. Wherever I went the impact of mechanized civilization was apparent. Forests had been sheared. Waterfalls had been reduced to a sad, attenuated flow. People spoke of wild places they had known since childhood, now vanished. Over and over again I heard the same refrain, "This used to be such a beautiful place." But amid all this devastation there was something of gain. As the wilderness had receded, the appreciation of the wilderness had grown. A current seemed strengthening all across the country. The will to save something of all that is melting away had become more apparent.

"We need," Henry Thoreau wrote in Walden, "the tonic of wildness, to wade sometimes in marshes where the bittern and the meadowhen lurk, to lear the booming of the snipe; to smell the whispering sedge where only some wilder and more solitary fowl builds her nest, and the mink crawls with its belly close to the ground." Throughout all the 20 volumes of Thoreau's works there runs the recurring theme of the value and importance of wildness. His was the first eloquent voice lifted in its praise. "In wildness," he said, "is the preservation of the world." Since his day others have recorded similar convictions. "The clearest way into

the universe is through a forest wilderness," John Muir wrote amid his beloved Sierra peaks. And in a more recent day Aldo Leopold has set forth his belief that "the opportunity to see geese is more important than television, and the chance to see a pasqueflower is a right as inalienable as free speech." Such men have spoken for more of us than is generally recognized.

At first it was only the unique and spectacular features of the wilderness, such as Yellowstone, Yosemite, and the Grand Canyon, that elicited Government protection. The idea of preserving wildness for its own sake, as opposed to the setting aside of the inspiring scene or the dramatic manifestation of nature, this was slow in developing. Many men have had a part in its growth. Frederick Law Olmsted, Sr., planning Central Park to interfere as little as possible with nature, certainly was one of the pioneers. So was Verplanck Colvin, whose activities in the 1870's led to the inclusion of an article in the New York State Constitution providing for an Adirondacks forest to be left forever wild. So was John Muir, singing of his joy in wild, western mountains but at the same time keenly aware of all that had gone and all that was going. And so, in our own day, have been such men as Stephen Mather, Aldo Leopold, Robert Marshall, Arthur H. Carhart, and Olaus J. Murie. They all have contributed toward the preservation of those living museums of primeval America, areas of untouched, unexploited wilderness.

Perhaps the underlying philosophy of wilderness preservation can best be set forth in a kind of Socratic dialogue, taking up in turn the basis questions involved.

What is a wilderness?

It is, by the strict dictionary definition, an area that is uncultivated and uninhabited by man. In a larger sense it is a sanctuary for all the primal realities of nature unchanged. Nothing artificial is imposed upon it by man. It is neither developed nor prettied up. A few years ago, along one of the trails in California's Point Lobos State Park, a woman was discovered pulling up plants with both hands. She explained she was helping clean up the place. Near New York, when the Sunken Forest on Fire Island was turned into a sanctuary recently, a troop of Boy Scouts volunteered to come out with hatchets and aid in cleaning out the area. This insatiable propensity of human beings for changing nature stops at the boundary of a wilderness area. There we find the whole book of nature and not—as Thoreau pointed out nature is usually found—a book from which previous visitors and previous generations have torn whole pages and mutilated others. A wilderness area is just wilderness—just that—an area in which nature is left unchanged by man.

But do not the national parks already provide sufficient sanctuaries for wildness?

In the back country of a number of national parks there are wonderful stretches of unspoiled wilderness. However, the fundamental purpose of a national park has not been to preserve wildness as such. It is to protect and make available to the public some superb example of natural splendor, some area that is unique. The significance of the national park, in the main, lies in features it contains that are found nowhere else. The significance of the wilderness area, on the other hand, lies in characteristics that it shares with all other wilderness areas, namely natural conditions as completely untouched and unaltered as is consistent with its protection and use as wilderness.

As long as many of the remaining wilderness areas are in remote, mountainous country, why worry about them? What can happen to them anyway?

Perhaps the best answer to such questions is to quote from the report of a select committee appointed by the Ohio State senate in 1857—just a century ago—to study the need for protection of a species of bird. The committee reported no protection at all was needed. The birds, it found, were wonderfully prolific. They had for their breeding grounds the vast forests of the North. They could travel daily hundreds of miles in search of food. The report concluded that no ordinary destruction could lessen them and that the numbers killed would never be missed from the myriads that are yearly produced. The bird they referred to was the passenger pigeon, now completely extinct for nearly half a century. It cannot be taken for granted, as the history of America has amply demonstrated, that any area—no matter how wild at present, no matter how removed from centers of population at present—can remain unendangered without protection.

Why do wilderness areas have to be big? Wouldn't small areas serve just as well?

The wilderness, by its nature, demands solitude. It requires as much remoteness from man and his works as possible. Only in compartively large areas can a wilderness continue to maintain its wilderness character.

Do these areas have to be roadless?

When we speak of an unspoiled area, unspoiled means different things to different people. But an area that is left as it was, unchanged, absolutely unchanged, cannot be spoiled for anyone. This is the aim of those interested in wilderness preservation. The road, the jeep, the outboard motor, the airplane all are part of a mechanized civilization incompatible with the whole conception of the wilderness. By its nature, a wilderness must remain trail country, canoe country, primitive country. Roads will attract mainly those who have no real interest in the wilderness, those who merely want to see the fringes of wilderness while going 60 miles an hour. Wherever a road is constructed through such a region, the cutting and filling and grading disturbs the vegetation, the drainage, the wildlife—not of just a narrow strip but for a considerable distance on either side. Moreover as soon as one road is built the pressure mounts for joining roads, multiplying the danger and damage.

But if a single road bisected an area why wouldn't it give two wilderness in place of one?

In the first place, the smaller the wilderness the less it is a wilderness. Furthermore, in bisecting the area it would also bisect the range of numerous animals and thus interfere with the normal balance of life which a wilderness area provides.

What about elderly people and those who are not strong? Would not a few such roads enable them to secure a taste of wilderness unobtainable elsewhere?

There is, in truth, nothing that such roads would provide that cannot now be enjoyed on established highways through national parks, and along the fringes of the wilderness. Wherever a road goes it brings with it the same fringe conditions that are found elsewhere. The real wilderness always lies in solitude away from the highway. Preserving the wilderness intact without roads thus does not deprive those who are unable to travel by trail or canoe of anything they cannot find in other places. The building of roads through wilderness areas, with its destruction of wilderness, would merely add to something relatively abundant, and subtract from something relatively scarce.

But couldn't just short roads be built in from the edge to, say, ski runs on mountainsides?

Here again the problem arises of what is a wilderness and what alters it until it is no longer a wilderness. Plans to develop portions of such areas—often in themselves attractive—are manifold. But it should be axiomatic that only those uses should be permitted that does not lessen or destroy the wilderness character of the area or any part of it.

Under these conditions, is not the preservation of such areas a special privilege for a minority group, namely those who are interested in wilderness for its own sake?

I remember discussing this point one overcast January day with Howard Zahniser, executive secretary of the Wilderness Society, as we walked down a street in Washington, D. C. He observed, quite rightly, that the National Art Gallery, with all its treasures, is used by only a small proportion of the people at any one time. Someone might say, "see all this floor space going to waste. Only the walls are being used. Let's turn this into a roller-skating rink. It will attract more people and the skaters can look at the pictures as they go by." More people, no doubt, would be attracted but the essential, higher purpose for which the gallery was erected would be lost. Anyone is free to visit the art gallery but not to turn it into something else. Similarly anyone is free to visit a wilderness area so long as its character is not altered. None of the regulations governing the areas provides for special users. As Olaus J. Murie has said, "it is not for the sake of any privileged few that we are thus working for wilderness preservation, but rather for all Americans." At present, those who fully appreciate wilderness values are, in all probability, a minority. But in time, as the pioneer attitudes of our history recede, as the pressures of civilization increase, this minority may be no longer a minority. Every test in recent years has indicated that when an issue is posed the majority of voters favors preserving the wilderness. In fact, it may be true that even now the wilderness supporters comprise no minority at all but rather a silent majority.

The tonic of wildness, contact with the realities of the unchanged wilderness, these will grow increasingly precious in years to come. For going to the wilderness is not a flight from life. It is escape—but escape to reality, escape from all that is artificial in civilization. There we have left behind the forced-draft din of the advertisers, shouting that every want is a need. There we are no longer surrounded by today's thousand and one improved means to unimproved ends. There we are in contact only with timeless and basic things.

One last question: In a country of growing population should not every acre be put to use?

Wilderness acres are put to use. They are useful to man for many things, the most important of all being such things as—to use John Ruskin's phrase—we do not sell or pawn or in any other way turn into money. I walked, one morning some years ago, through a woods and around a lake with a New York businessman. His interest in nature was entirely confined to two recurring questions: What's that? What good is it? By good he meant good to his stomach or his pocketbook. A different yardstick is needed to measure the usefulness of the wilderness. Such areas are not to be considered merely as storehouses of lumber and reservoirs of waterpower for future use. They are storehouses of wildness, and wildness will become an ever-increasing spiritual need in the crowded tomorrow. "We cannot base wilderness reservations on what is merchantable," Howard Zahniser once wrote, "and we should not think of wilderness resources in terms of commodities. In the wilderness there are acres and acres of forest but no board-feet. The resources of the wilderness are of another order."

There is always the temptation, in an effort to obtain immediate acceptance for wilderness preservation, to base the appeal on a lower level. The danger in taking a short cut on a lower road is, you may get stuck there. If, for example, you seek to save songbirds entirely on the basis of the

number of caterpillars they destroy, it takes only some superinsecticde to sweep away your arguments. If you plead for saving a wilderness area on the basis of its importance as a watershed, you may find that, sometime later on, new methods of management make only a fraction of that area needed for the purpose. If you advance the argument that the area is of no use for anything else, or that the forest is no good for timber, or that lumbermen can't get in there anyhow, new techniques and new market requirements are likely to leave these seemingly practical arguments bankrupt at a later date. Only by saving the wilderness as wilderness will the goals of its longtime preservation be achieved.

This does not mean that protection of the wilderness is divorced in any way from the overall program of conservation. It is integrated with many phases of land use and land management. The development of sound forestry practices outside the areas, for instance, is of vital importance. As long as we continue to cut timber faster than we grow it, the pressure to invade wilderness tracts will mount. Only if reforestation on a wide scale and more efficient timber management are able to achieve a sustained yield outside the wilderness areas will these preserves be safe. Even if the great forests of the Olympic National Park, one of the glories of the nation, were thrown open to the saw, it is estimated the available trees there would sustain the local lumber economy for only about a decade and then, with the irreplaceable forests gone, the need for more trees would be as pressing as ever. Taking the easy way and throwing open the forests of wilderness preserves to lumbering will never offer a permanent solution to the problem. That solution must be found outside such areas if it is to be found at all.

There are, at the present time, wilderness tracts of many kinds, particularly in and to the west of the Rocky Mountains. They are under the jurisdiction of the National Park Service, the United States Forest Service, the Fish and Wildlife Service, and—subject to the approval of the Indians themselves—the Bureau of Indian Affairs. They vary greatly in size. They vary widely in designation. Within the national forests, some are called roadless areas, some primitive areas, some wild areas, and some wilderness areas. The wilderness area is the largest. It must be 100,000 acres or more in size. A wild area, on the other hand, ranges from 100,000 down to 5,000 acres. In the national forests alone, 81 areas have been set aside, totaling 14 million acres.

The whole program of wilderness perservation, although never formulated as such by Congress, has grown steadily in importance and popular interest. Its greatest danger at present is the fact that the status of any area can be altered merely by administrative decree. A more solid foundation in law is required if the areas that have already been set aside are to continue as land forever wild.

It is for this purpose that Senator HUBERT HUMPHREY, of Minnesota, with a group of cosponsors in the Senate, and Representatives JOHN P. SAYLOR, of Pennsylvania, LEE METCALF, of Montana, and others in the House of Representatives, have introduced into the 85th Congress a bipartisan bill to establish a National Wilderness Preservation System. For the first time, it would give legal recognition to wilderness preservation as a national policy. It would designate specific areas to be set aside. It would outline the public policy in regard to them, such as that man himself is a member of the natural community who visits but does not remain and whose travels leave only trails. It would set up a central advisory and information group, a repository of files for the system, known as the National Wilderness Preservation Council. In the main, the bill would preserve the status quo. No new land would be added. No new land administration agency would be set up. Jurisdiction would continue, as in the past, in various agencies of the Government.

However, public hearings would be required before the status of any area could be altered and Congress would have a chance to review any changes in the areas. Shifts by directorial fiat would be eliminated. Such changes would have to be freely announced and freely discussed before they could be put into execution. One other major change would be included in the legislation. At present anyone who reports a mining discovery in a wilderness area not only can stake out a claim but can have a road buildt in to the spot. This continual threat to the integrity of wilderness areas would be eliminated by the legislation proposed.

Known as the National Wilderness Preservation Act, it represents one of the most important steps forward in the history of wilderness conservation in America. Hearings planned for late spring and summer should be of paramount interest to every conservationist. The sponsoring senators and representatives already have been greatly encouraged by the number of letters received from citizens expressing approval of the plan. The writer of every such letter plays a cumulatively important part in providing the impetus required for passage of this needed legislation. If the conservation support that defeated the attempted invasion of the Dinosaur National Monument rallies to the support of the wilderness bill its passage appears certain.

The wilderness itself is always perishable, as perishable as a pasque-flower or a warbler. Once destroyed it is forever gone. History has decided what wilderness areas are available for us to preserve. What is done in our time will determine what will be left for succeeding generations to preserve. The strength of public-spirited individuals united in a common cause was dramatically demonstrated in the fight against Echo Park Dam in Dinosaur National Monument. That prevention of an invasion of public lands has created the right climate for putting wilderness philosophy into law, for putting wilderness preservation on a sound and lasting basis.

In a democracy one generation does not tie the hands of the next. The ultimate disposition of wilderness lands will be made by those who come later. So it is never enough to establish sanctuaries and then sit back content. Education, continual education, that will be handed on as the land is handed on, is also required.

Land forever wild—how long will forever be? The answer to this question depends upon two things. One is how well we preserve that which we have an opportunity of preserving in our own day. The other is how well those of a later day are brought to understand the value of wildness in the lives of men and all the resources of the spirit that lie within the wilderness.

Greedy Uncle Sam Deprives Local Governments of Tax Revenue—Situation Is Getting Worse Instead of Better—Relief Is Needed

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, under leave to extend my remarks I am including an editorial which appeared in the Elkhorn (Wis.) Independent calling attention to the increase of Federal taxes and the extent of the increase in the percentage of tax money from local governments.

The State of Wisconsin in 1941 sent to the Federal Government $122 million and in return received $78 million in Federal aids. In 1956 Wisconsin taxpayers sent $1⅓ billion and received back $90 millon.

The people of my State, Mr. Speaker, are paying over 10 times more in Federal taxes today than in 1941. The time has come to halt this situation.

THAT'S WHERE MY MONEY GOES

The Federal Government is taking more and more of the tax dollar and the State and local governments are taking less and less, according to an analysis furnished by Gov. Vernon Thomson. The disturbing shift of the ever-increasing tax collection to Washington, is revealed by the following tabulation showing the 15 year trend in the use of your tax money:

	Percent
1941:	
Federal Government	36
Local government	50
State government	14
1956:	
Federal Government	67
Local government	25
State government	8

It is also alarming to note that in 1941 Wisconsin taxpayers sent $122 million to Washington and got $78 million back in Federal aids. Last year we sent a billion and a third and got $90 million back.

"In other words, Wisconsin residents are paying over 10 times more in Federal taxes than in 1941 but the amount returned to Wisconsin through Federal aids has barely changed," says Governor Thomson.

Most Federal aids are matched by State funds so if we want to get more from the Federal Government we have to put up more in State funds. Thus we must raise more money to be eligible to get back some of the money we have already sent to Washington.

We heartily agree with the Governor when he says we'd get a lot more for our tax dollar if State and local governments handled the money.

America's First Participation in Poznan Trade Fair

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. PELLY. Mr. Speaker, if Members will read between the lines, the significance of the following statement will not require amplification. It was furnished me at my request by Under Secretary of Commerce W. Walter Williams:

I believe this is the information you spoke to me about. I think this should do the trick. It's an excellent idea to get this into the CONGRESSIONAL RECORD.

America's first participation in the International Trade Fair in Poznan, Poland (June 9–23), is proving most popular, Harrison T. McClung, Director, Office of International Trade Fairs, United States Department of Commerce, reported yesterday. In a dispatch from Poznan, he describes how on opening day crowds thronged through the

American pavilion, requiring 50-man police cordons, with locked arms, to restrain traffic.

While none of the exhibits from some 30 foreign countries lacked visitors on this inaugural day of the 26th Poznan International Trade Fair, none drew the crowds that jammed into the United States pavilion to see the latest home appliances, fashions, fabrics, automobiles, and furnished model American bungalow type suburban house.

The Poznan Fair opened at 1 p. m. By nightfall, Mr. McClung reported that an estimated 85,000 visitors had seen the comprehensive variety of consumer products that make up the United States display. Director McClung wired that the greatest interest was shown in the modern middle-priced home, household appliances, frozen foods, clothes and fabrics.

He also told how a separate American agricultural machinery exhibit at an area a half hour from the fairgrounds also attracted large crowds. The visitors asked many questions about the farm equipment. In some instances, Polish farmers offered to buy the machinery on the spot.

Among the early visitors was a group of Polish officials, led by Prime Minister Jozef Cyrankiewicz and Minister of Foreign Trade Tram Czynski, who spent almost an hour touring the United States exhibit. They were greeted by Ambassador and Mrs. Joseph Earle Jacobs, Assistant Secretary of Commerce and Mrs. Frederick Mueller, Congressman Thaddeus Machrowicz of Detroit, Mich., OITF Director McClung and Paul Medalie, United States Exhibit Manager.

"You have a very interesting and unusual exhibit," Prime Minister Cyrankiewicz told Ambassador Jacobs. He proposed a toast with American orange juice offered him by Miss Barbara Sampson, home economist, "to continued and growing friendship and cooperation between people of Poland and the people of the United States." The Polish officials were generous in their praise of the United States exhibit.

In commenting on the Polish models, who were displaying American clothes and furs, the Prime Minister said: "Excellent examples of Polish-American cooperation." He then paused for a time at the "Hall of Recreation," an integral part of the American Exhibit, and spoke to Miss Genevieve Minitska, Polish Olympic track star of Helsinki (1952) and Melbourne (1956), who is directing a vast exhibit of sports and recreational equipment. At the conclusion of his tour, Prime Minister Cyrankiewicz, who was extremely delighted with the American house, said, "The United States Exhibit here in Poznan should do much to add to Polish-American friendship and cooperation."

His countryman, Minister of Foreign Trade Czynski, echoed the same words. During the tour, the latter was especially interested in the large American display of television sets varying in sizes from small screen portables to large console types.

By the time the Fair comes to an end, June 23, it is expected that more than 750,000 people will have seen the United States consumer goods exhibit which shows the things Americans wear, use, and consume.

Among the questions asked by Polish visitors of the United States Central Exhibit are these: "How much is a refrigerator?" "Could you use a washing machine and dryer for a laundry business?" "Will you leave the model house when you go?" "Please, can I live in the house while it is here?"

A foreign correspondent told how one visitor said as he came out of the exhibit on opening day, "I know America is wonderful, but I can't believe that the ordinary man has a deep freeze, a radio, a television set, a car and goes skiing every winter."

"But whether they believe it or not," the correspondent wrote, "The Poles were impressed. They watched fascinated as frozen fruit juice was whipped into drinkable condition, as frozen waffles were popped in and out of electric toasters and as the automatic windows of American cars slid silently up and down."

The Middle East and Discrimination

EXTENSION OF REMARKS
OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of an address I delivered on Saturday, June 15, 1957, at the annual convention of the New York Department of the Jewish War Veterans of the United States of America, at South Fallsburg, N. Y.:

ADDRESS BY CONGRESSMAN VICTOR L. ANFUSO, JEWISH WAR VETERANS, NEW YORK DEPARTMENT, HOTEL BRICKMAN, SOUTH FALLSBURG, N. Y., JUNE 15, 1957

Mr. Chairman, members, and friends of the Jewish War Veterans, United States of America, and ladies auxiliary, I am delighted to be here with you this afternoon and to have the opportunity to renew old acquaintances and make new ones. Many of your leaders are my personal friends. I am quite familiar with your wonderful organization and its great record of achievements. In fact, several times during these past few years I had occasion to speak in the Halls of Congress and to insert material into the CONGRESSIONAL RECORD about the activities and accomplishments of the Jewish War Veterans of the United States of America.

May I say to you at this time, on the occasion of your annual convention, that I wish for you a year of fruitful activity in the coming 12 months, and may you realize your programs in all spheres to the fullest extent, and may you go from strength to strength in your efforts. Yours is a good cause, a deserving cause, and I shall always be proud to be associated with you in any endeavor you may call upon me.

Your past national commander and my dear friend, Abe Kraditor, who is primarily responsible for my being here today, has suggested that I discuss with you the recent agreement between the United States and Saudi Arabia in which the United States acceded to the discrimination against Americans of the Jewish faith by that Arab country. Although this is a matter involving constitutional law and would require a long dissertation, I shall touch on it, nevertheless, in the general context of the Middle East situation.

The Middle East situation, as you well known, has been relatively quiet these past few weeks. Nasser has been losing ground in the Arab countries, such as Jordan and Lebanon, and may soon find himself completely isolated. But not only is he losing ground and prestige with his Arab neighbors, but he lost much more with Israel when the latter routed his army in Sinai and captured many of his tanks and other equipment.

In fact, there is a nice little story making the rounds in Israel now. At the Independence Day celebration a few weeks ago, the Israelis put on a big parade in Tel Aviv in which they displayed some of the captured Egyptian tanks. Two Jews were standing and watching the parade. One of them was a refugee from Egypt who had been expelled by Nasser and recently arrived in Israel. As the Egyptians tanks came rolling by, he turned to the other Jew, and said:

"You know, Nasser was right. He kept his promise."

"What do you mean he kept his promise?" asked the Israeli Jew.

"Well, it's this way," replied the Egyptian Jew. "Last year I stood in Cairo and heard Nasser tell the Egyptians that his tanks would parade through the streets of Tel Aviv. Well, he kept his promise. Here they are."

Speaking in a more serious vein, I am glad to see considerable improvement in the Middle East situation of late. The military situation appears to be relatively stable. Nasser's influence, as I stated a moment ago, has diminished and his ego is much deflated—thanks to Israel. American-Israeli relations have improved to some extent over these past few months, and I trust they will remain friendly and cordial for many years to come.

That does not mean that all problems have been solved or are on the verge of being solved tomorrow or the next day. Israel is still confronted with difficult international problems, with the security of its borders, its relationship with the Arab countries who are continuing and expanding their boycott of Israel, and also with the problem of attaining economic self-sufficiency. If peace could be maintained in the Middle East, many of these problems could be solved in due time.

It was most unfortunate that the relations between the United States and Israel became strained last fall after the Sinai action. There was no cause or reason for it. Had the United States pursued its traditional policy in this matter, had we truly realized then the full meaning of Nasserism and its Communist coconspirators, had we understood that they were gunning not only for Israel but even more so for the United States and the free world, we could have avoided much misunderstanding and tension.

It is my deep regret that the United States in recent years has failed to pursue a firmer policy with the Arab couutries, as befits a world power such as ours. By now, we are all aware that appeasing Nasser has not achieved peace and stability in the Middle East, just as appeasing Hitler in the 1930's did not achieve world peace. It is high time for the United States to exert all possible influence in world affairs to put this would-be Hitler of the Middle East in his proper place, if we desire to safeguard that area against communism. The removal of Nasser would be the best contribution to Middle East stability and world peace.

Must we wait until he brings on a new disaster by his arrogance? Must we continue to coddle Nasser and to ignore his antiwestern intrigues. Must we disregard his alliance with Russia and his reckless purchases of new arms? Must we close our eyes to his announced goal to destroy Israel?

The answers to these questions are obvious. If Nasser is permitted free rein as in the past, a new crisis will develop—and for this we shall have to thank our State Department because it pursues a Middle East policy which does not measure up to reality. Some of our officials still talk about bringing Nasser back to the path of peace and righteousness, and reaching a satisfactory agreement with him. But I tell you that this man constitutes a serious threat to the free world.

I wonder sometimes whether the State Department realizes the full gravity of this menace. When I see that Mr. Dulles is still aspiring to play the role of an impartial peacemaker in the Middle East, when I realize that the Eisenhower administration still refuses to take a firm and decisive stand regarding the Arab countries—then I must conclude that our Government is blind to the impudence and threats of a Nasser and his ilk. Unfortunately, Secretary Dulles continues to drift along in a state of immobility for fear he might provoke the Arabs. Instead of strength, we display weakness.

And this brings me to the United States-Saudi Arabian agreement, to which I referred earlier. The agreement which allows Saudi Arabia to keep American-Jewish military personnel out of our air base at Dhahran is an affront to Americans of all faiths. Originally concluded in 1951, this agreement was extended for another 5 years when King Saud visited Washington last February. It specifies that no persons objectionable to Saudi Arabia would be assigned there. In 1951 President Truman held that this was to be done only on an individual basis, rather than in terms of discriminating against a whole people.

It is quite clear that this is simply and solely discrimination against American Jews. I, for one, regret that it has been so codified with this interpretation under the Eisenhower administration. True, the State Department keeps assuring us it will continue its efforts to remove this discrimination, but if it could not be done before the agreement was signed it certainly will not be achieved now. The Saudi Arabian government continues to deny entry and transit privileges to Americans of the Jewish faith, and no American-Jewish soldiers are allowed at an American air base built and operated with the funds of American taxpayers. In fact, the Air Force Manual of the United States Government states specifically: "Individuals of Jewish faith or descent or strictly barred entrance or transit to Saudi Arabia."

This is absolutely base discrimination. As an American citizen, I resent it. As a naturalized citizen of this country, I wish to state with all the emphasis at my command that once an alien becomes an American citizen he should receive the same respect and treatment as any native-born citizen. I think it is the duty of our country to see to it that he is so respected by foreign countries, regardless of whether he was born a Jew, an Italian, a Negro, or a Chinaman. He should never be referred to in any other manner but as a citizen of the United States. Unless we protect these rights for our citizens, we are letting ourselves open to many abuses in the future.

In addition to our acceptance of Saudi Arabian discrimination against American citizens, there are also commercial repercussions which are closely related to it. Saudi Arabia, together with other Arab countries, boycotts American firms in which Jews have an interest. All American firms, which have contributed to the United Jewish Appeal or have agents or branches in Israel, are blacklisted. Ships which call at Israeli ports are blacklisted and forbidden to enter Arab ports. This is a boycott which is destined to hurt not only Israel, but the whole Middle East and in the long run also the United States. What are we doing to stop it?

Actually, there is no legal basis for challenging the agreement, which in itself is an executive arrangement. You will remember that about a year ago (July 26, 1956) the Senate passed a resolution, Senate Resolution 323, sponsored by Senator George, which stated that discriminations such as those practiced by Saudi Arabia are inconsistent with American principles. It went on to note that these discriminations were incompatible with friendly international relations and it called for every reasonable effort in our negotiations to maintain our democratic principles. The resolution was adopted only in the Senate, but never came before the House, hence it is not a law and therefore has no binding legal effect. A much stronger resolution was previously introduced by Senator Lehman of New York stating it was the sense of the Senate that certain actions were highly inappropriate in our foreign relations, but Lehman's resolution was sidetracked in favor of the George resolution.

There remains, however, a vital moral and political issue which has been expressed in terms of an old dilemma—that of posing political principle against the requirements of the national interest. There is the value of the airbase in a relatively secure area on Russia's southern flank—an area which is subject to severe Russian pressure. There is the oil flowing from the Arabian Peninsula, which is of great material and strategic importance to the free world. Finally, there is the belief that Saudi Arabia can play a key role within the Arab world against Communist infiltration in that area.

The opponents of these policies set forth some practical arguments. They hold that Saudi Arabia gains a great measure of protection against the threat of communism from the existence of the base on her territory, and also from the $50 million military aid program from the United States. Saudi Arabia also derives a huge income from its oil, which runs into several hundred million dollars annually. Thus, there is no need for the United States to make further concessions to that country.

Finally there is the question of American foreign policy objectives as measured against the so-called spiritual position of Saudi Arabia in the Middle East. Our purposes, ironically enough, are pointed up in the Eisenhower-Saud communique: both parties avowed a determination to settle Middle Eastern problems under the U. N. Charter and to oppose the use of force from any source to settle disputes. They added that any aggression would be opposed by the principles and purposes of the U. N.

The American Government stands for political stability in the Middle East, which includes also the peaceful existence of Israel and the end of efforts, like those of Nasser, to master Arab nationalism for extremist purposes. Yet, despite this understanding with the United States, Saudi Arabia remains at war with Israel and, like the other Arab States, calls for Israel's eventual destruction. It seeks jet planes, larger and more tanks, and enough arms to double its present force of 15,000 men. I ask in all sincerity: For what purposes does Saudi Arabia need these arms? And I also ask of our own Government: In agreeing to permit Saudi Arabia to discriminate against our own citizens, how do we enhance our foreign policy objectives? Aren't we encouraging other nations to do the same and to pursue discriminatory practices against our people? Is this the way we uphold democratic principles?

Our failure to confront such discrimination and to deal with it properly feeds Arab-Israel tension by enabling Arab extremists to argue that they can get United States aid and protection against communism, and at the same time prepare themselves for war against Israel. Instead of acting to check the power of Nasser, who is leading the anti-Israel movement, we are actually fostering the conditions under which his power grows and sustains itself. This is the path to further flare-ups, like that of last year, and of permanent political instability. It does not really enhance our national interest. On the contrary, it jeopardizes our interests in the Middle East.

Administration's Interest Rise Proposal Aimed at REA, the Family Farmer's Friend

EXTENSION OF REMARKS

OF

HON. COYA KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 14, 1957

Mrs. KNUTSON. Mr. Speaker, this administration's antifarmer program is taking many and devious forms. The latest is its proposal to increase interest rates on Government loans—which is aimed directly at the family farmer's friend, REA. By increasing interest rates at this time, the farmer's thin pocketbook, already reduced to a shadow by the administration's farm program, will be further flattened.

During the farmers' good years, REA turned back to the Treasury of the United States according to REA's 1956 annual report, a total of $48 million. Taxpayers please take note. Even in "big business lingo" a profit of $48 million in 22 years "ain't exactly hay."

Today the family farmer is fighting for his life against the "big farmer" administration. Now that the family farmer is down, private power interests and others, by their tremendous unethical and false campaigns against their "competition," have induced the administration—with very little difficulty—to deliver another major body blow against the farmer—by proposing to increase his costs still further for his electricity which these same power interests have never been interested in or willing to supply themselves.

Quite apart from the rank discrimination involved, nobody is fooled as to the end purpose of this broad proposal—least of all the members of the cooperatives and the farmers themselves. Under leave to extend my remarks, I request permission to insert an excellent editorial on the subject from the pages of the Rural Electrification magazine, June issue:

ADMINISTRATION INTEREST RISE PROPOSAL AIMED AT REA

An administration move to increase interest rates on Government loans was aimed at the rural-electrification program, according to a White House announcement May 28. It evidently stemmed from a protest raised by the Indiana State government against a generation and transmission loan application sought by nine rural electric cooperatives of that State. Indiana's Gov. Harold Handley sent the State's public servic commission members to see Agriculture Secretary Ezra Benson about the loan the previous week.

NRECA immediately issued statements defending the right of REA to make such loans, and denied that there is any justification for raising REA's interest rates.

President Eisenhower announced that the administration is drafting a bill to forbid all Government lending agencies from making loans at less than the interest rate paid by the Treasury on its borrowings, through party congressional leaders. The announcement said Republican leaders were discussing REA loan policy when the proposed legislaiton was mentioned by Eisenhower. Representative CHARLES A. HALLECK, of Indiana, was reported to have raised the issue over a loan being sought by Hoosier Cooperative Energy, Inc.

General Manager Clyde T. Ellis told reporters, "the National Rural Electric Cooperative Association is unequivocably opposed to President Eisenhower's recommendation to increase interest rates to farmer-owned and controlled rural electric cooperatives. REA is a creature of Congress, and we believe it is up to Congress to establish interest rates in the light of the benefits of the loan program to the public welfare.

ARTIFICIALLY CREATED JUSTIFICATION

"The alleged justification for increasing the 2 percent interest rates now charged by the Rural Electrification Administration is one artifically created by the Eisenhower administration. The real remedy is to put a brake on inflationary interest rates, which

will increase the cost of power to 4 million farm families they serve."

The annual report of the REA Administrator for fiscal 1956 states that the Government had accrued a net profit totaling $48 million from REA lending operations since the inception of the program 22 years ago, due to borrowers paying interest rates higher than cost of Government money most of those years.

"The Government has never lost a dime on REA loans to the co-ops," declared Ellis, "but it will if this interest increase goes through." Rural electric cooperatives have borrowed $3 billion from REA, and have achieved one of the finest repayment records in the history of American financing. As of March 31, 1957, the rural electric cooperatives had repaid $450,241,415 of principal and had paid $275,347,019 in interest on their loans. In addition, rural electric cooperatives have paid $104.7 million in advance of their amortization schedules. Moreover, the total amount delinquent is less than one-twelfth of 1 percent of all the money loaned to farmers, approximately $178,000.

In the face of this, Ellis declared, "The average cost of money to the Treasury has been increased from 1.9 percent in 1948 to an average of 2.7 percent last February—not 3.5 percent as Senator STYLES BRIDGES, (New Hampshire), claimed in the White House announcement—and it is still rising as a result of banker-dictated hard-money policies. The administration's hard-money, high-interest policies are inflationary and destructive to small business and farmers, consumers, home builders, and purchasers, and are increasing the cost of Government preventing the construction of needed schools and hospitals, and has increased the Federal interest burden by over $700 million each year.

2 PERCENT BRITISH LOAN CONTRACTS

The administration has just negotiated a British loan of $4.4 billion at 2 percent. This will run through the year 2007. Principal payments on original loans were deferred for the first 5 years—and no interest was charged at all for the first 5 years. Moreover, under the renegotiated loan, the British are entitled to waive up to seven of the annual principal payments and interest installments when they fall due. "Domestic policies should not be subordinated to foreign policies in this discriminatory manner," Ellis asserted.

"To increase REA interest rates to 3 percent is a 50-percent increase in debt service for the farmer-owned co-ops," Ellis observed. "This is indefensible when farmers are already hard pressed by the cost-price squeeze. Farmers' net income in 1956 was only $11.6 billion as compared to $16 billion in 1951—a drop of 27.5 percent. Compared to this, interest income skyrocketed 56 percent, from 1951 to 1956—from $11.6 billion to $18.2 billion as a result of the hard-money policy."

Report of Committee on Industrial Water Use, Pollution Abatement, Wildlife, and Recreation to the 44th National Convention of the National Rivers and Harbors Congress

---

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks, I wish to include the report which was made to the 44th annual national convention of the National Rivers and Harbors Congress by the newly created committee on industrial water use, pollution abatement, wildlife, and recreation.

This is one of the most important committees which will function at our national convention—

Said Representative OVERTON BROOKS, of Louisiana, president of the congress, in announcing its appointment.

The purposes of the committee are to formulate a policy and program for the conservation, development, and use of our water resources and the abatement of pollution; and to suggest ways and means whereby the National Rivers and Harbors Congress may better cooperate and coordinate its efforts with those of the advocates of water conservation and pollution abatement.

I have served for many years as vice president of the congress for the State of Minnesota and was honored to be asked by President BROOKS to act as chairman of this committee which it is agreed by all can render a distinct service to the people of the United States.

The committee met with a full attendance on May 16, 1957, and continued in session that day and the next, reaching complete agreement on its proposed report. On May 18, at the final session of the congress, I presented the committee's report which was unanimously agreed to by the convention.

Subsequently, I am informed, the board of directors of the congress acted favorably on a motion to make this a permanent, standing committee, and I am sure I speak for all of its members when I say that we shall be glad to continue our labors in the months and years ahead.

I was impressed by the keen interest shown by the committee members representing the many diverse geographic areas of our country and it was obvious that there is a growing awareness throughout the country of the increasing importance of this complex problem of sound water-use and pollution-abatement policies and programs.

The report of our committee is as follows:

NATIONAL RIVERS AND HARBORS CONGRESS, 44TH NATIONAL CONVENTION, WASHINGTON, D. C., MAY 16–18, 1957

(Report of committee on industrial water use, pollution abatement, wildlife, and recreation)

PREAMBLE

The history of this Nation's growth is paralleled by a history of action to conserve our natural resources. As it has become necessary to the national welfare, measures have been taken to conserve and, where feasible, restore our lands, forests, and minerals. In recent years there has been increasing public concern directed toward the conservation and restoration of the Nation's fresh water supplies. The Nation is becoming water conscious, aware that water is a major factor in all of man's relationships to his environment and that an adequate supply of usable water is essential to our economic future and way of life. Stated simply, the water resource problem is one of making the essentially constant water supply of the Nation meet an ever increasing demand, and of providing the right quantity of the right quality at the places where it is needed. Water use for all purposes is on the increase, particularly for municipal, industrial, irrigation, and recreational purposes, and for transportation of wastes. It is estimated that by 1975 the Nation's population will be in the range of 220 million persons, and industrial capacity will be double the 1950 levels. Public water supply use will probably increase from 17 billion gallons per day to 30 billion gallons per day, and industrial water use, excluding power, will increase from 60 billion gallons per day to 115 billion gallons per day. The estimated use of water for irrigation will reach 170 billion gallons per day—50 billion gallons per day more than is now used. By 1975, this country will require an increase in the current water supply of 145 percent—equal to the additional supply of 145 New York Cities, requiring the flow of about 11 Colorado Rivers. Another, and probably the fastest growing use for water is recreational use, for boating, swimming, camping, and fishing. As our economy expands, leisure time increases, and population grows, and better highways make travel safer and more convenient, it will become necessary to provide more and more water areas suitable and available for recreational uses.

To meet foreseeable water needs will require a variety of conservation practices. Among these is the prevention and control of water pollution and the regulation of runoffs to even out stream flows. In addition to important public health values, water pollution control is essential to permit safe reuse of the water for all legitimate purposes as streams flow from city to city.

Whereas acute water shortages exist and severe water shortages are in prospect over wide areas of the Nation unless bold, preventive actions are taken for maximum conservation and utilization of waters; and

Whereas pollution causes water shortages as effectively as droughts and surface and ground water are being progressively deteriorated by manmade pollution to an extent that pollution abatement is now a major integral part of water conservation; and

Whereas corrective conservation and pollution abatement practices are lagging behind the increasing need for water; be it

Resolved, That the committee on industrial water use, pollution abatement, wildlife and Recreation of the National Rivers and Harbors Congress strongly urge a positive Federal-State-local cooperative program for the maximum conservation of waters for essential uses, including effective abatement of pollution, which program includes the support of:

1. Policies relating to conservation and pollution abatement as set forth in the report of the President's Advisory Committee on Water Resources Policy, January 1956:

"The committee endorses the established policy of primary State responsibility for controlling water pollution at its source. This is a traditional State responsibility and should continue. The Federal Government should assume its share of responsibility for pollution caused by its establishments. However, because of the broad public concern with water pollution and the growth and seriousness of the problem, the committee recommends that the Federal Government assist the States through research, investigation, and technical assistance in the solving of pollution problems at their source.

"Where the effects of pollution are interstate and where regulatory actions by the States or interstate agencies are ineffective, the Federal Government should prescribe basic criteria and participate in the planning of long-range programs for the abatement of pollution. Such action would be in addition to the enforcement of Federal statutes applicable to the abatement of pollution in interstate waters."

2. The principles as set forth in section 205 and 206 of S. 497, 85th Congress, authorizing the provision of storage in reservoir projects—

(a) for present and anticipated future needs for municipal and industrial water supplies under the method of reimbursement when contract for use of such impoundment water is made, and

(b) to increase needed low flows downstream to the extent warranted at present or during the economic life of the project with such low flows determined on the basis of widespread general benefits;

3. Practical methods for stimulating construction of necessary water pollution abatement works with Federal and State financial incentive aids;

4. Comprehensive programs of water-resource development, including flood control, irrigation needs, recreation and water-pollution control, and other beneficial uses, geared to meet the future water requirements of the regions, in accordance with State law and interstate or basin compacts or agreements;

5. A joint effort to intensify conservation and water-pollution control efforts with Federal, State, interstate, and local responsibilities and authorities exercised at the lowest practical level consistent with the regional and national interests involved; and

6. Reuse of water to develop the maximum conservation and utilization of existing sources to help meet the increasing water requirements; and

7. A program to ascertain, assemble, and disseminate in useful form basic data relative to surface and ground-water resources and potential water resources by use of reservoirs.

Chairman: Representative JOHN A. BLATNIK, Chisholm, Minn.

Secretary: Dr. Daniel Bergsma, past president, association of State and Territorial Health Officers.

MEMBERS

New England division: Walter G. White, chairman, water resources board, State of New Hampshire, Concord, N. H.

North Atlantic division: George R. Shanklin, chief engineer and acting director, division of water policy and supply, State of New Jersey, Trenton, N. J.

South Atlantic division: Miles J. Smith, vice chairman, North Carolina Board of Conservation and Development, Salisbury, N. C.; Harry H. Saunders, vice president, St. Joe Paper Co., St. Joe, Fla.

Southwestern division: Judge J. E. Sturrock, general manager, Texas Water Conservation Association, Austin, Tex.

Lower Mississippi Valley division: Leonard N. White, engineer, Arkansas Geological and Conservation Commission, Little Rock, Ark.; Calvin T. Watts, assistant director, Department of Public Works, State of Louisiana, Baton Rouge, La.

North Central division: Lynn F. Baldwin, chairman, Michigan Water Resources Commission, Lansing, Mich.

Missouri River division: Milo W. Hoisveen, chief engineer, North Dakota Water Commission, Bismarck, N. Dak.

Ohio River division: Laban P. Jackson, commissioner of conservation, State of Kentucky, Frankfort, Ky.

North Pacific division: Herbert G. West, executive vice president, Inland Empire Waterways Association, Walla Walla, Wash.

South Pacific division: Walter G. Schulz, division chief engineer, division of design and construction, Department of Water Resources, State of California, Sacramento, Calif.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

American Democracy

EXTENSION OF REMARKS
OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Tuesday, June 18, 1957

Mr. BUSH. Mr. President, last week, on June 12, the distinguished Senator from New Jersey [Mr. CASE] spoke in Hartford before the Hartford Chamber of Commerce. He was introduced by Mr. William H. Mortensen, former mayor of Hartford, and also, in part, by George J. Ritter, corporation counsel of the city of Hartford.

The address of the Senator from New Jersey was a very significant one. I have prepared excerpts from it which I think would be of great interest to Members of the Senate and to others who read the CONGRESSIONAL RECORD. For that reason I ask unanimous consent that both the address and the introductory remarks by both gentlemen be printed in the Appendix of the RECORD.

There being no objection, the introductory remarks and the excerpts were ordered to be printed in the RECORD, as follows:

INTRODUCTION OF UNITED STATES SENATOR CLIFFORD CASE, OF NEW JERSEY, BY WILLIAM H. MORTENSEN, FORMER MAYOR OF HARTFORD, AT ANNUAL MEETING OF HARTFORD CHAMBER OF COMMERCE, HOTEL STATLER, HARTFORD, CONN., JUNE 12, 1957

In the summer and fall of 1954 we had a number of exciting and close-fought political campaigns in this country. But none of them was more spectacular or more closely engaged public interest the Nation over than the battle for the United States senatorship in New Jersey. The winner of that important contest is our principal speaker tonight.

You might suppose, from his Phi Beta Kappa key, that our guest of honor tonight belongs in the venerable American tradition of the scholar in politics. That is hardly an adequate designation. It takes something more than scholarship to accomplish what he has done on the American scene.

He has been a phenomenally successful political candidate. In fact he has held public office continuously since 1938—a remarkable achievement when you consider that he doesn't come from the Deep South.

For 20 years his climb has been steady: Five years on the council of his native Rahway; 2 years in the legislature of his State; 9 years a Congressman from his New Jersey district, and now in the midst of his first term in that most august of legislative assemblies, the United States Senate.

And he seems to have gotten better as he went along. On his fifth successive trip to Congress, his fellow citizens of the sixth district packed him off to Washington with a majority of nearly 55,000 votes. This was 20,000 higher than any other Congressman from the district had ever received. In fact, 10,000 more than the voters of the district gave his good friend, President Eisenhower, in the same campaign. (You certainly don't have to have the political savvy of Ned Allen or John Bailey to appreciate that kind of batting average at the polls.)

I spoke of the gentleman's academic distinction, but, obviously a candidate has to have something more than good grades at college to win such a massive and continuing mandate from his fellow citizens.

In addition to a first-rate mind and a willingness to work around the clock, he brings to politics and government the warmth of heart and human understanding without which no candidate can for very long retain the confidence of the people. A practical idealist, he has shown himself consistently eager to seek out the right thing, and then to do his best to make the right thing the possible thing.

It gives me much pleasure to present him to you: Lawyer, humanitarian and an ornament to American politics and government, United States Senator from New Jersey, the Honorable CLIFFORD CASE.

REMARKS MADE BY GEORGE J. RITTER, CORPORATION COUNSEL OF CITY OF HARTFORD, AT HARTFORD CHAMBER OF COMMERCE BANQUET, JUNE 12

Mr. Toastmaster, Senator CASE, invited guests, on behalf of Mayor Cronin, Acting Mayor Parskey, and the city of Hartford, I am pleased to bring you greetings tonight.

As a transplanted Jerseyite, with some deep roots—and lots of relatives—still left in the Garden State, I am particularly happy to extend a warm welcome to our speaker of the evening.

A double coincidence has served to help focus my close attention on the Senator's public life. First, the Senator and I are fellow alumni of Rutgers University. Second, one of my closest friends, a former classmate at Rutgers, is the Senator's top assistant.

Accordingly, I have followed with much interest, Senator CASE's vigorous support of such important measures as our mutual security program, Federal aid to education, protection of civil rights, the President's program of atoms for peace, and adequate funds for our vital United States information program abroad.

His record, previously as a Congressman, now as a Senator, explains why many responsible and influential citizens cross party lines to support him at election time.

Senator CASE, I'm happy to be able to assure you that your approach to politics finds great support in our Hartford community. Indeed, our toastmaster, Mr. Mortensen has brought to local public life a system of values, and an ability to stick to these values such as distinguishes your own career.

Senator, I know you will share much of yourself with us this evening. In return, I hope that in your few hours with us you will be able to sense our high regard for you. Perhaps this will serve in some small measure to reinforce you in your most vital and demanding job.

PARTIAL TEXT OF REMARKS BY SENATOR CLIFFORD P. CASE, REPUBLICAN, OF NEW JERSEY, PREPARED FOR DELIVERY AT CHAMBER OF COMMERCE DINNER, HARTFORD, CONN., JUNE 12, 1957

Like everything else, American democracy suffers from the defects of its own virtues. And the very fact that our democracy has been so successful has magnified these inherent defects.

If democracy—government by consent—is to work, the people must achieve a working consensus on the issues they consider truly important. In America we have achieved this consensus to a remarkable degree. But with it has developed a willingness to conform, a pressure for conformity, a tendency toward orthodoxy in action and thought, which, unless consciously and continuously corrected, could mean disaster over the long pull.

There are those who reject democracy on this very ground. But, for me, surely for the great majority of Americans, that alternative is unthinkable. Our problem is to maintain our American consensus, so essential to government by consent, and still find ways to prevent the smothering of the individual and to promote individual initiative and diversity without divisiveness. This we must have if our society is to continue to grow and expand and to adapt itself to the changing needs of our people in this modern age.

This is one of the reasons why our continued support for the civil rights and freedoms embodied in our Constitution and the Bill of Rights is so essential. These rights, in our view, are inherent in each individual because he is a human being. Beyond that, the maintenance of each individual's rights is essential to our society because only as the rights of the individual are thus protected will society have the benefit of the spontaneous contributions which can only be made by men who are truly free.

Another defect inherent in our successful democracy is our insistence that the great decisions be made by the people as a whole. Both because of our egalitarian tradition and our commonsense recognition of man's capacity for evil as well as for good, we refuse to entrust power to any single individual or group. We reject any notion of an elite ruling class.

This insistence is indeed soundly based. But once refusal to allow an elite to make the decisions for us can be disastrous if we as a people are unwilling to assume the burden of making those decisions for ourselves and in a responsible manner. If as a people we fail to meet this responsibility, we shall certainly destroy our democratic way of life. And in this thermonuclear age our failure in this regard may well spell the end of civilization.

When errors of judgment or lack of wisdom in dealing with the great issues carry such fateful penalties, an alert and informed public opinion becomes more than ever essential. Two examples may help to make clear by meaning.

No one who has followed the hearings on defense appropriations can help but feel deep concern at the interservice rivalry they so clearly reveal. Conflicting claims, duplication of effort, the constant battle for public attention, all point up the absence of any true unification.

Even more important, they indicate the lack of an overall defense policy or doctrine under which the role and mission of each service is clearly defined. Yet surely nothing could be more important to the long-term security of the country than its ability to protect itself against small as well as big aggression.

The unfortunate fact, however, is that the battle for budgetary priority has inevitably tended to emphasize the "bigger

bang for a buck." The development of ever more powerful and complex mechanisms has overshadowed the problems involved in recruiting and keeping the skilled manpower required to operate them. Most significant of all, in the opinion of responsible authorities, it has weakened our ability to defend ourselves by something less than all-out war.

Closely allied is the problem of finding ways to lessen the threat of nuclear catastrophe. As you know, talks are now going on in London looking toward the possibility of breaking through the unhappy impasse in which we have been living for some years.

I will not here attempt to discuss this question. My point is that in this, as in the other case I cited, there are no easy or dogmatic answers. They require a thoughtful objective approach, keeping always in mind the long-range interests of our country and people. They require a willingness to explore all possible avenues to agreement as well as a sustained effort. But the effort can succeed only as it is backed by the understanding and support of the people. And this in turn largely depends on the degree to which the relevant information is freely available and freely discussed.

Each one of us has responsibility for the course we follow in matters of this kind. If you and I are to participate intelligently, we must first of all want to. And, second, of course, we need facts and an opportunity to examine different points of view.

I am one of those who believe the American people have nothing to fear from a free exchange of ideas and opinion. I do not think our security is threatened by exposure to a Khrushchev on television. Indeed his appearance seems to me to provide a chance to press for an equal opportunity for an American to be heard on Soviet airways. We should, in my view, welcome such opportunities just as I think that wherever possible it is preferable for us to have the reports and accounts of our own newsmen even in such a country as Red China.

In short, I do not think we need ever fear the facts, whether they concern radiation hazards, the condition of our Armed Forces, or the strategic alternatives we face. Indeed we must ever seek the facts for, in the largest sense, our survival as a nation and democracy is at stake.

The "Open Curtain" Proposal—Editorial Comment

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, June 18, 1957

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD two very excellent editorials on the "open curtain" proposal—one from the Baltimore Evening Sun, and one from the Pittsburgh Sun-Telegraph.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Pittsburgh Sun-Telegraph of June 13, 1957]

CALLING KHRUSHY

Over last weekend Senate Republic Leader KNOWLAND and Senate Democratic Leader JOHNSON made proposals designed to call Soviet Boss Khrushchev's bluff.

We'll bet a $7 bill against a repudiated Soviet government bond that Khrushy won't lay down the hand.

It was his professed belief in the recent TV interview that communism was so popular of itself that the regimes in Hungary, Poland, and East Germany would flourish even with withdrawal of Soviet troops and that in Russia nothing could weaken it.

Senator KNOWLAND said in effect: How about a test? Would you agree to get out of Hungary if Norway would agree to become neutral or get out of Poland if we got out of Greece?

Senator JOHNSON proposed free and unjammed radio and TV time for American spokesmen to reach into homes in the Soviet Union and the satellites in return for equal time on American air waves for Soviet speakers.

As we suggested above, we think there's not a chance either proposal will be accepted.

But it's good to see Senate leaders of both parties engaged in showing up the emptiness of Khrushy's words.

[From the Baltimore Evening Sun of June 13, 1957]

CLASH OF IDEAS

The very fact that Nikita Khrushchev agreed to appear on an American television program should have set State Department brains to work on the problem of exploiting this new and large chink in the wall separating Russia from the Western World. Instead it has been Senator LYNDON JOHNSON who took the initiative in pressing for wider reciprocal exchanges. In his address Saturday night he pointed out that now might be the time for the United States to try for frequent, even weekly appearances of American spokesmen on Soviet radio and television. Under his plan Russians would have the same access to American audiences. Industrialists, farmers, labor leaders, professional men and others could participate, he pointed out. For the first time the Russians might get a clear, undistorted—and unjammed—version of different aspects of American policy and practice.

The Secretary of State has given Mr. JOHNSON his blessing and congressional support is building up for the proposal. If the Russians should express a willingness to put the bars noticeably lower than they have kept them in the past, it would be a clear gain for the West. Except for a handful of diplomats and propaganda officials, very few Russians have had access to undistorted versions of Western proposals and policies. In this country, on the other hand, Russian broadcasts have been available on short wave, unjammed, for any who care to listen. We have little to fear in any more vigorous clash of opinion.

Some of the difficulties of working out a practical arrangement are obvious. One became aparent when the subject was discussed at the summit conference in Geneva 2 years ago. Western proposals offered at that time envisaged the free flow of information—and persons—who represented only themselves, as farmers, journalists, doctors, professors or whatever. The Soviet counterview was based upon an exchange of official delegations, under the close control of government officials. Later, at the subsequent foreign ministers conference at Geneva in the fall of 1955, more specific Western proposals for dispensing with jamming of broadcasts, for an exchange of uncensored monthly broadcasts on world developments, and for elimination of censorship were offered.

Only the second of these three met with even a partially positive response. Soviet intervention in Hungary washed out whatever promise there seemed to be of developing this. But the Khrushchev speech has raised the question once again, in concrete form. And it is good to see both Senator JOHNSON, and belatedly the State Department, recognizing that something may be gained by pressing the matter.

Address Delivered by Hon. Joseph S. Clark, of Pennsylvania, Before the National Housing Conference

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 18, 1957

Mr. HUMPHREY. Mr. President, the distinguished junior Senator from Pennsylvania [Mr. CLARK] addressed the National Housing Conference last night in Washington. The conference could not have chosen a more appropriate speaker on the subject of housing. His long-time interest in housing matters, buttressed by his outstanding record as mayor of Philadelphia, have made Senator CLARK an authority in this field. I am glad to be associated in all aspects of his work for better low-cost housing.

Our current national housing crisis which our colleague discussed last night in his address is more than a sufficient reason for Senate adoption of S. 2159, Senator CLARK's bill, which I joined in cosponsoring, and which would create a Department of Housing and Urban Affairs.

Mr. President, I ask unanimous consent that the text of Senator CLARK's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR JOSEPH S. CLARK, DEMOCRAT OF PENNSYLVANIA, BEFORE THE NATIONAL HOUSING CONFERENCE JUNE 17, 1957, STATLER HOTEL, WASHINGTON, D. C.

I am glad to have this chance to become better acquainted with you of the National Housing Conference. Having been on the Housing Subcommittee of the Senate for the last 6 months, I have developed an even greater respect for your organization than I had before.

In that committee, the bankers tell us what is good for the people who lend for housing. The real estate boards tell us what is good for the people who trade in housing. The builders tell us what is good for the people who build housing. But when Ira Robbins or Lee Johnson or Bill Wheaton steps up to testify for the National Housing Conference, then we know we are going to hear about what is good for the people who live in housing—which is, after all, what houses are for.

We meet at a time when, as all of you know, the housing situation is literally going from bad to worse. Seven mayors came before our committee a few weeks ago representing the American Municipal Association and the United States Conference of Mayors and told us that in virtually every city of the Nation, the slums and blight that are the shame of the 20th century are spreading faster than they are being cured. We are scarcely building houses as fast as families are being formed plus normal losses of housing units—so we are not rehousing the 5 to 7 million families living in places not fit for human beings. To really make progress in improving housing standards, there is general agreement that we need each year at least half again as many houses as are now being built, and the best authorities I know reckon we really need twice as many.

We need more houses—and we need cheaper houses. The price of new homes has been rising recently much faster than family income. Forty-five percent of the increase in the cost of living since 1952 has been due to the 13 percent rise in the cost of shelter, including rent. And if present trends continue we will have, within a few years, not just a housing shortage, but a housing famine—with all the effect that that will have in pushing prices even further upward and in undermining family life in America.

I am not going to try tonight to set forth the answers to the question of what, exactly, should be done. There are experts enough in this room to devise the answers. What we are lacking is not ideas but a political climate in which good ideas can be translated into action. I want therefore to describe a political framework within which those who understand housing, like yourselves, can come up with your solutions, and we can then put them into effect.

The first essential element in this framework is a comprehension where it counts that housing is, first of all, human environment. Homes are a social, not just an economic, fact. Housing must be thought of first as people in need, not as a commodity, an industry, something to be financed and traded, from which rents and profits can be gotten.

Certainly, we need a healthy housing industry. But when we consider any housing measure, we need to ask not only will it produce the highest profits but will it provide the most homes and the best homes, within a cost range that the public can afford?

Unhappily, this is not the way the question is being asked these days.

I believe it is correct to say that no significant new departure in the field of housing has been presented to Congress by this administration—certainly not this year—that was opposed by any significant combination of those who make up the housing industry. In fact, you can sit in the committee hearings, and having heard what these groups oppose, you can fairly well predict what the administration will oppose.

If we make our housing policy subservient at all times to the short-run welfare of those who finance and trade in housing as a commodity, we may as well give up. Their interests are not necessarily identical with the needs of the people for more and cheaper housing. In the absence of Government support, there is more profit and less risk in high-cost than in low-cost housing. There are even groups whose self-interest would lie in maintaining a housing shortage, notably landlords and bankers, because shortages produce higher rents and the willingness to pay higher interest rates because demand forces prices up. Witness the opposition to any kind of direct lending by the Government to increase the supply of housing. Witness the warnings issued from time to time by various segments of the housing industry against the dangers of overbuilding—which from the standpoint of social needs is impossible as long as millions of families live in housing unfit for human habitation. Look behind the fight against public housing, and among other influences you will see the interests of those who profit from the slum homes that ought to be replaced.

Housing is far too important to be left to the housing industry and the banks without making sure that their interests do coincide in each particular aspect with the interests of the consumers of housing. The character of our housing supply has a profound effect on the whole character of a city and of all the people in it. When there is conflict, the general good must override the private good.

The second element in our political framework must be a willingness, more than that, a determination, to use the instrumentalities of Government to help get the job done.

We may have thought that decision was made in 1949 when the Congress adopted, and the President approved, a declaration of national housing policy. That policy acknowledged the responsibility of the Federal Government to use its programs and resources to help realize "as soon as feasible the goal of a decent home and suitable living environment for every American family."

That is a good statement. We could hardly improve on it today. The only trouble is that, as an expression of our actual national policy in 1957, it is a dead letter.

The exact extent of our housing needs may be argued, but that there is a shortage, and that it is an overwhelming shortage, is not controverted. Yet, who is doing anything about it? The prevailing attitude in those places from which our national housing policy should be aggressively directed is, I am afraid, one of brazen feet-dragging. The HHFA just does not have the will to solve the housing crisis. Their proposals, when you boil them down, amount to just letting well enough alone, or, if pressed, just raise the interest rate. That's all that's needed, they say, to get houses built, as if slum families are ever going to be able to outbid General Motors in the money market. And I regret to say that the Congress, while it seems somewhat more alive to human misery than does the administration, is not going to write a bill this year that will come anywhere near to what is needed.

Why is this? Well, there will always be those among us, I suppose, who believe that if they just don't look at unpleasant facts they will go away. But, beyond that, we still have to struggle with a pervasive reluctance in both the executive branch and in the Congress to the whole idea of setting social priorities in the disposition of our national resources and the guidance of our economy, even when we know very well things aren't going right without them. This is the socially obsolete philosophy of the 18th century that priorities shall be determined by the impersonal mechanics of the market place.

Look what happens to those who suffer from this intellectual hangover. When they are confronted with a chart which shows, for example, that manufacturing plant construction has gone up 43 percent in the last 2 years, utilities up 41 percent, nonresidential construction up 14 percent, and housing down 15 percent, they have to say, in effect, that whatever is is good—because that's what the market place decided.

For myself, I have no faith in the ultimate social wisdom of the market place. I think God put wisdom in human minds to use, not to abdicate. The splendid cities of good homes that Americans should have in this century will rise only through conscious acts of man.

The fact is, of course, that housing is one field where nobody is really honestly preaching laissez-faire. We have Government intervention in housing on a massive scale. We have FHA, VA, HHFA, Fannie May, and so on, and the last thing that those who denounce Government intervention as socialism want us to do is to take them at their word. If we did, and abolished those agencies, we would hear an urgent cry for a return to socialism from some of the most unexpected people.

So let it not be argued that the issue is Government intervention versus no intervention. We have crossed that bridge. The housing economy is not going to be left alone. It is going to be influenced, and guided. The question is simply whether it is going to be guided intelligently and well and in the interests of the men, women, and children to be housed.

There are some words of Lincoln that President Eisenhower has sometimes quoted with approval. They are:

"The legitimate object of government is to do for a community of people whatever they need to have done, but cannot do at all, or cannot so well do for themselves—in their separate and individual capacities."

I suggest to the latter-day Lincolns of this new, modern Republican Party that if they wish to lend to these fine words substance they can begin with housing.

Once we resolve to make serving people our guide and resolve to get the job done, then we can proceed to inventory our needs and analyze the market.

Who are the people who are ill housed? In general, the people in the upper third of the income scale can get good housing—although it may be in developments whose planning may be atrocious.

But the lower and middle-income families are not well served. And this raises a basic philosophic question about what the role of Government should be.

If we look back two decades, we will see that our housing programs were then reasonably balanced. We set up the FHA to take the risk out of mortgage lending to those who could afford new housing, but we also set up a strong and vital public-housing program for the lowest income groups who could not afford private housing. But 20 years ago was about the last time we had such balance. Since then, the FHA program has consistenly been enlarged and made bigger and more active and has been backed up with Fannie May, while public housing has with equal consistency and dedication been gradually strangled to death. New wrinkles have been added year by year to guarantee more private mortgages, but the principal new wrinkles in our housing for the lower income groups have been ingenious new restrictions.

This trend reached a climax of sorts this year. The Administration asked for $600 million more for insuring mortgages and asked that the limit be raised to push even more of the assistance into the higher brackets. At the same time, it asked nothing at all for public housing and proposed a cutback which would bring slum clearance and urban renewal to a grinding halt. The House of Representatives then did the administration one better. It added another $1.5 billion to Fannie May, and it passed a punitive resolution designed to restrict the public housing program even further—which surely must be this year's leading example of how to beat a dead horse.

The House amendment to cripple this instrument which is indispensable in the solution of the slum problems of the great metropolitan cities was sponsored, incidently, by a Congressman from a district whose largest city has a population of 52,093.

So the third necessary element in the political framework for housing progress is a determination to restore the balance in our housing programs. Government exists to serve the poor as well as the relatively well-to-do; and if we provide billions for an active Fannie May for the suburban middle class—which I agree we should do—we are honor-bound to have also a working program to improve the housing of the urban poor.

For the middle-income families the problem is one of bringing down the price. We cannot bring down the cost of land, and there is not much we can do—not quickly, anyway—about construction costs. But there is one highly flexible item in the cost equation, and that is the price of money. What can be done by reducing the interest rates and extending the amortization period is a revelation to anyone who has not studied it before. On a $12,000 house, increasing the term from 25 to 40 years and lowering the interest rate from 5½ to 4 percent will reduce the payments by $23 a month and bring the $12,000 house within the reach of al-

most half, instead of only 30 percent, of our people. Think what that would mean toward reviving the building industry and improving our national standards of housing.

Of course, you won't get an interest rate of 4 percent without either reversing the Government's high interest rate policy or passing on to middle-income families the advantages of the lower rates which the Government pays for money. Unhappily, neither of these things can be done except over the dead bodies of the organized money lenders and of the administration which reflects their views. But the Sparkman bill, which was incorporated in the Senate housing bill after my own moderate-income measure was defeated in committee, will be a start in this direction if the administration does not succeed in knocking it out of the bill that finally passes.

There remains the large segment of our population who cannot rent or buy decent housing even should the cost of money be brought down—the families theoretically eligible now for public housing. If we mean what we say about a decent home for every American family, then obviously those who cannot pay for such housing have to be subsidized.

So far, we have had just one means of subsidizing new housing for these families—the public housing program. Now I believe in public housing. I fought, with WAYNE MORSE and PAUL DOUGLAS and HUBERT HUMPHREY, the losing fight to authorize 200,000 starts this year, and I sponsored the amendments in the Senate bill to make our public housing program more workable. I would insist that nothing be done to impair the present public housing program unless and until a better one can be devised.

But I do believe a more effective one can be devised. Just as I have argued that the private interest should give way to the general interest when necessary, so I would argue that the public interest should be served with the greatest possible adherence to our traditional practices of free enterprise. The public housing program as now conceived and operated is unfortunately divorced from our private enterprise economy. In order to subsidize rent in good housing, it is not necessary to do it exclusively through publicly owned and publicly operated projects which set low-income people in a class apart in effect, institutionalizing them. I am impressed, as I know you are, with the proposals that Mr. Abrams made this afternoon. I think we should explore to the fullest the possibilities of subsidizing rental in new or reconditioned private as well as public housing, of scattering public housing units in normal neighborhoods, of permitting private or cooperative purchase of public units, and of subsidizing the purchase as well as the rental of decent homes. If we thus shift a large segment of our public housing load into the private-enterprise framework, I think we would be able to rally far more support for our efforts in each of our communities.

I agree with Henry Churchill that we need a rethinking and not a retinkering of public housing. It is my hope that the work which the Housing Subcommittee of the Senate undertakes this fall will be that kind of rethinking, and that we will develop some fresh ideas to present to the Senate when it convenes next year.

Concurrently, I urge your support for the bill which Senator JAVITS and seven other Senators have joined me in introducing, to create a Department of Housing and Urban Affairs in order to elevate the status of, and bring proper recognition to, these important programs.

The issues that confront us in the field of housing are part of the greater issue of our time—whether our economic institutions will be allowed to drift or whether they will be guided and shaped to serve men—all men.

In the long run, they must so serve. No economic system will ultimately survive which does not satisfy the basic needs of mankind—and among these are the need for shelter. When a free economy fails to serve, the solutions imposed are far more radical than the gentle social guidance and political invention that could have made it serve. Khrushchev expressed his own confidence in our inability to adapt when he predicted blatantly that the United States would be Socialist in 50 years. It is because we believe in our free economic system that we must use our God-given wisdom to so guide and influence it that it will work for the fullest benefit of all.

I think the awakening is already on its way. I have seen the renaissance of civic spirit and civic will in one city, and I know that you have seen it, and indeed helped create it, in others. I think that awakening is becoming an overwhelming force. In due time—and I believe the time is not too far ahead—that force arising in the great cities of America will sweep into the Nation's Capital, and there will be here, too, a renaissance of will and spirit. Then the Nation will join with its States and its communities, and together we will build in America the cities of bright homes that will be jewels instead of stains on the fabric of our civilization.

Address by Maj. Gen. Sheppard Crump at Dedication of Memorial at Bedford, Va., to the Members of the 29th Division in World War II

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 18, 1957

Mr. ROBERTSON. Mr. President, on Sunday, June 16, there was dedicated at Bedford, Va., a new armory which stands as a memorial to the men of that area who served in World War I and World War II, and more particularly to those members of Company A, 116th Infantry, who gave their lives in the heroic assault on Omaha Beach on June 6, 1944.

The Honorable Bolling Lambeth, chairman of the Bedford Armory Committee, who presided at the ceremony, said the building was important not only because of the service it would render to the community, but also because it is built of an intangible substance called faith.

As a further tribute to the kind of faith which carried the men of Bedford and their associates in the 29th Division unhesitatingly into the hell of Omaha Beach, I ask unanimous consent to have printed in the Appendix of the RECORD the History of Company A, 116th Infantry, as it was presented at the dedicatory service by Col. H. B. Jordan, the company's first commander, who in addition to serving gallantly in World War I and World War II, has served his community as mayor and postmaster.

I also ask unanimous consent to have printed in the Appendix the dedication address delivered by Maj. Gen. Sheppard Crump, the Adjutant General of Virginia.

There being no objection, the matters were ordered to be printed in the RECORD, as follows:

BEDFORD, VA., ARMORY DEDICATION ADDRESS BY MAJ. GEN. SHEPPARD CRUMP, THE ADJUTANT GENERAL OF VIRGINIA

Mr. Chairman, officials of the county and town of Bedford, Va., members of the 116th Infantry, especially company A of that regiment, distinguished guests, ladies and gentlemen, it is a distinct honor and privilege for me to be with you today and participate in the dedication of this modern and attractive armory, constructed for the benefit of your local unit of the Virginia National Guard (now Company A, 116th Infantry, 29th Division) and the citizens of this community from funds provided by the Federal and State government and local contribution, with the fine support and cooperation of Hon. Thomas B. Stanley, the Governor of Virginia, the general assembly of this Commonwealth, the officials of the county and town of Bedford, the citizens committee and the Veterans of Foreign Wars post, which donated the necessary land and was so active through its representative, Hon. R. Bolling Lambeth.

We are most grateful to the two United States Senators and Members of Congress from the State of Virginia for their interest and valuable assistance in our armory program. They have willingly and ably used their influence in presenting the need of armories to the Congress and appropriate committees of the Government, and I feel it is proper to express our appreciation of their splendid cooperation on this occasion.

We also gratefully acknowledge the excellent support of the National Guard Bureau and of our State architect and local contractor, to whom we are indebted for financial aid and plans for the construction of this handsome building.

The Bedford Armory is located on one of the most beautiful sites in Virginia. Standing here you can look from the extreme north to the extreme south and eastward to a continuation of rolling hills, valleys, and woodland, which it would be difficult to surpass anywhere; then to the northwest we have the beautiful peaks of Otter. In keeping with such a surrounding it should become a pleasing community project to landscape this entire area where not used for roads and parking and continue the beautiful scenery.

Many years ago when visiting Salt Lake City I noticed a short distance from the capitol a valley or canyon. It had been landscaped to be a thing of beauty and it was in memory of soldiers of Utah killed in World War I. It was most appropriately called The Vale of Memory, and was reserved, I understand, for meditation of those who wished to go off quietly and recall memories of beloved warriors who had given their all for State and country. I commend this thought to you in your planning.

This handsome armory is another memorial to the brave men from Bedford who served in World Wars I and II, particularly those noble heroes who so courageously fought and made the supreme sacrifice at Omaha Beach in the fateful invasion of Normandy on June 6, 1944. Bedford already has the unique distinction of possessing a memorial, given to the Parker-Hoback Post, 29th Division Association, by the Government of France, which was presented by Rear Adm. Andre Jubelin, naval attaché at the French Embassy in Washington, on the 10th anniversary of that landing, in memory of the 23 gallant heroes of Company A, 116th Infantry, killed on that day, and other members of that unit who fought so valiantly in the defense of their country. It should be

remembered that the 29th Division served in World War I with equal valor and north of Verdun in 1918 made history. Your fellow citizen, Maj. W. Ben Davis, was there and severely wounded. It would not surprise me to learn that this is perhaps the only town in the United States so signally honored, and this was largely brought about, I understand, through the interest and efforts of a member of your press, who must be well loved and respected by the citizens of this town.

When Company A was first organized it occupied a building hardly worthy of the designation of armory, but they struggled along as best they could and developed one of the finest units in the National Guard. Some years later, through the efforts of the then unit commander, now Col. Harry B. Jordan, and other public-spirited citizens, armory space was provided in the basement of the Bedford Courthouse, which was such a great improvement over former facilities that everyone was pleased. However, it soon became apparent, with the growth of the company and the large amount of equipment, uniforms, arms, and other supplies furnished by the Federal Government, that the building was inadequate. Therefore, about 5 years ago, when the Federal Government began its armory construction plan, effort was made to include Bedford. Many faithful and patriotic citizens took part in this movement. For several years there were moments of encouragement and discouragement. Those with the military knowledge of the need of an armory did not give up but kept fighting. Finally, about 3 years ago it appeared that an armory would be obtained, and I wish to take this occasion to thank all who rendered such valuable assistance in this project. We see in this building the culmination of the dream of many of your citizens, and it is also a testimonial of what can be accomplished when the Federal Government, the Commonwealth of Virginia, and the local community join hands in the determination to assure that its National Guard is properly housed.

It is estimated that the training of your unit, to include not only its strictly military operations but athletic events and an occasional party, should not require more than 2 nights a week. At other times, agreeable to the county officials of Bedford, it will be available for local community affairs under such terms as the county desires to make, as long as the armory is properly operated and a home provided for the training of the National Guard. I can see many uses that can be made of it, such as citizens or church meetings, and basketball games for the high school. If you have teams for both girls and boys, they may use separate gymnasiums at the same time, one at the school, and the other in the armory.

As most of you already know, the National Guard is the oldest military organization in the United States, in recognition of which a 3-cent stamp was issued by the Post Office Department in 1952. In the early days these troops were known as State militia or minute men, and they have served in every war in which this country has been engaged. They were with Washington at Valley Forge and Yorktown, fought with Lee, Jackson, and Stuart in the War Between the States, served in Cuba and the Philippines, on the Mexican border, in the dark forests of the Argonne, fought briefly on the grim Corregidor and saw the light of liberation, fought the enemy through the jungles and on the beaches, helped to raise our banner on the serene sir of Okinawa, scrambled over Normandy's beaches, crossed the 38th Parallel, flew Mig alley; and they have always rendered aid to the stricken in times of disaster, such as hurricanes, floods, fires, riots, and disorders, and have brought relief and comfort to many, and a more abundant, fuller, finer life to our youth. For three centuries they have been soldiers in war and civilians in peace, the custodian of security and honor now and forever. The record of the 29th Division, of which the 116th Infantry is a part, goes back to 1620 through the regimental history of Virginia troops, and their records are unequalled.

Plans are now under consideration by the Department of Defense for the reorganization of our Army, and since our neighboring States of North Carolina and Tennessee each have a complete division, Virginia should have the same. I shall soon take occasion to ask our representatives in Congress to lend us their valuable influence and assistance in obtaining a division.

I think this armory could well be used as the custodian for relics, pictures, and other things of historic and military interest, to perpetuate the memory of our noble ancestors and keep alive their heroic deeds of the past. I know of one armory in Virginia in which a most famous organization has relics and pictures reaching back to the period before the War Between the States, and if at any time members of Company A, 116th Infantry, are interested, I will be glad to arrange for them to inspect the museum.

It is my most fervent hope that this outstanding organization may always be mindful of the important role the National Guard has placed in all wars of their country through the ages, of the fine record established by their ancestors, and of the heritage it is theirs to maintain, and that they will at all times endeavor to move ever forward and live up to the traditions of the historic 116th Infantry.

In conclusion, may I also express the hope that this armory may be used and enjoyed by the local National Guard unit and the people of Bedford, and that everyone will realize the importance of the National Guard in the defense of State and country, and will support this local organization to the best of his ability and help the company commander, Capt. Ward A. Dean, build up the unit to full authorized strength, in order that he may reach the training efficiency so highly desired.

I thank you.

History of Company A, 116th Infantry Regiment

(By Col. H. B. Jordan)

The written record which is well known, and I feel, therefore, not necessary to include in this paper, is that Bedford County, throughout its history has accepted its part of military duty for the defense of this country and also for a cause it thought was right, and with such a proud record as our heritage we begin with the National Guard in Bedford.

On September 30, 1921 Federal recognition was given to Headquarters Company, 2d Provisional Infantry Regiment. This regiment was converted to the 116th Infantry Regiment, on March 8, 1922, and Headquarters Company was converted to Company A, 116th Infantry, Virginia National Guard, on March 15, 1922.

The company commanders have been Harry B. Jordan, September 1921 to June 1929; Frank K. Saunders, June 1929 to February 1938; James L. Patterson, February 1938 to December 1941; Taylor N. Fellers, December 1941 to June 6, 1944; E. Ray Nance, June 6, 1944 to November 1948; H. G. Danes, November 1948 to March 1951; and the present commander, Ward A. Dean, March 1951.

During the first few years, Company A was housed in various places in the town; not so bad as the usual armory situation existed, but with the erection of the new courthouse, considerable more space was made available for training and storage of equipment, and this greatly benefited the unit in most every way. During these times the board of supervisors and the town council were most considerate and understanding of the company's condition and situation.

During the period of encampments from 1922 to 1940 company A maintained somewhat of a consistent record in bringing home camp honors, namely: Regimental honor trophy, a silver cup awarded for being the best all-round company in the regiment, 6 out of 10 times it was awarded. This trophy was discontinued in 1934. The indoor rifle match, 1929 and 1930. The kitchen banner, 1927, 1929, 1931, 1932, and 1936. The street banner, 1927. This company had personnel on the State rifle team 1923, 1926, 1929, 1930, 1932, 1933, and 1934. Trophy for excellence in marksmanship for the first 2 years it was awarded, 1934 and 1935. In 1934 the William R. Hearst musketry trophy.

This unit served on State duty at Danville November 26, 1930, to January 24, 1931, and was on temporary State duty at Norfolk in 1927.

Company A, as a part of the 29th Infantry Division, was inducted into Federal service February 3, 1941 and reported to Fort Meade, Md., soon thereafter. Training areas were Fort Meade, A. P. Hill Military Reservation in Virginia, First Army Maneuvers in the Carolinas, Camp Blanding, Fla., and on September 27, 1942 sailed from Camp Kilmer, N. J., for assignment and training in England.

It was not by chance that the 116th Infantry Regiment was selected to be one of the first units to hit the beaches of northern France or that company A was selected to be one of the first company units to be in the forefront of the invasion; it was ordered, in my judgment, after a careful study of the units most likely to accomplish its purpose, consideration being given to background, training, spirit and ability to carry out an assigned mission. Success in an invasion is not marked by the yards gained, but how much of the enemy's plans were upset.

Whenever we hear Beaches of Normandy, Vierville-sur-Mer and Vire, we think of the fine action on the part of company A, which was the beginning of the final end to World War II and our hearts go out to those whose loved ones gave all in helping to make this attack a real beginning. And may we hope that never again will the lives of our young men be given in defense of France against some of its neighbors.

The 116th Infantry remained intact throughout the rest of the war, performing its duty where it was assigned and in January 1946 it was inactivated at Camp Kilmer, N. J. Company A was returned to Bedford and after its reorganization and Federal recognition January 15, 1947, the officers and men set about to rebuild the unit with strength in numbers and to maintain its training and efficiency.

Under the new Federal system it has been quite apparent for some time that the present housing of the unit was not in keeping with its performance and requirements. The present unit personnel, working with many civic-minded individuals and organizations have accomplished a great mission for the unit and community, in a wonderful all-out effort in securing the armory which is dedicated this day.

The present command of company A, 85 enlisted men and 6 officers as follows: Capt. Ward A. Dean, 1st Lt. Lester C. Robertson, 1st Lt. Raymond B. Overstreet, 1st Lt. Sandy C. Arrington, 1st Lt. Thomas F. Powers, and C. W. O. Jack W. Mitchell.

Company A will enter this new home with strength, good morale, excellent equipment, and training. A credit to Bedford County and a unit which the State of Virginia, in my judgment, will not hesitate to order out whenever it feels that the military should go into action.

The World Waits for a Clear American Voice

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Tuesday, June 18, 1957

Mr. MANSFIELD. Mr. President, I ask unanimous consent that I may have printed in the Appendix of the RECORD an editorial entitled "The World Waits for a Clear American Voice," which appeared in the Kansas City Star of Friday, June 14, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE WORLD WAITS FOR A CLEAR AMERICAN VOICE

According to the current Khrushchev line Communist Russia will conquer the world by the force of an ideology and butter. In the role of man of peace the Communist leader plays down the nuclear weapons that frighten the uncommitted people of the world.

This looks like an attempt to steal the natural role of the United States. We are not fearful that Khrushchev will make any more world impression as a man of ideas and dairy herds than he made in neutral Finland. He can't, at least for the present.

The proper concern of the United States is in the fact that it is the Nation to catch the imagination of the world with ideas and human freedom. But, generally, American spokesmen take refuge in military power as men afraid.

The same day that Khrushchev spoke on ideologies the Senate Foreign Relations Committee's released testimony given by Gen. Lauris Norstad.

As an informed view for use by the Senate, no one could quarrel with the testimony. But, as released, this claim of ability to annihilate Russia fitted into the general pattern of threatening talk from official American sources. They have thundered with "containment," "massive retaliation" and obliteration. Necessarily they revolve around the hydrogen bomb that is a frightening subject for hundreds of millions of people in other countries.

When our people aren't waving the bomb they are likely to be waving the money bags. The persistent assumption that we can buy friendship with foreign aid hasn't paid off. In some cases the aid has been essential but it hasn't made friends.

Fortunately for us, Khrushchev's attempts to play on the peace and ideology theme are currently rather ludicrous. Almost in the same breath he showed himself resistant to anything that would make possible a start on disarmament. The same day his ideological partner, Mao Tse-tung, was quoted on the little misunderstandings over correct thinking that led to the death of 800,000 Chinese.

By this time most of the world's people know that it has always been necessary to implement the Communist ideology with weapons. They still remember how its "ideas" were carried to the Hungarians. In fact, no country has ever been won to communism by ideas. Without exception its spread has depended on violent revolution by a well-organized minority or an occupying army.

Yet, with every advantage, the United States gives the impression of being afraid of any conflict of ideas and falls back on bombs or money. We are in possession of a system, democracy, that has stirred the imaginations of men around the world. By force of ideas alone it has spread to many lands. Even among Asian peoples too backward for complete self-rule pictures of Abraham Lincoln hang in countless homes.

By no means do we think the United States should hide its military power under a bushel. Our survival may well depend on full Russian knowledge of what we can do. But we don't have to shout about it every week or two. As a Nation, we can remember Teddy Roosevelt and speak softly as we carry the big stick. Militarism gives no true picture of America. It was forced on us by necessity.

Our opportunity for leadership is in the great conception that created free and dynamic America. This is the power capable of stirring the imaginations of men of all races and faiths, even in the Ukraine or Siberia. Khrushchev can't steal this power from us. We can lose it only by deliberately throwing it away.

At the Geneva Conference the President stirred the world with his basic concept of American aspirations. And many Americans in high places recoiled from the Conference in fright. Opportunity still waits for responsible American leadership to speak to the world with a clear voice.

Miss Helen Pool, of Beaumont, Tex., Typifies Best in Teaching Profession

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, June 18, 1957

Mr. JOHNSON of Texas. Mr. President, there is no greater force for good in America than the right kind of schoolteacher. That is the kind Miss Helen Pool, of Beaumont, Tex., has been for 40 years.

Miss Pool retired this month from the teaching profession, and the Beaumont Journal took advantage of the occasion to pay her an editorial tribute that obviously expressed the view of many Beaumont people. I ask unanimous consent that the Journal editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO MORE SCHOOL BELLS FOR MISS POOL

Junker School, at 1112 Caldwell Street, won't be quite the same after June 15.

On that date, Miss Helen Pool, who has called the school her home since 1917, will hang up her paddle and reap the rewards of a well-earned retirement.

For 37 of those 40 years, Miss Pool has been the Junker principal. During that time she has been teacher, adviser, helper, and even a "mother" on numerous occasions to three generations of Beaumonters.

A spokesman for the teachers expressed the sentiment of many when she said: "The place she (Miss Pool) holds in our hearts can never be filled by anyone else."

She is held in high esteem by all who have had the fortune to come in contact with this kindly lady. Students, faculty, school administrators, parents, and others place her at the top of the best liked and best qualified list.

It may be hard for her not to answer those school bells at first, but Miss Pool can work that out, too, just as she had to do with numerous other problems during her years as teacher and principal.

Miss Pool has her beach cottage and her flower gardening. She'll get along all right and she'll still stay close to us.

Many happy retirement days, Miss Pool.

Washington's Summer Jubilee

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Tuesday, June 18, 1957

Mr. WILEY. Mr. President, I have been pleased to note that the Greater National Capital Committee is sponsoring a summer jubilee here in the Nation's Capital.

From June 15 through Labor Day, the committee has the welcome mat out for visitors from all over the Nation to join in jubilee festivities here.

Folks are being invited to witness a jampacked calendar of events which are going to take place during these 2½ months.

One of the most interesting devices of focusing national attention to the jubilee is through a serious of jubilee keys. They are being distributed to principal cities of our country, including Milwaukee. The finder of the key becomes the guest of the city for a fine vacation treat.

CITIZENS CAN BE PROUD OF WASHINGTON

We who are privileged to work in our Nation's Capital are glad that through the means of the jubilee, the American people are being made aware of all the many regular and special attractions which are available here.

Every American has a right to be deeply proud of his National Capital. I hope that during these months up ahead, our people will avail themselves of this fine opportunity to see their Government in action, as well as to see all the other events which take place here.

SUPERATTRACTIONS SUMMER SERIES

They will particularly enjoy, I am sure, the fourth summertime series of Entertainment Under the Stars at the Carter-Barron Amphitheater. This fine series is staged by Mr. Irwin and Mr. Israel Feld, in cooperation with the United States Department of the Interior and National Capital Parks of which Mr. Edward J. Kelly is superintendent.

ENJOYING WISCONSIN VACATIONLAND

Of course, I may say that many, many Americans will want to get away from it all—to enjoy top fishing, boating, swimming, and plain relaxing in America's best vacationland, wonderful Wisconsin. One and one-half million visitors last year visited our famed Wisconsin Dells, alone, and I know that 1957 will be a peak vacation year for my whole State.

But America is a great and vast vacation country, and those tourists who plan to come East or to come up from the South or down from the North will truly enjoy their Nation's Capital.

I ask unanimous consent that the text of a letter which I have received today from Mr. Orville Crouch, chairman of the summer jubilee committee, together with attached press releases and a writeup of the Entertainment Under the Stars series in the June 1957 issue of the Board of Trade News, be printed in the Appendix of the RECORD.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

WASHINGTON CONVENTION AND VISITORS BUREAU,
Washington, D. C., June 10, 1957.

Hon. ALEXANDER WILEY,
Senate Office Building,
Washington, D. C.

DEAR SENATOR: One of your constituents may be formally presented with a golden key to the Nation's Capital. The golden key presentation will highlight the summer jubilee program sponsored by the Greater National Capital Committee, June 15 through Labor Day. To mark this occasion the city will assume a gay festive air with flags and banners spelling out a hearty welcome to its jubilee guests.

Concerts at the Watergate, and in the shadow of the Capitol, parades, Fourth of July celebration, President's Cup Regatta, Woodlawn Mansion ceremony, and other outstanding attractions will be recorded in a calendar of events. This comprehensive brochure of things to see and do in the Nation's Capital is jointly published by the Washington Hotel Association and the committee. Airlines, buslines, and railroads servicing Washington will handle the calendar distribution. Fifty of these calendars will contain a golden insert with a replica of a jubilee key. Residents of the cities scheduled to receive a marked copy of the calendar will be advised to that effect through newspaper, radio, and TV publicity. They will be told to visit their travel offices and to ask for their copy of the calendar of events. One of the calendars will bear the jubilee key insignia.

The finder of the marked copy will become an official guest of the Nation's Capital. We are also urging the travel editors of the jubilee key cities to sponsor a courtesy key to be delivered by the finder as a good will message from his city to the Nation's Capital. Upon his arrival to the city, the finder will be presented with a golden key which will guide him through a week of summer jubilee fun.

A list of jubilee key cities, a copy of the calendar of events, and a press release describing the jubilee key program are enclosed with this letter. You might want to drop a line to the constituents of your key cities inviting them to visit you. You might particularly like to have the key finder as your guest.

Sincerely,

ORVILLE CROUCH,
Chairman, Summer Jubilee Committee.

JUBILEE KEY CITIES—NEW LIST

This is a new jubilee key cities list: Albuquerque, N. Mex.; Atlanta, Ga.; Asheville, N. C.; Birmingham, Ala.; Boise, Idaho; Boston, Mass.; Bradford, Pa.; Bristol, Tenn.; Buffalo, N. Y.; Charlotte, N. C.; Chicago, Ill.; Cincinnati, Ohio; Columbia, S. C.; Dallas, Tex.; Dayton, Ohio; Daytona Beach, Fla.; Denver, Colo.; Detroit, Mich.; Erie, Pa.; Houston, Tex.; Indianapolis, Ind.; Jacksonville, Fla.; Kansas City, Mo.-Kans.; Los Angeles, Calif.; Louisville, Ky.; Miami, Fla.; Milwaukee, Wis.; Minneapolis, Minn.; New Orleans, La.; Newark, N. J.; New York, N. Y.; Norfolk, Va.; Pittsburgh, Pa.; Portland, Maine; Portland, Oreg.; Reno, Nev.; Richmond, Va.; St. Louis, Mo.; St. Paul, Minn.; Salt Lake City, Utah; San Antonio, Tex.; San Francisco, Calif.; Savannah, Ga.; Seattle, Wash.; Spokane, Wash.; Tampa, Fla.; Worcester, Mass.

LOOK FOR THE JUBILEE KEY TO THE NATION'S MOST EXCITING VACATION

WASHINGTON, D. C.—There's a magic key hidden in your city. Find it, and you will discover the pass to an unforgettable week of Summer Jubilee fun in the Nation's Capital. Airlines, railroads, and buslines carry a supply of the Washington Calendar of Events. In one of their city offices you may find a marked copy of the calendar—and the mark will be that of the golden jubilee key.

The benefits to which this golden symbol entitles the finder are representative of the many wonderful features of the Summer Jubilee, June 15 through Labor Day. Sponsored by the Greater National Capital Committee, this summer-long holiday offers unusual values in entertainment and economy.

A week's stay for two with breakfast is the key's first reward. The Burlington, Jefferson, Raleigh, and Sheraton-Park Hotels are offering their air-conditioned comfort to the lucky finder of the jubilee key. Their rates, listed in the Calendar of Events, reflect the special family plans initiated by most Washington hotels during the summer months. Children under 14 are admitted free. In some cases, swimming-pool privileges, free garage space and breakfast are added to the plan.

All that Washington has to offer is at the disposal of the key winner and of the summer visitor: Band concerts in the shadow of the Capitol or at the Watergate steps, Fourth of July celebration with its elaborate fireworks displays and the speed-shattering power-boat races of the President's Cup Regatta. The key finder will be a guest at the rustic Olney Theater, featuring Broadway shows and musicals. He will also receive two passes to the romantic open-air Carter Barron Amphitheater where Jimmy Durante, Bob Hope, Harry Belafonte, and Jerry Lewis appear in the entertainment under the stars series. Add to this two tickets to big-league baseball and a moonlight cruise on the Potomac River and you will catch the glimpse of an exciting weekend awaiting the key finder as well as the visitor.

Seeing the Nation's Capital is a delightful and rewarding experience. Graceful monuments and memorials, stately White House and Capitol Building, surrounded by shady trees and green lawns are truly beautiful. The jubilee key finder will be taken on a complete sightseeing tour of the city, courtesy of the Gray Line. From Union Station to Rock Creek Park, one building after another will unfold in a majestic succession. The climax of the trip will be a visit to George Washington's home—Mount Vernon.

The international flavor of Washington emanates not only from the presence of foreign dignitaries and the impressive embassy row, but also from the cosmopolitan nature of the city's restaurants. Their cuisine will please the most refined gourmet palate. The jubilee key finder is invited to dine in 7 different restaurants—1 for each day of his stay in the Nation's Capital.

Inquire about travel to Washington, ask for your copy of the Calendar of Events at the travel offices of airlines, railroads, and buslines. The calendar that you pick up might contain your lucky jubilee key. Visit the Nation's Capital gay and festive in its Summer Jubilee attire. Be a guest of the city and let the city treat you to an unforgettable vacation.

[From the Washington Board of Trade News for June 1957]

FOURTH ANNUAL CARTER BARRON SERIES OPENS JUNE 13

The fourth summertime series of Entertainment Under the Stars will open at Carter Barron Amphitheater, in Washington, D. C., on the evening of Thursday, June 13. Announcement of bookings for the outdoor productions in Rock Creek Park are made by Israel and Irvin Feld, who will again stage the lineup of attractions in cooperation with the United States Department of the Interior and National Capital Parks.

World renowned artists are scheduled to appear at the Amphitheater; and the roster of entertainers includes top names in today's show business. The expensive talent involved makes the Carter Barron Amphitheater project the most costly summertime theater operation in America.

The series will open with a double bill featuring Jose Greco and his Spanish dance company and the Pearl Primus Dancers. These 2 groups will hold the Carter Barron Amphitheater stage from June 13 through June 19, to be followed on June 20 by 6 grand opera presentations.

Metropolitan Opera Association artists will sing leading roles in Carmen, Madame Butterfly, Aida, La Boheme, La Traviata, and Il Trovatore. The opera festival will run at the Amphitheater from June 20 through June 27.

Third attraction in the series, opening on June 28, and continuing nightly through July 3, will be Louis Armstrong and his all-star performers. On this bill will be such notable jazz musicians as Erroll Garner and his Trio, Kid Ory, Jack Teagarden, Earl Hines, and others.

Jimmy Durante and his own all stars spectacular show will occupy the Carter Barron Amphitheater stage from July 11 through July 24.

Durante will be followed on July 25 by another famed comedian, Jerry Lewis, who, too, brings a big variety show to the amphitheater. Jerry Lewis will perform each evening through July 31.

Fourteen nightly performances, each a different bill, will be presented by the Ballet Theater from August 1 through August 14. Nora Kaye and other leading dance artists will be seen in terpsichorean roles.

A certain capacity audience attraction at Carter Barron Amphitheater will be Bob Hope and his Hollywood Revue, occupying the stage from August 15 through August 19. The season closes with "An Evening With Harry Belafonte," presented nightly, August 21 through August 31.

The attraction for the single, as yet unbooked, period, July 4 through July 10, will be announced shortly.

Carter Barron Amphitheater is located just off 16th Street and Colorado Avenue, in Northwest Washington, only a few minutes by public transportation or auto from the downtown area. There are acres of free parking space adjacent to the amphitheater; and buses from the D. C. Transit line pick up patrons at the entrance immediately after each performance. Popular prices prevail for all performances.

Information about shows and tickets and mail orders may be obtained by writing to Carton Barron Amphitheater Productions, in care of Super Music City, 1350 F Street, NW.

Trial by Jury

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. HERLONG. Mr. Speaker, those of us who are so interested in preserving the right of jury trial in the so-called but misnamed civil-rights legislation underestimated the effect of pressures from the White House. We did not be-

lieve the boys uptown would work so hard to deprive the people of this civil right. I suppose if we had provided, in our jury trial amendments, that the venue of the case be moved to Japan and that the jurors be Japanese, we would have had no such opposition from the other end of Pennsylvania Avenue, because it is pretty obvious that that type of jury trial is approved by the administration.

If this bill is passed and becomes law, as it is now written, there will be a lot of southern people who will probably go to jail. From yesterday's action of the Supreme Court is seems the only sure way to stay out of jail is to engage in Communist activities, and we are not going to do that. Quo vadis, mia patria?

Soil Conservation Will Help To Prevent Heavy Siltation

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, June 18, 1957

Mr. JOHNSON of Texas. Mr. President, the water problem of my State of Texas has many aspects, and that may also be said of the national water problem.

In Texas, the prevention of siltation of our lakes is a serious problem. Fortunately, it is not being ignored, as may be seen from an editorial appearing recently in the San Angelo Standard-Times, a newspaper that looms large in the life of west Texans.

I ask unanimous consent that this editorial, touching as it does on a matter of extreme and even urgent importance, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PREVENTION OF SILTATION A PROBLEM FOR TEXAS

The water that went over the dams in the Concho Rivers the last few weeks was muddy enough, evidence of siltation. The dam in Elm Creek near Ballinger has pretty well silted up in a few years.

It is said the streams in west Texas do not silt as heavily as the dams in east Texas. Logically so, because they are in farming country where waters flow off plowed fields carrying tons of dirt with them. However, we can expect dams to fill up with topsoil in Texas over a period of 30 or more years.

This calls to mind that when engineers built the big Texoma Dam 12 years ago, they made a prediction that lake wouldn't go over the spillway but once in every century.

Apparently the lake can rest for a century now, for it went over the spillway last week with plenty of water to spare.

Lake Texoma is the largest artificial lake in this part of the country. There are only six larger ones in the entire country and a seventh now under construction. The kingbee of America's reservoirs is Lake Mead, which piles up behind the Hoover Dam—almost 20 million acre-feet.

Lake Texoma is rated at 5,711,700 acre-feet. Next in size in Texas is the newest, Falcon, in Starr-Zapata Counties, with 4,096,000.

In the fullness of time, however, the engineers' prediction that Texoma would go over its spillway only once in a century is destined to be nullified. As is characteristic of nearly all Texas streams, the siltation problem is bad, and the time will come when the capacity of Texoma will be gravely reduced.

That is true in greater or lesser degree of all our artificial lakes. The situation is not wtihout a remedy, but the application of the remedy will take a lot of time and more money than the lakes originally cost.

It involves widespread soil-conservation practices, religiously carried out and kept up. It involves the building of thousands of small upstream detention dams on the tributaries of our rivers. The problem is to hold as much water as possible in the area where it falls—on crop and range lands to prevent soil erosion, behind smaller dams on smaller streams such as the Brady Creek watershed so floodwater can be released gradually to avoid floods, to settle out some of the silt before it reaches the larger lakes.

All this will take, as noted, a lot of time and money, but it is absolutely essential to the continued well-being of the Nation. The alternative is a Chinafied America.

Rural Library Services Program

EXTENSION OF REMARKS
OF
HON. FRANK CHURCH
OF IDAHO
IN THE SENATE OF THE UNITED STATES
Tuesday, June 18, 1957

Mr. CHURCH. Mr. President, I have today received a letter from Mrs. Glenn Balch, chairman of the Idaho State Library Board, which is the occasion of a very deep sense of satisfaction to me. I sometimes feel that in none of its activities does the Congress of the United States accomplish anything so satisfying and so conducive to a strong America as when it devises, authorizes, and appropriates for a program to enable our States and local communities to advance the degree of education among our people. Surely the truism that an educated America is a strong America has been set forth in this Chamber so often as to need no repetition. But when we debate, as we have debated, billion-dollar programs for the procurement of weapons, we sometimes lose sight of the much smaller and essentially more valuable programs for the procurement of knowledge.

Last week, Mr. President, the Senate passed H. R. 6287, the appropriation bill for the Departments of Labor and Health, Education, and Welfare. Within that bill, along with a large number of other worthwhile programs was contained the sum of $5 million for grants-in-aid for the rural library services program. This program has been watched hopefully and planned for carefully and energetically by the Idaho State Library Board and a whole group of Idahoans whose dedication to the spread of the riches of our culture has earned for them the gratitude of the people of my State.

I have just received a letter from one of these people describing the plans that are being made in Idaho to implement this program, and to make the greatest possible use of this grant. The writer of this letter is Mrs. Glenn Balch, chairman of the State Library board, and a person whose hard work and great foresight have contributed heavily to the furtherance of library work in Idaho. Mrs. Balch's letter made me deeply proud of the initiative and vision of these hard-working Idahoans.

I was not able to be present in the early stages of the floor discussion on H. R. 6287, Mr. President. For that reason, I wish today to add my voice to the many heard that afternoon in commendation of the magnificent work done for America's physical and intellectual health by the great senior Senator from Alabama [Mr. HILL], whose compassion and vision are among the Nation's most important strategic weapons in the struggle for men's minds and hearts.

I ask unanimous consent, Mr. President, that this letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

STATE OF IDAHO,
STATE LIBRARY BOARD,
Boise, Idaho, June 10, 1957.

Senator FRANK CHURCH,
Senate Office Building,
Washington, D. C.

DEAR SENATOR CHURCH: Your telephone call a few minutes ago was deeply appreciated. Please permit me, on behalf of all the people interested in improved library facilities for our State, to thank you for your support of the appropriation measure.

We, as the State library board, will do our utmost to use the funds wisely as seed money to stimulate the growth of local library facilities throughout the State. In order to be able to demonstrate modern library services for rural areas, we are ordering an exhibit bookmobile immediately. It should be delivered in Boise and ready for a tour of the State soon after Eugene D. Hart's arrival in mid-September. We will also be able to order a very substantial number of new books that will be available for circulation to individuals and schools in the fall. And, perhaps most important, we will be able to add personnel to our staff and they will be able to travel around the State and give on-the-spot advice to local groups who wish to work for improved local service. This demonstration program would never have been possible without Federal aid.

Thank you again for your help.

Yours sincerely,

Mrs. GLENN BALCH,
Chairman, Idaho State Library Board.

Scherer Replies to California Bar Association

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. SCHERER. Mr. Speaker, on March 29, 1957, the gentleman from California, Mr. JAMES ROOSEVELT, called to the attention of the House the censure of a subcommittee of the Un-American Ac-

tivities Committee by the board of governors of the State bar of California. In connection with his remarks, Mr. ROOSEVELT inserted in the RECORD the resolution.

Today, at the opening of hearings in the city of San Francisco, I answered the board of governors of the State bar of California as follows:

Mr. Chairman, at the opening of these hearings here in California, I request, as a matter of personal privilege, the opportunity to discuss a resolution adopted by the board of governors of the California State Bar Association on March 15, 1957.

I was a member of a subcommittee of the Un-American Activities Committee of the Congress of the United States which held hearings at the direction of that committee in Los Angeles and San Francisco, Calif., in the month of December last year. This resolution severely criticized and condemned the subcommittee for its conduct during these hearings. Copies of this resolution, by direction of the board of governors of the bar association, were sent to the Speaker and my colleagues in the Congress of the United States. The resolution was printed in the CONGRESSIONAL RECORD. The press all over the country carried accounts of the censure.

Under the circumstances, I feel that on my first return to the State of California since this censure, it is necessary for me to answer. In fact, I requested the chairman of the Un-American Activities Committee to appoint me as a member of this subcommittee so that I might make this reply in the backyard of the board of governors of the California State Bar Association.

What I say here today in connection with this matter is not a statement of the Un-American Activities Committee nor of the subcommittee against whom the censure was directed, nor does it necessarily reflect the feelings of the other members of that subcommittee or its director, none of whom is with us this week in California.

I have practiced law as a member of the State and Federal bar in Ohio for a quarter of a century. I am a member of my local and the American Bar Association. There is almost nothing that hurts a lawyer more than to be censured by a governing body of the bar with the attendant publicity. It is shocking to be censured by a bar association, supposedly steeped in the tradition of the law—censured when one is 2,000 miles away, censured without notice that any such action was contemplated, without any knowledge of the charges, without a hearing, without an opportunity to reply contemporaneously with the publication of the censure in the CONGRESSIONAL RECORD and newspapers of the country.

When I was elected to the Congress for the first time in 1953, I was naturally thrilled by the responsibility of my post, by the dignity and prestige it presumably carried. Now, I can only smile a bit wryly over that first reaction.

I could not guess that soon after reaching Washington I would be reviled, ridiculed, and insulted from coast to coast. Of course, I am not the only victim of this kind of abuse. It is shared by all members of the House and Senate committees investigating the ravages of the Communist conspiracy within our gates, even as it was the fate of our predecessors, beginning with the much-maligned Texan, MARTIN DIES, about 20 years ago.

Legislators may probe garden-variety crimes or scandals like the Beck case, with relative impunity, but, when they venture to tackle the Kremlin's little gremlins, they have need for strong nerves and tough hides.

In accepting a place on the House Committee on Un-American Activities, I had neither misgivings nor borebodings. Our boys were dying in the Communist firing in Korea. The mischief wrought by Communist agents and spies was no longer a matter of generalized surmise—enough of it had been exposed in detail to alarm the American people. To dislodge these internal enemies seemed to be a task any patriotic American could undertake proudly, earnestly, and with a clear conscience. Alas for my innocence.

I failed to see that in joining this committee one made himself at once a target for organized slander, regardless of how he might conduct himself. Before I had met all of my colleagues on the committee and before it had held its first meeting, I was being plastered by sticky epithets by expert mud-gunners.

It does not make any difference who succeeds to the chairmanship of any of the committees of the Congress investigating the Communist conspiracy. Whether it be Martin Dies, Joe McCarthy, Pat McCarran, Bill Jenner, or Francis Walter, they immediately become subject to attack.

I recall that it was only a very short time after FRANCIS WALTER became chairman of the Un-American Activities Committee that the committee held hearings in Newark. I believe it was one of the first hearings conducted under the chairmanship of Mr. WALTER. No one could possibly have been aware of his policies or the manner in which he would handle the chairmanship of the Un-American Activities Committee.

Nevertheless, as I left the hotel at which the committee was staying in Newark on the night of the first day of the hearings, at which Mr. WALTER was not even present, 1,200 pickets, by FBI count, most of them imported from New York City, surrounded the hotel. They carried dozens of well-painted signs criticizing, condemning, and vilifying the new chairman of the committee. These signs had been prepared by experts, some of them members of the bar. Ninety percent of the people in the picket line did not or could not understand the import of the signs they were carrying.

As I say, a number of the Communist lawyers representing clients at that hearing assisted in the preparation of this demonstration, as well as in the disruptions that took place during the hearings. We were even favored with the presence of one of the Communist lawyers who had almost driven Judge Medina to distraction in the trial of the 11 Communists in New York under the Smith Act.

Pseudoleftwing liberals who are always interested in protecting the sacred rights of the Communists who appear before our committee were strangely silent about these demonstrations against the committee.

You learn to expect this treatment from the agents of the Kremlin. You are shocked and disheartened when it comes from the board of governors of a State bar association.

Let us take a look at a number of facets involved in this censure. During the 4½ years of my service in the Congress, I have participated in hearings in Los Angeles on 4 different occasions. There is no place in the country—and I have sat in hearings from coast to coast—where the committee has been insulted, slandered, ridiculed, its hearings disrupted, more than in Los Angeles. There is no city in the country where there have appeared before the committee more lawyers who have themselves been identified as members of the Communist conspiracy than in Los Angeles. There is no city in the country where these Communist lawyers and their like have participated in, urged, and planned these attacks upon the committee more than in Los Angeles.

I have seen lawyers put words into the mouths of witnesses, telling them how to answer factual questions—telling them how to bait the committee and disrupt the hearings. On more than one occasion I and other members of the committee have publicly and in the record of the hearings called attention to this reprehensible conduct upon the part of these laweyrs.

If lawyers had conducted themselves one-tenth as contemptuously in a courtroom as they have before our committee, htey would have been jailed. These lawyers of whom I speak realize that the committee cannot punish for contemptuous conduct and, therefore, have continued to violate the rules of ethics and decency. Undercover agents of the Federal Bureau of Investigation have testified, as did one of them at the hearings in Los Angeles in December, that often lawyers meet with witnesses—known Communists—and instruct them how to bait the committee, how to disrupt the hearings. Some have gone so far as to set up a signal system between them and their clients for answering questions.

Has the California bar board of governors taken any action whatsoever during the last 4 years against one or more of the lawyers who have been guilty of the conduct I have just outlined? It has not.

Now someone will say that I am exaggerating the situation. I am willing to rest my case on the records of the California State Bar Association itself.

The conduct of certain lawyers at hearings in this State before the Un-American Activities Committee was so bad that two bar association committees found it necessary to make a complete investigation of the nature and extent of this misconduct. The reports of these committees to the board of governors of the California State Bar Association confirmed in every respect what I have said here today about the unethical tactics of these lawyers. These reports are carried in the Journal of the State bar of California.

To illustrate the unethical and contemptuous conduct of certain lawyers who appeared before the Un-American Activities Committee in Los Angeles, the reports set forth excerpts from the testimony of the hearings. In the Journal of the State bar of California, we find this committee, in reporting to the board of governors and in urging that the rules be changed so that the bar could deal more effectively with these lawyers, saying this, and I quote:

"At the time of the hearings of the Committee on Un-American Activities in 1952, several members of the bar called as witnesses before the committee conducted themselves in a most contemptuous and objectionable manner. A lawyer is never entitled to conduct himself so as to be discourteous and highly objectionable to any public body, court, or otherwise."

In another place in the report in the Journal, we find this language:

"The amendment we suggest should be ample to cover the principal grievances concerning misconduct presently being considered by the committee. We believe the existing rules inadequate to permit the board of governors on its own motion to take disciplinary steps against lawyers whose conduct was so objectionable in the Un-American Activities Committee hearings."

The report continues:

"As to lawyers suspected of Communist activities, although we feel that the State bar does have some power under section 6106.1, nevertheless it would be desirable to broaden the section in the manner provided for in exhibit A."

The bar association committee which studied the conduct of these lawyers before congressional committees was so shocked by their conduct that it recommended that section 6068 of the business and professions code be changed to read as follows:

"The following are the duties of an attorney:

"1. To maintain the respect due to the courts of justice and judicial officers, a com-

mittee of the Congress of the United States, a committee of the legislature of this State, any subcommittee of such committee of the Congress or of the legislature, the board of governors of the State bar of this State, and any administrative committee of the State bar of this State.

"2. Never to seek to mislead by artifice or false statement of fact or law a court of justice or judicial officer, a committee of the Congress of the United States, a committee of the legislature of this State, any subcommittee of such committee of the Congress or of the legislature, the board of governors of the State bar of this State, or any administrative committee of the State bar of this State."

Now I ask: What has the board of governors of the State bar done with that report, which also contains recommendations for dealing with Communist lawyers and those who take the fifth amendment? What has it done? Nothing. What action has it taken against these lawyers? None. It has not even censured them.

Yet it was willing to censure this committee, reputable members of the bar, who have come to Los Angeles time and time again and have been faced by this same cabal of attorneys. While FRANCIS WALTER, the chairman of the full committee, was not personally present at the Los Angeles hearings, nevertheless the censure of his subcommittee is a reflection on him, a man who has been the recipient of the American Bar Association award for contributing most to the preservation of our American form of government.

The board of governors of the State bar of California has failed miserably and has been derelict in its duty to act affirmatively on the basis of the findings of its own committees. By reason of its failure to act, it shares with these lawyers I have been talking about the responsibility for what happened in the hearing room in Los Angeles last December.

For years the committee allowed itself to be subjected to abuse and harangued by those who served the Communist conspiracy, waiting patiently for some evidence of courage, some action on the part of the leaders of the bar of the State of California.

It was apparent when we came to Los Angeles last December that there was a well-conceived plan by the Commupists and some of these same lawyers to again disrupt the hearings and abuse the committee as they had so many times in the past.

When we acted firmly and ejected these betrayers of the legal profession, so the hearings could proceed in an orderly manner, the board of governors, who were not present at the hearings, censured members of Congress, reputable members of the bar.

I have studied the censure resolution by the board of governors of the California Bar Association with exceeding care. I have likewise searched the transcript of the proceedings at the December hearings in Los Angeles. The truth is that the basic facts as reported in the statement of the board of governors of the California Bar Association are misrepresented.

The tenor of the statement is that certain lawyers, whose conduct was in thorough accord with all of the canons of ethics for lawyers, were not accorded proper treatment by the committee. The truth is, as reflected by the record and as is indelibly impressed in my memory, that certain lawyers who had been repeatedly identified under oath as members of the Communist conspiracy deliberately engaged in barroom and back-alley tactics as they did in previous hearings for the purpose of disrupting a serious enterprise of a congressional committee.

The statement of the board of governors further complains that one of the lawyers was identified in the course of the proceedings as a Communist. Since when have lawyers who are Communists been immune from exposure or identification? Does the board of governors of the bar association seriously contend that this committee, the Congress of the United States or the American people are precluded from attempting to detect and isolate traitors, even though they be possessed of a license to practice law?

The bar association statement likewise completely misrepresents the announced purpose of the hearings. The statement contains the following:

"The announced purpose of the hearing was to investigate opposition to the McCarran-Walter Immigration Act."

This is a baldfaced misrepresentation of the facts, which should be apparent to anyone who would take the trouble to read the transcript of the proceedings. The announced purpose of the hearings was to investigate and develop facts respecting the activities of the Communist conspiracy in its program of political subversion.

In another place, the board of governors used this language in censuring the subcommittee:

"Counsel appearing for the witnesses were not permitted to address the committee or to make objections to the manner in which the proceeding was being conducted; but counsel were repeatedly told that 'their sole and exclusive right was to advise their clients.'"

We admit that counsel were repeatedly told that their sole and exclusive right was to advise their clients. Evidently the board of governors are not familiar with the rules of the Committee on Un-American Activities.

Rule VII reads as follows:

"The participation of counsel during the course of any hearing and while the witness is testifying shall be limited to advising said witness as to his legal rights. Counsel shall not be permitted to engage in oral argument with the committee, but shall confine his activity to the area of legal advice to his client."

It was because the lawyers insisted on violating this rule that they were ejected after the repeated warnings.

Rule VIII provides that the committee shall remove from the hearing room attorneys who violate the rules. It is apparent, from the mere reading of the last two specifications of alleged misconduct on the part of the subcommittee, that the lawyers were violating rule VII.

In fact, the whole censure resolution is so erroneous and biased that I wonder what influences were at work in its preparation and adoption.

I want it clearly understood that this is not an indictment of all lawyers who have appeared before our committee in the Los Angeles area or elsewhere. By far the great majority of the attorneys who have represented witnesses before our committee have conducted themselves in a most exemplary manner and in accordance with every provision of the code of ethics.

By the same token, the unwarranted and intemperate action of the board of governors does not represent the will of the great mass of lawyers in the State of California. This is evidenced by the fact that we have received numerous letters from members of the California bar deploring and condemning the action of the board of governors.

The records of the hearings of this committee clearly indict those lawyers who are members of the Communist conspiracy and who have conducted themselves in the manner I have described. What the record does not show is the fact that some of these very lawyers about whom I have been complaining have violated the basic duty and obligation of a lawyer; namely, to serve the best interests of his client. There have been occasions when it was obvious that it would have been to the best interests of the client to have cooperated with the committee; and yet, when that witness employed a Communist lawyer or had an attorney furnished him by the Communist Party, he was advised to take the fifth amendment to his detriment. Why? Simply because the lawyer was serving the Communist Party rather than his client. I have often wondered why bar associations have failed to act in such cases.

Lest my observations be construed as wholly negative, may I commend the American Bar Association for its forthright position on the issue of communism as expressed by its action in creating a special committee of which former United States Senator Herbert O'Conor, of Maryland, is chairman, for the purpose of coming to grips with this very situation. This special committee on Communist tactics, strategy, and objectives of the American Bar Association is working zealously toward the objective of removing from the ranks of the legal profession those who are in fact dedicated to the forcible overthrow of our Government.

Some few months ago, FRANCIS WALTER, chairman of this committee, introduced legislation which would preclude from practice before congressional committees or in the executive department persons who have been publicly identified under oath as Communists.

I commend this bill to the bar association of this State, as well as to all other groups and organizations in this country which are or should be earnestly concerned over the increasing menace of communism.

While the censure resolution of the board of goverhors of this bar, to say the least, has adversely affected all of the members of the subcommittee and its director, it has been a rather severe personal blow to Congressman CLYDE DOYLE, from the Los Angeles area. As chairman of the subcommittee, he feels particularly responsible for the conduct of those hearings and the censure weighs heavily upon him because he is a member of the California bar.

While CLYDE DOYLE is a Democrat and our political philosophies and voting records in the Congress are as far apart as the poles, there is no more sincere, conscientious, upright, and patriotic man in the Congress than he. All those who know him intimately as I do will agree that what I have said is no exaggeration. For many years he has been a highly respected member of the California bar, a man who lost his only son in the service of his country, a fine, moral, family man. It hurt him deeply to be censured by his own bar without a hearing and without cause. He was shocked when a colleague of his in the adjoining district, a man with a prominent name but a man who is in no position to throw stones, placed the resolution of censure in the CONGRESSIONAL RECORD—in a subtle violation of the rules of the House, and without even discussing the matter with Mr. DOYLE or any other member of the committee.

I need not tell you that the Communists and their apologists from coast to coast were delighted at the action of the board of governors and JIMMY ROOSEVELT. They have used this censure resolution effectively.

I wonder when so-called responsible Americans are going to learn the danger of the threat from within and stop attacking the policeman and start chasing the criminal.

Every Man's Destiny

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. EDMONDSON. Mr. Speaker, on the day before the national elections in

1956, the Muskogee Daily Phoenix carried a brief feature story which is one of the finest items of its kind that I have ever read.

The story, which appeared on the front page, was written by one of our city's best loved citizens, Sox Gage, who has for many years been in the front ranks of many worthy civic undertakings.

This appeal to citizenship is one of Mr. Gage's finest services to our community, and there is a message in it for all of us.

The article follows:

X

(By Sox Gage)

I'm X. Just plain X.

I'm the oldest and best friend you have in this world.

I'm a willing worker, I'm absolutely honest and truly trustworthy.

I'm your servant and I have the appearance of being meek. But I'm strong and I'm dangerous. I'm more deadly than any gun, battleship, airplane, or hydrogen bomb. I'm more destructive than death.

I'm never a dictator in my own right, but I'm ruler in America today just as I have been since 1776. I'm unbiased. I'm every adult's X. I'm the expectant hope of all the children in all the countries of the globe. I'm sought after by hundreds of millions of peoples of all races and creeds whom I'm not now serving or haven't ever served.

They're dying every day and they're begging for me.

Millions lying in their graves gave their all for me, some at Bunker Hill and Lexington, some at Chickamauga, some at San Juan Hill, some at Chateau Thierry and Belleau Woods, at Guadalcanal and Iwo Jima and at Old Baldy. Yes, the bodies of brave men who have given their lives for me lie in all parts of the sphere.

Many hundreds of thousands, maimed of body and broken of mind, who were in war are now in hospitals and mental institutions. Their faculties admonish o'er their sufferings that I survive; that I do what they so nobly tried to do—to bring love and honor and freedom to all beings. Their prayers are that I glorify them and Him by gaining for every living soul and all nations a life of peace.

While I warn you that I'm strong, I also tell you that I'm subservient; that come Tuesday I'm just your rubber stamp at the polling place. Before you use me, I ask only that you thrust aside all political ties; all favoritisms and petty intrigues; all hates and all hankerings and that you use me as your partial payment on the cost by which I have been attained.

I'm your responsibility to the future.

I'm X. Just plain X.

But I'm your destiny.

How Can Modern Language Teaching Promote International Understanding?

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 18, 1957

Mr. HUMPHREY. Mr. President, Marjorie C. Johnston, a specialist in the Division of State and Local School Systems, Secondary School Section, of the Department of Health, Education, and Welfare, has recently written an important article entitled "How Can Modern Language Teaching Promote International Understanding?" The article appeared in the Bulletin of the National Association of Secondary School Principals for December 1956.

The author puts her finger on one of the critical areas of deficiency in our current training of the next generation of Americans to meet their responsibilities in world affairs. I ask unanimous consent that a condensed version of the article be printed in the Appendix of the RECORD.

There being no objection, the excerpts from the article were ordered to be printed in the RECORD, as follows:

HOW CAN MODERN LANGUAGE TEACHING PROMOTE INTERNATIONAL UNDERSTANDING

(By Marjorie C. Johnston)

Experience in direct communication through speech or writing, imaginative identification with the people whose language is used, a feeling of personal involvement, induction into a different thought process and cultural medium—these are the ways in which modern foreign language study can make a significant and indispensable contribution toward international understanding.

Although understanding of other peoples must rest on information, factual knowledge alone does not bring understanding; therefore, to collect all sorts of facts about a people, to learn a great deal about their language, their history, political system, social practices, art, and other cultural elements, does not substitute for the experience of learning to react in the language and thus actually to participate in a different culture. Without a working knowledge of their language one is insulated from other people.

Effective language teaching is characterized by an awareness that language is itself an integral part of the behavior system of a people and at the same time a means for the expression and summing up of this system or culture. Every stage of foreign language learning must relate in some manner to the life and civilization of the people because the linguistic forms belong in a frame of reference which is different from that of the learner. Early in the beginning course, even the first day, the student should begin to realize that the new words and language forms symbolize experiences, attitudes, and points of view unlike those which give meaning and connotations to corresponding forms in English. The more skill he develops in the use of the language, the greater should be his progress toward a real understanding of the foreign people. This is why a course in general language, although useful, is not enough, and why constructed language such as Esperanto, not being rooted in any culture, can never go beyond the code function of language.

There has not been a time, presumably, in the history of modern language teaching in the United States when secondary school courses of study did not state or imply that one of the objectives of the program was to foster understanding of the people whose language was being studied. Until recently this objective was seldom defined clearly, and more often than not it was regarded in practice as something quite incidental to the main purpose of the instruction. Language teachers generally consider it self-evident that certain cultural insights can be gained only through active experience with the foreign language, but they have found it extremely difficult to explain this outcome or to tell what they do to achieve it.

A recent questionnaire study (John B. Carroll and others, The Place of Culture and Civilization in Foreign Language Teaching, Reports of the Working Committees, 1956 Northeast Conference on the Teaching of Foreign Languages) sought to find out how language teachers define the cultural objective, how important they consider it to be in introductory courses, and whether they feel that they are adequately achieving this purpose. All shades of opinion were expressed, but a striking thing about the results is that high-school teachers, public and private, tend to rate nearly all aspects of the cultural objective as more important than do college teachers. A possible explanation is the high-school teachers' greater concern with general education and the realization that, since few secondary schools offer advanced foreign-language classes, introductory courses provide virtually their only opportunity to foster cultural understanding through the language. The most highly valued aspects of the objective were "appreciation of how ideas are differently expressed in a foreign language, with recognition of the inherent difficulties of translation" and "an increased respect and tolerance for the ideas, values, and achievements of a foreign culture."

It has also seemed obvious to language teachers that direct communication establishes a rapport which is utterly lacking in interpretation, even when simultaneous, but they have frequently defeated their own purposes in this aspect of language teaching by requiring students to work with a set of abstract grammatical rules before they have acquired an ability to communicate in the language. Since in the past teachers generally made no sustained effort to achieve the cultural objective and too often traveled circuitous routes in the development of functional skills, many students—far too many—in language classes ended their study with the same naive assumptions they started out with: that learning a new language is simply a matter of recoding one's own, that languages are alike except for the words, that thought and ideas are universal and can be put into words by all languages in much the same way. They never gained, therefore, the basic concept that language and culture are inextricably interwoven, that speakers of different languages see relationships and interpret experiences in very different ways, that language not only conveys thought but also shapes it, that a foreign language leads the learner into an entirely new world of tradition and thought and feeling.

DEFINITION OF OBJECTIVES

Language teachers, along with those in other fields, are rethinking their objectives and trying to devise effective ways of achieving them. In 1953 the steering committee of the foreign language program of the Modern Language Association of America enunciated the following:

"The study of a foreign language, like that of most other basic discipline, is both a progressive experience and a progressive acquisition of a skill. At no point can the experience be considered complete, or the skill perfect. Many pupils study a foreign language only 2 years; longer time is of course needed to approach mastery. At any point, however, the progress made in a language, when properly taught, will have positive value and lay a foundation upon which further progress can be built. It is evident therefore that the expectancy of values to be derived from language study must be relative to the amount of time and effort devoted to it.

"The study of a foreign language, skillfully taught under proper conditions, provides a new experience, progressively enlarging the pupil's horizon through the introduction to a new medium of communication and a new culture pattern and progressively adding to his sense of pleasurable achievement. This experience involves:

"1. The acquisition of a set of skins, which can become real mastery for professional use when practiced long enough. The international contacts and responsibilities of the United States make the possession of these skills by more and more Americans a matter of national urgency. These skills include:

"(a) The increasing ability to understand a foreign language when spoken, making possible greater profit and enjoyment in such steadily expanding activities as foreign travel, business abroad, foreign language movies and broadcasts at home and abroad.

"(b) The increasing ability to speak the foreign language in direct communication with people of another culture, either for business or for pleasure.

"(c) The ability to read the foreign language with progressively greater ease and enjoyment, making possible the broadening effects of direct acquaintance with the recorded thoughts of another people, or making possible study for vocational or professional, e. g., scientific or journalistic, purposes.

"(2) A new understanding of language, progressively revealing to the pupil the structure of language and giving him a new perspective on English.

"3. A gradually expanding and deepening knowledge of a foreign country—its geography, history, social organization, literature, and culture—and, as a consequence, a better perspective on American culture and a more enlightened Americanism through adjustment to the concept of differences between cultures.

"Progress in any one of these experiences or skills is relative to the emphasis given it in the instructional program and to the interests and aptitude of the learned. Language skills, like all practical skills, may never be perfected and may be later forgotten, yet the enlarging and enriching results of the cultural experience endure throughout life."

This statement has had wide acceptance by the various national and regional associations and conferences of language teachers. The ideas were amplified in a report by the committee on foreign language instruction in secondary schools at the 1956 northeast conference on the teaching of foreign languages, a report prepared on the basis of the committee members' professional experienc and that of teachers in 35 secondary schools cited by colleges and universities for the excellence of the language preparation given their students. This committee's recommendations emphasize the need for the five-fold objective of understanding the spoken language, speaking, reading, writing, and knowledge of the foreign civilization.

CURRICULUM PLANNING

How opportunities are utilized or, if need be, created, challenges the best thinking of any teaching and administrative staff. Even though the foreign language field is a natural for the cultivation of broad human understanding, and even though the complex of skills being developed provides an open door to accurate comprehension of other ways of thinking, language learning is an exceedingly complicated and many-sided process. The factors involved need to be carefully analyzed and reckoned with. To assure a reasonable chance of success, teachers and students alike must have a clear understanding of what the aim is, they must use effective materials and methods of teaching and learning, must apply themselves diligently to the task, and must have some means of evaluating the outcomes.

The same principles and many of the activities that have proved themselves in other learning experiences apply, of course, to a foreign language. Students learn to understand the spoken language by listening; to speak by speaking; to communicate in social situations by practice in communicating; to understand the nature of language and culture by firsthand acquaintance and experience with them; to know and appreciate more fully one's own language and culture by getting outside the familiar culture pattern, by seeing them in perspective from the vantage point of another language and culture. Unless these aims are a conscious, inherent part of the teaching process, the study of a foreign language does not automatically increase the ability to communicate successfully or to understand foreign cultures. This fact has been emphasized by various national and international groups seeking to determine the part that languages play in developing international understanding.

Much confusion exists about what foreign language study can and cannot do to foster international understanding. In order for schools to provide suitable curriculum experiences in a language other than the mother tongue, this confusion needs to be cleared up. There are certain broad elements of international understanding to which nearly all phases of the total school curriculum—including of course the teaching of a modern foreign language—can make valuable contributions: helping students obtain a realistic view of some of the world's problems; helping them see the United States in its relationship with other nations; helping them to appreciate the contributions of all peoples to the world community; helping them to value the services of international organizations devoted to better world understanding (i. e., United Nations, Organization of American States), and the like. Then there are a number of specific contributions, some of them unique, which the teaching of a modern foreign language can make to an understanding of other people.

Working toward international understanding in a formal educational situation involves the cultivation of generous and informed attitudes through (1) factual knowledge of other peoples, (2) significant experience of other cultures, and (3) communication skills that increase knowledge and experience and prepare for personal foreign contacts. The first two, factual knowledge and significant experience, are possible to a considerable extent without a foreign language. The obvious advantage of foreign language study as a part of a total program that has cultivation of international understanding as one of its objectives is that it provides a skill making possible direct communication with another people in a world in which more and more Americans are meeting foreigners. And the more facility a student gains in a second language, thereby readying himself for contact with one other people, the more he increases his readiness for quickly familiarizing himself with any additional foreign language or culture which he encounters in his life's work. The foreign language can also provide a content and an experience which contribute uniquely to that acquired through other fields. Since language learning is not possible without subject matter, an appropriate, if not the natural, subject matter of a foreign language class is material which reveals the foreign culture. And since the language is an essential element in the culture, foreign language learning broadens the mental horizon and constitutes significant experience of the foreign way of life.

In this connection, one of the greatest barriers to international understanding is the normal tendency of human nature to react against the unfamiliar, and foreign language learning is probably the quickest and most direct method of making familiar what before was strange, by actually participating in and experiencing a different mode of thought. A person who can speak German, for example, may not like or admire the Germans, but he is no longer disliking them on instinctive grounds just because they sound queer.

The implications for curriculum planning are clear: (1) since language is a medium through which the value systems of a culture are expressed, the acquisition of language and of cultural understanding should be a simultaneous, not separate, process; (2) the language itself should be taught, not just information about the language; (3) it should be taught, in cultural context, not as an exercise in abstract reasoning. Each language class should take the students, so to speak, on a brief excursion into another way of life. In other words, foreign language teaching in the high schools today must contribute as fully as possible to the general education of boys and girls and to their ability to adjust to life in the modern world. The primacy of the communication approach seems right for the high school. Students who may later specialize in one or more foreign languages will take up technical linguistic subjects as they continue their study.

Another point of confusion has to do with proper standards for language work. To adapt foreign language teaching to the interest, maturity, and psychological needs of high-school students is not to lower the standards of achievement or to water down the subject matter. On the contrary, there is much evidence that high-school students can do solid work and that they do it with zest when their goals are clear, when they can note progress toward those goals, and when they can see the usefulness of the assigned work in relation to the goals. By the age of 5½ years, every normal child has learned the complex system of his native language—its structure, gestures, tone, and intonation—and, as his experience grows, vocabulary is added with relative ease. Although individuals learn at different rates and exhibit varying degrees of aptitude in self-expression, the power of all of them to communicate adequately proves that the underlying patterns composing the language are acquired by everyone in the culture. There is no basis, therefore, for believing that a high-school student cannot learn a second or a third language and no good theoretical reason to restrict foreign language study to the gifted. To pitch the level or the tempo of a course higher than is attainable by more than half the student body is not synonymous with high standards of achievement in terms of the stated objectives of modern foreign language teaching.

In the selection of curriculum experiences, then, teachers must see that students (1) take only as much as can be accomplished in the time available, (2) that they do well what they set out to do, (3) that they take stock frequently of their progress, (4) that they finish the course with a measure of satisfaction and, in addition, (5) carry with them an attractive vista of study to be continued or taken up again later. They will remember that language learning is a continuum and that no one should expect to master a second language in a few hours a week during the course of 2 or 3 years.

With the trend toward an earlier start in languages, many students upon entrance to the high school will have acquaintance with a second language and will have acquired varied abilities in speaking and understanding it. There is the greatest need to see that such pupils progress without starting over or waiting 2 or 3 years before they can continue their foreign language study. This means that the idea of covering the course of study each year, as often conceived, can no longer apply. It should be noted, too, that there is a growing inclination by college language departments to give entering students oral-aural and written placement tests, and the college entrance examination board is now conducting experiments for the express purpose of adding a listening comprehension

test to the regular foreign language college board achievement tests by about 1960. Obviously, the attempt to teach a complete course in formal grammar at the expense of practice in the use of the language must soon rate a low priority in the choice of learning activities. The exigencies of the situation seem certain to stimulate a type of curriculum planning more conducive to the attainment of the objectives as now defined.

• • • • •

URGENT NEEDS

A consideration of modern language teaching as it is and as it ought to be in American high schools can lead to only one conclusion; Some encouraging progress is being made, but several important improvements are of immediate urgency.

1. More and better qualified teachers: Unless teachers have the ability to speak and understand the language and have firsthand acquaintance with the people and country, how can they guide their students toward the attitudes, skills, knowledge, understanding, and significant experiences to which their study of a modern language entitles them? The Foreign Language Program of the Modern Language Association has recently issued an official statement of qualifications for secondary-school teachers of modern foreign languages based on demonstrated abilities rather than course credits; it has received wide endorsement from leaders in foreign languages and professional education. A large-scale movement to permit residence and study abroad, both for preservice and in-service teachers, is of the utmost importance. United States teachers need to get the feeling expressed recently by a visiting teacher from France:

"If I feel that my stay in the States has been profitable, it is because when I get back to France, I shall be in a position to pass on to my pupils such direct, vivid, or picturesque information as I have had the opportunity to gather here. This information may still be very partial and limited. Yet Ford's assembly line, the speedways and drive-ins, the museums and the galleries, the drug-stores and jukeboxes, the American homes and their wife-saving gadgets, the lavishness of nature and the warm hospitality of men—all these have now taken for me a quality of concrete experience and actual reality that throws the mere bookish secondhand knowledge into the realm of bloodless shadows."

The prepartion of modern language teachers should include a better background in American civilization and culture, including work in social psychology and cultural anthropology planned in correlation with linguistic studies. And, since our heritage is deeply rooted in western European tradition, an introductory study of a language which is unrelated to the one taught would do much to overcome the undiscriminating enthusiasm sometimes exhibited by language teachers. Learning experience in the unrelated language would better prepare the teacher to convey the concept of how and why language shapes or governs thought. At least some knowledge of linguistic science is also a must. In other words, if teachers are ever to learn how to plan curriculum experiences in their field effectively and in collaboration with their colleagues in other fields, their own preparation must include some interdisciplinary experience.

Greater professional spirit is likewise a necessary element in the high-school language teacher's equipment. Much productive work and much inspiration would result from attendance at annual meetings of the State, regional, and national language associations. At present an infinitesimal number of high-school teachers go to national meetings, work on State committees, carry on experimental research, contribute articles to journals, work to achieve good articulation with the elementary school and the college, produce new instructional materials, learn language laboratory techniques, and otherwise demonstrate their sense of responsibility to the profession. Should not the local school board give some material encouragement to high-school teachers who are disposed to attend annual meetings of professional associations or serve on working committees?

2. More schools offering modern languages: The high-school years have been described as a linguistic wasteland for an alarming proportion of students, and with some justification. A study conducted in 1955 by the Modern Language Association reveals that 56 percent of our public high schools fail to offer any modern foreign language, that only 14.3 percent of the total high-school population is currently enrolled in a modern foreign-language class (PMLA, September 1955). Along with measures to remedy this situation it might be advisable for a few of the larger cities to provide a specialized high school devoted to the teaching of foreign languages and cultures.

3. A longer sequence of study: Students with special interest and aptitude should be able to continue the language long enough to make real proficiency possible. The customary 2-year high-school program in modern language is unsuited to the needs of students today.

4. Opportunity to study Asiatic, African, and East European languages: Spanish and French are taught in all of the 41 States for which enrollment figures are available; German is taught in 32 States, Italian in 8. Polish, Greek, Hebrew, Russian, Portuguese, Norse, Chinese, and Swedish are available to an extremely limited extent. Eleven secondary schools are known to have classes in Russian, for example, and one offers spoken Chinese. Many current problems in international relations center in Asia and other areas that are little known in the United States; they are likely to be long with us, and their solution will require an ability to reach a meeting of minds with peoples whose traditions and psychology are almost a complete blank to most Americans. Will the present high-school generation be better prepared than their parents to maintain amicable relations with these areas of the world?

5. Instructional materials designed to develop skills in communication and cultural insights: New texts, kinescopes, wall pictures, and many kinds of materials are needed, pooling the best thinking and experience of the profession. Language laboratory facilities, to mention another necessity, are few and far between. Two years ago one of our linguistic scientists stated: "The time is past when a school can boast of possessing language laboratory facilities. The time is at hand when those who are lacking such facilities will have to find some explanation."

6. More interdepartmental planning: In the interest of economy, efficiency, and meaningful, integrated content, modern language instruction needs to be closely meshed with that in other fields.

7. More research and evaluative criteria: There are many questions that remain unanswered in the field of language learning and tests and measurements. Some significant research in psycholinguistics has already been done and more is in progress. Modern-language teachers need to assimilate and disseminate the results of such research and try to apply the best information available to the construction of measures by which they can evaluate progress in such abilities as speaking and listening comprehension, desirable attitudes toward other cultural groups, and changes in behavior patterns as a result of foreign-language study. It is as difficult in language as in social studies to evaluate attitudinal growth. Travel, for example, is believed to have some relation to better international understanding. Modern language study ought to motivate a student to travel, prepare him to profit more from the experience when the opportunity comes, and fit him to add his bit toward the creation of a more favorable attitude abroad toward United States citizens. How, therefore, do we judge to what extent this is happening? In the absence of adequate measuring devices, teachers should keep better anecdotal records and collect more samples of student and community reaction to apparently successful modern-language teaching.

In summary, modern languages for modern living are beginning to be taught in a new key—one attuned to an awareness of the ways on which language study can lead to cultural understanding—and the new key will be recognized more and more generally as greater numbers of teachers and students are prepared to feel at home in a second language. Clearer objectives and more direct ways of achieving them have been emerging in the wake of recent advances in linguistic science and with the trend toward interdepartmental or interdisciplinary approaches to language study. The improvements in progress and those remaining to be made coincide with the growing need for language proficiency in the national interest and with the widespread conviction that through language we get a personal view of peoples that we cannot get in any other way.

Girard and Civil Rights

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Camden (S. C.) Chronicle of June 12, 1957:

GIRARD AND CIVIL RIGHTS

Those outrages against national honor, tradition, and duty known as the status of forces agreements and treaties, now in effect with some 50 countries, have been brought into sharp focus for Americans by recent events. One is the charge that the Formosan riot which sacked the United States Embassy and the USIA office in T'ai-pei would not have happened if we had had such a treaty with Formosa and had turned over to local justice the fate of the Army sergeant who shot and killed a peeping tom spying on his home. Acquittal of the sergeant by an Army court-martial is regarded by irate Formosans, we are told, as a "whitewash."

More significant is the decision by the Commander in Chief, himself, President (and former general) Eisenhower that Sgt. W. S. Girard, of Ottowa, Ill., will be turned over to Japanese courts for "inflicting bodily injury causing the death" of Mrs. Naka Sakai on a firing range last January 30. Sergeant Girard was on duty, guarding United States property. Mrs. Sakai, in defiance of posted warnings, was salvaging empty shells fired on the range. Since the incident, the sergeant's case has provided a tug-of-cold-war between the State Department which wanted to turn him over to the importunate Japs and the Defense Department which originally did not. But the President, who signed the agreement, has decreed Japanese justice for Girard.

All of which should recall the consistent stand of the American Legion against the status-of-forces agreements and its repeated demands for the repeal of these and similar agreements. And the Girard decision returns the spotlight to the telegram of protest sent to the President only a few days ago by National Commander Dan Daniel, of Danville, Virginia.

"If our Government allows Japanese courts," wired Commander Daniel, "to try and punish Girard for an unfortunate accident that occurred while he was on duty then the Status of Forces Treaty and similar agreements are an even more inexcusable betrayal of the trust and rights of American servicemen stationed overseas to defend the freedoms which we so proudly proclaim in the Bill of Rights, including the right of trial by jury and the presumption of innocence until proven guilty.

"It is not William Girard who is on trial," the commander continued. "Rather, it is our Government. If our Government abandons Girard to Japanese justice (which it has now done), it will have notified the world that we will defend freedom for everyone except our own military personnel serving abroad."

The President has, by his action, answered Commander Daniel. He has answered the American people. He has answered the Armed Forces that he once led in the greatest struggle for human justice the world has yet seen. He has answered American youth that must soon be sworn to defend a Constitution that will not defend them.

A Salute to Two Distinguished North Carolinians

EXTENSION OF REMARKS
OF
HON. HAROLD D. COOLEY
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. COOLEY. Mr. Speaker, it is with great pride and satisfaction that I bring to the attention of the House today the devoted service of two distinguished North Carolinians in behalf of the farm families and the general agriculture and economic development of my State.

Upon these two men the United States Department of Agriculture recently bestowed its Superior Service awards. Summations of these awards read:

David S. Weaver, Extension Service, Raleigh, N. C., for encouraging farmers to modernize their operations which has been instrumental in bringing about greater efficiency and cultural advancement; and for promoting cooperative relationships among agricultural agencies and farm leaders.

Horace D. Godfrey, Agricultural Stabilization and Conservation, Raleigh, N. C., for leadership in bringing about an outstanding degree of accuracy and efficiency in the operation of North Carolina ASC State and county offices; and for achieving the fullest cooperation of all agricultural agencies in the State.

Mr. Speaker, it has been through the work of such men as David S. Weaver and Horace D. Godfrey that our agriculture has become the most efficient of any nation, that Americans are the best fed people in the world and that consumers in our country, after paying for their food, have three-fourths of their income left for investment in good homes, modern, neat, and progressive communities, and in other necessities, conveniences, and comforts that together make a good life on an American standard of living that is the envy of the world.

Mr. Weaver is director of the North Carolina Agricultural Extension Service. He was born at Westwood, Hamilton County, Ohio. He served with the infantry in World War I. After receiving his bachelor of science degree at Ohio State University in 1920, he turned his interests southward, and in 1925 was awarded his master of science degree in agricultural engineering at North Carolina State College.

He entered a distinguished career as a teacher, served for a while as principal engineer for the Federal Rural Electrification Administration in Washington, and then returned to North Carolina State College as head of the Department of Agricultural Engineering. He became director of the Agricultural Extension Service, North Carolina State College, in 1950.

His particular interests in professional work has included the improvement of the efficiency of human labor on farms; he conducted the first statewide rural electrification survey and was instrumental in formulating both State and Federal laws pertaining to rural electrification; and he encouraged the development of farm mechanization including tractors, combines, haying, and other laborsaving equipment.

He is the author of numerous scientific works. His membership in learned and professional societies include Phi Kappa Phi, Alpha Zeta, Delta Theta Sigma, and Kappa Sigma Pi.

Mr. Weaver, in 1950, was named Man of the Year in Service to North Carolina Agriculture by the Progressive Farmer. In 1955 he was given the Distinguished Service to Agriculture award by the North Carolina State Grange.

He is married and has three sons. He is a Presbyterian and a member of the Masonic order.

Horace Godfrey was born August 22, 1915, at Waxhaw, Union County, N. C. He is 1 of 6 sons and 4 daughters of the late Cloyd and Helen Therrell Godfrey. Following graduation from high school in 1932 he went to work and attended business school at night. Two years later he went to Raleigh as a comptometer operator for the old Agricultural Adjustment Administration. His appointment was only for 3 months, but now he is finishing out 23 years. His agency first was AAA, then PMA, and now is ASC—Agricultural Stabilization and Conservation.

Mr. Godfrey went into military service in January 1943 and served with the Army Air Corps. When World War II ended he returned to his job in Raleigh and resumed his climb upward. Since 1949 he has been the top administrator of his agency in North Carolina.

Recently he was elected chairman of the North Carolina Board of Farm Organizations and Agencies.

Mr. Godfrey was married in 1943 to Julia Orr, a native of Great Falls, S. C. There are three children. Mr. Godfrey is a Baptist and a member of the Masonic order.

Mr. Speaker, I sometimes wonder if the Nation fully realized how much all of us owe to such men as David S. Weaver and Horace D. Godfrey. They are making this a better country not only for farmers and their families whom they serve directly but for the people in the towns and cities as well.

They are the kind of men upon whom our farm families can confidently depend, to improve the conditions of our farms and to bring to agriculture an equitable share in the Nation's prosperity.

I salute these two devoted men and I commend the Department of Agriculture for bestowing upon them the superior service awards for their outstanding service.

Permanent U. N. Force

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I present herewith a copy of the Gallup poll which appeared in the Washington Post on May 7 in regard to a permanent U. N. police force.

I should hope that committee hearings could be arranged soon on this important subject.

THE GALLUP POLL

(By George Gallup, director, American Institute of Public Opinion)

PERMANENT U. N. FORCE FAVORED

PRINCETON, N. J.—Has the influence of the United Nations increased or decreased as a result of the actions it has taken in the months since Suez erupted into a world threat?

To find out how Americans feel about it, the institute has just completed a survey in which a representative cross section of adults from coast to coast were interviewed on two questions concerning the world peace organization, whose success hinges to a large extent on the outcome of the Israeli-Egyptian problem.

The study shows that:

Twice as many Americans think the influence of the U. N. in recent months has increased as think it has decreased.

A majority of Americans think the U. N. should have its own permanent armed forces, including troops from the United States, which it could use to enforce its decisions.

Fewer than 1 person in every 4 believes that such a step would give too much power to the world organization.

The first question in today's survey:

"In general, do you think the influence of the United Nations has increased or decreased as a result of the actions it has taken recently?"

The vote:

U. N.'s influence

	Percent
Has increased	43
Decreased	22
Same, can't say	35

A 64-year-old Minneapolis lumber and hardware salesman put it this way: "If we didn't have the U. N., we would have been in war by now."

On the other hand, many who felt that the U. N. has lost influence in recent months pointed to its lack of authority in carrying out its resolutions.

Another question asked was:

"Do you think the U. N. should have its own permanent armed forces, including troops from the United States, which it could use to enforce U. N. decisions—or would that be giving too much power to the U. N.?"

The vote:

Armed forces for U. N.

	Percent
Yes, should have	53
No, should not	23
Can't say	24

It is interesting to note that among the college-trained group, the group which includes the opinion leaders of the country, majority sentiment holds that the influence of the U. N. in recent months has increased.

Similarly, a larger proportion of the college group believes that the world peace organization should have its own permanent armed forces to enforce its decisions.

Since its founding in 1945, many proposals have been made to strengthen the world peace organization.

Institute surveys as far back as 1948 have shown public opinion strongly in favor of establishing a U. N. police force to be used when needed in settling international disputes.

The President of the Republic of the United States

EXTENSION OF REMARKS

OF

HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. SCRIVNER. Mr. Speaker, a few days ago each Member of Congress received a brochure relating to the coming visit of Mr. Coty, President of the Republic of France.

Noting that the brochure repeatedly used and emphasized "republic," realization came that we do not, but should, emphasize that the United States is a republic. In a recent weekly newsletter, I commented as follows:

"The President of the Republic of the United States"—that, I feel, is the way our Presidents should be introduced.

This Nation is the oldest and most successful Republic in the history of the world. Kingdoms, duchies, dictatorships, whatever there may have been have fallen. In many instances, in recent years, the successor has been a republic, many of which I have visited. There has always been great pride in the reference by these citizens to their republic. It is never Korea—it is always the Republic of Korea. It is never Panama—it is the Republic of Panama—and so it goes all over the world.

Last week, Members of Congress received a brochure in advance of the visit of Mr. Coty, President of the French Republic.

The outer cover said, "State Visit to the United States of M. Rene Coty, President of the Republic of France. (Of course, to be consistent, I feel they should have said, "visit to the Republic of the United States.")

In a 3-page biography, 4 references were made to the French Republic.

In a four-page summary entitled "Functions of the President of the Republic," the words "President of the Republic," "Constitution of the Republic," and similar phrases are found.

The word "republic" is found 38 times on those 4 pages, and always it is "the President of the Republic," never just "the President."

If these newer, and less successful or stable, republics are justly proud of their status as a republic and stress it so much, do we not have even more reason to be proud of the fact that we, too, live in a republic and so refer to it? It is a little more cumbersome—that's true—but it is worth it.

So, to the citizens of this republic, it should be the Republic of the United States of America; and to us it should always be the President of the Republic of the United States of America.

And, after all, it should not be forgotten either that every one of our States is guaranteed a republican form of government by the Constitution of the Republic of the United States of America.

During this state visit, there will undoubtedly be many toasts. One toast, I hope, will be to the bright future of the Republic of the United States of America.

American Women as a Factor in Our Economy

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 18, 1957

Mr. HUMPHREY. Mr. President, the distinguished chairman of the board of General Mills, Inc., in Minneapolis, Mr. Harry A. Bullis, recently wrote an article for the Commercial and Financial Chronicle. The article is entitled "American Women Have Become the Economy's Prominent Factor" and it appeared in the Thursday, May 9, 1957, issue.

I ask unanimous consent that this deserved tribute to Mrs. America be printed in the Appendix of the RECORD.

The being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICAN WOMEN HAVE BECOME THE ECONOMY'S PROMINENT FACTOR

(By Harry A. Bullis)

(American women's outstanding record as money managers receive from Mr. Bullis a great deal of credit for accomplishments of the American democracy and economic system. After listing various data showing the extent of women's expeditures and savings, the General Mills' head notes that "women do not aspire to industrial or corporate management * * * [or try to gain] control of big corporations," but admits "undoubtedly they could if they set their minds to it." Though she is conservative and suspicious of debt, the author calls Mrs. America "the great determining factor in our dynamic free enterprise," and believes her high standards assure the country's economic future.)

The American woman is the most vital force in our social and economic development today—and certainly the most often discussed. The educator, the sociologist, churchmen of every denomination, the economist, and the manufacturer study her, write about her, weigh her attributes, measure her potentials as though she were a new species—or a force, newly unleashed, with potential for unlimited good.

All this speculation about the modern emancipated woman might lead a visitor from Mars to believe that mankind discovered atomic fission and the power of women at about the same time.

But leave it to a Frenchman to be quicker. Well over a hundred years ago, Alexis de Tocqueville, appraising the singular prosperity and growing strength of democracy in America, wrote "It ought mainly to be attributed to the superiority of their women."

Although I agree that the only man who really understands women is the one who admits he understands nothing at all about them, I will stick my chin out and say that I, as a businessman, at least have some understanding of the modern woman's power as the money manager. That is the result of statistics, not of any manifestation of superior masculine judgment.

FAMILY SPENDING

Statistics about women as money managers get quickly to the heart of the matter—the American home. Our national food bill is about $70 billion a year. Women handle most of this money. We will pass quickly over the $3 billion they spend in beauty shops and on cosmetics and get to the selection of refrigerators, electric stoves, irons, toasters, dishwashers—all those mechanical aids to a higher standard of living. Women control these expenditures, too. In fact, they are responsible for most of the family spending in our 43 million family units.

More statistics—yes. But even the ladies will tolerate statistics when favorable and regard them as masculine flattery to the seductive charms of the feminine wallet. I for one, and I am sure most American industrialists and economists, will admit that the hand that holds the family bankbook rules our economy.

Estimates of the spending power of women vary. The high estimate is 85 percent. But many market research authorities agree that women control about 60 percent of all personal consumption expenditures, which last year totaled nearly $266 billion. Sixty percent of that figure is $160 billion.

SAVINGS AND WEALTH

Women not only spend money. They save it, too. They own stocks worth about $100 billion. Half of the $110 billion in our savings accounts is theirs, as well as half the $66 billion in Government bonds. In addition they have $50 billion insurance on their own lives.

About 75 percent of all life insurance death benefits go to women—around $15 billion annually. Widows pay nearly 80 percent of inheritance taxes.

Last year a New York Stock Exchange survey revealed the wealth of American women. It found that 51.6 percent of all persons owning shares in public corporations were women, and only 48.4 percent men. Women stockholders numbered 4,455,000, a gain of 1,225,000 since 1952. In many large corporations, United States Steel for example—women considerably outnumber men as individual shareholders.

Here's still another way to say American women are a powerful financial influence—they control about 70 percent of estates, 48 percent of railway and utility holdings, 40 percent of the Nation's homes, 66 percent of mutual savings-bank accounts.

We could go on piling up golden evidence of women's might as owners of private capital. But we are discussing here women's power in our society as money managers. That's something else again.

Actually, despite all their wealth and their ownership of stocks and shares, women do not aspire to industrial or corporate management. You do not hear of women trying

to gain control of big corporations. Undoubtedly they could if they set their minds to it. But they seem to have other aspirations.

It is a revealing comment on women as money managers that even in companies where the majority of the stockholders are women, there are few women executives and fewer board members. In general, they seem to take little interest in the management of companies in which they are part owners. They are content to judge competence by dividends.

Actually, the great money manager is Mrs. America—the woman who runs the American home. Through the medium of the family budget, Mrs. America has become the dominant factor in the American economic scene. It is she, not the men, who directly control well over 60 percent of personal expenditures in the United States. By expressing her preferences in the market place, she sets standards of style and quality in many of our major industries.

She is courted by manufacturers and financiers alike. The first group hope to sell to her, the others have confidence in her dollar integrity. Mrs. America is generally rated as a better financial risk than her husband. Her name on a banknote or mortgage indicates payments are more likely to be made. Installment companies report that if the wife's name is on the contract, the furniture or the color TV or the new car are far less liable to be repossessed. One of the country's largest personal-loan companies has stated that a married woman as cosigner is their best security.

MRS. AMERICA IS CONSERVATIVE

Basically, Mrs. America is conservative. Her deepest purpose seems to be to have and to hold, to establish and maintain a safe and happy home. Everything she does is directly or indirectly related to this basic urge, whether it concerns making friends, taking up causes, joining groups, or in the way she spends family money. Esther Foley, astute home service director of True Story women's group, has found there are two distinct types of homemakers. The first, she says, is the planner. She plans all her expenditures for years ahead. Generally she lives on the edge of a large community.

The other type, according to Miss Foley's study, is the one who buys on impulse rather than on plan. She lives in the industrial parts of cities and her greatest interests seem to be her personal and family relationships in the community. Advertising and what the neighbors are doing influence her more than a predetermined pattern of spending.

Remember, both of these groups are money managers. Both variations of Mrs. America are interested in everything new that will make a better home, raise their living standards, and increase the security of their families.

But in the past 5 years, according to studies of the wage earner groups, the homemaker has developed a more critical attitude toward things offered her. She is developing a better sense of values. The modern day money manager takes a second look, often a third, before she relaxes her grip on the bankbook.

That is all to the good. And another wholesome development for our economy is that Mrs. America is showing a greater awareness of the fact that being in debt can bring trouble to the family.

As an example of this suspicion of debt, mortgages are being paid off in shorter periods than required. Commonly mortgages to finance new homes are made for 10 to 20 years. For GI's even longer. However, in recent years, under the conservative influence of young Mrs. America, the average life of such mortgages is down to 7½ years.

There is no doubt that this wiser spending and more conservative control of the family money is the result largely of better education. The new Mrs. America is unquestionably better schooled, has traveled more and thought more about basic human and national problems than her grandmother. She is not afraid to be intelligent. Nor does the modern young Mr. America wants his wife to be just a good cook and a slave to child raising. He wants her to look young and attractive and to be a good companion. More and more marriage is becoming a partnership of equals based on love, children and home, in which each related person is a respected member in full standing.

I do not go along with those who speak of Mrs. America as though she were an isolated factor. She may be wise, beautiful, independent and alert. She may be the money manager of the family. But she is a part of the whole, an indispensable member of a closely knit social group, who influences the other members of her family. Nevertheless, she in turn is influenced by their prejudices and likes and attitudes. To speak of Mrs. America as a thing apart, as the spender of the family income as though she, alone, had that income to spend, is nonsense. No mister, no missus. No children, no family. It's as simple as that.

ECONOMIC IMPORTANCE OF MRS. AMERICA

Of course, many a Mrs. America does help bring in some of the family income. About 30 percent of all married women in the United States take jobs outside the home either to improve their standard of living, to guarantee better education to their children, or just because they find working is psychologically important to them. Whatever the reason, these working mothers contribute substantially to total consumer buying power. And furthermore, economists, expecting our total labor force to increase by 10 million before 1965, predict that more than half of that increase will be women.

Our constantly rising cost of living frequently takes the question of "should a married woman work or stay at home" out of the realm of moral debate. Often the double pay check is a family necessity. The national Manpower Council in its latest study sums it up this way—"The desire to achieve a richer life for the family, measured not only in physical goods and possessions but also in more education and better medical care, has such widespread approval that it provides a generally acceptable reason for married women, whose responsibilities at home do not absorb all of their time and energy, to go to work."

When Mrs. America does help bring home part of the family bacon, she often assumes considerable importance in the economic life of the Nation. These figures from the Department of Labor point up that fact. The number of women in the classification called managers, officials, and proprietors, increased from about 450,000 in 1940, to 932,000 in 1956.

Women in the classification of professional workers grew from 1,157,000 in 1940 to 2,125,000 in 1956.

Combining these classifications we have over 3 million women who may be called "business and professional women." Many of them are Mrs. America, remember.

However, I do not think these figures about women who work outside the home should lead us to believe that Mrs. America devotes as much of her skill as a money manager in the office or corporation as she does in her own home. Generally, women do not show as much interest in handling great wealth as they do in the wise and profitable spending of their dividends. They tend to trust their brokers, brothers, trust officers, or corporation directors with those things. Nor do I think you will find many women vitally concerned with the operating policies of the companies for which they work or in which they have money invested.

CONCLUSIONS

With Mrs. America at home, things are different. There she becomes the experienced, almost dedicated money manager fired by love of her family, to investigate, appraise, and buy every new product or service that will raise her standard of living. It is in this role of director of the domestic budget that she has won such power in our modern economic system.

Mrs. America, therefore, can be called the great determining factor in our dynamic free enterprise. As long as she is determined to keep her home standards high, to assure the best health and the best education for her family, to provide them with everything good the economic future of this country will be assured, and the American way of life, symbolized by Mrs. America, will continue to inspire the rest of the world.

Alexis de Tocqueville's appraisal was indeed correct. America will always be strong because of the superiority of her women.

Conservation of America's Forests

SPEECH

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. SIKES. Mr. Speaker, there is now before the Conference Committee on Appropriations for the Department of Agriculture for fiscal 1958 a very important question regarding conservation of America's forests. There are some phases of the tree-planting program under the soil bank on which general information will, I think, be helpful.

The $5 million for nursery operation and development being considered by Congress for fiscal year 1958 under the soil-bank program will enable the State foresters to meet the unprecedented demand for nursery seedlings. This need is particularly acute in Florida and other Southern States. The soil bank tree planting signup to date in Florida makes up 9 percent of the entire national signup. The Florida State forester expended capacity of three existing State nurseries in fiscal year 1957 with soil-bank funds. Next winter, he will have about 46 million soil-bank seedlings available and can produce up to about 58 million seedlings for this program in each remaining year for the life of the program.

It is planned to use $4,500,000 of the $5 million in the budget for fiscal year 1958 for purchasing seed, operating nurseries, and purchasing seedlings from commercial nurseries. The remaining $500,000 will be used to complete expansion of soil-bank nurseries started in fiscal year 1957.

For fiscal year 1956 commercial nurseries produced an output of 76,923,000 seedlings for forest and shelterbelt planting; whereas production of similar stock by State foresters was 580,884,000; by forest industries was 77,307,000; by Forest Service and TVA was 141,850,000;

and by soil conservation districts, counties and municipalities was 9,004,000. This output from all sources totaled 385,968,000, of which the commercial nurseries share was 8.7 percent, and for State nurseries was 65.6 percent. An equivalent of this entire fiscal year 1956 output from all sources was planned as the annual soil bank need for nursery stock. The State foresters had the experience and basic facilities to provide for rapid expansion of nursery production. They were willing to do the job based on cooperative agreements and are in a position to distribute the needed planting stock through their regular distribution systems. Agreements have been made with 33 State foresters accordingly. No expansion of Federal nurseries has been made or is contemplated. Full consideration has been and will continue to be given to acquiring adapted nursery stock from commercial nurseries when available at reasonable prices. In many States and groups of States where large signup is developing, there are no commercial nurseries producing the class of stock required. Each of the State foresters considered fully the commercial nursery capacities and potentials in his State before preparing plans for expansion and production schedules in State nurseries. Although State nurseries are ordinarily able to provide stock at cheaper prices for soil-bank use than are commercial nurseries, this was not the determining factor in planning program stock sources. It appears that the assistance of all types of nurseries will be needed to meet the accelerated demands for soil-bank nursery stock. Commercial nurseries will especially be of importance in providing hardwood stock for soil-bank shelterbelts and post lots in the Great Plains.

Tree planting accomplishment is forging ahead under the impetus provided by the soil bank program. The State foresters are proceeding with renewed determination to attack the job of planting the some 60 million acres in need of forestation.

Tree planting signup under the soil-bank program has been heavy in some States and light in others. Florida is the third State in magnitude in this tree planting signup and furnishes an outstanding example of tree planting interest and cooperation.

Farmers basically want to make the wisest use of their land and a considerable acreage will be shifted to trees. Some farmers are expected to move slowly in making this shift and signup is expected to continue until the deadline of 1960. State foresters are confident that signup will increase and are going forward accordingly.

Actual soil-bank signup through April 15, 1957, in Florida was 49,764 acres and is expected to increase rapidly. The comparable national signup was 562,165 acres. Florida is estimated to have 480,609 acres that should be shifted from cultivation to trees and at least one-half of this is expected to be signed up in the soil bank program.

I feel there is a justification for the funds that have been requested and that our Nation will benefit by the expenditure.

The Lawyer's Concern About Taxes: We Must End Confiscation by Taxation

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mrs. ST. GEORGE. Mr. Speaker, the following very distinguished article by Mr. Charles W. Briggs, entitled "The Lawyer's Concern About Taxes: We Must End Confiscation by Taxation," is truly important and very worthy of our attention.

H. R. 6452, introduced by the distinguished Member from Connecticut, Mr. SADLAK, is given well-merited attention in Mr. Briggs' article, and this bill should also receive our most thoughtful and cooperative consideration.

Mr. Speaker, we must consider the reformation of the graduated income tax in this country and the time is growing late:

THE LAWYER'S CONCERN ABOUT TAXES: WE MUST END CONFISCATION BY TAXATION

(By Charles W. Briggs, of the Minnesota bar (St. Paul))

(Mr. Briggs is concerned about two problems that are as old as civilization: taxation and inflation. Our present tax structure, he writes, is unsound and dangerous because it is drying up the sources of capital needed for the investments in new enterprises that lead to expanding economy. He urges the legal profession to support a bill, H. R. 6452, sponsored by Representative SADLAK, of Connecticut, which over a 5-year period would reduce the present high rates of tax progression to more moderate proportions.)

Systematic efforts to smash capitalism (private capitalism) are no longer to be ignored by the legal profession. Ultimate survival of the profession is involved. Capitalism describes a way of economic and social life which cannot thrive upon apologies for the institutions of private property, economic competition, and freedom of enterprise. The legal profession has lived with and upon capitalism in a symbiotic relationship. From capitalism as a host the legal profession has drawn its sustenance and strength, indeed its very life. Reciprocally the profession has formulated and applied the rules and principles for the Government of a free-enterprise system in which capitalism is able to survive. Once either of the parties to this relationship perishes the other dies also. Those who remain to be called lawyers speedily become the abject minions of the state—their freedom and emoluments gone. It is timely that we point out here the significance to lawyers of the possible demise of capitalism. The miserable condition and subservient position of the bar in totalitarian countries today is ample justification for concern. With the disappearance of a capitalistic society goes also the legal profession, a necessary and effective force in the defense of individual liberty.

There has been for some time a mounting apprehension of what inordinately high taxes and inflation, the twin despoilers of ancient lineage, may do to our social and economic structure. The lawyers may well constitute an effective core of resistance to the use of these weapons. Lawyers should not be indifferent while in the legislative mold is cast the legal framework of our society and our economy.

Quite often lawyers pursue a narrow and legalistic course in the tax field. They focus their attention upon particular cases while they neglect the public interest and too often ignore the broader economic and social aspects of our over-all tax structure. Is this the sole and inescapable mission of one who tends to the business of clients? We think not. The bar is honored by distinguished members who have in various fields unselfishly devoted themselves to the triumph of fundamental ideas and concepts in government and law as distinguished from exhibiting primary interest in persons and events. By doing so they have served both their clients and the public well—sometimes perhaps without the reward of soul stirring appreciation of their efforts.

There are many enormities in our taxation systems.

A DOUBLE WRINGER: TAXATION AND INFLATION

History affords ample demonstration of the withering blight of such enormities. Every nation of which we have any record has passed through the double wringer of confiscatory taxation and inflation. We feel tempted to follow Justice Holmes' aphorism: "Continuity with the past is * * * a necessity * * * a page of history is worth a volume of logic." But the area of discussion is necessarily limited.

Let us now throw upon the screen a chart which gives a convincing picture of one enormity—the terrific impact of our Federal progressive rate structure:

Taxable income		Pay	Tax rate in excess over first column
Over	Not over		
			Percent
$2,000	$4,000	$400	22
$4,000	6,000	840	26
$8,000	10,000	1,960	34
$10,000	12,000	2,640	38
$16,000	18,000	5,200	50
$20,000	22,000	7,260	56
$26,000	32,000	10,740	62
$32,000	38,000	14,460	65
$50,000	60,000	26,820	75
$100,000	150,000	67,320	89
$150,000	200,000	111,820	90
$200,000		156,820	91

The discriminatory and confiscatory character of these rates and the in-between rates (not quoted) is visibly shocking. It approaches incredulity that any part of a taxpayer's income should be subjected to such a paralyzing grab. One might almost stop right here with the assurance that the table carries its own demonstration.

PROGRESSIVE TAXES, AN UNEASY CASE

It is recognized that progressive rates of income taxation are difficult to justify. They are patently discriminatory, based as they are upon the elusive theory of ability to pay.

And here is the paradox we live with: The Constitution says that your property shall not be taken without just compensation; but your income and property can be confiscated without limit under the constitutional power to tax.

Professors Blum and Kalven of the University of Chicago Law School in their recent book say this: "The case for progression * * * turns out to be stubborn and uneasy." They conclude: "The case has strong appeal when progressive taxation is viewed as a means of reducing economic inequalities." It might have been more boldly put this way: "Progression embodies as its most active ingredient a 'soak the rich' or 'share the wealth' complex well seasoned with displeasure about the many inequalities which no organized society on earth can remove." You may sprinkle in a lot of envy to complete the mixture. Through the ages a prevalent and festering cause of discontent has been merely that someone else has more. Progressive taxation is the forerunner of an

equalitarian society where needs take precedence over abilities, and equity is dissolved in passion and prejudice.

But we are not proposing the abolishment of progression now.

We do propose softening its impact within a framework designed by Representative ANTONI N. SADLAK'S bill, H. R. 6452, introduced in the House of Representatives on March 28, 1957. The plan is to accomplish within 5 years a reduction of the starting rate and a telescoping of the individual surtax rates so that the top rate will be 42 percent and the starting rate 15 percent; also to reduce the combined normal and surtax corporate rate to 42 percent.

The mechanics of the plan give no trouble. They can be varied to suit convenience, while the principle is kept. A short explanation later will suffice.

The plan must stand or fall on its justification. The case for the plan is more important than the plan itself. The first essential is a conviction that the surtax rates for good and sound reasons must come down.

Let us look at some of these compelling reasons:

1. Income tax progression is one of the demolition tools of the Socialists: Their strategists say: "Let us have steeply progressive rates in order to sabotage private enterprise and the institution of private property." They want to make every individual a servile minion of the State shorn of freedom to accumulate private means. They know that the earning power of private property constitutes a lasting base of individual liberty.

Another demolition tool of the Socialists is the debauching of the money by inflation. We shall have a little more to say about this one later on.

2. Our progressive rates work a stagnation or drying up of equity investment capital. This is so because of their sickening impact upon the taxpayers in the middle and higher brackets. The middle class especially takes a drubbing.

It is pretty well established now that equity capital must eventually come out of the savings of the middle class and above middle class taxpayers. It is also conceded that the capital needs of the country should be largely financed out of savings and not by an excessive expansion of the money supply.

We need only take a hop, skip and jump up the Federal income tax rate scale to be amazed at the steepness of the climb. Let us peg the rates at a few stops. Over bracket income of $10,000 the collector begins to snatch 38 percent; over $16,000, 50 percent; over $32,000, 65 percent; over $50,000, 75 percent; and over $200,000, 91 percent. Manifest on the face of the rate schedule without more is discrimination par excellence. There is yet to appear one who can successfully refute this.

The natural impression is that such a tax grab is wrong once it is understood. Public sentiment has been so registered in nationwide polls. The "$64,000 Question" program on TV shocked people into the realization that the winning of the second $32,000 would cost a winner with a $4,000 income about $24,000 in taxes. The first $32,000 would cost him over $15,000 in taxes. To keep $64,000 after taxes he would have to take in $450,000.

The sponsors of the Sixteenth Amendment back in 1913 had a premonition about the possible economic havoc and destruction that would result from exorbitant income tax rates. They realized, of course, that the sky was the limit and that they were empowering Congress legally to take away the last penny of a taxpayer's income. But they could not imagine nor foresee a rate higher than 10 percent. Therefore no limit on the rate was incorporated in the amendment. But we have had a look at the rate structure today. If this plundering of the taxpayer had been anticipated in 1913 the Sixteenth Amendment would never have been adopted. If this Amendment were sent to the country today together with the history of its application it would not be ratified.

And here is a most significant fact that few people realize: The overtaxation in the middle and higher brackets produces only a small proportion of the total income tax revenues. The graduated surtaxes produce only about 17 percent, or about $5.5 billion while the starting rate of 20 percent produces 83 percent, or about $26.5 billion.

The progressive elements in all surtax rates above 34 percent now produce only $3½ billion in taxes.

If the Federal Government confiscated all taxable income above $10,000 per taxpayer it would by that drastic progression take in only about $4½ billion over and above the $5½ billion now taken, or about one-fifteenth of what it takes to run the Federal Government a year.

The punitive character of the rate progression stands out boldly. Seventy percent of the taxable individual income falls in the brackets below $5,000. The Federal expenditure budget can never be met by squeezing dry the taxpayers in the middle and higher brackets.

A FAR GREATER DANGER: STIFLED INCENTIVE

But rate progression in our Federal tax system does far greater damage than to confiscate savings for capital investment. It stifles the incentive to earn, to produce, to save, and to invest. In fact, this is common gossip in the market place. The widespread pressure for relief provisions in the Revenue Code is strong prima facie proof of the injustice of present rate progression. When money can no longer earn a fair return after taxes for investment risk the middle class is liquidated.

The chief incentive offered by business is financial profit. That incentive atrophies if the reward is not worth the struggle.

The rate of return is a controlling factor in taking investment risk.

Suppose an investment pays 5 percent per annum. The rate of return on this income falling within the bracket of $16,000 to $18,000 is 2½ percent; within the bracket of $22,000 to $24,000, 2.05 percent; within the bracket of $50,000 to $60,000, 1.25 percent. The rate of return progressively declines as the altitude of the income brackets increases.

Such returns hardly justify putting equity capital to work. America was not built on such trifling compensation for risking capital.

The squeeze of rate progression takes from individuals money that should be invested in business, industry, and production. Saving for investment should be a natural and normal process controlled by individual choice and selection.

To the extent that the furnishing of equity capital ceases to be a privilege and responsibility of private investors the strength of the capitalistic system declines and eventually statism takes over while free enterprise is suffocated.

Government cannot successfully determine the employment of capital so as to preserve that all important essential of versatility in investment. Government interventions always produce an imbalance between production and the demands of a free market—so true of discriminatory taxation.

Our present Federal tax structure is a perfectly fashioned instrument of paternalism—for Government control and manipulation of the national economy.

The progressive rates we have now assess a drastic penalty against the efficient and successful. A young man today starts on a treadmill insofar as savings are concerned. We hear much concern expressed for the small-business man that does not square with our shackling tax policies. We appear to say to him: "The Government should guide and keep you; should see that you advance your prospects and make your business grow." At the same time the larger he grows the more the Government demands in taxes. Uncle Sam proposes to fatten the small-business man and then process him in the graduated tax mill.

There are other indirect effects upon the size of business units. Taxes—and we include here estate and gift taxes—are a mischievous force that is inevitably furthering the concentration of economic power in this country. With excessive taxation the small closely held business finds it difficult to survive, the promises of Government largesse notwithstanding.

The most effective tonic that could be prescribed for business, small and big, is tax reduction.

3. The present progressive rates create pressures for further inflation. Here we come to grips with a twin despoiler of ancient lineage—that soothing sirup used by nations to dull the pain of economic troubles.

We still like the taste of this economic panacea. While the left arm of the Government is raised to ward off inflation, the right arm is feeding inflation by increased spending.

Inflation is a palliative for high taxes. It is a process of attempted recoupment of business costs including taxes. Buying power in the market has been and is created by expansion of bank loans. Increased costs including taxes add to needs for credit. As bank credits go up so does the money supply which accelerates the chase after commodities.

Taxpayers subjected to present taxes and increases in other costs of operation will employ every legitimate means to protect profit levels after taxes and to accumulate reserves of capital.

Inflation appears to be the seductive answer. The popular thing is to keep a central blood bank of tax money and credit under Federal auspices. Transfusion will be ready whenever and wherever even a slight anemia shows up in the boom. Any drop in prices is a signal for the economic doctors to go into action. It probably has occurred to them that the anemic condition in the economy is due to draining of the tax blood from their patients in the first place.

Right now as costs go up we have the perfect climate and mood for further inflation. Will we succumb again? We are familiar with the factors and conditions that constitute the potential push up the inflationary spiral. They make a dismal record in history.

Inflation has enabled producers for a time to keep ahead of increased costs, including even inordinate taxes. It has made possible self-financing on a large scale.

The docility with which even preposterous levels of taxation are accepted by some is hard to explain. Many taxpayers seem to be saying: "You might just as well relax and enjoy it."

The explanation must lie in the compensating antidote of inflation—that most insidious of all social thefts. There is even now building up a tremendous demand for more bank loans and consumer credit.

UNLESS WE KNOW THE PAST WE SHALL REPEAT IT

But there is one dismal fact of history we should never forget. It is that no established program of manufacturing an excessive supply of money or other circulating media in order to present a captivating mirage of prosperity can be stopped short of economic disaster. We can well profit by the wise words of Santayana: "He who does not know the past is doomed to repeat it."

We are aware that the reduction of income taxes may have two opposing influences: (1) the increase of buying pressures which is a factor in the generation of infla-

tion; (2) a decrease in the tendency to replenish capital out of the fruits of inflation.

Which factor predominates in immediate influence depends largely upon where in the income scale the tax reductions are made. If they are made in the lower income brackets consumption power will be raised more than if they were made in the middle and higher brackets. In other words, a pattern of reduction that accrues more largely to the middle and higher brackets may be expected to release less in consumption expenditures and contribute more to capital formation than a pattern which accrues to the lower brackets. The percentage of income consumed declines as we move up the income scale, whereas capital for risk investment comes largely from the middle and higher brackets. Therefore it is logical to expect that a lowering of the surtax rates would diminish the urge to foster and make use of the usual inflationary formula to make capital available to business and industry.

Formulating a tax program that does not in operation induce inflation as a palliative would in the end prove to be of everlasting benefit to a sound and free economy.

We should not become addicted to perpetual inflation as the only relief from taxation and the open sesame to prosperity.

4. The harshness of rate progression drives taxpayers to the practice of tax circumvention. There is an irresistible impulse to resist plunder whether or not it is officially perpetrated. It has been commanded throughout the ages of human experience: "Thou shalt not covet nor steal."

There is another far reaching consequence of steep progression. Business and estate plans are cast in weird and unnatural forms in order to stay the tax collector's hand. All our affairs are enveloped in a smog of taxation.

Inevitably we come to a diversionary twist employed by the opponents of surtax reduction.

We are all familiar with certain provisions in the revenue code that operate in some instances to mitigate the harshness of progression.

Now unfortunately all these relief provisions have been classified as loopholes. Sometimes they are mistakenly called "erosions of the tax base." Whatever the designation, the impression sought to be created is that the relief provisions in the code are specially designed escape hatches. Through these escape hatches the unworthy taxpayers in the high brackets are supposed to be freed from discriminatory tax burdens. All this is pictured as an outrage upon the overall statutory purpose and intendment to soak progressively taxpayers in the higher brackets.

But it is admitted that after the so-called loopholes are closed by elimination of the relief provisions, reduction in the steepness of progression would be in order.

This is not the frank and effective way to deal with a suspected evil. It seeks to avoid meeting directly and on the merits the charges lodged against present rate progressions.

Let us begin our search for a remedy where the major trouble started. We may find that we lost an important part of our birthright as free men when the 16th amendment was adopted without any rate limitations. The surtax rate should first be brought down to reasonable levels. Then these relief provisions can be examined systematically and fairly each on its own merits. Many of them affect taxpayers of every degree—personal exemptions, for instance. Many are by no means of universal application—exemptions for cooperatives, for instance. Most of them have already been amply justified and should not be repealed no matter what the tax rates are.

Any attempt to make elimination of relief provisions a condition precedent to moderating rate progression will end in no tax amelioration for the middle and higher brackets.

Overall tax rates should be made fair to all. They should not inflict unjust punishment upon any taxpayer because another escapes them.

THE SADLAK BILL: A FEASIBLE PLAN

Now as to cutting down the tax rates. The plan is feasible because the margin for tax reduction is provided by economic growth.

We assume an expanding American economy. As the economy expands so does the amount of Federal tax revenues from any given set of rates but in greater proportion.

Under the plan proposed in Mr. SADLAK'S bill, the coordinated reductions in the individual rates over a 5-year period beginning January 1, 1958, would take place as shown in table I.

It is also proposed in the bill to reduce the corporate income tax rates over the same period by the steps shown in table II.

TABLE I.—*Individual tax rates*

Taxable bracket [1]	Present	Jan. 1—				
		1958	1959	1960	1961	1962
(Thousands)						
$0 to $2	20	19.0	18.0	17.0	16.0	15
$2 to $4	22	20.5	19.5	18.5	17.5	16
$4 to $6	26	24.5	23.0	21.5	20.0	17
$6 to $8	30	28.0	26.0	24.0	21.0	18
$8 to $10	34	31.0	28.0	25.0	22.0	19
$10 to $12	38	35.0	32.0	28.0	24.0	20
$12 to $14	43	39.0	35.0	31.0	26.0	21
$14 to $16	47	42.0	37.0	32.0	27.0	22
$16 to $18	50	45.0	40.0	35.0	29.0	23
$18 to $20	53	48.0	42.0	36.0	30.0	24
$20 to $22	56	50.0	44.0	38.0	32.0	25
$22 to $26	59	53.0	47.0	40.0	33.0	26
$26 to $32	62	55.0	48.0	41.0	34.0	27
$32 to $38	65	58.0	51.0	43.0	36.0	28
$38 to $44	69	61.0	53.0	45.0	37.0	29
$44 to $50	72	64.0	56.0	47.0	38.0	30
$50 to $60	75	66.0	57.0	48.0	39.0	31
$60 to $70	78	69.0	60.0	51.0	40.0	32
$70 to $80	81	71.0	62.0	52.0	41.0	33
$80 to $90	84	74.0	64.0	54.0	44.0	34
$90 to $100	87	76.0	66.0	56.0	46.0	36
$100 to $150	89	78.0	68.0	58.0	48.0	38
$150 to $200	90	80.0	70.0	60.0	50.0	40
$200 and over	91	82.0	72.0	62.0	52.0	42

[1] After deductions and exemptions.

TABLE II.—*Corporate tax rates*

	Present	Jan. 1—				
		1958	1959	1960	1961	1962
Normal tax [1]	30	28	26	24	23	22
Surtax [2]	22	22	22	22	21	20
Combined						
Tax rate [2]	52	50	48	46	44	42

[1] On all net income.
[2] On net income exceeding $25,000.

We assume a conservative average economic growth of 3 percent a year during the next 5 years measured by physical volume of goods and services.

To assure the realism and feasibility of the tax reduction plan it is not necessary to predicate economic growth upon inflation.

Time will not permit going into detailed financial and economic figures. They do support a conservative estimate that over a period of 5 years expansion of the revenue base would amply justify the proposed tax reductions and leave a balance for further reductions or for debt retirement.

It is sometimes asked by taxpayers who support the plan, why not a top tax rate of 50 percent instead of 42 percent? Let us point out that the difference in taxes collected under the present rate schedule would be only about $250 million. If the top rate were reduced to 35 percent that difference would approximate about $1 billion. Compare these differences with an expenditure budget of $72 billion, projected for fiscal 1958. It is estimated that at the end of 5 years the resultant annual tax saving to individual taxpayers would amount to $10.6 billion and that the corporate tax savings would amount to $4.2 billion. These sums so released from taxation would then be available for private investment.

Let the legal profession weigh carefully the idea that the primary function of taxation is to parcel out the wealth and income of the Nation under a controlled economy. The consequences of its implementation may be catastrophic.

Thomas Babington Macaulay left us a striking formula for the preservation of individual liberty and free enterprise. The above tax reduction proposal is in keeping. He said: "Our rulers will best promote the improvement of the people by strictly confining themselves to their own legitimate duties; by leaving capital to find its most lucrative course, commodities their fair price, industry and intelligence their natural reward, idleness and folly their natural punishment; by maintaining peace; by defending property, by diminishing the price of law and by observing economy in every department of the state. * * * Let the Government do these—assuredly the people will do the rest."

Donegal Congressmen

EXTENSION OF REMARKS
OF
HON. EMMET F. BYRNE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. BYRNE of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an item appearing in the Irish Digest, April 1957. My remarks are directed to my colleague from Texas, Congressman PAUL J. KILDAY—from one Irishman to another:

DONEGAL CONGRESSMEN

Donegal has a unique claim on two of the new Congressmen in the House of Representatives at Washington. Both are the sons of parents who were born in Kilcar and they are relatives, but they sit on opposite sides of the House—one is a Democrat, the other a Republican.

The Democrat, PAUL J. KILDAY, hails from San Antonio, Tex. He is a son of Pat Kilday, who emigrated from Ireland in 1871. Hanging on a wall in PAUL'S house is a picture of the thatched cottage in which his father was born. PAUL took the photo a few years ago on a visit to his Donegal cousin, John Gildea.

PAUL is a man with many brothers: James is Assistant Attorney General of the United States; Owen is the sheriff of Bexar County, Tex.; William an executive with General Motors; Tom is in the Army, a lieutenant colonel; and Frank is a priest, Rev. F. A. Kilday, O. M. I.

The new Republican Congressman, EMMET F. BYRNE, is a brilliant lawyer from Chicago. Attorney BYRNE led for the State in the famous Loeb-Leopold murder case. During the 5 years when the gangsters were on top in Chicago he risked his life many times in prosecuting them.

To Red China: No

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, as part of my remarks I am including an editorial that appeared in the Sunday Standard Times of New Bedford, Mass., on the subject of trade with Red China. The editorial follows:

TO RED CHINA: NO

There are those in the United States who call for American diplomatic recognition of Red China. The June issue of Harper's magazine sets forth succinctly certain of the arguments often cited in defense of this point of view.

Recognition, it is said, would give America a chance to get some intelligent observers inside what may prove to be a dangerous foe.

But the United States has had such observers inside Russia, its most dangerous enemy, since 1933. History would indicate these observers do not learn anything the Soviet Union does not want them to know. The same thing would be true in Red China.

It is suggested the United States should bend every effort to loosen the ties between China and Russia because a combination of 200 million Russians and 600 million Chinese would confront America with an array of military manpower the Western nations could "never hope to cope with."

Modern war is not won or lost on the basis of manpower, but on such factors as technology, production, and transportation. It is not particularly relevant whether the West has 800 million men to match this number of Communist forces. Because of technological and other advances, every western soldier would be equal to a certain number of Eastern opponents; whatever the ratio might be, it would be a lot higher than 1 to 1.

Proponents of recognition say uncommitted Asian nations see in nonrecognition a vestige of Western colonialism and a sign of the white man's unwillingness to come to terms with the new Asia.

Truly uncommitted Asian nations fear deeply the immoral Government of Peiping, which deprives its subjects of law, justice, livelihood, religion, liberty, and life itself, and which obviously threatens the "new Asia" more than Western colonialism ever did.

Recognition, say its adherents, might lead to "settlement" of the Formosa dispute * * * "which would save a good deal of manpower and money."

Yet any "settlement" of this "dispute" based on recognition of Peiping would mean a settlement on Communist terms—that is, elimination of the only free government of China and the end of hope for millions of Chinese.

It is further suggested recognition would lead to opening up trade between China and other Western nations, and that non-recognition keeps China almost entirely dependent on Moscow, thus strengthening, instead of loosening, the bonds between the two nations.

The fact is that the economic link between Moscow and Peiping is secondary. The ideological link which envisages conquest of the United States, would be strengthened, not weakened, by any Western trade which bolsters Red economy and thus strengthens Red Government.

Basically, the arguments for recognition have one major weakness: They refuse to take seriously Mao Tse-tung's own statement that, after Chiang Kai-shek, his principal enemy is the United States.

America: One Nation Under God

EXTENSION OF REMARKS
OF
HON. BENJAMIN F. JAMES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 18, 1957

Mr. JAMES. Mr. Speaker, the Upper Darby Post of the American Legion, in further promotion of interest in Flag Day, recently sponsored a competition among the junior high schools of Delaware County, Pa., on the subject "America: One Nation Under God."

This countywide competition was won by Miss Elizabeth Ann Whitman, a student of the Upper Darby Junior High School, located in the Seventh Congressional District which I have the honor to represent.

Miss Whitman, 14 years of age, is the daughter of Dr. B. L. Whitman, 843 Drexel Avenue, Drexel Hill, Delaware County, Pa., and the granddaughter of Mr. Roy L. Whitman, Official Reporter of Debates, here in our United States House of Representatives.

The winning composition by Miss Whitmar follows:

AMERICA: ONE NATION UNDER GOD

(By Elizabeth Ann Whitman)

"One Nation under God" was the dream of the early Pilgrims who came here for religious freedom. Through the years Americans have fought to keep this belief. It is the cornerstone on which America was founded. It is the basis for all the other laws and beliefs which make America what it is. For only a nation "under God" and not under a tyrant or dictator would permit freedom of speech and religion. Only a nation with such a belief would practice brotherhood as America has, practicing the Golden Rule of "Do unto others as you would have others do unto you."

As long as we are under God we will remain "indivisible, with liberty and justice for all." God has made us a strong nation, and one that believes in the dignity and worth of every human being. God has made us a prosperous nation, a land of opportunity. For when all the people, no matter what their religion, believe in God, this belief unites them and by working together they can accomplish many good things. But we must not let this abundance and prosperity make us forget God.

This Nation withstood two World Wars, and many wars before that, such as the Civil War, to keep us "One Nation under God."

Surely our brave ancestors, who fought and died for this belief, would want us to carry it on. We must protect our country from aggression to keep it whole. We can work for this by planting it in the hearts of all future generations and practicing it ourselves. So our pledge of allegiance should be a motto for us all to follow and strive for If we forget it, we cannot remain what we are. But if everyone will practice it, surely we will remain "One Nation under God" forever.

Schools and State Policy

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. ABBITT. Mr. Speaker, the people of Virginia are now facing a momentous decision. The question probably will be decided this fall—whether Virginia will accept integration or whether it will fight to retain States' rights, purity of the races and our way of life. There is much more at stake than is apparent at first glance. Mongrelizing the races in this country will soon lead to destruction of this great Nation as we know it.

There appeared in the Richmond News Leader of Monday, June 17, 1957, an editorial entitled "Schools and State Policy." I commend the editor, James J. Kilpatrick, for his forthright, well-thought-out, logical editorial. There is no man who is better versed on the problems confronting us as a result of the lamentable decision of the Supreme Court in reversing the separate but equal school doctrine that has heretofore been the law of the land. Mr. Kilpatrick has rendered a real service to the people of Virginia. He has forcefully pointed up the problems we face and the consequences that will follow after the decisions are made. I commend him for the great work he has done and will continue to do in the future.

Under leave to extend my remarks, I include the editorial mentioned above, which is as follows:

SCHOOLS AND STATE POLICY

Several events in recent weeks have prompted this newspaper to attempt today a restatement of the considerations that have impelled us to oppose any local option system of meeting the school-segregation problem. Senator Tad Dalton's statements, former Gov. Colgate Darden's recent renewal of his views, Mrs. Agnes Meyer's speech in Arlington—all these suggest that a review may be useful of certain considerations and convictions that seem to us inescapable.

By way of background, it may be emphasized that if Walter Gambill had wished to include the Richmond News Leader in his list of those who once favored local option (see today's Forum), he would have been wholly accurate. When the Supreme Court's opinion first came down in May of 1954, this newspaper reacted, as many others did, with an instinctive sense of automatic obedience to Supreme Court commands. Searching for a way to minimize the impact of that decision, we, too, once urged that localities be given highly flexible powers to deal with local problems in order to preserve the greatest possible separation of races.

It was not until the summer of 1955, more than a year after the decision, that the terrible violence the Court had done the Constitution became clear to us. Not until that time were the social consequences of race mixing in the South's public schools fully perceived. But in June of 1955, we fixed an editorial policy predicated upon what has been termed massive resistance. That policy still seems to us, after months of reflection, the best and wisest and boldest course, the course most in keeping with Virginia tradi-

tion, the course most calculated to benefit the people of Virginia and the law of the land.

From the very beginning, the arguments in favor of retaining a State policy of racial separation, as distinguished from a local policy of limited integration, have fallen under two headings—the constitutional considerations and the social considerations.

WE ACT AS STATES

What is woefully misunderstood in most casual thought upon the structure of American Government is the unique role of the States. Under our Federal system, the States—not the people as individuals, not the people of the country as a whole, not the localities, certainly not the Federal Government—possess ultimate sovereignty. It is the States alone acting as States, that can make or unmake the Constitution; it is the States alone that can delegate a power to the Federal Government, or take a power back; it is the States alone, acting as States, that may prohibit to themselves, by amendment of the Constitution, the exercise of a particular power. The Constitution never was ratified by the people. It was ratified by States, and it binds whole States. Whenever we act politically, we act as States.

Once this concept is grasped, of State sovereignty, and State citizenship, and State authority, the fallacy in local option becomes apparent. If Arlington County were a State, it would be free to set a policy desired by a majority of the state of Arlington. But Arlington is not a State. It is a political subdivision of the State of Virginia, a creature or a child of the State as a whole. Arlington's political powers descend to the county from the State—from the whole State. To talk of local rights, meaning local political or governmental rights, is to talk of something that simply does not exist in the sense of inherent rights or inalienable rights. The rights granted Arlington are subject to the will of the people of Virginia. By contrast, the sovereign rights and powers exercised by the State of Virginia since 1776 can be limited only by action of three-fourths of all the States in the American Union.

Now, the question of racial separation in publicly-supported schools is in Virginia a State question. This has been a matter of State policy from the inception of the public-school system. It is so described in our State constitution.

More than this: The right and power of a State to require such racial separation in its local schools, in the expressed view of the general assembly, cannot be prohibited to a State save by amendment of the Constitution itself. This is the constitutional position taken by the State, through its highest law-making body, and in the most solemn language. This position cannot be abandoned or compromised. Any scheme of local option that permitted race mixing, any acceptance of the principle of integration, anywhere in any degree, would utterly demolish Virginia's asserted position. Surely that resolute and fundamentally right position should not be surrendered without prolonged and resourceful resistance. Too much is at stake.

A RISK TO BE TAKEN

Turning now to the immediate social, educational, and tactical problem: The Roanoke Times, in a recent editorial, commented that "closing the schools would be a calamity which Virginia must somehow prevent." However, "uncontrolled mixing of the races in the schools would be equally disastrous." Then the newspaper concluded: "Ultimately the people are going to have to decide whether having no schools at all is preferable to some degree of integration."

But we do not agree that that is the question. Viewed from the other direction, the question is, whether risking the closing of a few schools is preferable to preserving racial separation in them all. This newspaper advocates acceptance of this risk. And for these reasons:

In our view, there can be no limited integration. Once the authority of the Supreme Court is accepted (as distinguished from the authority of all the States acting in concert under the Constitution), there can then be no stopping point within the State. The little integration of 1 year in 1 county promptly would become the larger integration of the next year in other counties. Acting as a State, a strong position can be held; acting as 98 counties and 35 cities, nothing but weakness can be foreseen.

If a public school should be closed, as a consequence of superior Federal force, soon enough the genius of the people would provide an alternative educational opportunity. Virginia's children will not want for an education. But if a school be integrated, it will never be unintegrated. In the first moment of race-mixing in our public schools, we will have accepted the amalgamation of the white and Negro races 20, 30, or 50 years hence. In that instant, we will have abandoned the elemental structure of our society in the South, and embarked upon a course of fatal debasement.

Let us hold on in this struggle. We have yet to invoke the powers of our State judiciary. We have barely touched the arsenal of political and legislative devices that may be conceived. We have not approached a real test of the powers of Virginia as opposed to those of the Supreme Court and the Federal judges. Why quit now? If in the end, Virginia is overwhelmed, and our local officials are jailed, and our schools patrolled by Federal troops, then will be time enough to fall back on "local option."

Make no mistake: Local option is the last ditch. When we reach that, nothing else remains. Virginia is not at the last ditch yet, and we should not let the smooth persuasions of Messrs. Dalton and Darden lead us into it.

New Trust Buster

EXTENSION OF REMARKS

OF

HON. J. HARRY McGREGOR

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 18, 1957

Mr. McGREGOR. Mr. Speaker, under leave to extend my remarks, I am enclosing an editorial appearing in the Mount Vernon (Ohio) News relative to a new trust buster.

Many times the New Dealers charge that the Republican Party is the party "of trusts and wealthy people." The following article clearly shows that Attorney General Herbert Brownell, who was appointed by President Eisenhower, is one who firmly believes that no individual, small group of individuals, or a group of industries or corporations, should control prices, contrary to the public interest.

I suggest that all read the following editorial:

NEW TRUST BUSTER

The Eisenhower administration has given the country a new trust buster in Attorney General Herbert Brownell, Jr.

He was not recognized as such before the Supreme Court's decision ordering the giant du Pont Co. to withdraw its interests in General Motors.

Since that, however, there has been some digging into the record with these facts brought to light:

In 4 years of the Eisenhower administration, the Attorney General has brought 148 civil antitrust suits and 69 criminal suits.

Of these 121 of the civil type have been won by the Attorney General, 107 by consent decrees.

Of the 69 criminal actions, 62 have been won by the Government, 50 of which were not even contested.

In addition, Brownell has obtained convictions against more than 100 labor union leaders under the Hobbs Anti-Racketeering Act and the bribery section of the Taft-Hartley law. Ten unions have been named in antitrust proceedings for allegedly conspiring with contractors to maintain high prices or squeeze out competition.

Brownell isn't through, however.

He has pending suits involving United Fruit, Radio Corporation of America, National Broadcasting Co., Continental Can Co., Pan-American Airways, Grace Steamship and numerous others.

He went to court to block the proposed merger of Bethlehem Steel Corp. and Youngstown Steel & Tube.

Smaller interests have been his targets as well as the industrial giants when he felt that their activities constituted attempts to monopolize a section of our economy or to control prices.

Is Brownell a social reformer?

Nothing of the kind, he says. The way he explains it he aims at making "real and prompt and practical strides toward either cracking restraint on entry by new persons into an industry or control over prices. Thus our goal has been a vigorous cracking-down on hard-core antitrust violations."

This is all in the public's interests.

John Foster Dulles—Princeton, 1908

EXTENSION OF REMARKS

OF

HON. JOHN SHERMAN COOPER

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Tuesday, June 18, 1957

Mr. COOPER. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Princeton, 1908," published in the New York Times of June 17, 1957, dealing with the career of John Foster Dulles, Secretary of State.

The editorial states, among other things that Mr. Dulles has "spoken out courageously for his beliefs, he has never spared himself when there was a job to do, he has been respected even when he wasn't agreed with."

It can be said also that he has labored unceasingly and effectively to preserve the security and free institutions of the United States.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PRINCETON, 1908

The idealistic-looking young man whose clean-cut features appeared in an oval frame on the upper left-hand side of this newspaper's front page yesterday was a member of the class of 1908 at Princton University. He was 19 years old when the picture was taken, and there can be no doubt whatever that he meant to use his talents and opportunities for the good of humanity. Many

young men have such intentions when they are in their junior year at college, but John Foster Dulles hung on to them. His attendance at the second Hague Conference in 1907 as secretary to his grandfather, who was representing the imperial Government of China, made Saturday his golden anniversary in diplomacy. President Eisenhower and others indicated that he hadn't wasted his time, and to that sentiment we can all say amen.

No diplomat can please everybody all the time, and Secretary of State Dulles hasn't done so. He has, however, spoken out courageously for his beliefs, he has never spared himself when there was a job to do, he has been respected even when he wasn't agreed with, and in 4 years he has traveled more than 400,000 miles in the service of his country. Princeton, 1908, may be proud of him. Indeed, we all are.

Civil Rights Bill

EXTENSION OF REMARKS
OF
HON. ROBERT P. GRIFFIN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. GRIFFIN. Mr. Speaker, in order to fulfill a firm and longstanding commitment, it was necessary for me to be back in the 9th Congressional District on Monday evening, June 17. I had hoped to return to Washington in time to cast my vote today on the civil-rights bill—H. R. 6217.

However, because the House was called into session at 11 a. m. this morning instead of the usual hour, 12 noon, it was impossible for me to be present in time to answer to my name.

Mr. Speaker, I wish for the record to reflect that I would have cast my vote in favor of the civil-rights bill on final passage. I wish to state further that I would have voted against the so-called jury trial amendment, and, accordingly, I would have voted "No" on the motion which was offered to recommit the bill.

Under the Taft-Hartley law, and under 29 other Federal statutes now on the books, injunctions are authorized in a manner similar to that provided in the civil-rights bill, and there is no right to trial by jury for contempt of court.

While we are concerned about securing to every citizen his constitutional right to vote—at the same time we would not, and should not, deprive anyone of a constitutional right to trial by jury in the cases where it applies.

However, the plain fact is that the civil-rights bill, as proposed by President Eisenhower, does not take away any constitutional right of jury trial—Congress could not effectively pass such a law—for the simple reason that if it did, such a statute, of course, would be unconstitutional.

I regret that circumstances made it impossible for me to cast my vote in person, but I am pleased that the bill carried without crippling amendments by such an overwhelming majority.

Commencement Address, Lowell Technological Institute, by Gov. Foster Furcolo

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

COMMENCEMENT ADDRESS, LOWELL TECHNOLOGICAL INSTITUTE, BY GOV. FOSTER FURCOLO, JUNE 16, 1957

I am happy indeed to participate this afternoon in the 59th annual commencement exercises of Lowell Technological Institute.

It is a particular pleasure for me as your governor to share with the officers and trustees of the institute and with their distinguished guests who represent industry and labor in the Commonwealth, the pride and contentment which all of us have on the occasion of the graduation today of so many who have been trained to lead and develop the industrial advancement of Massachusetts.

To you who are graduating today and to your parents, I bring the congratulations and felicitations of the citizenry of the Commonwealth.

I think it can aptly be said about graduation that it is probably the time of the greatest promise—not only to those who go forth from the institute, but also to the community and the State which they will serve.

As Shakespeare wrote for one of Henry VIII's great soliloquies:

"This is the state of man:
Today he puts forth
The tender leaves of hope;
Tomorrow blossoms
And bears his blushing honors thick upon him."

You who are leaving this great institution of learning will perform a useful service. And more than that, you will participate in the reconstruction of old industries—in the creation of new industries, and let us hope you will be responsible for the rebirth of New England economy.

It was the vision and imagination of the trustees and administrators of Lowell Tech which expanded the functions of the institute to make it a training center for every important industry in the Commonwealth.

Textiles, paper, leather, electronics, and plastics represent 60 percent of all Massachusetts industry. Indirectly these industries service or contribute to almost 90 percent of Massachusetts' industries.

You who have been trained in research—you who are alert to the need for new markets and you who have the technological skills, constitute the most important resources of our established industries and of our new industries.

I congratulate Lowell Tech on the foresight which brought about the diversification of an educational program to meet the needs of our specific industries. It was almost an inevitable result of this academic leadership that Lowell Tech should lead the way today in the number and quality of its graduates, and in the research and development assistance it has provided to Massachusetts industry.

Those of us who are concerned about our regional economy are continually aware that applied science, research, and technology play a vital role in holding industry and in attracting new industry.

We are also aware that technical education on the highest level possible will be increasingly in demand as our economy is revitalized.

That New England industry and to be specific, our own Massachusetts industry, needs revitalization, I cannot emphasize too strongly.

New England was the Nation's first industrial area. But, as the Nation expanded, new industrial areas were continually developed often with the help of the Federal Government by subsidies so that the relatively high place of New England has necessarily declined.

For example: New England textiles today in 1957 have become 87 percent less important in the national economy than they were 100 years ago—in 1850.

In a sense, we have been working against the tide. Federal contracts have not been diverted to our surplus labor areas, and in particular, to our textile industry to the extent that we have expected.

We have sought more adequate protection of the interests of this region. We have not asked for special privileges—we have asked to be premitted to hold our own.

I think there is no question that industry in Massachusetts has been burdened by heavy taxes and that our State and local governments have not moved in the desired direction.

Federal reports, for example, indicate that in 1955 the general property tax alone accounted for 63 percent of all our city government revenues.

As you know, I have recommended to the legislature a limited sales tax for the express purpose of affording our industries some relief from this burden. No one is more aware than I that our industry has felt the painful effects of competition from other States which do not have a tax on their industries in so burdensome a fashion as we do.

But, the revitalization of Massachusetts industry will depend not only upon our relieving the tax burden, but also upon the speed and energy with which we attract and develop new industry.

In no other way can New England or Massachusetts expect to recapture the relative importance in manufacturing which once was theirs.

To my mind there is hopefully something prophetic in the establishment at Lowell Tech of one of the first "hot labs" in the Commonwealth where radioactive tracers are used in fundamental and applied research. It is pioneer service of the first order that Lowell Tech has established courses in the fundamental subjects which underwrite the nuclear engineering of tomorrow.

I am particularly impressed and encouraged that Lowell Tech has already begun to plan the facilities and the program which will make Lowell Tech the center of nuclear research and training in Massachusetts.

There is, for example, no other publicly supported university in the northeastern part of the United States which has established courses in nuclear engineering, leading to a Bachelor of Science degree.

Obviously, this is a significant first step in providing qualified engineers for an industry of which we expect so much.

I cannot stress too strongly a fact which has been endorsed by outstanding nuclear authorities in this area, as well as by the

Massachusetts Commission on Atomic Energy, that technically qualified personnel constitute one of our greatest economic assets.

The atomic age has already begun. Each month that passes brings a new success in the harnessing of atomic energy.

It is not so significant that we are able to produce atomic weapons with less dangerous fallout, but it is of the greatest importance that we have already begun to plan the construction of atomic reactors for the peaceful uses of American industry.

In this development of atomic energy for peacetime use as with any new industry the resources of research and engineering and of trained personnel are absolutely necessary.

If the Commonwealth is able to offer a Lowell Technological Institute and trained personnel and land area, and Government assistance all beyond the capacity of any other State, then there is reason to expect that we can revitalize our total industry even beyond our contemplated plans of today

It has often been true that institutions, both public and private and Government as well, have become static and have failed to grow and expand with the changing times.

Lowell Tech is an outstanding example of a public institution which has not only kept pace with the times, but, which as an important training center in the Commonwealth, will help to blaze a new path.

You who are graduating today may well take this example from your alma mater and continue to pioneer in new fields of knowledge, and in the new requirements of industry.

The technological progress for which you may be responsible will be reflected in the progress of your community, your State, and your Nation.

New England and Massachusetts may lack the natural resources which are possessed by other areas, but you, with your skills, your ingenuity, and your scientific curiosity comprise a human resource which may be difficult to equal any where.

In the textile field, alone, for example, the region of the South has been faced by an enrollment loss of its textile skills of 50 percent or more during the last 7 years.

The shortage resulting has become a problem in the South of the first magnitude.

You who are graduating today, trained in your various specialties, represent an asset to this Commonwealth and this community of States which we deeply appreciate.

Senate Salad Luncheon

EXTENSION OF REMARKS
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. TEAGUE of California. Mr. Speaker, California, I believe, is conceded to have the lead over the rest of the Nation when it comes to salad making and salad eating. The Sunshine State also grows more of the produce—lettuce, celery, ripe olives, and so forth—that go into salad, than any other State.

Therefore, it is fitting that California should take an active part in introducing to the Nation a new salad, "Senate salad."

I do not think it is too wishful to express the hope that Senate salad will shortly take its place next to the famous Caesar salad and chef's salad among Californians.

I also feel that after Mrs. American Housewife in the East, the South, the North, and the Midwest tosses her first Senate salad, it will become a regular feature on tables across the Nation.

Therefore, it is a distinct pleasure for me to joint with a number of my distinguished colleagues in both Houses to invite all of you to walk across the Capitol between 1 and 3 tomorrow afternoon and drop in at the Senate District of Columbia Committee Room, just off the Senate floor, to partake of a dish of Senate salad served to you by Mrs. America of 1958.

Agricultural Revolt Brewing in Congress

EXTENSION OF REMARKS
OF
HON. CHARLES W. VURSELL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. VURSELL. Mr. Speaker, with leave to extend my remarks I am placing in the Appendix of the RECORD an article of recent date by the Associated Press which appeared in many newspapers covering a statement by Secretary of Agriculture Ezra Taft Benson on the farm problem under the following title:

AGRICULTURAL REVOLT BREWING IN CONGRESS

Washington Correspondent B. L. Livingstone, of the Associated Press, says there is an agricultural revolt in Congress.

Representatives from urban areas are becoming tired of the subsidies poured out each year with no results in solving the farm problem.

Representatives from rural areas want all the aids-to-farmers they can get but are split over how much and what kind. This group is vexed at Agriculture Secretary Ezra Taft Benson.

That's the dilemma. Maybe, now, some kind of sensible farm program can emerge, because since 1934 both urban and rural representatives have united in farm relief that has not relieved.

The most sensible attack is a 3-point program: (1) To let prices seek their own levels by obeying the law of supply and demand. (2) Greater research into new uses in industry for farm commodities. (3) Higher yields, at lower costs, through use of fertilizers and machinery.

Benson's unpopularity is understandable but unjustified. He is not a politician. More than any other official in the Eisenhower administration he has had the courage to speak economic truth—and economic truth is often unpalatable to the politician who wants votes and the public that wants gravy.

Benson says continued subsidies and price supports wont' work. They've been tried, in varying forms, since 1934. The problem still exists. The revolt in Congress can be salutary if it produces a farm policy that is economic rather than political.

Where's Winston-Sodom?—Chub Seawel', in Latest Blast at Ike, Charges GOP Ignoring South

EXTENSION OF REMARKS
OF
HON. A. PAUL KITCHIN
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. KITCHIN. Mr. Speaker, under leave to extend my remarks, I wish to insert an article from the Pilot, a weekly newspaper published at Southern Pines, N. C., dated June 13, 1957.

This article contains a letter addressed to the President of the United States from Mr. H. F. Seawell, an attorney of Carthage, N. C., and a reply thereto.

Mr. Seawell was a candidate for governor on the Republican ticket in North Carolina in 1952 at the time Mr. Eisenhower was a candidate for the Presidency of the United States. Mr. Seawell polled the largest vote for a Republican candidate for governor in the history of North Carolina in that election.

The article reads as follows:

WHERE'S WINSTON-SODOM?—CHUB SEAWELL, IN LATEST BLAST AT IKE, CHARGES GOP IGNORING SOUTH

H. F. "Chub" Seawell, disillusioned former Republican leader in the State, recently fired off his views to President Eisenhower on the budget and foreign policy, then, on receipt of a creamy-smooth reply from a deputy assistant, took a caustic pen in hand again.

"What this country needs is 3 Presidents, 1 for international and 1 for national affairs—then 1 to represent the people," he wrote the man with whom he had twice shared a campaign platform in 1952.

"But he won't see it. What difference does it make what I think or what anybody thinks? They've got that man so fenced in, he doesn't know what the people think, and what's worse, he doesn't know he doesn't know," commented the Carthage attorney.

Seawell, as candidate for governor in 1952, polled more votes than any Republican candidate in the history of the State. Later receiving nothing from his party but the back of a cold hand, he quit the party publicly a year ago but has continued in the role of gadfly.

To his recent broadside calling the President to account for reneging on campaign pledges, Deputy Assistant Howard Pyle answered on White House stationery:

"DEAR JUDGE SEAWELL: This is to acknowledge your recent letter to the President. Such a forthright expression of your opinion is appreciated. Thank you for taking the time to share your thoughts with us."

The forthright expression, couched in the well-known style of one of the State's best-known orators and humorists:

"DEAR COUSIN DWIGHT D.: Will Rogers used to say all he knew was just what he read in the papers, and according to the papers it appears that you are the best President this country has ever had, since Truman. In fact, a lot of what you have been doing lately is just like Truman, only more so.

"When we were on the platform together at Charlotte and 'Winston-Sodom' you said what this country needed was a balanced budget and a firm foreign policy. Now you are pulling for a budget bigger than Tru-

man's and whatever we have that we call foreign policy is about as firm as mush.

"We cussed out Truman for flying the old Sacred Cow to the Pendergast funeral in St. Louis, costing taxpayers $8 a mile, but you take your new million-dollar machine and fly King Saud clean over the Atlantic. If anybody has ever visited us lately who was amply able to pay his own way home, I think it was cousin King Saud.

"Then you went down to Bermuda to see Mr. McMillan and explain to him some of the loose talk about freedom by Mr. Dulles and Mr. NIXON, and you went on 3 or 4 battleships at a rough estimate of about $400 a mile. With all this flyin' and visitin' all over the world, it 'ain't no wonder' we can't balance the budget.

"Truman fired General MacArthur and now you have caught up with him again by 'post-humorously' firing General Robert E. Lee.

"Truman threw 5 billion over the Pacific, and now you are trying to throw 10 billion over the Mediterranean, and poor old George Washington he didn't throw but a dollar over the Potomac.

"You said in Charlotte that you believed in local self-government, the dignity of the individual and in States rights, and now you are asking Congress to pass a bill that has more 'dictatorism' in it than Hitler and Goering combined. Even if the two helicopters did cost $135,000 each, I guess it would be better for you to fly 80 miles per hour in the air than to be running 90 miles per hour on the ground. You said you wanted to build up a two-party system in the South, but every time you have had a chance to appoint some Republican from the South, your cohorts in Washington fall into the old carpetbagging methods, and bypass all the local Republican organizations and you appoint some Democrat. If you think you are making Republicans by appointing Democrats to office, I've got news for you.

"Having been 'turnt out' of the Republican Party and hung on the courthouse square, I am under no obligations to say anything in a bragging way about your modern Republicanism, but it appears to me that modern Republicanism ain't nothing but New Dealism with the brains knocked out. It doesn't set well with a lot of folks to sprinkle mud in their face and tell 'em it's rainin'. A man born and raised in the South doesn't have to put turpentine on his imagination to recognize that about the only thing that you are interested in in the South is golf, and that only in good weather. A lot of this carryin' on is not your fault, but still it is your responsibility, and when I think about what you say and what you do, you remind me of the man who used to put vitamin pills in his liquor so he could build himself up while he was tearing himself down.

"Esse Quam Videri.

"CHUB SEAWELL,
"*Ex-Republican.*"

Wiley Supports U. N. Force

EXTENSION OF REMARKS
OF
HON. GARDNER R. WITHROW
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. WITHROW. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include a brief editorial comment from the May 21, 1957, issue of the La Crosse Tribune, published in La Crosse, Wis.:

WILEY SUPPORTS U. N. FORCE

United States Senator ALEXANDER WILEY has become cosponsor with five other Senators of a congressional resolution aimed at setting up a permanent United Nations police force.

That Wisconsin's high-ranking Republican chose to place his efforts back of this proposal is credit to himself and a boost for the resolution's chances of successful passage.

A similar resolution is being sponsored in the House of Representatives.

The measure is intended to build permanency out of the emergency force now serving in the Middle East, and by doing so now, ahead of a new outbreak that may spell war, it could promptly prevent just such a contingency.

Until world relationships are vastly improved there is crying need for a United Nations patrol force, supported by all the participating nations to give it the concept of world determination for maintenance of international peace.

Congressional action this session to set it up would be a major American contribution, with the likely extra advantage of being financed proportionately by all the participants, instead of disproportionately by the United States alone.

A permanent force is a natural sequence to the emergency force now employed—a continuation on a permanent basis of the need for constant vigilance to prevent or halt aggression.

Congress faces many matters of economic and other importance in these waning days of the session. But it faces none more strategic in the preservation of world peace than to bring enactment this year of a permanent U. N. police force to the U. N. General Assembly.

Senate Salad Luncheon

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. BOGGS. Mr. Speaker, the ingredient the State of Louisiana is contributing to Senate salad, which will be served between 1 and 3 o'clock tomorrow on the other side of the Capitol, is salad oil.

The State of Louisiana is responsible for the production of the largest amount of salad oil—and, in my opinion, the finest salad oil—in the United States.

Senate salad will be a real treat for my colleagues tomorrow. It is made of lobster, avocado, two varieties of lettuce, watercress, celery, green onions, ripe olives, grapefruit, tomatoes.

But, as Oscar Wilde once said, "To make a good salad is to be a brilliant diplomatist—the problem is entirely the same in both cases. To know exactly how much oil one must put with one's vinegar."

In other words, a salad is only as good as its dressing. Senate salad dressing will have just the right amount of Louisiana salad oil, blended with vinegar and a delicate touch of garlic-type salad dressing mix.

Civil Rights

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. WOLVERTON. Mr. Speaker, today will bring to a close the long and hard-fought battle to enact a civil rights bill.

The purpose of the bill is to provide a means of further securing and protecting the civil rights of persons within the jurisdiction of the United States.

It has been perfectly apparent during the debate that there was no misunderstanding as to what the bill sought to accomplish nor the conditions it sought to correct. The flagrant refusal in certain sections of our Nation to grant, or at least recognize, the right of colored citizens to vote, of course, was the basic reason for the bill.

This bill is designed to protect the civil rights of persons within the jurisdiction of the United States by the adoption of four major proposals, namely, first, the creation of the Commission on Civil Rights, second, the establishment of a Civil Rights Division in the Department of Justice, third, a supplement to title 42, United States Code, section 1985, providing civil remedies against conspiracies depriving a person of civil rights, and fourth, a provision for a civil remedy by the Attorney General to strengthen and protect the right to vote. In connection with this latter provision and to make it fully effective the bill amends existing law so as to permit the Federal Government to seek from the civil courts by injunction preventive or other necessary relief in civil-rights cases.

It has been difficult for me to understand why there should be such violent opposition to the enactment of a bill of this character. In fact, it seems to me that under our system of government, the right of all citizens regardless of race, color, or creed to vote is so plainly and surely based upon the provision of our Constitution that there should have been no necessity to adopt legislation to enforce the right. But, unfortunately, the necessity does exist and hence this legislation now before the Congress for adoption. I am, of course, in full and hearty accord with the legislation as drawn and will support it against all efforts to weaken its provisions.

We should not at any time fail to recognize the truth and justice of the Founding Fathers of this nation in the expression that was adopted by them, namely, "that all men are created equal, and they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness." These are noble words and express a principle that gives to this Nation a form of government that is distinctive among the nations of the world. To accomplish this basic principle of our Government has been our constant endeavor throughout all

the years that have intervened between the founding of our Government and the present time.

The rights and privileges accorded our citizens, regardless of race, color, or creed, are basic to our American way of life and, consequently, there is a continuing duty upon our part to make certain that these rights and privileges are maintained fully and completely for all our citizens.

Furthermore, as Americans we must also realize and accept the fact that the responsibility of worldwide leadership, which is now ours, carries with it a responsibility of providing an example of liberty and freedom for all in our daily lives. Any deprivation, intolerance, or discrimination in the application to every citizen of our basic rights and privileges would have a tendency to cast a cloud upon our vaunted liberties and recognition of the equality of all citizens. This could not be otherwise than highly detrimental to our standing throughout the world and could not be other than a disappointment to the millions of people throughout the world who are seeking in their respective nations the benefit of the same principles of liberty and freedom we enjoy. And in no particular is our distinctive character as a nation more apparent than in our individual right to vote. To destroy this right or deny it to any class of our citizens, as the result of prejudice or otherise, would undoubtedly destroy to an appreciable extent that high standing we now enjoy among all liberty-loving and liberty-seeking people. Thus it becomes our duty by such means as may be necessary to preserve and strengthen the rights inherent in citizenship in this great country of ours.

I support this legislation, because I consider it a duty to preserve fully and without any deviation the rights of all citizens, regardless of race, color, or creed. The bill deserves and should have the full support of the Congress and the approval of the President.

Senate Salad

EXTENSION OF REMARKS
OF
HON. JOE M. KILGORE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. KILGORE. Mr. Speaker, Texas could have supplied practically all of the ingredients of Senate salad. My district, which contains both the Rio Grande Valley and the winter garden areas of Texas, has often been called the Nation's salad bowl, and very aptly so. Last year it shipped 60,000 carloads of produce to all the markets of the Nation.

It is fitting, therefore, that Texas, the biggest State, should be a participant in the creation of the biggest salad in the world, which will be served tomorrow from the world's largest salad bowl. This bowl is 3 feet wide and 14 inches deep. Heaped, it will serve 320 main-course salads. Hand turned, it is made of solid walnut.

The salad fork and spoon naturally had to be a little larger than normal to accompany the salad bowl. Each is 3 feet long.

The bowl will be full tomorrow in the Senate District of Columbia Committee room at 1. We hope that you will come between 1 and 3 and help us empty it.

Special Subcommittee Chairman of House Armed Services Committee Makes Announcement of Dates for Hearings on Subject of Less than Honorable Military Discharges—Public Hearings To Begin Monday, June 24, and Run Through June 28

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do I am pleased to advise you and all the other Members of this distinguished body that the public hearings on the Doyle bill, H. R. 1108, and companion bills dealing with the subject of less than honorable discharges will commence at 10 a. m., Monday, June 24, in room 313A, 3d floor of the Old House Office Building. At that time the special subcommittee of five members of the full Armed Services Committee, appointed by the Honorable CARL VINSON to hold such hearings, will ony be able to hear, on Monday, the witnesses from the Defense Department. Beginning on Wednesday at 10 a. m. the Members of Congress and other interested witnesses representing the veterans groups and others will be heard and continue the balance of the week. Every effort will be made to accommodate the time element for all Members of Congress who desire to testify in the public sessions during the week but I regret to say that on account of the large number of witnesses who have already indicated such desire, the oral testimony of witnesses must needs be limited to 10 minutes; with the privilege of inserting in the record of the hearings additional written material which the congressional Member deems relevant.

Since the hearings on Monday are limited to witnesses from the Defense Department to the desirable end that members of the special subcommittees shall have the benefit of their stated position known throughout the balance of the week, I have taken pleasure in cordially inviting all Members of the House desiring to do so to also attend the hearings on Monday so as to also have the benefit of hearing the position of the military on these bills.

Mr. Speaker, the special subcommittee has held several executive meetings preparatory to these public hearings and I wish to state that it has already been a real pleasure for me to have the opportunity to sit with these distinguished members of the House Armed Services Committee on this special subcommittee appointed for these important hearings. And we have given our best considered attention to this very difficult and important problem which annually relates to several thousand members of our military establishments. We enter these hearings with the Defense Department and other witnesses who appear before us in a studious attitude, determined to seriously and conscientiously endeavor to ascertain the facts applicable to the problem so as to be able to recommend to the attention of the full Armed Services Committee, and through them if our recommendations be approved, to Congress itself; that which may definitely be of good report and real merit in a field which it is generally recognized some meritorious advancement should be promptly made.

Members of Congress desiring to make their wishes known for opportunity to appear in the hearings should promptly notify Mr. Russell Blandford, committee counsel, at the House Armed Services Committee office, phones 217 and 341. The members of the special subcommittee appointed by Honorable CARL VINSON are: CLYDE DOYLE, chairman, California; WILLIAM G. BRAY, Indiana; GEORGE HUDDLESTON, JR., Alabama; CHARLES S. GUBSER, California; and A. PAUL KITCHIN, North Carolina.

Merrimack River Flood Control

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following testimony which I gave before the Appropriations Committee on the Merrimack River flood-control project; also a letter from the head of the Corps of Engineers:

WITNESS: HON. EDITH NOURSE ROGERS, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF MASSACHUSETTS

Mr. CANNON. We are delighted to have with us the gentlewoman from Massachusetts, Mrs. EDITH NOURSE ROGERS.

On what project do you appear, Mrs. ROGERS?

Mrs. ROGERS. Mr. Chairman, I am appearing in behalf of the project for flood control on the Merrimack River.

Mr. CANNON. We shall be glad to hear from you at this time, Mrs. ROGERS.

Mrs. ROGERS. Mr. Chairman, I introduced a bill which would provide $800,000 to be expended by the Chief of Engineers under the direction and supervision——

Mr. CANNON. Is it included in the budget, Mrs. ROGERS?

Mrs. ROGERS. No; it is not. The reason it is not included in the budget is because we had to wait before proceeding until the compact was signed between New Hampshire and Massachusetts.

Mr. CANNON. The gentlewoman will proceed.

Mrs. ROGERS. Last year the New Hampshire Legislature was not in session. So, they did not act. I personally endured two floods in the Merrimack Valley in my district, at Lowell, Mass., and other towns along the Merrimack. It was very bad in 1936, and we had to go about in boats in certain areas of Lowell.

In 1938 I was out when the hurricane first struck the dike that was being constructed, and then I went home. As we drove, first one tree fell down right in front of us and almost on us, and then another, and then another, and then another. I went in the house to use the telephone and while I was in there one of the chimneys of my house came down right over my head. I opened the door in one room, and the window blew in on me. A little later when I started out again I had to go back as the slate was blown off my roof. It made an upright wall about the house.

There was a great deal of suffering and a great deal of damage through my district. At Lowell where I live, the Concord flows into the Merrimack River so when we have flood conditions, the danger is extremely great.

General Fleming is the Chief of Engineers of New England division, and states that of the New England areas the Merrimack Valley is one program that should be taken care of at once. He has stated repeatedly that we are sitting on a volcano. There were many times last year when the valley was in great danger.

Mr. CANNON. Thank you, Mrs. Rogers.

Mrs. ROGERS. I thank the distinguished chairman.

May I include as a part of my remarks a letter from General Fleming and a statement from me?

Also, may I include a statement from Mr. George Brady of the Boston American, of Boston?

Mr. CANNON. Those matters may be inserted into the record at this point.

Mrs. ROGERS. I greatly appreciate that privilege, Mr. Chairman.

(The matters referred to follow:)

CORPS OF ENGINEERS,
UNITED STATES ARMY,
OFFICE OF THE DIVISION ENGINEER,
NEW ENGLAND DIVISION,
Boston, Mass., March 29, 1957.

Hon. EDITH NOURSE ROGERS,
House of Representatives,
Washington, D. C.

DEAR MRS. ROGERS: In accordance with our telephone conversation, I am pleased to furnish you with information concerning the Hopkinton-Everett project.

The Merrimack River problem is the greatest unsolved flood-control puzzle in New England. Fortunately, the construction of the Hopkinton-Everett project is the key to its solution. If the 1936 and 1938 floods were to recur today the flood damages would exceed $74 million in New Hampshire and $140 million in Massachusetts. The operation of Hopkinton-Everett Reservoir together with the flood-control reservoirs already built would prevent 85 percent of the damage in New Hampshire and 70 percent in Massachusetts.

Although $50,000 in planning funds was provided this fiscal year for Hopkinton-Everett no money could be used until concurrence in the project had been given by the State of New Hampshire. Due to this lack of concurrence at the time our budget requests were submitted it was impossible to request funds for this project for fiscal year 1958.

As you know, recent favorable action by the New Hampshire Legislature gave Governor Dwinell necessary authority to commit the State of New Hampshire to the project. Immediately upon the removal to the legal roadblock Governor Dwinell wrote to me giving the formal concurrence of the State of New Hampshire. This cleared the way for initiation of planning which is now getting underway.

When a project is authorized we develop a tentative schedule for surveys, planning, and construction, which is revised from year to year. This schedule is made up without any reference to other projects in the division, the total civil-works program, or other program needs of the Government, or the availability of men or equipment generally in any one year. It therefore is a figure for internal planning purposes only. That figure for this project is $600,000 for fiscal year 1958, and would include planning and some funds for limited real-estate acquisition. For your further information the President has directed that our fiscal year 1958 expenditures as estimated in his budget presented to the Congress, be considered as the maximum that can be made within the overall fiscal policies of the administration for that year. Since no funds are included in the budget for the Hopkinton-Everett project, no funds can be utilized for this project and meet the administration's objectives.

Sincerely yours,

ROBERT J. FLEMING, Jr.,
Brigadier General, United States Army, Division Engineer.

INFORMATION ON THE HOPKINTON-EVERETT PROJECT, NEW HAMPSHIRE

(Assembled for Congresswoman ROGERS, May 6, 1957)

SUMMARY

Description: The Hopkinton-Everett Reservoir is located within the towns of Henniker, Hopkinton, Weare, and Dunbarton in Hillsboro and Merrimack Counties, Merrimack River Basin, N. H. The project consists of a dam and 2 dikes in the Contoocook River Basin and a dam and 2 dikes in the Piscataquog River Basin. The reservoirs thus formed would have a capacity of 60,500 acre-feet in the Contoocook River Basin and 96,500 acre-feet in the Piscataquog River Basin, and would be connected by a canal of sufficient capacity to cause the storage areas to function as a single unit. Construction has not been initiated.

Federal cost estimate as of July 1956: $34,100,000.

Funds appropriated to date $117,000.

Benefit-cost ratio: 1.4 to 1.

Status of local cooperation: None required.

Applicability of provisions of continuing authorization acts to the project: The project is a unit of the authorized comprehensive plan for flood control and other purposes in the Merrimack River Basin.

AUTHORIZATION

The Hopkinton-Everett Reservoir project, a unit of the authorized comprehensive plan for flood control and other purposes in the Merrimack River Basin, provides for the construction of dams in the Contoocook and Piscataquog River Basins near the villages of West Hopkinton and East Weare. Authorization for the project is contained in the following act:

Act and document: Flood Control Act of June 28, 1938 (H. Doc. 689, 75th Cong., 3d sess.).

Work authorized: A system of flood-control reservoirs and related flood-control works which may be found justified by the Chief of Engineers.

LOCATION AND DESCRIPTION

The Hopkinton Dam, on the Contoocook River, about one-half mile upstream from the village of West Hopkinton, would be of rolled-earth construction with outlet works for regulating the discharge of impounded floodwaters. The spillway for this portion of the project would be located in a saddle about 1.8 miles east of West Hopkinton. The Everett Dam, on the Piscataquog River, about 1.3 miles southeast of the village of East Weare, would be of rolled earth with an adjacent concrete spillway. The crest of this spillway would be at an elevation 2 feet higher than the Hopkinton Dam spillway. A project map is bound at the end of this report.

Pertinent data (preliminary)

	Hopkinton	Everett
Dam and dikes:		
(1) Top elevation dam (feet, mean sea level)	432	430
(2) Top elevation dikes (feet, mean sea level)	430	431 430
(3) Length of dam (feet)	670	1,250
(4) Length of dikes (feet)	7,500	5,900
(5) Maximum height of dam (feet)	75	115
(6) Maximum height of dikes (feet)	70	48
Spillway:		
(1) Crest elevation (feet, mean sea level)	412	414
(2) Length of crest (feet)	650	200
	No. 1	No. 2
Canals:		
Length (feet)	2,050	14,500
Width (feet)	130-150	170
Reservoir:		
(1) Storage capacity to Hopkinton spillway crest elevation.	157,000 acre-feet or 6 inches of runoff from a gross drainage area of 490 square miles.	
(2) Reservoir area at Hopkinton spillway crest elevation.	6,300 acres.	

Lands to be acquired

Type of land:	Acreage
Lots	205
Tillage	1,050
Pasture	750
Woodland	5,495

Relocations

Features:		
Highways	miles	21
Railroad	do	5.25
Telephone and electric distribution lines		
Water distribution system		
Cemeteries (4)	graves	2,800

PROJECT BENEFITS AND ECONOMICS

This project, together with the 3 completed reservoirs, will control about 32 percent of the total drainage area of the Merrimack River Basin. The 4-reservoir system would reduce the annual flood loss in the basin by $3,948,500. The Hopkinton-Everett project is an important unit in the comprehensive plan of improvement for flood control in the Merrimack River Basin. The reservoir area is 66 percent wooded, 14 percent in pasture, and 20 percent in tillage. One small community, the village of East Weare, is included in the reservoir area.

Construction of this reservoir is required, in addition to the completed reservoirs, to reduce the stage of the standard project flood to authorized grade of levees at those downstream cities now having local protective works.

Flood damages and protection afforded by Hopkinton-Everett 1936 flood: Damages in the 1936 flood amounted to $36 million.

A recurrence of the 1936 flood, without Hopkinton-Everett protection, would cause $153 million in damages under present conditions. Of these damages, $38 would be prevented by Hopkinton-Everett. The stage reduction at Manchester, N. H., would be 4 feet, and at Lowell, Mass., 3 feet.

1938 flood: Damages in the 1938 flood amounted to $6 million.

A recurrence of the 1938 flood, without Hopkinton-Everett protection, would cause $53 million in damages under present conditions. Of these damages, $16,500,000 would be prevented by Hopkinton-Everett. The

stage reduction at Manchester, N. H., would be 3.4 feet, and at Lowell, Mass., 2.6 feet.

Average annual flood-damage reduction, $1,800,000.

INDUSTRIES AFFECTED BY THE HOPKINTON-EVERETT PROJECT

New Hampshire: Based on property assessment values in 1939 of industrial properties damaged in the floods of 1936, 29 industrial concerns in the New Hampshire portion of the basin, with an assessed valuation of $35,500,000, would be affected by the Hopkinton-Everett stage reduction. These industries produce woolen and cotton textiles, mica products, paper, gypsum board, and other miscellaneous manufactured products. The 1939 assessed value represented 50 to 75 percent of real value.

Massachusetts: Based on similar data, a total of 174 industrial concerns in the Massachusetts portion of the basin would be affected by the Hopkinton-Everett stage reduction. These industries, generally similar to those in New Hampshire, produce wool, cotton, and synthetic textiles, shoes, shoe machinery, paper and paper box products, and plastics. Their 1939 assessed value amounted to $51,200,000.

Total: The total assessed value of 203 affected industries in the entire basin amounted to $86,700,000. Since 1939, a few manufacturing concerns, especially industrial concerns, have liquidated and have been replaced by electronic and plastic manufactures, so that the value of industrial properties that would be protected by Hopkinton-Everett is probably a lot higher now.

Results of West Virginia's Fourth District Questionnaire to Constituents

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. NEAL. Mr. Speaker, in my regular newsletter of June 3, which goes to a select list of some 2,000 of my constituents twice monthly, I enclosed a questionnaire. There were listed, in simple language, some 15 different questions on as many topics.

To date, I have received a return of some 20 percent of the questionnaires; or approximately 400 of my constituents are so interested in the operation of their Government that they voiced opinions on the subjects I had listed.

There was also conclusive proof that their interest in issues of the day is not superficial in that at least 90 percent of those replying went to the great time and trouble of writing extensive comment on their varied answers.

The following story which appeared on June 10 in the Huntington (W. Va.) Herald-Dispatch gives the results of my sampling of public opinion, both Democratic and Republican, in the fourth West Virginia district:

VOTERS FOR MAIL RATE RISE AND PAY VIDEO, NEAL FINDS

WASHINGTON, June 9.—Voters in the 10-county Fourth Congressional District of West Virginia are wholeheartedly in favor of increasing postal rates, commercial television, a Federal right-to-work law, but are opposed to Federal aid to schools, high farm-price supports, and continued economic aid to foreign nations.

These were some of the conclusions reached by Fourth District Congressman WILL E. NEAL, of Huntington, on the basis of returns from a 15-question quiz submitted to approximately 2,000 of his constituents last week.

The questionnaire was enclosed with his bimonthly newsletter from the Nation's Capital which goes to a cross section of the professions, farmers, labor-union members, and active political party members, both Democratic and Republican.

With more than a 10-percent return considered an ample response to such things in congressional circles, the poll showed that while the voters were opposed to continued price supports for farmers, they don't want the soil-conservation program tampered with. While the ratio against supports was almost 4 to 1, the conservation program was endorsed by a margin of 2 to 1.

By a margin of almost 100 percent the voters said they didn't want any curtailed postal service but (3 to 1) were willing to have postal workers receive a pay increase.

Federal aid to education, proposed under a White House-endorsed 5-year program of school construction, was opposed 2 to 1.

On the score of arming allies abroad, the voters were 3 to 2 in their endorsement of such steps as exemplified by the North Atlantic Treaty Organization, the Baghdad pact, and similar alliances.

Sentiment for Federal right-to-work legislation was favored almost 4 to 1.

Heaviest loser in the poll was the direct question:

Would you favor increasing the number of anti-Communist refugees permitted to come to the United States?" By almost 4 to 1, those replying were against raising quotas.

Sentiment on increasing veterans' benefits and liberalizing social-security laws was virtually evenly divided, while statehood for Alaska and Hawaii was favored 2 to 1.

Extension of the present $1-per-hour minimum wage law to greater numbers of workers in interstate commerce was voted down.

Senate Salad Luncheon

EXTENSION OF REMARKS
OF
HON. WILLIAM B. WIDNALL
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. WIDNALL. Mr. Speaker, on Wednesday, June 19, a new Senate salad will be introduced to the country at a luncheon in the Senate District of Columbia Committee room. I am very pleased that the Rutgers tomato will be amongst the vegetables used in its preparation. New Jersey, the Garden State, has developed the tastiest, juciest and firmest tomato. The Rutgers tomato was named for the university where Prof. L. G. Schermerhorn spent years of experimentation in cultivating the seed.

New Jersey is the third largest tomato-producing State in the Union and in 1956 $4,310,000 of tomato production went into the fresh market and $10,717,000 produced for the canneries. The Rutgers tomato is the color standard for tomato juice.

I am sure that Senate salad is going to just a little bit better because of the fact that New Jersey has made its contribution to this new all-American dish.

Nigerian Women in Civic Role

EXTENSION OF REMARKS
OF
HON. FRANCES P. BOLTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mrs. BOLTON. Mr. Speaker, the International Council of Women has been meeting in Montreal, June 5 to 15, at its triennial conference. Among those attending this important gathering were two Nigerian women, each distinguished in her own way. They are Chief Elizabeth Adekogbe, wife of the King of Ikija, and Chief Wura Esan of Ibadan, Nigeria, whose husband is a lawyer.

That the House may be more aware of the very real contribution women of Africa are making, I am including with these few words an article from the Christian Science Monitor, Nigerian Women in Civic Role, by Jessie Ash Arndt.

The article follows:

[From the Christian Science Monitor of June 14, 1957]

NIGERIAN WOMEN IN CIVIC ROLE

(By Jessie Ash Arndt)

MONTREAL.—Women of Nigeria not only have the vote, but they are beginning to take an active part in politics and some of them bear the title of "chief."

Two of these Nigerian women chiefs have been among the most picturesque of the delegates attending the triennial conference of the International Council of Women, in session here June 5 to 15.

Chief Elizabeth Adekogbe, wife of the King (or Oba) of Ikija, for a month preceding her current visit to Canada, was in the United States, studying various women's organizations, as a guest of the Department of State.

Chief Wura Esan of Ibadan, Nigeria, whose husband is a lawyer, arrived only a week ago and came to Canada expressly for the conference.

The two African women—both rather tall, the one roundfaced and plump, and the other, slender—wear handsome scarves of heavy silk in dark or gay colors, in a turban effect around their heads as a mark of their rank as chiefs. They wrap bright overskirts around their long dresses and wear pure gold earrings and necklaces. A young Nigerian student from McGill University, where the council sessions were held, bowed low in deference when he was presented to these leading women of his country.

HONORARY TITLE

The rank is something like that of "lady" in England, Chief Adekogbe explained, an honorary title conferred in recognition of outstanding achievement. The title of "Oba" or "King," which her husband holds, is an official designation, indicating that he is governor of one region or province of Nigeria.

Chief Adekogbe was recognized for her leadership in organizing the women of her country—3,250,000 of them—in groups now embraced in the Nigerian National Council of Women. This achievement dates from 1952, when she began recruiting members. The Nigerian Council was taken into the international in 1954 in Helsinki.

Their first goal, which was the vote, was achieved in 1955 and they exercised their franchise last year. Now they will work to educate themselves—and perhaps the men, too—for civic responsibility. Women are already represented on municipal councils

and it is at the local level that they expect to make their influence felt, broadening out from there, says Chief Adekogbe.

Men are beginning to show sympathy for their cause, and are helping with donations for their work, she stated. Married women as well as single girls in Nigeria are now taking jobs and many have their own businesses as market women and traders, often with considerable wealth in their own names.

Chief Esan has also helped in organizing women and giving them education in how to help their municipal governments, and carry on social welfare. She received her title for organizing a school for girls in 1945, which now has an enrollment of 600. The girls are from 4 to 18 years of age; 60 living at the school and the others coming as day pupils.

The school is in three divisions, the nursery, the government-maintained free primary grades, and the secondary modern for older students who pay a fee.

Emphasis in the older classes is not on homemaking and practical arts, Chief Esan told me, but on civics. "We want everyone to know the rights of citizens and be trained in good citizenship," she said, explaining that Nigeria was seeking self-government and that even now the governor in West Nigeria was chiefly an adviser.

She and other leading women are busy preparing the girls and women of their country to have a voice in government and to take an increasingly important role in it.

Arthur T. Vanderbilt

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. WOLVERTON. Mr. Speaker, today New Jersey had a sad duty confronting it as it laid to rest the body of its most distinguished jurist. Chief Justice Arthur T. Vanderbilt has passed into the Great Beyond. His life has been one of great usefulness. His activity in all the many and varied phases of life has been most commendable. His accomplishments have been so great that it would be impossible to adequately set forth all of them in the manner their importance deserves. In the field of politics his objective was always good government. In the field of jurisprudence he continually sought to establish justice and equity that was certain and assured. To accomplish this he surmounted barriers of long established procedures that worked against change of any kind. But, with zeal and intelligence, he carried on his fight for a swifter and more certain justice until he attained his goal. The result is that today we have in New Jersey one of the most modern and effective systems of justice to be found anywhere within the United States or elsewhere.

Arthur T. Vanderbilt was recognized throughout this Nation as one of the most outstanding judicial personages engaged in the administration of law and equity. His standing among lawyers and judges was such that he stood as on a pinnacle. He was worthy of every honor that was accorded him during his long and useful life. His views on matters pertaining to administrative procedures in the practice of law were the result of a long and varied experience in the practice of law, and, the experience thus gained, and, that which came as the result of his occupancy of the high position of chief justice of New Jersey, provided a strength and reason to his views that enabled them to stand firm and overcome any and all opposition.

Not only was Arthur T. Vanderbilt a man of great intelligence in law and all other phases of government, but, he was a man of superlative character and integrity. At all times his every action either on the bench, or, in his many years of activity at the bar and in active politics was based upon careful consideration of all the facts incident to the matter. And, when his opinion was finally formed, he stood back of it without any deviation or compromise. He stood for what he thought was right.

In conclusion, and, as part of my remarks, it is appropriate that I should include an editorial appearing today in the Washington Post and Times Herald. It is so true and illustrates that even in this Capital City of the Nation, his fame and outstanding character as lawyer, judge, and citizen was as well known and recognized as in his home State of New Jersey.

It reads as follows:

The death of Chief Justice Arthur T. Vanderbilt of the New Jersey Supreme Court is a tragic loss to the causes of justice, judicial reform, and legal education. In the last decade he had directed almost a judicial revolution in New Jersey. That was the culmination of many previous years of hard struggle to bring administrative management, sound organization, and highly qualified judges into the judicial system. As chief justice in New Jersey, he was able to put into practice what he had been preaching, with the result that that State now has one of the best judicial systems in the Nation.

After trying for 17 years to interest the bar, the judges, and the politicians in judicial reform, Mr. Vanderbilt decided a decade ago to carry his fight to the people. Govs. Charles Edison and Alfred E. Driscoll joined in the struggle, and a new constitution was adopted for New Jersey, including a model judicial system. Mr. Vanderbilt, who had won eminence in the practice of law and as dean of the New York University Law School, was then named chief justice.

There followed a decade in which rules were simplified, dockets were cleared of old cases, able and energetic lawyers were named to the bench and modern administrative management was applied to the work of the courts. In a single year the output of the New Jersey courts was increased by 98 percent. Justice is no longer soured by endless delays, confused jurisdiction, or excessive emphasis on technicalities. Arthur Vanderbilt's leadership in this sphere has brought New Jersey to the forefront among the States seeking to modernize their judicial systems.

In his practice as in his teaching, Mr. Vanderbilt was a strong defender of civil liberties and of independent judgment on the bench. As counsel for Norman Thomas, he induced the Supreme Court of the United States to strike down the Jersey City ordinance under which the late Mayor Frank Hague had forbidden the Socialist leader to address a public meeting there. As president of the American Bar Association, he contributed enormously to the defeat of President Roosevelt's efforts to pack the Supreme Court in 1937. It is the judicial reforms that he helped to establish in New Jersey, however, that are likely to stand as his most enduring monument.

The Unmentioned Famous Letter of Benson to Ellender

EXTENSION OF REMARKS
OF
HON. CHARLES M. TEAGUE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. TEAGUE of California. Mr. Speaker, a very significant editorial appeared in the California Farmer, a publication devoted to agriculture, on June 8, 1957, and in the same issue of that publication considerable space was given to a letter written by the Honorable Ezra Taft Benson, Secretary of Agriculture, to United States Senator ALLEN J. ELLENDER. Because "some people consider this letter one of the most unusual and important pronouncements to be made by a Secretary of Agriculture in the last 25 years," under unanimous consent, I am having the editorial and the brief of Secretary Benson's letter printed in the CONGRESSIONAL RECORD.

THE UNMENTIONED FAMOUS LETTER OF BENSON TO ELLENDER

Senator ELLENDER, chairman of the Senate Committee on Agriculture, asked Secretary Benson his views on problems that have arisen under existing price support legislation.

Benson, who has been twitching the rug under this subject for some time, decided this was the big moment, and he gave the rug a terrific jerk.

Benson's observations tear to shreds most of the farm legislation dealing with crop production and its attempted regulation for the past 24 years.

Take his opening three points just for example. He says:

1. Controls have not been effective in reducing production.

2. Farm products are likely to continue to be abundant and they cannot be successfully priced as if they were scarce.

3. Our formulas governing acreage allotments and price supports are obsolete.

The letter is a frightfully frank analysis of our legislative fumbling in the field of agriculture. For example, he points out that if we do succeed in cutting down stored surpluses of food, the first thing farmers will demand is increases in their acreage allotments, and we will start the expensive cycle all over again.

He coined one phrase that was pretty good. Speaking of the technological explosion that has doubled production per farm worker in the last 15 years he said, "This creates a new dimension in farm policy and makes it virtually impossible to curtail agricultural output with the type of controls acceptable in our society."

This is the kind of a letter that a politician would never write unless he were going some place to die. Benson, ostensibly, has 2 more years of this mess to manage, and here he has just announced—or rather dragged out into the beam of the searchlight—the naked, shivering truth. We have all picked at the problem and watched Con-

gress temporize, theorize and vulcanize the farm program, but it is sort of a shock to see the entire monster with all of its clothes off.

After busting this thing wide open, Benson walks away and leaves the pieces. He does say that he thinks we should continue the surplus food disposal program and soil bank acreage reserve program until we get rid of our mountains of stored food, but adds that as soon as we accomplish that, we should do away with the soil bank program and all these other miserable mistakes that have piled up surpluses.

This letter, one of the most unusual pronouncements of its kind, has been given wide circulation, but so far the silence on the part of the press has been deafening. It's the kind of silence you get when you hit a man between the eyes with a hammer. Is it stunned or just incapable of analyzing the implications?

This has been a very interesting administration in Washington, to say the least. Someone is always bouncing a fast ball off the dome of the chief while he is looking into the sun.

Benson led them all down an alley, left them no escapes and slammed the door.

What the Republicans, what the Democrats, what the disintegrating farm bloc will do, we have no idea. It does occur to us, however, that if we had just read this thing over carefully and we found the words "90 percent of parity" in our mouth, we would wash our mouth out with soap.

We have tried to brief the text of Benson's letter for inclusion elsewhere in this edition.

THE LETTER BENSON WROTE TO ELLENDER

(EDITOR'S NOTE.—Some people consider this letter one of the most unusual and important pronouncements to be made by a Secretary of Agriculture in the last 25 years. It is a very long letter, so unfortunately we had to shorten it for reprint.)

Benson made the following statements in the letter addressed to Senator ELLENDER, chairman of the Senate Committee on Agriculture:

"You asked for my views on problems arising under existing price-support legislation.

"Now is the time to see that graneries and warehouses presently being emptied are not filled again with price-depressing surpluses. I wish to make three points:

"1. Controls are not effective in reducing overall agricultural production, despite the severe restrictions they impose on farmers' freedom to produce and market.

"2. Agricultural products are likely to continue to be abundant. Under such conditions, they cannot be successfully priced as if they were scarce.

"3. The present legal formulas governing acreage allotments and price supports are proving obsolete.

"Production per farmer has doubled in the last 15 years. This creates a new dimension in farm policy and makes it virtually impossible to curtail agricultural output with the types of controls acceptable in our society.

"Farmers are being subjected to the forces generated by the technological revolution. They are adjusting from wartime to peacetime demands. Their markets are burdened by surpluses which result at least in part from past wartime programs. Obviously, farmers must be protected from the harsh price effects which would result from their exposed economic position, their weak bargaining power, and their abundant production. Government efforts should help rather than hinder them.

"If surpluses are reduced, farmers will feel that acreage allotments should be increased. Under present law, however, farmers are unlikely to receive increased allotments for most of the basic crops. Hence, under present law, disappointment awaits many farm families.

"Last year, in spite of acreage allotments, marketing quotas, the beginnings of a soil bank, and a severe drought in the Southwest, overall farm production reached an all-time record.

"Here are partial results of a special study of the USDA on acreage reduction programs as requested by the Appropriations Committee of the 84th Congress:

"1. The acreage allotment, marketing, quotas, and associated price support programs that have been in effect during the last 2 years have had little influence in total farm production, although the production of specific commodities has been modified considerably.

"2. An 8 percent reduction from 1953 to 1955 in the total production of four of the basic allotment crops—cotton, wheat, corn, and rice—was more than offset by increases in production of nonallotment crops.

"3. Land and other resources diverted from production of these crops were used mainly to grow feed grains other than corn, oilseed crops, rye, and hay.

"To continue with Benson's thoughts: We cannot control the total output of agriculture by controlling the acreage of crops which yield only one-fourth of our farm income. Obviously, it is unfair to the producers of the nonbasic products to expect them to solve their own supply problems and shoulder as well the supply problems shifted to them by producers of the basic commodities.

"We were trying for production control during the past 24 years of farm programs, but we have done many legislative things to defeat the purpose such as: Permission to plant on acres diverted from the basic crops, minimum national allotments, minimum individual allotments, legislative action to boost allotments or to prevent them from falling and control on the basis of harvested instead of planted acres.

"Farmers repeatedly vote for marketing quotas by wide margins, but actually they have no realistic choice. If quotas are voted down, the price support is only 50 percent of parity and farmers must stay within their allotments if they wish to receive even that low support. Furthermore, quotas have not been restrictive enough to balance supply and demand. For example, in 1956 accumulated stocks of wheat were so heavy that a quota of only 12 million acres would have been appropriate to adjust supplies to normal demand according to law. To deal with this impossible situation, the Congress provided a minimum national allotment of 55 million acres.

"Farmers favored a cotton quota based by law on 17.6 million acres, when a quota of 4 million acres would have been required to adjust to normal. For both wheat and cotton, the allotment on which farmers voted was more than four times as large as would be needed to adjust supplies to normal.

"Votes of this kind cannot reasonably be said to indicate farmers' willingness to keep supplies in line with demand in order to receive the support price. Eisenhower's recommendation for quantity allotments for cotton and other crops was turned down by Congress.

"Some people recommend extending acreage controls to the feed grains and the oilseed crops, a step which would approximately double the number of acres under Government control. Experience suggests that we should move away from acreage controls rather than toward more of them.

"The acreage reserve part of the soil-bank program came into being due to the intolerable situation caused by mounting stocks of food. It must be used to reduce accumulated stocks. It must not be put to other purposes. It must not be allowed to become permanent. A permanent program which subsidizes nonproduction is contrary to our tradition.

"The evidence of the past 24 years is inescapable. Farmers will not accept, legislators will not vote, and from a practical standpoint administrators cannot impose the kind of controls which, at the price objective specified by law, would be necessary to bring production into line with market outlets.

"Agricultural products are likely to be abundant. Under such conditions, they cannot be successfully priced as if they were scarce.

"Since we apparently cannot legislate scarcity, we must learn how to live with abundance. We need to build markets so that this abundance can be used. We cannot build markets by pricing ourselves out of them.

"The agricultural budget submitted for the coming year totals in the neighborhood of $5 billion. It was pointed out on the floor of the House that this is the equivalent of nearly half the net income of our farm people.

"Few would object seriously to heavy costs if these costs were temporary and if the program were moving toward a solution.

"There are two things which the American people are not likely to tolerate:

"1. The rebuilding of surpluses after stocks have been pulled down by surplus disposal and the soil bank.

"2. A permanent soil bank and a permanent disposal program of the dimensions made necessary by incentive prices and ineffective controls.

"Certainly, more production adjustments are needed for our basic crops than are likely to come from the type of controls we hitherto have had. Farmers are capable of making many needed adjustments on their own if permitted to do so.

"Many provisions of law are good and workable. There are more than 200 farm products for which we are authorized to provide price supports. For all but 11 of these (the basic commodities, wheat, cotton, corn, rice, peanuts, and tobacco, and a few other commodities with special programs, dairy products, wool, sugar, honey, and tung nuts) general guides are provided by law as a basis for price supports without the use of fixed formulas. For the 190 or so commodities to which these criteria apply, problems have perhaps been less troublesome than for the basic commodities.

"Of any proposed solution, I ask these questions: Will it work? Is it good for farmers?

"I have no doctrinaire solution for agricultural problems. My comments regarding governing legislation stem from the fact that these programs are not working.

"EZRA TAFT BENSON,
"Secretary of Agriculture."

United States Treasury "in Fiscal Mess"

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. MULTER. Mr. Speaker, the following excerpt from the syndicated column of Drew Pearson, which appeared in the Washington Post and Times Herald of June 18, 1957, is worthy of the attention of our colleagues:

UNITED STATES TREASURY "IN FISCAL MESS"
(By Drew Pearson)

By an ironic twist which the general public doesn't realize, George Humphrey is stepping out as Secretary of the Treasury just as

the Treasury is in one of the worst messes in recent history.

To quote the Wall Street Journal: "The Government of the United States is in a fiscal mess. The Treasury of the richest nation on earth is short of money. At one point this spring it had hardly enough cash to pay a week's worth of bills."

Yet Mr. Humphrey has been hailed as the strong man of the Cabinet and one of the greatest Secretaries of the Treasury in history.

The fact is, however, that Victory Bonds have been selling at $86, the same panic levels at which millions of people sold and took their losses on Liberty Bonds after World War I. In addition, the Treasury's interest rate for long-term bonds is at the highest point in history, despite which the bonds can't be sold to the public. The recent $4.2 billion bond offering at 3⅝ percent for 57 months was a complete bust. The investing public just wouldn't buy.

On top of this the Treasury has to raise $55 billion to cover maturing bonds in the next 12 months. Yet it has now given up all hope of raising money through long-term bonds and gone back to short-term notes.

BANKERS IN CONTROL

One of the big campaign issues of the Eisenhower Administration was to get away from short-term, hand-to-mouth financing. To accomplish this, one of the leading businessmen of the Nation, George Humphrey, was made Secretary of the Treasury, while the actual job of revising fiscal policy was put under Randolph Burgess of the National City Bank, a strong critic of the Government's past bond policy under Henry Morgenthau. Burgess is married to a great-great-great granddaughter of Alexander Hamilton, first Secretary of the Treasury and the father of American fiscal policy.

One of the first things Burgess did was announce that he would take $170 million of the Government's debt and put it away in long-term bonds for 20 or 30 years.

To please the bankers, he also jacked up interest rates. This was his worst mistake. After he had hiked interest rates on one bond issue, he couldn't go back to lower rates on other issues. The bankers and the investors wouldn't take it.

So the cost of handling the national debt today, because of increased interest charges, is about the same as the cost of the entire Government budget during the peak days of WPA and PWA, when many business leaders were denouncing the high cost of Government.

Meanwhile, the Government has enough money to last through June. But $4 billion will be needed in July. In August the Treasury faces another $15½ billion in maturities, with another $8 billion in October. Though part of these are held by the Federal Reserve, at least $9 to $10 billion are in public hands.

The public investors are finding that they can get a better return from the stock market or in municipal bonds. They don't like having their money tied up in long-term Government bonds when runaway inflation is daily depleting the value of the dollar.

Pay Raise for Postal Workers

EXTENSION OF REMARKS

OF

HON. J. FLOYD BREEDING

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 18, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to call attention to my testimony today before the House Committee on Post Office and Civil Service, on behalf of the postal workers of my district.

Our postal employees, who so loyally serve our Government and the public, are in urgent need of a pay increase. We are aware also that the postal workers have received only small pay increases in the past several years. This fact, in addition to the consistently higher cost of living levels, adds a note of urgency to their presently critical economic situation.

It is my desire to give full and immediate support to legislation which will remedy the distressing economic predicament of this long-neglected segment of our economy. Where a postal employee has a family to support he is reduced to a subsistence level, which in the face of our present high standard of living, makes it impossible for him to have more than the barest necessities of life without seeking additional employment. In the light of this deplorable situation, I cannot do other than agree that this raise is more than justified.

I have received numerous letters and petitions from the postal workers of the Fifth District of Kansas. I would like to present to this committee a small sample of these letters which so eloquently describe their depressed economic situation:

HUTCHINSON, KANS., *May 7, 1957.*

Hon. J. FLOYD BREEDING,
House Office Building,
Washington, D. C.

DEAR SIR: As a postal clerk's wife I am writing to you asking your support on the salary increase bill H. R. 2474. We feel that we need and are entitled to this increase. It is extremely difficult to exist on our present salary of $3,785 a year. Our bring home pay is considerably less.

In order to supply a sufficient home for our 2 small children, our house payments are 43 percent of our bring home pay. Our food costs us approximately $100 a month. With the small children we have had several medical bills. At present time we are driving a 1950 model car and don't see much chance of affording a newer one at our present wage. We need a car as Hutchinson doesn't have bus service and we live 24 blocks from the post office. A car of this age is in constant need of repairs. Our gasoline and oil is running $20 a month and sometimes more. There isn't money left for clothing, entertainment, nor a few necessary things to maintain a happy home. We are not asking to live better than our friends and neighbors but we feel that our family is entitled to live on an equal basis.

We think our job as a postal clerk should be classified higher than an average unskilled worker yet our wages are in the same classification. Our husbands are required to study a scheme and pass a test each year. At the present a postal clerk hasn't much to look forward to as far as making a living. Their hours are irregular and definitely inconvenient. They work evenings, nights, weekends and holidays and just draw pay for the 40 hours. Most all of the postal employees family have to have outside income to live decently. As a young postal clerk's wife, is that what we have to look forward to, either working myself or my husband always holding 2 jobs as he has in the past 3 years?

We would greatly appreciate your support on the salary increase bill H. R. 2474 and also on the personnel management relations bill H. R. 6.

Thank you.

Sincerely yours,

Mrs. WALLACE R. SMITH.

HUTCHINSON, KANS., *May 9, 1957.*

DEAR MR. FLOYD BREEDING: I am a wife of a postal clerk. He has been at the post office for 10 years. He has a family of four. With wages as they are and prices as high as they are it is very difficult to make a decent living.

If we don't get a pay raise it will be almost necessary for my husband to have a second job or for me to go to work.

We are coasting along without any sickness but if the children should get sick and have high doctor bills I don't know what we would do.

So if we could depend on your support we would appreciate it very much, on Bill H. R. 2474 and H. R. 6.

Thank you very much.

Yours truly,

Mrs. PAUL AUPPERLE.

HUTCHINSON, KANS., *May 9, 1957.*

Hon. J. F. BREEDING,
House Office Building,
Washington, D. C.

DEAR SIR: I am deeply interested in the bills S. 27, H. R. 2474, S. 386, and H. R. 6 for the postal employees.

We are a family of four, living on an income of $140 take-home pay. When we get our house payment, grocery bill, doctor bills, furniture payment and drug bills we hardly have any left for clothing, church, etc. I make all our clothes so we can have enough to get by. I had a $25 drug bill in November and a $17 one in January. It usually runs $8 a month. We have a $38 doctor bill as of now.

I have to let our grocery bill run over in order to pay something on different bills. I could work but after paying someone to care for our girls 15 and 29 months we wouldn't make a thing. Also I would have to have new clothes and a second car.

My husband's postal hours wouldn't work with mine. Our gasoline is $8 for just going to and from work. We don't spend foolishly as we neither drink, smoke, nor dance.

Respectfully,

Mrs. LEONARD F. BRENTLINGER.

HUTCHINSON, KANS., *May 13, 1957.*

Hon. J. FLOYD BREEDING,
Washington, D. C.

SIR: As a wife of a substitute postal employee I ask you to study this budget and see how we couldn't possibly live on a regular's take-home pay of $250 a month. As you can see our average budget is over this and it does not include home improvement, dentist, personal taxes, car insurance ($70 yearly), and repair bills and gifts.

This month we paid $28 for 7 hours of labor on a plumbing bill. My husband had to work 14½ hours to earn this.

House payment	$65.05
Food	70.00
Car payment	48.00
Utilities	20.00
Doctor	2.00
Drugstore	6.88
Spending money (lunches included)	5.00
Clothing	10.00
Gasoline and oil	12.00
Insurance	20.00
Church and charity	5.00
Total	274.33

Please support H. R. 2474 and H. R. 607.

Cordially yours,

Mrs. DON MCCAMANT, Jr.

HUTCHINSON, KANS.

Hon. J. FLOYD BREEDING,
House Office Building,
Washington, D. C.

DEAR SIR: I would like to write and urge you to vote for the bill H. R. 2474. My husband has worked for the Post Office for 10 years and makes $300 (take-home pay) a month. We have three children. Here is a sample of our monthly bills:

House payment	$68
Car payment	70
Gas for car	20
Food	70
Insurance	20
Lights, water, gas, etc	30
Total (per month)	278

As you can see this leaves $22.00 for doctor, dentist, clothes, etc. each month. We could not possibly get along without my husband working his days off at another job. So here's hoping the bill H. R. 2474 is passed.

Respectfully,

MRS. M. W. FRIESEN.

GREAT BEND, KANS., *May 13, 1957.*

Hon. FLOYD BREEDING,
House Office Building,
Washington, D. C.

DEAR MR. BREEDING: I am a postal clerk in the Great Bend, Kans., post office and I am writing to you for your support on H. R. 2474 which is pay raise for postal employees. Please sign the discharge petition House Resolution 249 which would make in order the immediate consideration of H. R. 2474.

My take-home pay from the Post Office is $3,900 and that small amount of money doesn't begin to pay for the many expenses of my family, consequently I have had to borrow money to live on and I am $1,800 in debt with no chance of paying back the $1,800. I have a son who is 18 years of age and I would like to send him to college this fall but with only $3,900 to draw from I can't do it. A college education is very important this day and age if one is to survive and I would like for my son to have that opportunity.

Many postal employees hold 2 or 3 part-time jobs to try to keep up and the wives of some work to help out with the expenses. This is not a good situation because the extra jobs held by the postal employees are depriving someone else from those jobs and if our wives have to work, when they finish their job in an office or wherever they might work they still have washing, ironing and all of the many other things to attend to at home. By the way does your wife work at a job outside of your home, Mr. Breeding, and could you live on $3,900 per year?

The facts as stated above give a pretty good picture of how things stand with 90 percent of postal people. The United States Chamber of Commerce president stated that postal people don't need a raise in pay while he draws around $125,000 per year. It's rather absurd isn't it. Also it has been stated that if postal people are given a raise that it will cause inflation, that is also rather absurd isn't it, Mr. Breeding.

Please give the above bills your most sincere consideration and support.

Sincerely,

ELDON STEURI.

GREAT BEND, KANS., *May 13, 1957.*

Congressman J. FLOYD BREEDING,
United States House of Representatives,
Washington, D. C.

DEAR SIR: I am writing you concerning salary legislation for postal employees. Our need for an adjustment is real and urgent.

I have been a clerk at the Great Bend, Kans., Post Office for over 8 years and at the present time my base salary is $4,285 a year. To maintain an adequate standard of living for my wife and three children on this salary is not only a hardship, it is next to impossible. I am forced to hold two extra part-time jobs to supplement my earnings. For postal employees to hold extra jobs is nothing new. Eighty-five percent of the employees of this office either hold extra jobs or have other sources of income Needless to say, this is detrimental to the employee and to the postal service.

In comparison to other jobs requiring skilled labor, I would like to state I have a friend who works in the Phillips Petroleum Co.'s office of this city. He has been with this firm approximately 6 years. He is the lowest paid clerk in the office. He works a 40-hour week, the same as I do. His base salary is $5,520 a year. His company also has extended fringe benefits that either equal or surpass anything the post office has to offer.

Lately it seems to me our situation has become a political football to be kicked around along with the postal rate increase legislation. Although I believe postal rates should be increased, and substantially, I do not believe our salaries should be in any way dependent upon revenues over which we have no control.

I enjoy working for the post office and hope to continue, but unless I can give my family a decent living, one which I believe the work merits, I feel I will be forced to seek employment elsewhere.

There are several good bills in the committee being considered at the present time and I would appreciate your support most especially for House Resolution 2474.

Thanking you, I am,

Sincerely yours,

DON HEROLD.

MAY 15, 1957.

Hon. J. FLOYD BREEDING,
Washington, D. C.:

I am a letter carrier here in Hutchinson and by working quite a few hours overtime at Christmas I managed to earn $4,029, before deductions. I have a wife and two boys to support on this salary and with the rising cost of living our present salary is very insufficient. I am a member of the Kansas National Guard and also a carpenter on the side to try to make ends meet.

I therefore urge you to support the pending postal legislation. Especially H. R. 2474 at this time in committee. Please help to get H. R. 2474 out of committee and before the House. After hearing reports from various sources, we Kansas letter carriers feel that we have one friend in Congress from Kansas.

Hoping for your full support, I am

Sincerely,

VERLE D. TRUITT.

HUTCHINSON, KANS., *March 31, 1957.*

Hon. J. FLOYD BREEDING,
Washington, D. C.:

SIR: As a wife of a substitute mail carrier I plead with you to support H. R. 607 and H. R. 2474. My husband is next to receive his regular appointment. We have figured and figured but haven't yet found a way to live on a bi-weekly pay of $125.

As a substitute he has averaged at least $150, and often times he receives $170. On this salary we have had no luxuries and have been able to save only a little, so how do you expect us to live on $125. We would gladly send you a monthly budget if you would like.

I trust you will do everything in your power to help us on this and also H. R. 2462.

Cordially yours,

MRS. DON MCCAMANT, Jr.

The Navy's Transition to Nuclear Power Is Providing This Country With a Long-Term Industrial Asset, Namely, an Industrial Base With Atomic Tools and Trained Manpower

---

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. VAN ZANDT. Mr. Speaker, our Nation and its people derive many advantages from the Navy's nuclear shipbuilding program. These advantages are not always immediately apparent. During a recent hearing before the Senate Foreign Affairs Committee, Mr. Lewis L. Strauss, Chairman of the Atomic Energy Commission, stated that the United States leads both Great Britain and the Soviet Union in the development of the peaceful utilization of the atom. He supported his statement by reference to the two reactors built for the U. S. S. *Nautilus*. This successful project represented the first practical application of nuclear energy for peaceful purposes.

It is important to remember that the purely military use of nuclear energy is represented by atomic and hydrogen bombs, nuclear warheads for missiles, and atomic projectiles for cannons. However, nuclear propulsion of submarines, cruisers, and aircraft carriers is basically a peaceful use of the atom, for in itself, it is not a weapon of war. These ships will make constructive use of the atom. At the keel laying of the first nuclear-powered submarine, a fundamental promise held out to the American people by President Eisenhower was the use of nuclear power for electricity to light our American homes.

Mr. Speaker, it is easy to foresee that knowledge learned and experience gained in building an atomic carrier will greatly further the peaceful benefits to the United States and her people. The Navy's transition to nuclear power is providing this country with a long term industrial asset, namely, an industrial base with atomic tools and trained manpower. We should recognize that all power producing reactors have technology in common and that at this stage of their development, gains in one application inevitably mean improvement in others. This is particularly true in the application of nuclear power to naval ships and to central power station use, since the technical power in these reactors is expected to be quite similar. There is no fundamental conflict between any objective to develop atomic power for cities and for other applications. Actually, the technologies of all nuclear power applications contribute to one another.

Since we are now spending over 70 percent of the national budget for activities associated with defense, the military application for nuclear power has important immediate economic signifi-

cance. It is clear that if nuclear power makes it possible to do our military job with fewer ships, planes and men, and to do these jobs with greater effectiveness, then the saving to the individual American is real and direct.

Mr. Speaker, we should never forget for one moment that some weapons of war have made a direct and substantial contribution to the peaceful pursuits of this country. It has been said that without the *Nautilus*, the United States might not today be the leading nation of the world in the peaceful use of the atom. Defense Department money spent in past years for the *Nautilus* and *Seawolf* makes it possible to build today an ocean-going merchant ship which will herald a new era in world shipping.

The construction of a nuclear carrier will be a new chapter in this peaceful progress schedule. She will be powered by eight nuclear reactors which present new problems not only for the nuclear scientist but for the mechanical, construction, and design engineers. It may well be that the nuclear carrier powerplant will open the door to practical and economical powerplants to serve the needs of great industrial factories. It may bring to sections of this country and the world a proven source of electrical and propulsion energy which has heretofore been the roadblock to the production and employment benefits of the industrial age to many areas—both here and abroad.

During the past few years great emphasis has been placed upon the reorganization of the Federal Government in the name of efficiency and economy. I am certain the Congress will continue to be concerned with this problem and rightfully so. No member, however, serves long in this body without being aware that there often is a realistic limitation to what we can do through statute in the name of reorganization to achieve efficiency and economy in the Government. Efficiency and economy must in large measure result from understanding, coordination and cooperation not only among the various departments of the executive branch, but also in their working relationships with industry and the civilian population. We in the Congress can provide stimulus and direction through reorganization, but we cannot guarantee results through reorganization alone.

The nuclear carrier presents a real challenge in this area. For the appropriation of the requested sum to the Department of Defense will not of itself assure successful completion. I have no doubt that the nuclear carrier will be a success. It will require, however, the closest of cooperation between many departments of the Government—the military services, the Atomic Energy Commission—all of whom must work in the closest cooperation with various segments of American industry. This cooperation must take place on all levels and be based on understanding of a common objective and its long-range importance to all of the American people in the years ahead. A current example of such cooperation is the Nation's first commercial-scale atomic powerplant, located at Shippingsport, Pa., which is the shore-based counterpart of a Navy aircraft carrier which never put to sea. Plans for the carrier were about to be scrapped in early 1953 when it was proposed that the technology involved be salvaged for a commercial atomic power plant. It is upon this type of cooperation between government and industry—voluntary and stimulated through understanding and mutual interest—that efficiency and economy in the military services must in large measure rest.

I am as concerned as any Member of this body with the costs of government and the price tag of American security. I think, however, that we would be less than honest if we did not recognize that many of the projects and programs which are carried on in the name of national defense make an immediate and important contribution to the material level of American life as well as that of the whole world.

The big commercial airliners which speed our people to all corners of the Nation and the world evolved from Air Force design contracts; a young child enjoys the protection and comfort of the lightweight, warm and waterproof snowsuit as a result of the Army's research with cold weather clothing during and since World War II; the revolution which has taken place in the packaging and preservation of the many foods which line the shelves of our supermarkets today resulted in large measure from the pioneering of the military. The Navy is primarily responsible for advancing the progress of radio—the military development of radar opened new vistas in television. The conversion from diesel to atomic power will revitalize the Nation's shipbuilding industry. By law, half the Navy's ships must be built in private yards.

I cite only a few examples, but the list is long. The price tag for much of the technological progress in this country is a part of the annual military budget—but the secondary benefits often are soon translated into benefits for all our people.

In this age of nuclear weapons, America must never hesitate to take the lead in development of new technological programs which give great promise for commercial and civilian benefit. We shall lose a tremendous international advantage if the Soviets forge ahead of us in peacetime applications of the atom.

It may be one of the great anomalies of our time, but perhaps the tremendous destructive capabilities of nuclear weapons will bring the realization to people everywhere that there can be no alternative to world disarmament and world peace. Perhaps the plowshares of the future will be shaped from the atomic sword.

Mr. Speaker, I urge my colleagues to give their continual and enthusiastic support to early transition to nuclear-powered ships for the Navy. We will enhance our military preparedness and we will get a running jump in building our atomic industrial base.

Monsignor Genova Offers Invocation on Israel's Anniversary

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. MULTER. Mr. Speaker, I am pleased to commend to the attention of our colleagues the following article which appeared in the June 3 issue of Israel Digest. It contains the invocation which was offered by the Very Reverend Monsignor Vincent O. Genova on the occasion of the ninth anniversary of the independence of Israel:

MONSIGNOR GENOVA OFFERS THE NINTH SALUTE INVOCATION

At the outset of the salute to Israel festivities held in New York earlier this month to mark Israel's ninth year of independence, the following moving invocation was recited to the thousands gathered by the Very Reverend Monsignor Vincent O. Genova, of Brooklyn's Holy Family Rectory:

"Almighty and Eternal God, we offer Thee humble worship and beg Thy blessing on this solemn gathering of people of our country who join in a spirit of fraternal charity in the celebration of the ninth anniversary of the foundation of the State of Israel. Thou, O Lord God, art the Ruler and Master of all men and all nations; Thy divine providence guides their destinies; Thy authority is the source of all legitimate human authority; Thou art the strength of the young and the weak, the hope of the poor and oppressed among nations.

"On this joyful anniversary celebration, we implore Thy gracious blessing on Israel—the oldest of peoples and the youngest of nations. All mankind rejoices that this ancient race—whom divine privilege made the custodian of the spiritual legacy of the human race, and the first recipients of Thy Ten Commandments—should now find a haven and a home of their own among the nations of the world. As America has opened its charitable arms to the victims of Communist aggression from many lands, so Israel has opened its arms to her own noble people, burdened by a centuries-old sorrow of dispersion and persecution.

"The free world rejoices at the special role given to Israel by divine providence to be the custodian of those holy places which saw the accomplishment of the Redemption of mankind. May this mandate be ever regarded as a serious responsibility, and carried out with the dignity and justice merited by this sacred trust. For the eyes of all the world are on this spot of land which witnesses the union of two civilizations, and joins ancient and modern history.

"We beg Thee, O God of might, wisdom and justice, to grant to the rulers and people of the State of Israel the wisdom to follow in the footsteps of their forefathers in the ways of justice and peace. Let Thy holy spirit guide its venerable and courageous leader, as Israel walks in the days of its youth as a nation with the Phylactery of Thy Holy Laws before its eyes. Grant to this young nation, we beseech Thee, O Lord, the grace to continue to collaborate with the nations of the world in giving honor and glory to Thee, and in bringing peace among all men of good will. Amen."

Monsignor Genova has a reputation as a vigorous man of action in the service of all his neighbors, including Jews and Protestants, as well as the members of his parish.

As a young priest he was assigned to a neglected area of Brooklyn which he built up into the largest of that county's parishes, the present Holy Family Rectory and Parish.

Monsignor Genova's application and industry were recognized by the authorities of the Catholic Church, and the Pope raised him to the degree of monsignor at the relatively early age of 40.

Sportsmen-Private Landowner Cooperation

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. NEAL. Mr. Speaker, the following address prepared and delivered by one of my constituents, Mr. Luther O. Griffith, of Huntington, W. Va., before the Huntington Rifle and Pistol Club on the score of recreational features being considered in connection with water impoundments is timely and should be of interest to every Member of this House:

SPORTSMEN-PRIVATE LANDOWNER COOPERATION

One of the big questions with which the sportsmen are confronted, today, is private landownership versus public landownership. This comes about by reason of the fact most large sportsmen's organizations have made it a controversial issue. It should not be at all, because, as every sportsman knows, this country was founded on the free enterprise-private landownership system and it has been through competitive free enterprise that we have attained the wonderful scale of living which the people of this country enjoy.

When the National Forest System was first inaugurated by President Theodore Roosevelt, the science of forestry was new to this country; we had an excess of timber in relation to demand and, although the Government was making large grants and cheap sales of land to help settle the West, there were some persons who feared a timber famine might eventually result, if a large portion of the original timber were not reserved from cutting.

Gradually, much of the reserved land was placed under the management of Federal foresters, just as much of the private forest land in the West was also put under sound forestry management. As private forestry has advanced, we now find many areas where private owners are doing a better job than the Government is in actual on-the-ground forestry. Thus, the need for the protective shield of Federal ownership is no longer needed to assure a continuous adequate timber supply. The lumbermen and other forest-products manufacturers are not working wholly from unselfish motives—they have found that good forestry is good business for them, their local communities, their States, and the Nation as a whole.

Fortunately, good economics has almost always been the solution of all of our national ills. Private landowners have come to realize the great value to them in good will, in working with the sportsmen and inviting them on their lands to hunt and fish during the open hunting and fishing seasons. When their timber lands are properly cut, the game habitat is greatly improved, especially that of the big-game animals. Likewise, good forestry necessitates operating timber in such fashion as to cause the least erosion possible and the least silting of the streams and the impoundments into which they flow. In the Appalachian area, where team and tractor logging predominate, we no longer build a skidroad straight up and down the side of a mountain, creating a rut into which water rushes every time we have a heavy rain and eroding a gully. Instead, roads are built around the side of the mountains and the logging is done as much along the contours of the land as is economically possible.

The one big problem which faces this Nation, today, the sportsmen can help solve to their eventual betterment and certainly for the good of the Nation as a whole, and that is our steady march into socialism. It is axiomatic that every time an acre of private land goes under Federal ownership we travel that much closer to a complete Socialist State. As things stand now, the Government owns 1 acre out of every 4 in the United States and the bureaucrats are still reaching for more. A current example is the sale of the timber from the Klamath Indian Reservation. There is a great hue and cry among the bureaucrats, aided and abetted by the national sportsmen's organizations, for this timber land to be owned by the Federal Government and to be administered by the Federal Forest Service, which is one of our most overgrown bureaucracies.

Another proposal, by a group of Senators headed by WAYNE MORSE and RICHARD NEUBERGER, is the building of a public high power dam in Hells Canyon. These Senators are found consistently voting for most all projects which make for more Government ownership, which in turn promotes more socialism. Fortunately, here is one particular proposal where private landowners feel the same way the sportsmen do, but for possibly a different reason. The sportsmen feel that building a high dam in Hells Canyon will destroy a great scenic beauty and ruin the fishing for all time in this particular area. The private landowners feel that it is just one more socialistic project and is an invasion, by the Government, of private enterprise. The Idaho Power Co. has already been granted the right to build 3 low dams in this section, which will not interfere with the fishing in that territory and already have spent millions of dollars on one of these dams. This would be scrapped if Mr. MORSE and Mr. NEUBERGER have their way about it.

Most of this public versus private landownership problem, but not all, centers in the West. Some of the big sportsmen's organizations always raise the hue and cry, whenever the private landowners of this country try to get some of the Government land put back on the tax rolls by selling it to private companies, that it is a give-away to the big lumber companies of the West.

Personally, I am just as much opposed to monopoly-minded companies as anybody in the world could be. However, the lumber companies of the West, which so many of the proponents of Government ownership call big, are in relation to other corporations very small, indeed. In steel and aluminum, for example, 2 or 3 companies control almost all of the output. No 1 lumber company produces as much as 5 percent of the national lumber output. In fact, I believe this percentage to be high, as there are over 55,000 independent lumber producing units in the United States. You can see from this that the lumber industry, as compared with some other industries, is very highly competitive.

Getting down to our own State, I feel that a portion of the money which the sportsmen spend for licenses (which goes into funds for purchase of additional lands or improvement of lands the State already owns) could be far better spent on these improvements and, cooperatively with private landowners, in building more small impoundments for better fishing. The State already has, in my humble opinion, as much forest land as it can properly manage, with the number of foresters they currently employ. Your forestry program and your game-management program must go hand in hand and for the game-management folks to have the proper habitat in which to work they must first of all have a professional forester to educate the landowners as to how to properly manage their forests.

I believe that one of the worst things we sportsmen ever did was to allow our national sportsmen's organizations to oppose the bill which was put in Congress, a few years ago, which would have required the Federal Government, when any private land was condemned for Government purposes (power lines, water impoundments, etc.) to give, in return, from Government forests, if available, an equal amount of land to the individual or corporation whose lands were being condemned. This was only plain, ordinary, everyday fair play—nothing more, and still the sportsmen's organizations, which your group supports, went all out in lobbying to defeat this bill. They accomplished it, but in doing so they gave private landownership and sportsmen cooperation a very severe setback.

In spite of this, progress is being made. I know of one lumber company which owns a fairly substantial tract of fine hunting land which has made an arrangement with a local sportsmen's club to handle all the hunting and fishing on its lands. Instead of the company opening its lands to all hunters, responsible or irresponsible alike, it lets the sportsmen's club decide on the ground rules and who does the hunting and fishing. This increases the prestige of the club, assures the company that the area will be protected from careless fire starters and gives the club a chance to meet the hunters and fishermen and instill a sense of sportsmanship and respect for private property in them. There are millions of acres of privately owned land denied use by sportsmen, simply because such cooperation as outlined above his never been attained.

I believe that I can see this question from both sides of the fence, as there is no one present who likes to hunt or fish more than I. I do feel, however, that my chance to hunt and fish will be improved and the free enterprise system, which made this country great, advanced by a firm determination on the part of the sportsmen's groups to try to understand the private landowners' viewpoint and help him to keep more private lands from going into public ownership, and possibly help the lumber people to get some of these Federal lands back in private hands so they can again be put on the tax rolls, and become a part of our great free enterprise system. To do this you will have to speak sternly to the national sportsmen's organizations who represent you, or at least say they do.

Address of the Honorable Gracie Pfost, of Idaho, to the Graduating Class of the Marjorie Webster Junior College

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mrs. KELLY of New York. Mr. Speaker, it is not only a privilege but also an honor to insert into the CONGRESSIONAL RECORD the following address

of the Honorable GRACIE PROST, of Idaho, to the graduating class of Marjorie Webster Junior College.

In pointing out that this age affords greater possibilities of achievement than any time in history, Congresswoman PROST urged the graduates to—

Reach for the stars. Dream the dreams of the great—for dreams do come true. Just remember that no goal is too ambitious for you to realize, if you will so direct your life that you sqeeze the very most out of each talent and each skill that you possess.

I guarantee that GRACIE PROST spoke from experience. As a Representative from an eastern State, my attention to the vast problems of the West was brought into a better focus by the dynamic presentation of the facts by the one and only GRACIE PROST. Her reasoning power on the basic principles involved in the Hells Canyon controversy soon launched her as an authority on the subject and clearly pointed up the necessity for the full development of the people's natural resources. She, and she alone, made available to Congress the issues involved.

The need for this vast high dam in the West is agreed to. Her sincerity and her determination for its realization is her dream. In other words, to give the most benefits to the greatest number for the least cost.

Her advice to the graduates is one to which all of us as legislators should pay heed.

Following is Congresswoman PROST's address:

SPEECH BY REPRESENTATIVE GRACIE PROST, DEMOCRAT OF IDAHO, BEFORE MARJORIE WEBSTER JUNIOR COLLEGE, AT GRADUATION EXERCISES, MAY 27, 1957

Dr. Webster, graduates, your parents, and friends, it is thrilling for me to stand here and face a group of young women who are about to go out into the world and fashion for yourselves a place in history. You have almost your whole life ahead of you—and you can make of it what you will.

In the next few years you will be taking the turns and making the decisions that will chart your course. Those of us who are older have already taken most of those turns and made most of those decisions—and few of us will ever have the opportunity to go out again into fresh fields and prove ourselves. Our courses are already set. But you have ahead of you—all of the splendor and satisfaction of making your way upward.

The most important advice I can give you today is—reach for the stars. Dream the dreams of the great—for dreams do come true. Just remember that no goal is too ambitious for you to realize if you will so direct your life that you squeeze the very most out of each talent and each skill that you possess.

You have been privileged in this school, to receive thorough training in the special fields in which you have native abilities and outstanding bents. You have achieved your education in the finest and freest society the world has ever known. You constitute a fragment of a generation of Americans that is without a doubt the most envied and the most immediately useful in all of the history of our country.

I sometimes wonder if we in our time fully realize the glory and grandeur of this era. America is at the peak of her eminence. We have emerged from two great wars with victory for the principles by which we live. Our cost in manpower and money has been great—but not nearly so great as the agony of those people whose country was a battlefield. And we can be deeply grateful that as we meet here, the free world is still the dominant force on our tight little globe.

It is across this threshold that you, the graduates of the Marjorie Webster Junior College, are entering the world of business, the world of ambition, the world of achievement.

I personally, could not wish to have been born in another world—either as a person or as a woman. The status of women in this country is incomparably beyond anything since the beginning of time. There is even now, within a half day's flight from this hall, a number of nations where women are little more than chattels or beasts of burden. Their value is so low that men with several wives cannot even be bothered to add up the number of their daughters. Girls there, just do not count. My friends, whole ages stand between the freedom you possess, and the bondage of many of the other women in the world.

I repeat—no generation of American women have been as welcome and as royally saluted as the generation of which you—being college-bred—are perhaps the choicest segment.

It was only a brief time ago that giving women a college education was regarded as a profound social mistake. And it was only a brief time ago that women in industry or in business—and especially women in politics were looked upon as a little queer—or to say the least, unrefined.

The 19th amendment to the Constitution of the United States was only presented to the legislatures of the several States by the 65th Congress, and was finally adopted as recently as 1920. And, even then, the State of Maryland, in which many of you girls live—was one of the States that rejected that amendment. Alabama and Virginia were the other two. Had a sufficient number of other States followed their example, we women might not have had the vote even today.

You can be grateful that you girls who are going out into commerce and industry today, go with much of the struggle for women's freedom behind you. We still haven't broken down all of the barriers—and we still have to work harder than men to make a success in any field we may choose, but every day we see greater evidence of a vast fusion of men's and women's efforts on an enormous coindustrial, copolitical, and coartistic scale.

Watch the crawl on a big television show and see how many women have been involved in a top capacity—in the writing, direction, choreography, or in the acting and singing. Look at the women who own their own businesses from jam kitchens to restaurant chains, from shoe factories to beauty parlors. There are women stockbrokers, women real-estate brokers—which was my field before coming to the Congress—there are women judges and lawyers, painters and sculptors, women educators like your own Dr. Webster, and there are women in public office. And the horizons are widening every day.

Today, womanpower is a potential and an indispensable ingredient in our economy. Nine out of every ten women will at some point in their careers hold down one job or another. The average schoolgirl of today may well spend fully a quarter of a century in some job or profession. Five million young women will join the labor force in the next decade. Today, 3 married women out of 10 are working—and 2 out of 5 of them have school-age children.

Fortunately, our economy is expanding—creating millions of new jobs. There is more executive work, more clerical work, and more on-the-line production to be done in this country than ever before.

Well—the question is—where do you fit in? I can only say to you again—dreams really do come true.

Decide what you want to be, and don't hesitate about reaching for the top. You can never tell when you may meet someone who can give you the advice and the help to get there.

This was brought home forcibly to me just the other night. I was in a group which included several young people and some members of both the House and the Senate. Someone asked one of the young men, who is serving as a Capitol Hill policeman during the day, and studying at night for his master's degree in political science, what he wanted to do with his life. Without any hesitation, he said:

"I want to be a United States Senator."

There was a slight pause. I thought someone might feel he was brash—then one of the Senators spoke up and said: "That's swell. Let me suggest to you how to get there. As soon as you finish school, go back to your own State and become active in civic affairs—try to be of service to the people. After you are well known, run for the State legislature and get some legislative experience. Then, after you have proven yourself on the State level, strike out for a national office."

I know this young man well. He is intelligent and ambitious. No work is too hard for him, and no hours too long. He never worries whether other people are pulling their full load—nor is he concerned about doing more than his share of the work. He outproduces and outworks almost everybody around him, and does every job well. I expect some day to hear great things from him—for he is one person who will truly take from life what he wants.

Most people who have achieved success have started from the bottom and worked their way up. Senator MARGARET CHASE SMITH, rated by the Gallup poll as the fourth most admired woman in the world, was once a telephone switchboard operator.

Sally Victor, experimenting with 30 cents worth of braid, created her first hat while she was still in high school, and promptly became the family milliner. She took a summer job as stock girl at Macy's—and in 4 short weeks was head stock girl. She went from assistant millinery buyer to head buyer, and on to designer in the space of a few short years. Today she designs hats for famous and well-dressed people the world over—including the President's wife, Mamie Eisenhower.

Dorothy Shaver, who is president of Lord and Taylor—and today it is a $30 million corporation—started out as a comparative shopper for the store. Working in both the merchandising and fashion fields, she rose steadily in responsibility. Her dream turned a rather dowdy store into one of New York's most glamorous and modern department stores.

Another example is Elsie Murphy, who rose from saleswoman to president of S. Strook & Co., in New York. Now after having carried the store to a new peak, she has enough free time to spend many hours happily with her grandchildren.

And there's Helena Rubenstein, who has netted more than $25 million in her career as a cosmetician—which began in 1902 in a one-room shop in Melbourne, Australia.

Mrs. Margaret Rudkin, the president of Pepperidge Farm, Inc., in 1937 started her business career to supplement the family income so that her 3 children could have greater advantages. Her company now has bakeries in 3 States, and her gross income is estimated at $5 million a year.

Time won't permit me to tell you the success stories of many other modern American women. Some of them are truly fabulous. The number of women who are managers, officials or proprietors in some field of business or industry has more than doubled since 1940. Within that time there has also been a 50 percent gain in the number of business and professional women. It is estimated there are about 3½ million women in

professional, technical and managerial work today, including teachers, nurses, accountants, editors, reporters, lawyers, judges, physicians, surgeons and architects.

And now the question is, "What special qualities take women to the top?" Energy and confidence are certainly two of them. Pleasure in achievement is undoubtedly a third. I think successful women must also have a sensitivity to people, and a flair for moving with a situation. If one method or approach is unrewarding, then another must be tried.

But most important of all, a successful woman must have an unshakable determination to be successful. She must not let setbacks and disappointments sway her from her charted course.

At the risk of being personal, I will say frankly to you that I would not be in Congress today if I had not been more persistent than a hound dog worrying a bone.

The first public office I aspired to was county treasurer. The first time I ran I was defeated by 1,500 votes. I had to wait 4 long years before I could try again.

During those years I continued in my position as deputy county clerk, auditor, and recorder—and I took advantage of every opportunity that presented itself to give service to the people. I worked hours and hours of overtime—trying to do the best possible job I could. The second time I ran, I was elected, and I was reelected 4 more times.

During my courthouse career I was also a member of a number of women's organizations such as the Business and Professional Women, and the Soroptimists. We talked constantly about the importance of advancing women in policymaking posts. Congress was one of the stars to which we had hitched our wagon.

But although Idaho women seemed willing to run for various county jobs, and for the State legislature, and other State offices, before I came along, only one Idaho woman had ever had the courage to try for Congress and she lost. There had been a hesitancy on the part of women to get out and to do the hard work and to take the hard knocks and to spend the money necessary to be elected. I finally decided to practice what we had been preaching.

So in 1950 I ran for Congress, and to make a long story short, I was defeated by a mere handful of votes. Though that was a heartbreaking experience, it was also a very valuable one. I learned a lot, and I made many, many friends.

Then, along in the spring of 1952, my husband, Jack, said to be one morning:

"GRACIE, you sowed a lot of grain 2 years ago. Are you going to let it go to waste, or are you going to get out this fall and harvest it?"

I hesitated only momentarily before I decided: I'd try again.

In my 1952 campaign I traveled over 20,000 miles. I started in April and didn't stop until the polls had closed on election day. My husband and I stayed in every type of accommodation—from good hotels and motels to pitching our tent out under the stars in the little ghost mining town of Dixie. Near the end of the campaign there were 5 nights when I did not go to bed at all, and many nights when I had only 2 or 3 hours' sleep. My campaign took my husband and me into logging camps where we ate with the men in the mess halls—to mining dumps where I handed out my campaign cards to grimy muckers who had finished a day's toil underground.

Somewhere along the line I picked up the 591 votes that made me the victor.

A major factor in my election was the support of many other women. In fact it was the endorsement of the Caldwell Business and Professional Women's Club that gave me the courage to run in the first place. I am hopeful that as the years go by more women will aspire to higher jobs—and that other women will support their endeavor.

I honestly believe that we women as a whole have more patience and tenacity than men, and that this is one of our greatest assets. We frequently overcome great odds and obstacles to achieve our goal.

An example is Miss Ann Pamela Cunningham, a South Carolina invalid, whose efforts a century ago saved us one of our greatest national shrines—Mount Vernon.

The walls were crumbling and the roof sagging when, in 1853, John Augustine Washington, George Washington's great-grand nephew who was then living at Mount Vernon offered to sell the estate to the Federal Government or to Maryland. Neither was interested.

From her invalid's couch in South Carolina, Miss Cunningham directed a campaign to raise $200,000 to buy Mount Vernon. The public was hard to arouse, and by the time the money was raised, John Washington had decided not to sell.

Miss Cunningham made her painful way north to induce him to change his mind. She had no luck. She was carried back to the Mount Vernon wharf, only to find the steamer had left. In the long interval before the next steamer, she finally induced Mr. Washington to sell.

The more than a million people who visit Mount Vernon each year owe a great debt of gratitude to the lionhearted lady who dreamed of making the crumbling house on the Potomac a national shrine—and did so.

You girls graduating in this year of 1957 have an even greater opportunity to achieve success and to give service to others, than the women whose careers I have touched on today. You are moving into a distinctly modern world, citizens of the greatest Nation on earth, equipped by your fine training to reap the fullest rewards that life can offer in our time.

Girls, the thought I wish to leave with you is that the promise for the youth of today is limitless.

The most important single fact of your generation is the emergence of the United States on the world scene as the greatest Nation of all time. We are now committed in practically every part of the earth to keep the free world safe and to avert world war III. Had the United States been committed to intervene in full strength from the first moment of World War I and II, the First World War, and certainly the Second World War might never have happened.

This theory is now under the acid test. It has worked successfully up to this hour.

Basic to world peace is our country's economic strength.

Our gross national product is expected to reach $473 billion in 1957. Compare this with our national income of $677 million back in 1799 when our Nation was young. Our Federal budget alone—that is to say the cost of our National Government alone—is over 100 times what the Nation's total income was just 166 years ago.

It is said there are no longer any frontiers to conquer. It is true, to be sure, that the covered wagon is gone. It is true that despite uranium prospecting, we will probably not again have a repetition of the gold rush of 1849. The days of Lewis and Clark, the Louisiana Purchase, and the annexation of Texas may never again be duplicated. But to deduce from this that all the frontiers have been crossed and there are no new worlds to conquer is to be blind to some of the most fabulously exciting opportunities of all time.

Atomic energy has revolutionalized the status of civilization.

Air travel is turning the whole world into a provincial town.

Medicine is giving new outposts to life itself.

Science is bringing areas of the universe almost as close to the earth as America was to Europe in the 15th century.

The present frontiers open vistas far more exciting than the gold rush, or the purchase of Alaska. The possibilities are so enormous they paralyze the imagination.

We speak of interstellar space with more familiarity today than mapmakers spoke of the great intercontinental oceans in Columbus' time.

We are even dispatching manmade satellites to discover for us the mysteries of outer space. Scientists speak of travel to the moon as a reality probably within the experience of you young people in this room.

Prejudice in all areas—including business and professional discrimination against women—is being eliminated.

This, girls, is your inheritance. I cannot imagine any period in our history when the prospect for the graduate was more promising. You are going out into the world in an epoch in history that presents limitless opportunities for you as an individual.

Star Chamber, Criminal Equity, and Civil Rights Legislation

EXTENSION OF REMARKS

OF

HON. WILLIAM M. TUCK

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 18, 1957

Mr. TUCK. Mr. Speaker, I am not a hand to thresh over old straw, but this is not the last the House of Representatives and the country will hear of the jury trial. As long as life remains, we will continue to hammer on this. We will not sit by and see the precious rights of our people destroyed and not utter a protest. We will not submit in this country to "star chamber" proceedings and ways and means will be found whereby these laws will be circumvented, if not repealed. It is shocking to think that American Congressmen would deliberately foist upon the people such a law as the so-called civil rights bill and then at the same time deprive the people of the fundamental right of trial by jury.

Mr. T. Keister Greer, a very distinguished young lawyer from Franklin County, Va., one of the counties of the district I have the honor to represent in the House of Representatives, and who now lives in San Francisco, Calif., has written an excellent paper, copy of which he sent me, entitled "Star Chamber, Criminal Equity, and Civil Rights Legislation." I commend this document to the membership of the Congress and to the people of the country as a whole.

The paper prepared by my friend, Mr. Greer, is as follows:

STAR CHAMBER, CRIMINAL EQUITY, AND CIVIL RIGHTS LEGISLATION

(By T. Keister Greer)

It is a remarkable commentary on human nature that the most vicious reversions may be successfully sponsored under the name of progress. Some attention has been focused on the deprivation of jury trial incident to the civil-rights program of the present administration; what has perhaps not been fully realized is that this is but one manifestation of a more fundamental malignity. This legislation would revive a jurisdiction

illegal under the English law since 1641. For it would restore star chamber, the Camera Stellata of evil memory.

The lay Briton and American, however great his ignorance of its detail, realizes that his liberties are grounded in the common law. He is aware of its slow and often painful growth through the centuries, and of its essential achievement, protection of the individual, and his liberty and property, against all who would transgress, including the state. When we speak of the hereditary liberties of the Anglo-Saxon, of such things as grand juries, the presumption of innocence, the right of confrontation, compulsory process in behalf of the accused, trial by jurors drawn from the vicinage, we speak of the common law. The layman is probably less informed about equity, a discretionary jurisprudence originally administered by the English chancellor. It will suffice for our present purpose to point out that equity is a far different thing from the common law. The procedures and penalties of the latter were developed through many centuries of English experience, and we are familiar with them. Courts of equity had a different history, and are different both in theory and in substance today. And the main difference is this, that a court of equity may in a civil case deal with a man who has disobeyed a civil decree by putting him in jail.

At this point we are reminded of a concept of paramount interest to our forefathers, liberty. A man in jail is deprived of it, and courts of equity can jail men who are not criminals and who have committed no crime. They have been doing it for centuries. Now this power to jail men in civil litigation was watched very carefully by Englishmen, because the possibilities of its abuse are too plain for comment. There is no mandatory trial by jury in equity; like nearly everything else in equity it is discretionary, and the Englishman did not cherish the notion of being committed to jail at someone's discretion. The jurisdiction of equity, therefore, was said to have certain fundamental limitations. Equity acted only when there was no remedy at the common law, and there only to protect rights of property. As the late Professor Glenn put it, "the outline of equity was drawn in terms of property right." [1]

Now a jurisdiction restricted to the protection of property rights will appear reactionary to some, but the limitation was essential to the maintenance of individual liberties. Protection of other interests was provided by the common law, with its centuries-old experience and safeguards. Extension of the jailing power of the chancellor into the fields of public and political rights would have been regarded as a constriction rather than any enlargement of liberty.[2]

With this background let us examine "sterre chambre," abolished from English law these three centuries, but well remembered. It took its name from the starred ceiling of the room in the palace at Westminster in which its judges sat.[3] It was not the adornment, however, but the court's nature, jurisdiction and procedures which terrified Englishmen.

The first thing to grasp about star chamber is that it was a twin sister [4] of the court of chancery. Star chamber was no common law court; it was the antithesis of the common law. It was a foreign court, deriving from Roman rather than Anglo-Saxon experience.[5] Star chamber is most accurately described, such eminent authorities as Maitland and Holdsworth agree, as a court of criminal equity.[6]

Star chamber had no trial by jury. It was unconstrained by precedent, including its own. It might disregard rules of procedure. It might punish for offenses theretofore not known to exist, and in this evil sense thus provide a remedy where there was none at common law. All this has echoes of equity, but it is an equity distorted and malign, as in a nightmare. "Its jurisdiction," Maitland tells us, "was exercised without any lengthy formalities—there is no trial by jury before it—the accused person is examined on his oath, a procedure quite strange to the courts of common law in which (as the phrase goes) no one can be compelled to accuse himself." [7] Take note of but a few of the safeguards lost to the accused by this convenience of equitable prosecution in star chamber—he may be called to the stand and examined. There is no jury, nor has there been any necessity for a grand jury before. Contrast this with the spirit of the common law. In Virginia, for instance, the prosecutor may not call the accused, nor his wife, nor may he comment to the jury on the accused's failure to testify on his own behalf. All this inconvenience, not the least of which was the jury itself, star chamber cleverly evaded. It was a splendid vehicle for the expeditious delivery of the individual to his gaoler.

It was thus only natural that star chamber should be a most efficient engine of government.[8] Holdsworth describes it as an instrument of royal absolutism.[9] Lord Bacon spoke of it as the high and preeminent power, and William Hudson, a barrister who practiced before star chamber, emphasized its importance to the sovereign in calling it the seat of monarchy.[10]

For Star Chamber was a prerogative court. It was close to the royal power, and we may rightly regard it as an agency of the Executive. In this it differed greatly from the common law courts. While these latter slowly established that the crown was in "wardship" [11] to the common law, in Star Chamber the Crown was the law. The prerogative nature of Star Chamber appears clearly from Hudson:

"By the arm of sovereignty it punisheth errors creeping into the Commonwealth which otherwise might prove dangerous and infectious diseases, or it giveth life to the execution of lawes, or the performance of such things as are necessary in the Commonwealth, yea, although no positive law or continued custom of common law giveth warrant to it." [12]

Its punishments, therefore, were not secundum qualitatem delicti, that is, following the nature of the offense, but in terrorem populi, calculated to terrify (and warn) the people. It was "the curious eye of the state and the King's Council, prying into the inconveniences and mischiefs which abound in the Commonwealth." [13] And precedents touching the rights of the accused did not detain it, for "exorbitante offences are not subjecte to an ordinarye course of lawe." [14] It applied "new remedies to new diseases," and where an act was done which did not happen to violate any law, but was offensive nonetheless, Star Chamber did not scruple to "straine the line of justice beyond the ordinary length and wonted measure, and thereby to take exquisite avengement * * *." [15]

A court so close to the Executive must be influenced by policy considerations. A key to Star Chamber's character is given by Maitland when he says, "We know it best as dealing with what may be called political crimes." [16] "It was a court of politicians enforcing a policy, not a court of judges administering the law." [17] And Holdsworth agrees that because of its "semijudicial character" it was "often animated by political quite as much as by judicial considerations." [18]

It was, then, a special court, and though it heard some civil as well as criminal cases, it was not the court for the ordinary citizen. There had to be a special reason for exercise of its jurisdiction, as "when the matter is such as deserveth to be heard upon the higher stage," [19] or was "of some publicke consequence to touche the government of the realme." [20]

It was an efficient court. As Maitland informs us, "the Star Chamber examining the accused, and making no use of the jury, probably succeeded in punishing many crimes which would otherwise have gone unpunished. But that it was a tyrannical court, that it became more and more tyrannical, and under Charles I was guilty of great infamies is still more indubitable." [21]

The argument of the present Attorney General of the United States against jury trials in civil-rights cases does not, therefore, possess the merit of originality.[22]

In 1641 the Long Parliament passed "an act for * * * the taking away the court commonly called the Court of Star Chamber." [23] The phraseology of the act is important:

"From henceforth no court, council, or place of jurisdiction shall be erected * * * which shall * * * exercise the same or the like jurisdiction as is or hath been * * * exercised in the said court of star chamber."

No Englishman, therefore, has been examined under the starred ceiling for over 300 years, and no English court has or could assert under the law any jurisdiction in criminal equity. But it were well that we acquaint ourselves with star chamber, for it is in prospect for the Southerner. The civil-rights legislation pressed for by the administration will provide the South with as many star chambers as there are Federal courts.

First, the jurisdiction is to be in criminal equity, that is, the trial court sitting in equity is to restrain by injunction acts which are crimes. The criminal law is to be enforced by this highly expeditious procedure,[24] which, precisely is in star chamber, knows no grand jury indictment, constitutional right to a speedy public trial, trial by jury, requirement of proof beyond a reasonable doubt, privilege of the accused against being called by the prosecution, constitutional right to be informed of the nature and cause of the accusation, constitutional right to be confronted with the witnesses against him, constitutional right to have compulsory process for obtaining witnesses in his favor, constitutional right to the assistance of counsel for his defense, or the other safeguards of the common law. Criminal equity, which has hitherto been employed sparingly, and wrongfully employed,[25] against bootleggers and brothels, is now to be turned against an entire people.

Second, the Federal courts of the South will be prerogative courts, like star chambers, they are close to the Executive, the arm of national, or more properly, of Northern sovereignty. Federal judges are appointed for life by nonsouthern Presidents, with the advice and consent of a Senate the overwhelming majority of which are not Southerners. Recent history admonishes us that they need in no way be acceptable to the southern people, although appointed to sit in southern circuits to hear southern causes. The executive power is little felt in the common-law courts of Southern States, where the judges are chosen by the people or their own State legislatures. The Federal courts are more responsive to the Executive will, which appointed each judge sitting. Recent history demonstrates, especially in the field of racial litigation, examples of the most remarkable immediacy.

Third, the Federal courts sitting in criminal equity, composed of judges appointed by nonsouthern Presidents, acceptable to nonsouthern Attorneys General, with the advice

Footnotes at end of speech.

Footnotes at end of speech.

Footnotes at end of speech.

and consent of nonsouthern Senators, to administer nonsouthern notices of conduct to southerners, will be courts of policy. The aim is to alter the social and political equation of the South, and this is a political venture. Here, again, the coincidence with Star Chamber requires no illumination.

Fourth, the Federal courts sitting in the South already are and will continue to be special courts, used for matters "of some publicke consequence to touche the government of the realme." Lawyers call this a "Federal question"; it is one of the bases of the jurisdiction of Federal courts. It will be invoked when southerners are haled into court by Federal marshals, in terrorem populi, for punishment although no "continued custom of common law giveth warrant to it."

In 1517 Cardinal Wolsey wrote Henry VIII that certain Englishmen were going to be properly taken care of:

"I trust at the next terme to learn then the law of the Star Chamber. * * * They be both learned in the temporal [common] law, and I doubt not good example shall ensue to see them learn the new law of the Star Chamber."[36]

It is a commentary on the present tragedy of the Southern people that the descendants of George Washington and Patrick Henry are in the power of men who intend to impose conditions in light of which the exactions of George III appear unworthy of notice. It requires a return to enormities which had fled England long before George III to comprehend what is to be done. But the present Executive has in his Attorney General a counsellor quite as intent as Wolsey to teach the South "the new law of Star Chamber." If he and the forces outside the South allied with him in this effort succeed, only the adornment of the ceilings in Federal courtrooms need be altered. The remaining features of Star Chamber will already have been provided.

President's Objection to Jury Trial Weakens Citizen's Personal Safety—President Might Remember Taft's Racial Opinions

---

EXTENSION OF REMARKS
OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include therewith an editorial from the News and Courier, of Charleston, S. C., under date of June 7, 1957, entitled "President's Objection to Jury Trial Weakens Citizen's Personal Safety," and an article from the News and Courier under date of June 9, 1957, entitled "President Might Remember Taft's Racial Opinions."

Mr. Speaker, it is ironic that the prestige of the President is alined against one of the basic rights of all Americans—trial by jury. President Eisenhower fought for freedom in Europe. He could be the force to deny this precious right to his fellow Americans.

The editorial and article follow:

[From the Charleston (S. C.) News and Courier of June 7, 1957]

PRESIDENT'S OBJECTION TO JURY TRIAL WEAKENS CITIZEN'S PERSONAL SAFETY

In lining up against jury trials for persons accused in civil-rights cases, President Eisenhower may be on the popular side and perhaps eventually the victorious side. He is not, we believe, on the right side.

The News and Courier regrets to find the President of the United States seeking to weaken the guaranties of personal liberty that had been built into the fabric of the American Republic.

Today public opinion is exercised over possible loss of American safeguards for United States servicemen accused of crimes overseas. Several cases are in the news. Under agreements with host countries, the United States in certain circumstances yields jurisdiction over its soldiers, sailors, and airmen to foreign courts. These courts operate under the laws and practices of the foreign countries.

The News and Courier concedes the justice of trying soldiers for off-duty peacetime offenses in civilian courts of the country where they are stationed. If foreign troops were stationed in the United States, we believe American citizens would demand that they be tried in American courts on charges of lawbreaking outside their military duties.

In the civil-rights controversy within our own country, a new and special type of legal procedure now is being devised. In effect, the new procedure aims directly at white southerners. A set of regulations, designed for the benefit of Negroes with the aid and guidance of the Negro racial lobby, would govern laws and customs heretofore controlled by the people of the States.

Whether or not these new regulations actually will benefit Negroes, or help the cause of genuine civil rights, is open to debate. We are not now debating that point. Our point today is protection of the civil rights of persons who may be accused in future of violating such regulations.

Unless trial by jury is so guaranteed, American citizens may be put into prison not on conviction by a jury of their peers, but on orders of a Federal judge. This judge may be hand picked and appointed for the specific purpose of carrying out a program that is against the principles and wishes of a majority of the people concerned.

Representative COLMER, of Mississippi, one of the South's most forceful spokesmen, described in Congress the civil-rights measure as "a bill to extend the long arm of the Federal Government into your State, as well as my State, and further concentrate government here in Washington * * *. Under this bill a veritable Gestapo could be set up."

President Eisenhower quoted former President and Chief Justice William Howard Taft as saying: "If we tried to put a jury trial between a court order and the enforcement of that order, we are really welcoming anarchy."

We are not familiar with the context of Mr. Taft's comment. He was a jurist of great learning and no doubt the application of his remark was sound. The overall drive to force unwanted racial laws down the throats of white Americans, however, is too big a subject to cover in one sentence spoken by a distinguished citizen.

We cannot believe that Mr. Taft would have denied jury trials to southerners in cases that may be brought under the force bills now before Congress. Basic rights and basic liberties are involved here. The most charitable thing we can say about Mr. Eisenhower and other opponents is that they do not understand what they are doing to fellow Americans.

[From the Charleston (S. C.) News and Courier of June 9, 1957]

PRESIDENT MIGHT REMEMBER TAFT'S RACIAL OPINIONS

(By W. D. Workman, Jr.)

COLUMBIA, June 8.—If President Eisenhower wants to lean on the words of William Howard Taft (whom he cites with respect to bypassing jury trials) he might more profitably turn to Taft's fostering of good race relations in the South.

Back on March 4, 1909, in his inaugural address, President Taft took stock of the situation in the South, with particular respect to the operation of the 13th, 14th, and 15th amendment. As to the last named, which guaranteed the right of Negroes to vote, Taft recognized the need for southern establishment of voting qualifications to forestall political domination by "an ignorant, irresponsible element," whether white or black. Noting the increased interest of white southerners in the welfare of their colored contemporaries, Taft said:

"The colored men must base their hope on the results of their own industry, self-restraint, thrift, and business success, as well as upon the aid and comfort and sympathy which they may receive from their white neighbors of the South. * * * There is in the South a stronger feeling than ever among the intelligent, well-to-do, and influential element in favor of the industrial education of the Negro and the encouragement of the race to make themselves useful members of the community."

With another look of appraisal at the South, Taft said:

"There was a time when northerners who sympathized with the Negro in his necessary struggle for better conditions sought to give him the suffrage as a protection to enforce its exercise against the prevailing sentiment of the South. The movement proved to be a failure. What remains is the 15th amendment to the Constitution and the right to have statutes of States specifying qualifications for electors subjected to the test of compliance with that amendment.

"This is a great protection to the Negro. It never will be repealed and it never ought to be repealed. If it had not passed, it might be difficult now to adopt it; but with it in our fundamental law, the policy of southern legislation must and will tend to obey it, and so long as the statutes of the states meet the test of this amendment and are not in conflict with the Constitution and laws of the United States, it is not the disposition or within the province of the Federal Government to interfere with the regulation by southern States of their domestic affairs."

After cautioning against the indiscriminate appointment of Negroes to Federal position in areas where such appointments might do the race more harm than good, President Taft gave this personal view and an admonition which might well be heeded by the present administration in its program of forcing integration upon an unwilling South:

"Personally, I have not the slightest race prejudice or feeling and recognition of its existence only awakens in my heart a deeper sympathy for those who have to bear it or suffer from it, and I question the wisdom of a policy which is likely to increase it. Meanwhile, if nothing is done to prevent it, a better feeling between the Negroes and the whites in the South will continue to grow, and more and more of the white people will come to realize that the future of the South is to be much benefitted by the industrial and intellectual progress of the Negro."

Price Increases

EXTENSION OF REMARKS

OF

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 18, 1957

Mr. VANIK. Mr. Speaker, in today's newspapers it was distressing to learn of further price increases ranging from 20 percent in the cost of automobile insurance policies, an undetermined amount for steel products, and a 5-percent increase in the cost of cigarettes.

The curious fact is that these price increases are industrywide and merit the serious consideration of Congress. The issue is raised of possible antitrust law violations.

For example, all 5 major tobacco companies raised the wholesale price of their nonfilter brand cigarettes 35 cents per thousand, effective immediately. The American Tobacco Co. was the first to announce the boost and was followed by Liggett & Myers, Philip Morris, Inc., P. Lorillard, and R. J. Reynolds. The increase will amount to 1 cent per package at the retail level or a price increase of 5 percent.

It seems to me that Congress should concern itself with the reasons why all five companies should find it necessary to raise prices the same amount at the same time. Is it not conceivable under a free-enterprise system that 1 of the major manufacturers may not be as adversely affected by the general rise in costs as the other 4? In the same way is it not conceivable that another of the major manufacturers might be compelled to request an even higher increase in price because of higher production costs? Was it not possible for 1 major manufacturer to face this problem earlier or later than the other 4?

When 5 of the major manufacturers producing almost 98 percent of the cigarettes manufactured in America come to the same conclusion on the same day that a 1-cent-per-pack increase in the retail price of cigarettes is necessary, that determination smacks of colusion and possible violation of antitrust laws of America.

Perhaps the only defense the American consumer has is to stop smoking and fortify himself with fresh air.

Civil Rights Act of 1957

SPEECH

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6127) to provide means of further securing and protecting the civil rights of persons within the jurisdiction of the United States.

Mr. PHILBIN. Mr. Chairman, there are no provisions of the American Constitution which are more precious to our people than the Bill of Rights. These provisions were not included in the Constitution as originally adopted, but as a result of overwhelming public sentiment, were inserted into that immortal document not long afterward. They set forth briefly and eloquently the basic rights of free men and women living under our Government. They are fundamental guaranties for freedom of conscience and belief, the inviolability of the person and property of American citizens and those who dwell within the confines and jurisdiction of the Nation.

There are other provisions in the Constitution, which afford similar and additional rights to the individual, which in the very broadest sense spell out the doctrine of equality before the law and the safeguards against persecution and discrimination. The due process and equal protection clauses of the Constitution afford special and most carefully written provisions insuring respect for person and property, and provisions against discrimination based on what might be termed essentially private, inherent status of the individual such as race, creed, class or origin.

Esteemed, able colleagues on both sides of the aisle have delivered eloquent addresses during this debate on civil rights and the Constitution. Many strong, persuasive, well-documented legal arguments have been presented on both sides of the question pending before the House in this legislation. I shall, therefore, not elaborate upon the legal or constitutional aspects and facets of this question.

I take it for granted that we are all agreed that we are living under a government of laws by men and that we are all subject to the rule of law under the Constitution.

It is this faith and purpose in ordering the affairs of government by popular will under the rule of law that differentiates our system from many so-called democracies and from the absolute, authoritarian powers.

Here in America, men are judged by their merits or demerits, and not by their rank, or station, or color, or religion, or national origin. Under constitutional philosophy rule and practice the dignity of each human being is recognized and protected regardless of the color of his skin, the size of his purse, the kind of his religious beliefs, his calling, or his station in life. The poorest citizen, yes, even the most depraved human wretch is entitled to his day in court, equality of justice and fair treatment under the law. It is this respect for the Constitution and its safeguards, so characteristic of all our laws, which has won for us the esteem of almost all nations, and usually assures the individual living under the American flag of absolutely equal treatment before the law.

American boys have fought and died for the Nation in every war. Boys of every race, every religion, every class, creed, station, and origin, when crisis and need arose, have offered their lives on the altar of American patriotism. When this great Government called many of these boys into the service during our various wars it never rejected them because of the color of their skin, the church they attended, the race they belonged to, or the place they or their parents came from. They were all taken into the service to fight for our country, regardless of any of these external considerations, and they became part of great, united, American forces of invincible strength which through valor, sacrifice and bloodshed hammered out many notable victories for the cause of liberty, and successfully defended the national security and our free institutions from power-crazed tyrants plotting our destruction and enslavement.

It may be commonplace to say it, but it is unquestionably and undeniably true, that boys who were willing to fight and die for this Government and our way of life should be entitled to enjoy all its rights without reservation, restriction or limitation. All our people must be so entitled.

Under our constitutional system, we cannot have two rules of law, we cannot have two types of citizenship. The same rule of law must apply to all, and the same rights and privileges of citizenship must be enjoyed by all who are entitled to them.

We cannot have one law for the North and another for the South; one law for the East and another for the West. We all must have one law—the law that derives directly from the Constitution—the law that is based upon constitutional mandate. That law must apply with equal force to all persons.

Disobedience to that law, circumvention of that law, flouting and flagrant violation of that law can never serve to solve the social or political problems of any section. To flout and disregard the plain provisions of the Constitution will only bring discord and heighten misunderstanding and engender fresh hatreds. In the end these divisive forces will cause increasing bitterness, disruption and violence. They will upset the moral, political and economic balance so essential to common understanding. They will harden the conflict between race and group and seriously breach the national unity.

Some of the very able arguments and discussions of this controversial bill have been delivered on this floor by my learned, distinguished and dear friends from the South. In my legislative experience I do not recall such able, penetrating debate, such well-reasoned and well-documented and well-briefed legal arguments, such commendable emotional restraint, dispassionateness and objectivity admirably suppressing the intense, pent-up feelings of more than a century and a half of established sectional, social customs and usages. I must commend these colleagues for their high-minded patriotic manner and the great ability with which they discussed these difficult and distressing issues.

I am not satisfied in any sense that this bill is letter perfect, or that it will accomplish all that its more ardent advocates claim for it. Nor am I particularly enthused about the application of the techniques of equity that are so ingeniously incorporated into this measure. While I do not specifically question the legality of the measures which have been adopted to achieve the ends sought by this bill, I think on the whole that improved interracial relations could be achieved by an approach that would make it abundantly clear beyond cavil or doubt that the bill intends no circumvention of the right of trial by jury, a treasured right to the American people, which goes back to Magna Carta and beyond in the history of Anglo-American law.

However, the principles which the bill seeks to serve are so strongly entrenched in the American Constitution and in the very spirit of our laws as to be completely inescapable from the standpoint of American jurisprudence and history. These principles penetrate deeply into the origin and life of our Nation. They are expressly written into the Constitution and the laws. They constitute a mandate to each and every one of us to uphold, honor, and respect the doctrine of equality of opportunity, equality of legal treatment, equality of right as well as duty, which are clearly prescribed by many legal decisions of political, social, and economic significance as well as historic value.

Since I believe that it is not only illegal but un-American to deny any person the right to enjoy all the constitutional rights and privileges that are available to any other person, and the right to be protected against persecution, intimidation, violence, discrimination, and unfair, unequal treatment, I am prepared to support this bill.

At the same time, I plead for moderation and rationalized restraint on the part of all citizens regarding the great, social questions which are the source of such acrimony and bitterness. I hope that this legislation, if it is enacted, may be a landmark of reaffirmation of American principles, which will serve the purpose of alerting all the contending groups concerning the truly sacred character which Americans do attach or should attach to the great civil and human rights guaranteed by the Constitution.

Time and time again in our history we have had occasion to observe the futility of sumptuary laws and laws designed to uproot deeply imbedded traditions of the people.

It is my prayerful and devout hope and wish and plea to all those who are concerned with these vital, difficult questions that reason and justice and the tolerant spirit of human brotherhood and the call of humanity may be potent, irresistible forces swiftly and inexorably healing the wounds of misunderstanding, friction, and division, sweeping away the dark shadows of skepticism, distrust and suspicion, and instituting in our American society the only values upon which we may permanently rely for our security and our salvation—unity, trust, and deep faith in the Creator, in our great free Government, and in the wholehearted purpose of ourselves to do what is right, honorable, and just among our fellow citizens and all mankind.

I commend the distinguished chairman of the committee for the fair, able manner in which he handled the bill on the floor and his distinguished associates on the committee for their painstaking, capable work.

Statement on Federal Aid to Public School Construction

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 9, 1957

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following statement of the American Jewish Committee, issued at a meeting of its administrative board on May 7, 1957:

STATEMENT ON FEDERAL AID TO SCHOOL CONSTRUCTION, THE AMERICAN JEWISH COMMITTEE, MEETING OF THE ADMINISTRATIVE BOARD, MAY 7, 1957

The American Jewish Committee views with concern the present drive in the interest of economy to deprive the Nation's public schools of desperately needed Federal aid for school construction.

In October 1955, the American Jewish Committee published a resolution by its executive board urging the White House Conference on Education to approve the Federal aid bill for public school construction.

The White House Conference on Education, representing a complete cross section of the American population, subsequently urged the need for Federal aid. In the light of this action and the support of both political parties, Federal aid to public school construction appeared for the first time to have an excellent chance of adoption; instead, however, it is now confronted with a massive campaign of opposition.

It is not true economy for the Nation to withhold funds crucial to the development

of our valuable human resources, especially when other nations which are dedicated to the destruction of our society have stepped up their programs of instruction—technological and ideological.

The American Jewish Committee therefore urges the President of the United States, the Congress and all appropriate governmental bodies to publicly resist all attempts to defeat Federal aid to public school construction, and to affirmatively recommend and effectuate passage of the Federal aid bill.

Franklin D. Roosevelt and Civil Rights

EXTENSION OF REMARKS

OF

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. VANIK. Mr. Speaker, during the course of the current debate a great many Americans are being misled into believing that the cause of civil rights was something only recently championed by President Dwight D. Eisenhower. The record of former President Harry Truman and the late President Franklin D. Roosevelt cannot be overlooked. They are the real leaders in the struggle for civil liberties. Their efforts, running back over 20 years, are producing the civil-rights victory which is near at hand today.

In connection with the current debate in Congress on the civil-rights issue, I would like to submit for the consideration of the Members of Congress the following paper prepared at my request by the Legislative Reference Service of the Library of Congress and entitled "Franklin D. Roosevelt and Civil Rights":

FRANKLIN D. ROOSEVELT AND CIVIL RIGHTS—WHAT ARE CIVIL RIGHTS: THE DISTINCTION BETWEEN CIVIL LIBERTIES AND CIVIL RIGHTS

The distinction between civil liberties and civil rights is often hard to draw, but as the terms are customarily used, the distinction would seem to depend upon who is in a position to do the depriving. Generally, the term "civil liberties" is used when the possible source of infringement or deprivation is government or an agent of government. The term "civil rights" is used when the source of deprivation is an individual or a group of individuals. Robert Cushman is making this distinction in his book Civil Liberties in the United States when, on page 124, he writes:

"Constitutional guaranties of civil liberty are in the main protections which the citizen enjoys against abridgement by the action of government, State or local. No individual can possibly violate the Federal Bill of Rights, which begins with the words, "Congress shall make no law," and which has been held to restrict only the Federal Government. Nor can an individual violate the 14th amendment, which clearly says 'no State' shall do the things forbidden. * * *

"At the same time there are rights and privileges which the citizen enjoys which arise either from the Constitution or from acts of Congress, and Congress may punish individuals who 'injure, oppress, threaten, or intimidate any citizen' in the full and free enjoyment of these rights. * * * These provisions * * * comprise the bulk of the Federal Government's arsenal of legislation directed against persons who interfere with the civil rights of other persons."

1928–38: REFERENCES TO CIVIL LIBERTIES AND CIVIL RIGHTS WERE MOSTLY OF A GENERAL CHARACTER

During the early New Deal, Roosevelt rarely mentioned civil rights, as we understand them today, in his public pronouncements. More often, he would praise the practice of tolerance, the concept of brotherhood. This was especially true during the presidential campaign of Al Smith in 1928 when Roosevelt would frequently exhort his listeners to forgo religious bigotry, in appraising the qualities of Smith, a Catholic, as a potential President. For example, on October 17, 1928, while urging Smith's election before a gathering in Binghamton, N. Y., Roosevelt labeled the religious bigotry advanced against Smith "the worst sort of un-Americanism." Continuing, he said, "I believe that the day will come * * * when education * * * will be so widespread, so clean, so American, that this vile thing that is hanging over our heads in the presidential election will not be able to survive."

Occasionally, during the early New Deal, Roosevelt would be called upon to deliver a purely patriotic speech. His approach on these occasions was generally to laud the Bill of Rights, the blessings of freedom and liberty, and the virtues of our Constitution. He apparently viewed these assignments as a time for reasserting agreement on fundamental principles, for his purely patriotic speeches contain little which deals with civil rights that could be considered controversial.

Clearly, his chief concern during this period was to end the depression. In this connection, he made numerous references to liberty and freedom, but almost invariably his emphasis was upon the economic aspect of liberty. This was a theme repeated time and again, inserted in his every speech to serve as both the basis and the justification for decisive action and sweeping reform. Here is a typical illustration, the final paragraph of his second "Fireside Chat" of 1934 (vol. III, p. 432):

"I am not for a return to that definition of liberty under which for many years a free people were being gradually regimented into the service of the privileged few. I prefer, and I am sure you prefer, that broader definition of liberty under which we are moving forward to a greater freedom, to a greater security for the average man than he has ever known before in the history of America."

This profound desire to mobilize support for his social-economic program—and thus enhance human freedom—was handled by the President in a variety of ways. Frequently, for instance, he would issue blistering attacks against "sectionalism" and "class distinction," attacks which might be interpreted as attempts to advance, indirectly, the cause of civil rights. Speaking before the American Legion Convention on October 2, 1933, the President had this to say (vol. II, p. 374):

"But there are two enemies of national unity—sectionalism and class—and if the spirit of sectionalism or the spirit of class is allowed to grow strong, or to prevail, that would mean the end of national unity and the end of patriotism * * *.

"The other enemy of national unity is class distinction, and you and I are well aware of the simple fact that as every day passes, the people of the United States are less and less willing to tolerate benefits for any one group of citizens that have to be paid for by others."

Or again, he would wage battle against the depression even on patriotic occasions, as he did on September 17, 1937, while addressing the Nation on the 150th Anniversary of Constitution Day (vol. VI, p. 369):

"Nothing would so surely destroy the substance of what the Bill of Rights protects than its perversion to prevent social progress. The surest protection of the individual and minorities is that fundamental tolerance and feeling for fair play which the Bill of Rights assumes."

That the President was opposed to racial discrimination but reluctant to disrupt his majority coalition in Congress with civil rights proposals too progressive for the times is perhaps best borne out by an examination of his messages to groups who were greatly concerned with Negro rights.

For example, on September 22, 1933, he congratulated America's Negro citizens upon the 70th anniversary of the Emancipation Proclamation in these words (vol. II, p. 364):

"I heartily congratulate the Negroes of the United States upon the seventieth anniversary of their emancipation. Their progress during these 70 years has been remarkable. They have contributed greatly to the economic development of the Nation and I am sure that as prosperity returns they will share proportionately in the greater security, increased comfort, and happiness resulting therefrom."

Two years later, on June 17, 1935, in the course of some informal remarks to State Works Progress Administrators gathered in Washington, Roosevelt counseled (Washington Post, June 18, 1935, p. 4):

"The second point I make is that we have to be extremely careful not to make any kind of discrimination. We cannot discriminate in any of the work we are conducting either because of race, or religion, or politics. If anybody asks you to discriminate, you can tell them that the President of the United States gave direct orders that there is not to be any such discrimination."

And in 3 more years, on June 25, 1938, he was to dispatch this greeting to the National Association for the Advancement of Colored People (vol. VII, p. 401):

"I am happy to extend to the twenty-ninth annual conference of the National Association for the Advancement of Colored People cordial greetings and best wishes for the success of its efforts in advancing the interests of the Negro race and bringing about the cooperation and understanding between the races so essential to the maintenance of a vital democracy.

"I have watched with interest the constructive efforts of your organization, not only in behalf of the Negro people in our Nation, but also in behalf of the democratic ideals and principles so dear to our entire Nation. For it is evident that no democracy can long survive which does not accept as fundamental to its very existence the recognition of the rights of its minorities."

The impression received from a study of Roosevelt's prewar staements which have bearing upon civil rights is that he chose to place first things first. He felt, apparently, that what the people wanted most were more jobs, more purchasing power, more security for self, family, and community. He made many statements which revealed his strong stand against racial and religious bigotry and his firm belief in equal justice for all; but the bulk of his legislative program was directed toward ending the depression, once and for all. Probably he regarded this goal as an indispensable prerequisite to confronting civil-rights problems in more direct fashion.

1939–1945: CIVIL RIGHTS PROBLEMS APPROACHED IN MORE SPECIFIC AND DIRECT MANNER

Beginning in the late 1930's, Roosevelt took more decisive action regarding civil rights. Why he did so is not within the scope of this survey to discuss. Certainly the war influenced the shift. Perhaps, too, the fact that most of the legislative measures embodying the New Deal philosophy had been achieved allowed the President to turn his hand to other problems. At any rate, 1939 saw for the first time the establishment of a civil rights section within the Department of Justice.

According to Robert Cushman, it was not until the civil rights section was created in the criminal division of the Department of Justice "that any well-planned and imaginative campaign for the effective enforcement of the civil rights statutes was made possible" (p. 125). Professor Cushman continues:

"Prior to the creation of the section, responsibility for prosecuting persons who violated these statutes rested with the local United States attorneys, and these, especially in southern communities, had displayed little energy or courage in protecting the civil rights of Negroes."

The newly created section immediately undertook to enforce existing civil rights statutes, and despite the fact that its staff was rather small and its assignments often included enforcement of laws only remotely involving civil rights, its achievements were of real value. Its major efforts were directed toward prosecuting cases of police brutality, destroying the Ku Klux Klan, investigating cases of lynching where evidence indicated local officials were implicated in the crime, and protecting the citizen's right to vote in Federal elections.

With the coming of the Second World War, it became clear to the President that to build a powerful United States required the integration of every group into the national defense effort. His antipathy for the undemocratic practices of discrimination coincided perfectly with a determination to make the best possible use of our human resources. According to the editor of Roosevelt's public papers, Samuel Rosenman, "he (the President) felt keenly the inconsistency of helping to defeat the Nazis and Fascists and of tolerating the kind of injustice and discrimination on which these dictatorships thrived" (vol. X, p. 235).

Accordingly, on June 25, 1941, the President issued Executive Order 8802, establishing the Committee on Fair Employment Practice. The heart of the order required that all defense contracts with the Government contain a provision "obligating the contractor not to discriminate against any worker because of race, creed, color, or national origin" (vol. X, p. 234).

Less than 3 years later, the President expressed his strong disdain for discrimination in the Armed Forces. At a press conference on February 5, 1944, the President commented on mistreatment of colored troops with these words (vol. XIII, pp. 66–7):

"It is perfectly true, there is definite discrimination in the actual treatment of colored engineer troops, and others. * * * The trouble lies fundamentally in the attitude of certain white people—officers down the line who haven't got very much more education, many of them, than the colored troops, and the Seabees, and the engineers, for example. * * * And we are up against it, absolutely up against it. I always think of the fact that it probably is improving. I like to think that mere association helps things along."

During President Roosevelt's fourth campaign for the Presidency, he issued one of the strongest protests against interference with the right to vote ever pronounced by a Presidential candidate until that time. In a national radio address from the White House delivered on October 5, 1944, the President contended:

"It is true that there are many undemocratic defects in voting laws in the various States, almost 48 different kinds of defects, and some of these produce injustices which prevent a full and free expression of public opinion.

"The right to vote must be open to our citizens irrespective of race, color, or creed—without tax or artificial restriction of any kind. The sooner we get to that basis of political equality, the better it will be for the country as a whole."

From this brief survey, it can be seen that most of the steps actually achieved later, or advanced currently, for reducing discrimination had antecedents in the Roosevelt era. Reduction of discrimination in employment, in the armed services, realistic enforcement of existing civil rights statutes, elimination of undemocratic conditions preventing the right to vote—all of these proposals were favored by President Roosevelt.

In addition, he spoke repeatedly in favor of civil liberties and, perhaps most important of all, constantly reminded the American people that the ultimate source of discrimination and bigotry was ignorance. He had great faith in the efficacy of a sound, liberal education.

Arthur T. Vanderbilt

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 18, 1957

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorials:

[From the Newark Evening News of June 17, 1957]

ARTHUR T. VANDERBILT

In the death of Chief Justice Arthur T. Vanderbilt, New Jersey has suffered a loss of the first magnitude.

It seemed more than coincidence that Mr. Vanderbilt should be stricken while en route to his desk. For of him, as much as any man, it may be said that he lived to work.

Only a year away from retirement from the court he loved and graced, Mr. Vanderbilt continued to drive himself as relentlessly as ever he did during the days when he was fighting for and installing the judicial system that is counted a model among all the States.

It was this incredible energy coupled with a superb intellect that opened many careers to Chief Justice Vanderbilt. He achieved national distinction at the bar and on the bench. He was widely known as an educator, as a writer on jurisprudence, an authority on judicial procedure, and as a political leader he had helped direct the State and national destinies of the Republican Party.

The presidency of the American Bar Association and appointment as dean of New York University Law School were two of his many honors.

He had relentless determination. No obstacle, however formidable, no opposition, however vociferous, could swerve him from a course to which he was committed.

An unknown young lawyer, he resolved upon the destruction of the corrupt and discredited Republican machine that had exploited Essex County for many years. He was the architect of clean government, and though it was to take him more than a decade, he never gave up until he he had driven the entrenched machine from power. For years thereafter he was in undisputed control of the county government and the Essex delegation in the legislature.

He used his power to give Essex one of the best county governments in the Nation, outstanding for its honesty and efficiency, and in Trenton his representatives fought for the same policies, consistently opposing extravagance and increased tax burdens.

As his experience and knowledge widened, he became appalled by the time-wasting complexity of New Jersey's judicial structure. A densely populated industrial center, the State retained almost intact the courts erected when it was an agricultural colony of England.

Once again Mr. Vanderbilt embarked on a crusade that was to take many years, in which he was to encounter resistance and setbacks that discouraged less resolute associates.

His goal was a judicial amendment. In the end a new constitution was adopted, and with it the opportunity for him as chief justice to put into practice the theories and principles evolved from his experience as chairman of the judicial council, as bar association president, and as law-school dean.

Gov. Alfred E. Driscoll named Mr. Vanderbilt to his high office. The governor's judgment was more than vindicated. New Jersey's new court system attracted attention throughout the country.

As chief justice Mr. Vanderbilt did not permit his administrative duties to obscure his judicial role. Some of his decisions were controversial, most notably in his assertion tath the rulemaking power belonged exclusively to the supreme court. But all bore evidence of profound learning in the law.

His viewpoint was essentially conservative, but it encompassed a broad and sympathetic understanding of public needs and the relationship of public and private interests. This was best expressed in his decisions in zoning, tax and utility rate cases and in those restating the moral responsibilities of public officials.

His exterior was austere, but he was a man of strong emotions, with a subtle sense of humor and a devastating power of mimicry. The theater, travel, and reading were his relaxation. His life was devoted to work, and he worked productively and happily until the very end. In his death the Nation loses a great legal mind.

[From the Passaic (N. J.) Herald-News of June 17, 1957]

A GREAT LOSS TO NEW JERSEY

The death of Chief Justice Arthur T. Vanderbilt is a serious loss to our State court system. The courts today are what Chief Justice Vanderbilt made them after the new constitution was adopted in 1947.

The constitution-makers who met that summer at New Brunswick planned the new court system, but it was the man appointed to be chief justice who breathed life into it. He was a stern, even harsh, taskmaster. Judges and lawyers grumbled, but the courts put aside easygoing ways of the past and became models of efficiency. He infused a new moral tone into the courts and the bar. He gave the courts dignity.

It was all part of his determination to give the people of New Jersey the best possible kind of justice.

Mr. Vanderbilt was not softhearted or tolerant of shortcomings. Lawyers who violated their trust could expect no sympathy from him. Judges were always under the pressure to avoid his disapproval. Everyone who came within the range of his authority realized that he was not a man to cross, or to take lightly.

The most spectacular demonstration of his ability to get things done was ending the "fixing" of traffic tickets. The practice was widespread and deeply entrenched. When he first proposed wiping it out, there was a great outcry. Politicians and police officials said what he proposed was contrary to human nature and would never work. They complained bitterly that they were being deprived of a privilege to which they were

entitled. Mr. Vanderbilt steamrollered the opposition. He imposed his will and made it stick.

With the removal of his strong hand, the courts will inevitably change. The finest tribute that could be paid to Chief Justice Vanderbilt would be for all of us to see that the courts are kept on the road he marked out.

[From the New York Times of June 18, 1957]

ARTHUR T. VANDERBILT

Chief Justice Vanderbilt of the New Jersey Supreme Court made his influence felt for many years in the interest of good government, good courts, good citizenship, and good human relations. He was known throughout the country for his forward-looking views. He was respected for his integrity and his courage.

One of his many contributions to New Jersey was his leadership in the rewriting of the State constitution. Another was reform of the judicial system. He worked to the same high purposes toward improvement of the Federal court system. His example made itself felt in New York State, through encouraging constant examination and application of new ideas to management of the courts' business. So the death of this distinguished judge will be widely and deeply regretted.

[From the Washington Post of June 18, 1957]

ARTHUR T. VANDERBILT

The death of Chief Justice Arthur T. Vanderbilt of the New Jersey Supreme Court is a tragic loss to the causes of justice, judicial reform, and legal education. In the last decade he had directed almost a judicial revolution in New Jersey. That was the culmination of many previous years of hard struggle to bring administrative management, sound organization, and highly qualified judges into the judicial system. As chief justice in New Jersey, he was able to put into practice what he had been preaching, with the result that that State now has one of the best judicial systems in the Nation.

After trying for 17 years to interest the bar, the judges, and the politicians in judicial reform, Mr. Vanderbilt decided a decade ago to carry his fight to the people. Govs. Charles Edison and Alfred E. Driscoll joined in the struggle, and a new constitution was adopted for New Jersey, including a model judicial system. Mr. Vanderbilt, who had won eminence in the practice of law and as dean of the New York University Law School, was then named chief justice.

There followed a decade in which rules were simplified, dockets were cleared of old cases, able and energetic lawyers were named to the bench, and modern administrative managemnet was applied to the work of the courts. In a single year the output of the New Jersey courts was increased by 98 percent. Justice is no longer soured by endless delays, confused jurisdiction, or excessive emphasis on technicalities. Arthur Vanderbilt's leadership in this sphere has brought New Jersey to the forefront among the States seeking to modernize their judicial systems.

In his practice as in his teaching, Mr. Vanderbilt was a strong defender of civil liberties and of independent judgment on the bench. As counsel for Norman Thomas, he induced the Supreme Court of the United States to strike down the Jersey City ordinance under which the late Mayor Frank Hague had forbidden the Socialist leader to address a public meeting there. As president of the American Bar Association, he contributed enormously to the defeat of President Roosevelt's efforts to pack the Supreme Court in 1937. It is the judicial reforms that he helped to establish in New Jersey, however, that are likely to stand as his most enduring monument.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

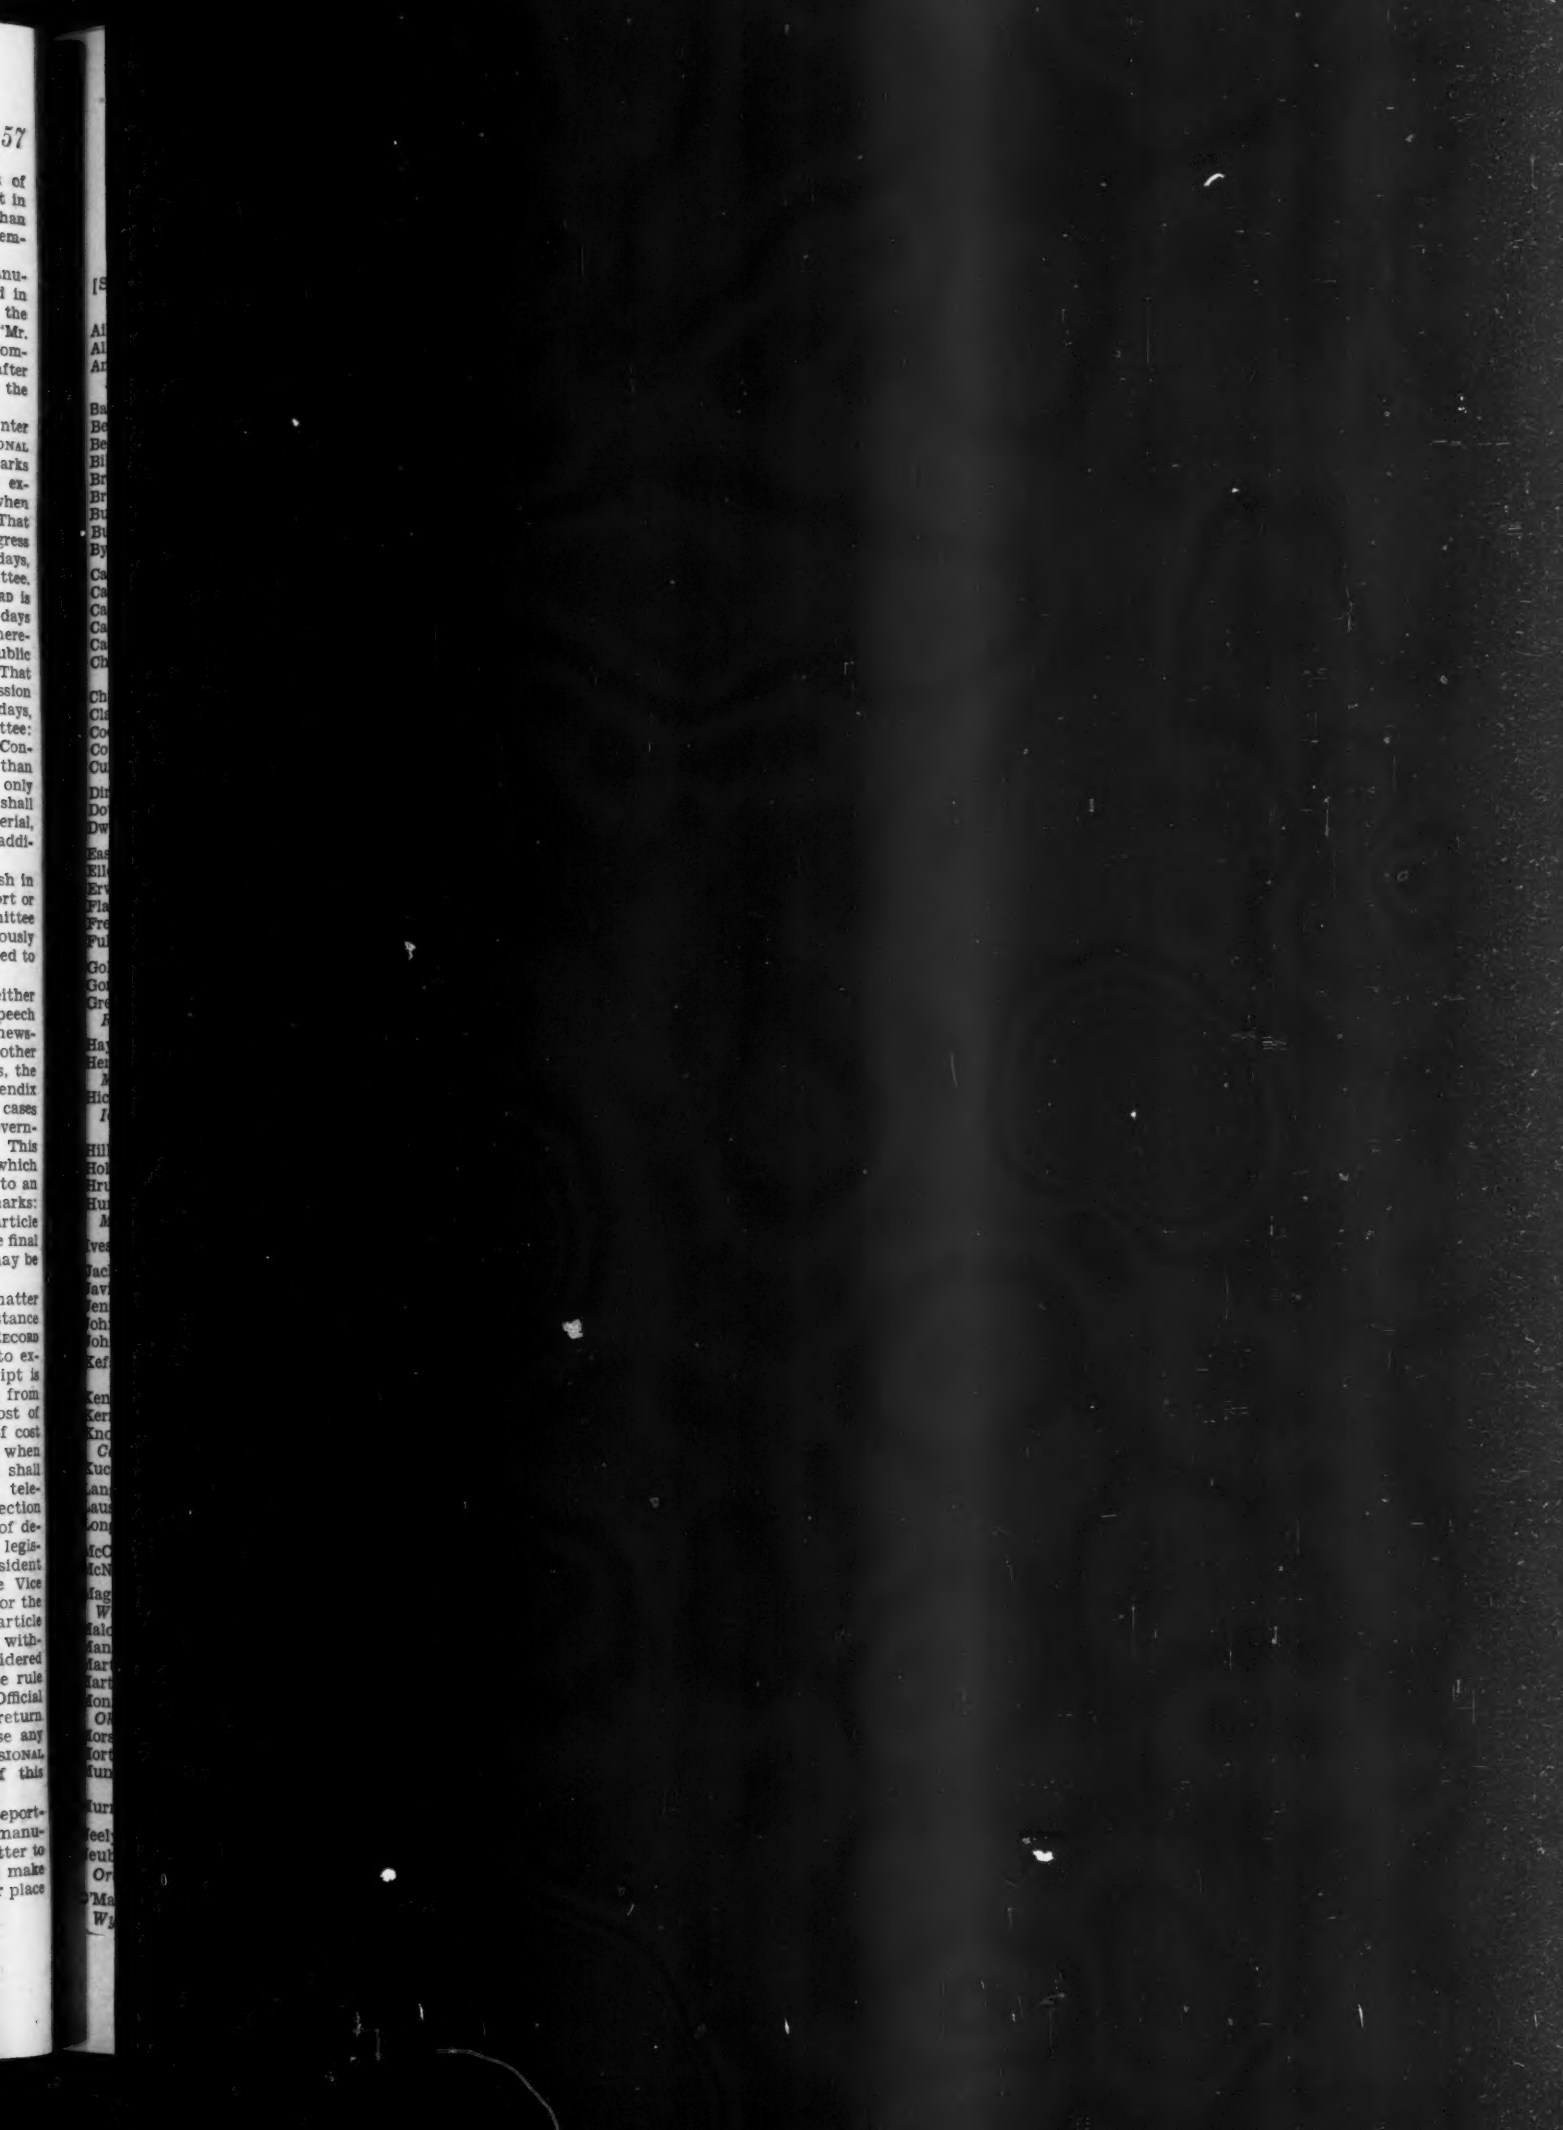
8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.



Appendix

Freedom's Open Door

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 19, 1957

Mr. THYE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a copy of an address which I delivered at Duluth, Minn., on June 16, 1957, before the Midsummer Festival of the Swedish-American League of Duluth. The address is entitled "Freedom's Open Door."

I also ask unanimous consent to have printed in the Appendix of the RECORD an editorial on the same general subject, published in the Minneapolis Star Tribune of June 17, 1957.

There being no objection, the address and editorial were ordered to be printed in the RECORD, as follows:

FREEDOM'S OPEN DOOR

(Address by Hon. EDWARD J. THYE, United States Senator from Minnesota, before the midsummer festival of the Swedish-American League of Duluth, Duluth, Minn., June 16, 1957)

Mr. Chairman, ladies and gentlemen, during my years of public service as Governor and United States Senator, I have always looked forward to my visits to the great port city of Duluth. Today I enjoy the special honor of participating in your annual Swedish-American midsummer festival. I have joined hands with Swedish Americans on numerous occasions in paying tribute to Sweden and her people.

Today in Duluth we recognize that within a short time Sweden will be brought into direct contact with Duluth as a result of the Saint Lawrence Seaway. Duluth stands on the threshold of a new and exciting era of history. The vast taconite industry has already sparked an atmosphere of expansion and development which holds great promise for years to come.

The same type of dedication to progress has made Sweden a great nation. Today the Swedish people enjoy their continued freedom; a high standard of living; and a posture of independence. At the same time, these people look back upon hundreds of years of continuous economic and industrial development.

I also know from conversations with people from Sweden, that they are proud of the close and friendly association of their nation with the United States. I also know that they are particularly proud of the great contributions which men and women of Swedish descent have made toward the development of our own great Nation. It is this type of people who came to Minnesota years ago and dedicated themselves to the transformation of a wilderness into a vigorous and prosperous State. All of this has been done in less than 100 years.

We must not forget that it was Sweden which was the first nation, not engaged in the Revolutionary War, which recognized the independence and equality of the United States. It was a Swede, John Hanson, who was one of the signers of our Declaration of Independence. It is also worthy of note that one of the very first permanent settlements in this country was a colony of Swedes on the shores of Delaware.

As we pay tribute to Sweden on this day, we can observe the leadership of Sweden in world affairs through the work of Dag Hammarskjold as Secretary General of the United Nations. It is this type of sensitivity to changing world conditions which sets Sweden apart as a nation dedicated to the cause of freedom and independence.

But there is another common bond which Duluth and its citizens enjoy with Sweden and her people. That is the activity of ocean going trade. As I have said it is just a matter of months before Duluth will have direct access to world ports.

Trade and commercial intercourse between nations has always been a vital factor in the history of nations and in the lives of their people. There is no nation capable of sustaning itself completely without trade with other nations. The degree of dependency upon trade with foreign nations will vary with the different countries of the world. But every nation to a certain extent depends upon trade for its continued existence and progress.

Today, we live in a world sharply divided between free people; people dominated by Communist control; and people who are as yet uncommitted to either of the first two groups.

It is a paradox of our times that two of the leading issues today should be disarmament on the one hand and the development of nuclear weapons for war on the other hand.

The United States has taken the initiative at the current London talks on disarmament. For the first time in 10 years we have some reason to hope that we may be entering a period when the first step might be taken toward a genuine disarmament agreement. It is a source of pride and satisfaction to Minnesotans that one of its sons, Harold Stassen, has emerged as a dynamic and forceful spokesman for the entire free world on the subject of disarmament.

At the same time, the Congress of the United States is reviewing the hazard of nuclear testing of weapons for war and is engaged in studying a request for a $38 billion defense budget.

One can see by this set of circumstances that this is not the day for timid leadership. It is a day when we need all of the vigor and vision which was displayed in the fighting of the Revolutionary War and in the subsequent establishment of a great nation through the Declaration of Independence and the Constitution.

There is one issue which has emerged to tax all of our resources and initiative. That is the subject of trade with Red China and the Russian satellite countries by the nations of the free world.

Within the past 2 weeks, our ally Great Britain announced to the world that she was going to relax her restrictions against trade with Red China. Other nations of the free world have followed suit. This action was not taken in defiance of the United States, but as a matter of economic necessity. Once again it has been demonstrated that nations must open up channels of trade in order to gain economic and social progress. At the present time the United States follows a policy of no trade with Red China. However, at his press conference the other day the President stated that trade could not be permanently restricted and rejected. President Eisenhower realizes that we cannot forever succeed in keeping the avenues of trade with the China mainland closed.

The time has come when we must conduct an extensive and thorough reevaluation of our trade policy in Asia. I do not propose for a moment that we should all of a sudden throw open the doors of trade to Red China.

At the present time, Red China is holding eight American civilians. They refuse to release 4 Catholic missionaries, 2 American businessmen, and 2 Department of the Army civilians who crashed in North Korea.

In addition there are 450 American soldiers who were known to be alive after capture and who are held by Communist China. We have insisted on an accounting for each of them to determine their status. Communist China has not met our requests for information concerening these soldiers.

Until such time as Communist China has accounted for these people and is ready to negotiate their release, I submit that we should retain our policy of no trade with the Government of Red China.

However, I believe that with patience and through diplomatic negotiation that we may be able to obtain freedom for these people. Communist China must demonstrate by cooperation and action its good faith in dealing with our Government.

Therefore, I believe that the following five-point plan of action is needed in order for the United States to deal with the issue of trade with China:

1. The continued negotiation by our Government for the release of persons held by Red China.

2. A demonstration by Red China by deeds her willingness to negotiate in good faith with the free nations.

3. The admission of American newsmen into Red China.

4. A complete analysis and reappraisal of our trade policies in regard to Red China and Russian satellites.

5. Continued support through economic aid and assistance to our key Asian allies such as South Korea, Japan, Formosa, Thailand, Vietnam and others.

I realize that the success of this proposal depends upon the willingness of Communist China to open up doors to the outside world and to bury its deep seated antagonism to the spirit of freedom and independence.

The admission of newsmen to Red China would expose the economy and social life to the Chinese Communists to the free world. We would be the recipients of a storehouse of valuable information. Communist China would be thrown into the spotlight of direct news reporting. Negotiations should be commenced immediately to allow American reporters to work in safety within the boundaries of Red China.

The Senate Interstate and Foreign Commerce Committee is about to begin extensive hearings into the subject of actual trade with Communist China. There is strong feeling in Congress that such a study is overdue.

After considerable thought and investigation of my own on this subject, I have come to the conclusion that such a review is a necessity.

Continued economic and technical assistance to our Asian allies is of utmost importance. Since 1950 we have delivered over $7 billion in aid to these nations.

The success of this program is dramatically illustrated by the accomplishments in Vietnam in the past 3 years. During these short 36 months that nation has been transformed from a war ravaged country into a strong anti-Communist stronghold. The economic progress and the improvement in the living standards of the Vietnamese people have caused many Asian leaders to examine closely the advantage which the free world has to offer.

One of the most important links with freedom in Asia is found in Japan today. Here is a nation which has been transformed from an enemy of the United States to a friend and ally in the short span of 15 years. Today Japan has a population of 90 million crowded into an area about the size of the State of Montana. Japan has very few natural resources. Only about 16 percent of the total land area is suitable for cultivation. Japan must import 20 percent of the food necessary to feed her people. In order to pay for these imports, Japan must export. She has few raw materials to export. Therefore, Japan must export finished goods and in order to do that she must import most of the raw materials necessary for their manufacture.

The merchandise trade deficit in 1956 was $729 million as compared with $461 million in 1955. Japan has experienced a sharp rise in the imports of textile materials, metal ores, scrap, mineral fuels, chemicals, and machinery.

Successful trade is a necessity for Japan. At the present time much of her trade is with the United States. However, historically, one of Japan's natural trade areas has been the China mainland. I do not propose to predict how long Japan can continue to avoid trade relations with Red China. This demonstrates again the importance of reevaluating our own trade relations with the Communist regime in China.

We must maintain Japan as a strong and friendly ally in Asia. To do otherwise would be to court Communist aggression in this key area of the world.

Great Britain is faced with a situation similar to Japan's. It is an island nation of small land area and with a large concentrated population. History reveals that Great Britain's strength as a nation depends upon successful trade policy. Lacking in natural resources she must rely upon trade to receive the raw materials necessary to manufacture and produce items of export. To deny Great Britain the right to expand her trade would be to weaken our strongest ally in Europe both economically and as a world power in the battle against communism.

Today the people of the world stand in the twilight zone between annihilation and disarmament. They do not want to live in a world of tension and fear. They are asking for leadership which will carry them into an era of peace and independence. The United States as a leader of the free forces has demonstrated on numerous occasions that it is willing to cooperate in the development of a framework for a just peace.

We ask Russia and Communist-dominated countries to act in good faith and to demonstrate by constructive action that they are willing to accept disarmament and peace as the most urgent goals of our time. Red China must show to the world that she is responsible and reliable in her leadership. The first step in this direction can be taken by the release of American citizens and soldiers.

I know that the administration and the Congress will continue the type of leadership which will demonstrate again our dynamic role of a world leader dedicated to the opening of freedom's door to all peoples of the world.

[From the Minneapolis Star Tribune of June 17, 1957]

THYE REALISTIC IN VIEWS ON RED CHINA PROBLEM

Senator EDWARD J. THYE proposes a reevaluation of some United States policies in Asia, including the matter of trade relations with Red China. His suggestions have much merit.

Great Britain and other western nations friendly to the United States have decided to permit trade with Red China on a similar basis as with Russia and her European satellites. President Eisenhower has stated that complete trade barriers against mainland China cannot be kept indefinitely by nations normally dependent upon international commerce.

In his address to the Swedish American League of Duluth Sunday, Senator THYE said that the present United States trade ban should be maintained until the Communist government has released all Americans still held prisoner. Meanwhile, he urges "a complete analysis and reappraisal of our trade policies in regard to Red China and Russian satellites." The inference is that if China shows good faith in the matter of prisoners, this country should be prepared to consider liberalizing commercial relations.

Senator THYE also gave strong support to admission of American correspondents to the Chinese mainland, which is refused by Secretary of State Dulles. On this matter both Minnesota Senators are in agreement, for Senator HUMPHREY has criticized the Dulles position for some time.

The general program put forward by Senator THYE is constructive and recognizes the realities of the Asian situation and of international trade. He points out that both Japan and Great Britain historically have helped support themselves by trade with the Chinese mainland. Policies which tend to weaken these allies may prove an aid to communism in the long run. As Senator THYE puts the case: "To deny Great Britain the right to expand her trade would be to weaken our strongest ally in Europe both economically and as a world power in the battle against communism."

Arguing the advantages of sending American reporters into Red China, Senator THYE says: "The admission of newsmen to Red China would expose the economy and social life of the Chinese Communists to the free world. We would be the recipients of a storehouse of valuable information."

This great advantage for the American cause continues to be lost through the obdurate and unrealistic attitude adopted by Secretary Dulles.

Case of Sp3c. William S. Girard

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 19, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a release prepared by me on June 11 and my newsletter dated June 12, 1957, regarding the case of Sp3c. William S. Girard.

There being no objection, the release and newsletter were ordered to be printed in the RECORD, as follows:

RELEASE FROM THE OFFICE OF SENATOR WILLIAM E. JENNER, REPUBLICAN, OF INDIANA, JUNE 11, 1957

Senator WILLIAM E. JENNER, Republican, of Indiana, commenting on the press statement by Robert Dechert, General Counsel of the Defense Department, that GI William S. Girard enticed Naka Sakai closer into the firing range before he killed her, said:

"The important point in this case is not whether William S. Girard is innocent or guilty. That remains to be determined at the trial.

"The question is whether his constitutional rights have been forfeited by surrendering him to a Japanese court for trial instead of letting him be tried by a United States military court. This turns on the critical question whether he was engaged in the performance of his duties when the incident occurred.

"I am shocked and amazed that the General Counsel of the Defense Department would issue a statement to the press which gives substantial help to those who will prosecute this young American soldier.

"Mr. Dechert had no excuse for making any comment whatever on the guilt or innocence of Private Girard. That is the sole responsibility of the court which ultimately tries him.

"Mr. Dechert had no excuse whatever for making a statement on the evidence to be presented in any court proceeding, when he was not in court and not under oath. We do not tolerate trial by press conference in this country.

"Mr. Dechert, as counsel for the Defense Department, had no excuse for issuing voluntarily a derogatory statement about an American soldier, when that statement will certainly be used by the prosecution when he is on trial, perhaps for his life.

"Government agencies are supposed in this country to serve the people. Have our officials descended so low, in the struggle to have their way regardless of public opinion, that they would destroy the reputation and, perhaps, the life on an American soldier in order to win a contest over who is to have the most power in Government?"

NEWSLETTER FROM THE OFFICE OF WILLIAM E. JENNER, REPUBLICAN, INDIANA, JUNE 12, 1957

The case of William Girard in Japan has aroused American indignation about the status-of-forces treaties and agreements we have with over 42 nations.

At this time I think it is appropriate for me to review some of the important Senate debates on the rights of American servicemen.

Let's start with the background of the agreement we have with Japan.

Over 5 years ago, the Senate was asked to ratify the formal peace treaty with Japan, signed by 48 nations. At the time, Senator MARGARET CHASE SMITH, of Maine, and I, introduced four reservations to the treaty.

One of them read, in part:

"Nothing contained in this treaty shall be construed (a) to impose any limitations on the right of the United States as a sovereign power to exercise complete and unlimited control over its foreign policy, its Military Establishment, and its domestic concerns."

On March 20, 1952, the Senate debated our reservation and defeated it by a vote of 55 to 25.

During the same debate, Senator DIRKSEN reintroduced the same reservation as a new one, by omitting a part of mine which did not refer to United States sovereign power. That was the only way to bring the subject up for reconsideration after it had once been defeated.

During the discussion that followed, one of the Senators who opposed our reservation made the essential point that:

"In the administrative agreement which has been negotiated with Japan, when the question rises as to jurisdiction in the matter of persons who are accused of crime, possibly our own citizens, possibly our own soldiers, we agree to apply the same rule as the one we will agree to with respect to NATO countries, and it is contemplated, I believe, that we shall work out some agreement whereby they can be tried locally, certainly for certain specified offenses. If this reservation were agreed to, I am wondering whether it would not negate that effort, because it would certainly be a limitation upon our control of certain parts of our Military Establishment."

That was precisely why Senator SMITH, Senator DIRKSEN, and I wanted the reservation in—and if it had passed, William Girard would still be under the jurisdiction of the military courts.

But the reservation submitted by Senator DIRKSEN was defeated by a vote of 47 to 29.

Later that same day the Senate debated ratification of a security treaty between the United States and Japan.

Article III of that treaty reads:

"The conditions which shall govern the disposition of Armed Forces of the United States of America in and about Japan shall be determined by administrative agreements between the two governments."

I introduced a resolution, for Mrs. SMITH of Maine and myself, providing that no administrative agreement would be binding unless ratified by the Senate.

It read:

"Since Congress under the Constitution has the sole power to declare war and authorize the employment of the Armed Forces of the United States, any so-called administrative agreements under article III of this treaty relating to the right to dispose of the Armed Forces of the United States or any part of its Military Establishment in or about Japan shall not become binding on the United States unless ratified by the Senate as a treaty in accordance with article II, section 2 of the Constitution, or approved by the Congress by act or joint resolution specifically referring to such agreement or arrangement."

At the time I said:

"We are today signing a blank check, the amount of which we do not know. We cannot control our own forces. It is our responsibility to raise and maintain armies. It is not the responsibility of the Defense Department or the State Department. If we accept the treaty without this reservation, that is the situation in which we shall find ourselves. There is no policy involved; that is left to the administrative agreement.

"Here * * * is the tentative administrative agreement, containing several pages, closely typed. We are delegating our constitutional right—to whom? I do not know whether Mr. Acheson will send Jessup or Dean Rusk to work out the administrative details. I do not know whether the Defense Department will send a representative. I do not know whom Japan will appoint. * * * So I do not know who is going to conduct the negotiations, and I do not think any other Senators know."

I also said: "This is a shocking way for a great nation to conduct its governmental business. Under the American form of government, the executive department presents its agreements in clear, complete, and concise form. The Senate consents or withholds consent. A policy is established and the administrative problems are left to the Executive to be carried out."

The reservation was defeated by a vote of 45 to 22.

On July 15, 1953, the Senate ratified the NATO Status of Forces Agreement. Fourteen other Senators and I voted against it, because we felt it deprived the servicemen we send overseas of the full protection of the Constitution they are supposed to defend.

In the last session of Congress, I introduced a resolution, Senate Joint Resolution 94, asking that the President renegotiate article 7 of the NATO Status of Forces Treaty to provide for exclusive American jurisdiction over our servicemen stationed overseas. The treaty provides that any article in it can be renegotiated.

On June 20, 1956, I personally requested the Senate Foreign Relations Committee to hold hearings on my resolutiton. Copies of my 12-page statement can be obtained from my office on request.

I stated that if we are in the process of abandoning our Constitution, we shouldn't begin with our servicemen.

No action was taken by the committee last year, so I reintroduced the same resolution this year as Senate Joint Resolution 40. It was referred to the Foreign Relations Committee.

If you are interested in the resolution, I suggest that you write to Senator THEODORE F. GREEN, chairman of the Senate Foreign Relations Committee and request the committee to hold hearings on Senate Joint Resolution 40.

Valedictory and Salutatory Addresses at Commencement Exercises at the Capitol Page School

---

EXTENSION OF REMARKS

OF

HON. FRANK CHURCH

OF IDAHO

IN THE SENATE OF THE UNITED STATES

Wednesday, June 19, 1957

Mr. CHURCH. Mr. President, one of the very minor irritations I have felt since coming to these Halls, was the absolute lack of any occasion upon which I might give fatherly advice. But on June 10, in the House Ways and Means Committee room, that lack was remedied. I was privileged at that time to address the graduating class of the Capitol Page School, on the occasion of their commencement exercises. I was deeply pleased at being asked to make this address, but I even more enjoyed listening to the valedictory and salutatory addresses of Mr. Jerry Bostick and Mr. George Weaver. It seemed to me, as I listened, that these young men symbolized the earnestness, the courtesy, and the devotion to duty which unfailingly characterizes the service rendered by our young associates here at the Capitol.

I should like again, today, as I did on June 10, to wish these graduates productive and rewarding lives, filled with much success and happiness.

I ask unanimous consent that the addresses by Mr. Bostick and Mr. Weaver and the list of the members of the graduating class of the Capitol Page School for 1957 be printed in the Appendix of the RECORD, following these remarks.

There being no objection, the addresses and list were ordered to be printed in the RECORD, as follows:

VALEDICTORY ADDRESS BY JERRY BOSTICK, CAPITOL PAGE SCHOOL COMMENCEMENT EXERCISES, HOUSE WAYS AND MEANS COMMITTEE ROOM, JUNE 10, 1957

Distinguished guests, Mr. DeKeyser, members of the faculty, and friends, I realize that graduation ceremonies similar to ours are taking place in every community at this time of the year, but I feel confident that no graduates have been given better advice or have heard sounder words of wisdom than those expressed by our distinguished speaker, Senator CHURCH. Thank you for taking time from your busy schedule to speak to us this evening.

Tonight we are bringing to a close our training in the essentials that will help us as we undertake more advance training, which in turn will futher mold our lives. The years immediately ahead present a greater challenge than ever before to all of us and we are determined to do our part in providing progressive leadership. We, therefore, pledge that we will do everything possible to spur our country on to a full realization of its magnificent potentialties. This can be done if we will forever keep in mind the words of the English writer and critic, John Ruskin, who said, "It is not how long we live, but how well we spent the life we lived that counts."

The opportunity to be graduates of the Capitol Page School and of working from day to day with the lawmakers of this Republic will forever be among our most cherished memories. The many unique experiences and wonderful associations we have been privileged to have here will bear fruit in our lives and in our work. We hope that we can show our appreciation to our sponsors by using these experiences to further the welfare of our Nation in the years to come.

We fully realize that perhaps we would be saying nothing of a brighter tomorrow if we had not had the patience and understanding shown us by parents, teachers, and associates. To those who have assisted us so greatly we pay our humble respects.

Only the future will tell whether we achieve the high standards which have been set before us. With Divine guidence we hope to contribute toward America's ultimate goal—peace, preparedness, and prosperity.

ADDRESS BY GEORGE WEAVER, SALUTATORIAN

Distinguished guests, Mr. DeKeyser, members of the faculty, and friends, when a mighty ship slides down the ways into the sea which is to be her home, a great crowd gathers to see her launched. When the vessel, completely outfitted and motors tuned, sets forth upon her maiden voyage, it is customary for a number of dignitaries to sail with her, to enjoy her luxury, and to experience her power.

So it is tonight, my friends, that this mighty ship of the class of 1957, which has been 4 years in the building slides down the ways into the sea of life and sets forth upon her maiden voyage.

We are proud, as we gather for this joyous occasion, that we have so many friends who have come to witness the launching. Because we are happy that you have come, we want to extend to each of you a hearty welcome. We know that among our guests are many relatives and friends. We appreciate deeply your interest in our achievements and in our future.

Numbered among you, too, are our sponsors and the many other acquaintances which we have made during our days on Capitol Hill.

The work on our ship, the class of 1957, was begun 4 years ago. As freshmen, we undertook the task which we are completing

this evening. As the months progressed, the congressional elections of 1954 overtook us, and with our task barely begun, a change in the control of Congress compelled many of our classmates to return to their homes. Disrupted, but with spirit, our class continued. New boys, from all sections of the country, came to replenish our ranks and to continue our mission. Each year saw fewer and fewer of the original class return, until tonight, there are in the class of 1957, only two members who were present when the class first met in September 1953.

This is our victory, our night of triumph, the time when all the work which has been put upon our great ship begins to bear fruit. It has been a glorious past, but with the faith and strength of youth, we know that the best is yet to be. It is with genuine pleasure that we extend a welcome to you as you join us in our launching ceremonies.

LIST OF GRADUATES, 1957 CLASS OF THE CAPITOL PAGE SCHOOL

Jerry Creel Bostick.
Charles Vernon Bush.
Allen Warren Davis.
Lawrence Colin Fernsworth.
Richard L. Fruin, Jr.
George Ward Gaines.
Robert M. Jacoby.
Drew M. Johnson.
Jed Joseph Johnson, Jr.

E. John Watson.
George Arthur Weaver.
Roger Stephen Williams.

Address by George Meany, President of AFL–CIO

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, June 19, 1957

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address by George Meany, president of the AFL–CIO, which was delivered at Knoxville, Tenn., last evening.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY GEORGE MEANY, PRESIDENT, AFL–CIO

Permit me first of all to express my thanks to the United American Mechanics for its American Citizen Award for 1957. I accept it not as a personal honor, but as a valued recognition of the contributions made by the free trade union movement to the development of American democracy.

Your organization, now more than a century old, is a fraternal society, rather than a labor union, yet our objectives are similar—to uphold the dignity and to enhance the opportunity of the workingman.

America has frequently been described as the land of opportunity. In this country of ours, it is possible for men and women with ability and determination to rise from humble beginnings to positions of eminence. What is it in our way of life that provides limitless opportunities for the individual? What is it that closes the door against human progress in other lands?

Perhaps the answer can be summed up in one word—"freedom." Where freedom exists—freedom of conscience, freedom of association—mankind can and does move forward. Where dictatorship reigns, where the rights of individuals are suppressed, human progress is stopped in its tracks.

We in America cannot afford to become smug about the advances we have achieved nor about the rights and privileges we enjoy. We must prove ourselves worthy of them through the way we live with our fellow men and the way we serve our country and its cause.

No matter what our private aspirations or desires may be as individuals, we cannot escape our common obligations to make, each and every one in his own way, our full contribution to the maintenance and preservation of our cherished free way of life.

For at this very moment, unceasing war is being waged by powerful forces to eliminate our free way of life from the face of the earth. Each of us must face up to this unpleasant fact. The advocates of communism have not in the slightest degree abandoned their objective of complete world domination for their particular brand of totalitarian tyranny. In the very nature of things, this objective cannot be attained unless and until all forms of government based on justice and human freedom are destroyed. The Communists are pursuing this goal with a zest and a zeal that could well be emulated by those who enjoy the rights and privileges of freemen. And mawe no mistake about it—America is their No. 1 target, for with America out of the way, the rest of the free world would become easy pickings for the Kremlin.

Naturally, the leaders of Soviet Russia constantly disclaim any hostile intentions toward us or other free lands. They say all they want is peaceful coexistence. They blandly offer to engage in constructive competition with us through trade and cultural exchanges. They even assert that we have erected an Iron Curtain against their efforts to become more friendly.

This was the theme of the remarks uttered by Dictator Khrushchev when he was permitted to invade millions of American homes with a telecast interview. This was the same Khrushchev who condemned thousands of Hungarians to death and sent tens of thousands to slavery and exile, merely because they wanted to be free and live in peaceful coexistence as an independent nation alongside the Soviet Union.

In dealing with the Communists, we in America must learn to separate fact from friction, truth from propaganda. We must learn to recognize the forces of evil by their actions rather than their words. We must judge by results, rather than glowing predictions.

The current Soviet disarmament proposal presents a clear case in point. It calls for the suspension of further test explosions of nuclear weapons under a system of monitoring by the United Nations.

Because of the growing fear throughout the world that the air we breathe may become poisonously contaminated if atomic tests are allowed to go unchecked, this Soviet proposal will undoubtedly be welcomed. In fact, some people will hail it as the forerunner of peace.

Peace would be wonderful, if true, but let us not be carried away by the prospect merely on the basis of the new Soviet proposal. It does not contain the faintest guaranty of disarmament, nor the slightest assurance of peace.

The United States and our allies have said before and we should reiterate even more strongly now that we will be glad to join in any effective plan to halt atomic tests. But we dare not stop there. We must continue to exert every pressure to prevail upon Russia to agree to a worldwide cessation of production of atomic weapons and fissionable material for military purposes under a program of strict international inspection.

Halting bomb tests will not prevent any aggressor from going to war if it can continue to produce atomic weapons and gain the opportunity, while other nations relax their vigilance, to achieve preponderant superiority in such weapons.

Furthermore, even if all atomic weapons are banned effectively, that alone is no guaranty of peace. Actually, it might have the opposite effect and precipitate war. As Winston Churchill pointed out some years ago, the greatest deterrent to war in our time is the superior atomic-bomb strength held by the United States. If such weapons were outlawed tomorrow, Soviet Russia would enjoy an overwhelming position of military strength, both in conventional weapons and in the size of armed forces.

Obviously, then, it would be folly for our country to sidetrack the question of disarmament on the limited basis of ending bomb tests or even on the basis of outlawing certain selected weapons. We must have real assurances that disarmament will be general and will be geared to peace, rather than war.

The latest Soviet line, as expressed by Khrushchev, is that the Communists need not resort to war because other countries, including our own, will within a couple of generations turn to communism voluntarily in emulation of the perfect state achieved by Soviet Russia.

The Communist dogma of the attainment of a perfect state has been proven false time and again in almost 40 years of practical application. The recent lesson of Hungary has convinced any remaining doubters that there can be no human values where life is not guided by moral values. And we know only too well that there is very little room for morality in a land where the power of government over man is total and absolute. No social panaceas, no economic reform is worthy of attainment, if people have to be clubbed and terrorized into accepting it.

The crisis mankind faces today cannot be fought only with economic, political, military, and material weapons. In this epic struggle between freedom and despotism, it is the battle for men's minds that will be decisive. To win that battle, individuals and organizations who believe in freedom must do their part, rather than leave the entire burden upon government.

For in our free society, public opinion is the controlling factor. Enlightened public opinion is essential to the good health of our society. Enlightenment comes not only from the expressions of public officials, or from information and opinions expressed in the press, radio and television, but from the positions taken by the voluntary institutions which serve as the arteries of our democratic way of life. By this, I mean not only labor unions, but management organizations, cultural groups, fraternal societies such as yours, institutions of learning, and community social service associations.

It is our job to help refute and expose the hypocritical output of the Soviet propoganda mills. It is our duty to help overcome whatever damage may have been wrought by permitting Khrushchev, without challenge or confrontation with the truth, to broadcast his lying and poisonous propaganda to the American people.

In the long run, of course, public opinion will be influenced by results rather than words or promises. It is incumbent upon us, therefore, to do considerably more than we have done thus far to bring the benefits of American democracy to all our people.

This means an ever higher standard of living, under an economy that provides well-paying jobs for those able and willing to work, as well as proper rewards to management and capital. Toward this end, it is es-

sential that a higher degree of labor-management cooperation be attained through the combined efforts of industry and trade unions. When the future of free labor and free enterprise are under common attack by totalitarianism, it should be obvious that it is to their mutual interest to work more harmoniously together.

It means also that all Americans, regardless of race, color or creed, must be accorded full enjoyment of civil rights, as well as equal educational, political, and economic opportunities.

It requires a broader view of our internal problems and a broader program of action to overcome them than we have as yet undertaken. If we set ourselves to the task, we can quickly build the schools our children so desperately need. We can get rid of slums and provide decent homes for every American family at prices within their reach. We can equip our Nation with modern roads and ultramodern airports to meet present and future needs. We can protect our people from annual flood disasters, as was done in this area by TVA.

Yes; we can do all these things and do them, let me add, without going broke—for our history proves that progress does not bankrupt a nation but encircles it.

And what would be the result? Happier lives for the American people—of course. But more than that—much more. It would prove to our own people, once and for all, that democracy works for their benefit. It would prove to the people of other nations, including the people now enslaved behind the Iron Curtain the fundamental truth that the free way of life is the only way of life that makes human progress possible.

There are pessimists, I know, who contend that progress is strictly an illusion, that, in the classic phrase, the more things change, the more they remain the same.

That is no longer true of the world we live in. Through the process of civilization, the face of our world has taken on a new look. For one thing, it has shrunk. Less than a century ago, to get around the world in 80 days was considered the fantastic dream of a romantic novelist. Today, the trip can be made comfortably and conveniently in eight. And there is a far cry between the slingshot of Biblical times, which might kill one man at a hundred paces, and the H-bombs of today which can wipe out an entire nation thousands of miles away.

Nor is it fair to say disparagingly that human progress has been mainly destructive in nature, that we have learned to kill wholesale instead of retail, but that's about all.

On the contrary, the power to produce for the good of humanity has advanced to such a high level by this time that, given assurance of peace and worldwide freedom, we could in a very short period banish hunger from every section of the globe and all the diseases and human misery that stem from poverty.

Yes, we have this great, humanitarian goal virtually within our grasp. Only one thing stops us from achieving it promptly—the necessity of diverting a disproportionately large measure of our wealth and energy into vital defenses against attack by those who would destroy everything we are trying to build.

I venture to predict that if the Soviet world were to lay down its arms tomorrow, renounce communism and embrace the ways of peace and freedom, America would be more than willing to lead the way for the adoption of a 5-year plan that would bring abundance of the fruits of civilization to every nation and every people on earth—and on schedule, too.

Unfortunately, we cannot look forward with any degree of confidence to such an easy way out of the present world crisis. We will have to do it the hard way, by working, by praying and perhaps even by fighting for the eventual triumph of human liberty and peaceful progress.

But if we hold true to our ideals, if we strive to put them into practical effect through liberal and progressive programs, we will surely win the crucial struggle for the hearts and minds of men—and that battle may be the key, the turning point, to peace and victory.

In Time of Flood, Texas Plans for Future Water Supplies

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 19, 1957

Mr. JOHNSON of Texas. Mr. President, some solid, sound thinking is being done in my State these days about the overall water problem. The recent floods, coming at the end of years of drought, have stimulated the kind of constructive thought shown in a recent editorial, entitled "Water for Tomorrow," which appeared recently on the always interesting editorial page of the Fort Worth Press.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WATER FOR TOMORROW

Drouth is recent and the memory of man is short; but floods and full reservoirs today do not mean water in the taps tomorrow.

The caprices of Texas weather are pointed up, in a sense, by a report to city council from its water engineers and consultants, Freese & Nichols.

It is a tribute to planning foresight (as well as hindsight) that their recommendations, first submitted in dry October, have not changed substantially by wet June.

In brief, the 27-year program calls for development of reservoirs on the Trinity River tributaries of Cedar Creek, near Athens, and Richland Creek, near Corsicana, and the construction of pipelines to a filter plant near Forest Hill.

The plans also call for raising the storage levels of Eagle Mountain and Grapevine Lakes; and for building with Federal aid a flood control dam on the West Fork, near Boyd, between Eagle Mountain and Bridgeport Lakes.

There is one apparent concession in the engineers' report to criticism of the Richland Creek project. A full study is proposed into the possibility of using water from streams in southeastern Oklahoma. If this source is shown feasible, it could be substituted for the Richland Creek project.

There is obvious merits in devising a system for gathering water supply to Fort Worth from widely separated sources. Rainfall in one area may be abundant while sparse in another.

The vagaries of weather being something we have to live with, we believe the study of Oklahoma as a water source is worth the cost to taxpayers.

Let's have all the facts in planning a $124 million water program.

Torch of American Justice Dims—The Girard Case

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 19, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Fort Wayne (Ind.) News Sentinel of June 17, 1957, discussing the case of Sp3c. William S. Girard.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TORCH OF AMERICAN JUSTICE DIMS

For a long time we Americans had reason to be justly proud of our meticulously exacting tradition of American justice. Everything about our judiciary and our constitutional rights therein implemented, long was held in highest esteem by legal minds and laymen alike. The very thought of warping justice even by the slightest margin in the interest of expediency was regarded as positively intolerable.

However, we, unhappily have lived to experience the laying of violent hands on our traditional concept of justice and the judiciary. An American President even proposed in this latter day of expediency that the highest judicial tribunal be "packed" by the executive.

Our pride and sense of assurance in American justice has again been rudely shocked in the past few days.

In Washington, Robert Dechert, General Counsel of the Defense Department, in a formal press statement, the other day indulged in a flagrant prejudgment of the case of American GI William S. Girard. In the first place, it patently is not within the province of the counsel for the Defense Department to judge at all, for he has no judicial authority. But even if he had, it would be shockingly unethical for him to pass judgment on any phase of the case prior to trial. Nevertheless Dechert adjudged publicly that Girard had "enticed" Naka Sakai closer to the firing range in Japan before he killed her.

Also in Washington, Oliver Gasch, the Federal district attorney, presented an alarming objection to the habeas corpus proceedings brought for the purpose of rescuing Girard from a Japanese court and having him produced in Washington, for a judicial determination by our own highest courts on the question of the situs of his trial. Gasch says the habeas corpus should not prevail, for the reason that the matter of turning Girard over to the Japanese was "a political decision not subject to judicial review." If that is not an amazing tacit contention that expediency rather than justice should prevail, we do not know what could constitute one.

If the executive department can ruthlessly wrest an American citizen's constitutional rights away from him with impunity before trial, it can bar him from invoking them in a trial court. And if the executive department can actually do that, does not that virtually sign a death warrant for the Bill of Rights?

Gasch does not want the court to lose any time in blessing his brief with judicial approval either, for he says that, "every moment of delay is extremely dangerous in the conduct of our foreign relations." He ap-

parently feels that the danger to an American citizen's constitutional rights and his life, is of little consequence.

In connection with these latest assaults on the citadel of our traditional constitutional rights, Indiana's United States Senator WILLIAM E. JENNER has made some highly pertinent comment. Commenting particularly on Dechert's statement, JENNER said:

"The important point in this case is not whether William S. Girard is innocent or guilty. That remains to be determined at the trial. The question is whether his constitutional rights have been forfeited by surrendering him to a Japanese court for trial instead of letting him be tried by a United States military court. This turns on the critical question whether he was engaged in the performance of his duties when the incident occurred. I am shocked and amazed that the General Counsel of the Defense Department would issue a statement to the press which gives substantial help to those who will prosecute this young American soldier.

"Mr. Dechert had no excuse for making any comment whatever on the guilt or innocence of Private Girard. That is the sole responsibility of the court which ultimately tries him. Mr. Dechert had no excuse whatever for making a statement on the evidence to be presented in any court proceeding, when he was not in court and not under oath. We do not tolerate trial by press conference in this country. Mr. Dechert had no excuse for issuing voluntarily a derogatory statement about an American soldier, when that statement certainly will be used by the prosecution when he is on trial, perhaps for his life."

Senator JENNER, as he usually is, is again eternally right in this instance. When men high in the councils of the Government, who should be most zealous champions of our inherent constitutional rights, want to sacrifice them on the base altar of expediency, we can only ask:

What has become of our traditional American justice?

David Dubinsky, President of International Ladies Garment Workers Union

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 19, 1957

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a lead article by Mr. John Herling, Washington correspondent, relating to the life and works of Mr. David Dubinsky and his leadership of the International Ladies' Garment Workers Union. Mr. Dubinsky celebrated 25 years as union president this past week.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ANOTHER DAVE—DUBINSKY'S WORK MAKES GARMENT UNION UNIQUE

(By John Herling)

WASHINGTON.—David Dubinsky, 65-year-old head of the International Ladies' Garment Workers Union, celebrating 25 years as union president this week, happily steals the international labor spotlight from that other Dave—Beck—still president of the Teamsters Union.

The contrast between the two Daves is considerably greater than the 3,000 miles from New York, Dubinsky's headquarters, to Seattle, where Beck centers his business empire.

To hear Dubinsky's admirers talk about it, one must measure the span between them in character, trade-union integrity, and philosophy, not in miles but in light-years. Dubinsky has brought himself and his union a long way.

When Dubinsky became president of the Ladies' Garment Workers Union in 1932, the country was ditched in depression, the union's membership was down to 45,000 members (not all of them paying dues). Today 450,000 ILG members work in shops in cities stretching from the Atlantic to the Pacific.

In the last quarter century, this union has set a standard of achievement for advancement of its members and the industry's welfare which excites pleasure and envy. Dubinsky made his union rich, not himself.

But it was a tough, slogging struggle through the "garment jungle," beset at various times by Communist traps, gangster killers, seductive offers of friendly employers, and the usual temptations of soft living after a strenuous climb.

Back in 1932, the ILG was ridiculed by the Communists in a ditty: "Dubinsky's union is a no-good union. Is a company union by the bosses and Hillquits and the Thomases. They give false promises; and give to the workers the doublecross."

Within a few years, Dubinsky made such opponents eat those barbs. He countered with Pins and Needles, a musical comedy which became the labor movement's paean of triumph over economic disaster and political subversion. It produced songs of "social significance" produced by young men whose fathers had worked in the shops and sung by a cast made up of young men and women still employed there.

This Dubinsky-led union is unique. Made up originally of immigrant workers, it has become one of the most fiercely American-conscious.

Address of Hon. Charles H. Silver, President, Board of Education, New York City

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, June 19, 1957

Mr. KEFAUVER. Mr. President, on June 19 I had the opportunity of attending a luncheon meeting of the Times Square Club in New York, at which time their annual service award was presented to Hon. Charles H. Silver, president of the Board of Education of New York City. It has been my pleasure to know Mr. Silver for many years. He has given unselfishly of his time, thought, and great ability to many noble and worthwhile causes, and has made an outstanding contribution to the cause of education in New York City as president of the school board.

Mr. Silver made an inspiring speech in accepting the award, and the speech contains several recommendations which have to do with the Federal Government, in connection with education, which should be considered by all Members of Congress.

I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY HON. CHARLES H. SILVER, PRESIDENT, BOARD OF EDUCATION, AT ANNUAL LUNCHEON OF THE TIMES SQUARE CLUB AT SHERATON-ASTOR HOTEL, JUNE 9, 1957

If the words, thoughts, and deeds of a man may sometimes flower in the recognition of his fellows, then you, my friends, have tendered me a rare bouquet. All who strive for the public good profess to seek no laurels for their efforts. Yet I must humbly confess that you have profoundly warmed my heart with this welcome award which I accept in deep and abiding gratitude.

The feelings that well up in me at this moment are beyond my powers of expression. I know that in presenting me with this citation you are paying symbolic tribute to every member of our board of education, to every teacher and administrator in our schools, to that vast heroic legion, known and unknown, which labors to advance the cause of learning.

Your tribute is not to me alone. It is to all who watch a child's eyes grown wide with wonder as he finds the way to truth and understanding in this world of endless enchantment. It is they who plant the magic seeds of faith, patience, and inspiration that flourish in the mind of youth and grow into the tree of knowledge—the tree of life.

In their name I thank you for this great honor. I can recall many rewarding moments in a rich, full life, but I shall cherish none with greater pride than this.

Few organizations are as close to my heart and interest as the Times Square Club. Your valued member Ben Fine is one of my dearest friends, and I have so many other friends among you that I could not pause long enough to name them all. Let me just pay tribute to your growing strength and influence, to your selfless dedication to the welfare of the community, and, most of all, to your magnificent service to youth in furthering the advancement of education and widening the opportunities for scholarship among our young people.

For me to say that yours is a noble cause would be doing it small justice. They who crusade for education today are the builders of a better tomorrow for all mankind.

In the terrible uncertainty of our times, when each morning's headlines emphasize a growing social unrest in many areas of the earth's surface, the educator bears a tremendous responsibility. He is the watcher in the night. He is the bearer of the torch against darkness and distrust. He is the guardian of our civilization, assailed, as never before, by the forces of dissension and unimagined potential destruction.

The burden of the educator is not an easy one in these days of momentous decision—and time is running out. We can no longer allow ourselves the luxury of error. In the relentless struggle between the slave world and the free world, education must meet the challenge and we should not defer to dollar diplomacy or political expediency.

An alarm has sounded, not a moment too soon, to match the haste of other nations who are producing 10 scientists, 10 engineers, 10 chemists, 10 teachers to our 1. We are engaged in a vast intellectual mobilization of our Nation's greatest resource, our young people. This is the business of the trained and devoted champion of education.

We must develop throughout our society an alert and vital awareness of the truth that, today, knowledge is power, as at no other period in the time of man, and that, against the poised threat of universal chaos, it may, indeed, be his only hope of survival.

Those of you who know me can attest to the fact that mine has been no mere lip-service to the cause of education. My work on the board is not casual commitment to routine duties. I am as intense in my obligation to the tasks of heading the largest

system of public education in the world, as I expect every teacher and staff member to be, and I look upon the public schools of New York as citadels fortified to war upon man's oldest foes: ignorance, indifference, intolerance, and want.

Education is to me, as I know it is to you, an army with banners, defending our way of life and perpetuating the American dream. Every citizen is personally concerned in these objectives and their fruits will be peace for ourselves and a more abundant life for our children.

In this spirit, I have come to you not only to express my warm appreciation of the honor you have done me, but to justify it, in some measure, with a few concrete proposals I would put before you as educators and leaders of public opinion.

Here, in America, nearly every child who graduates from elementary school goes on to high school. Of those who complete this secondary course of study, more than a third go on to college, and that proportion is increasing at such a rate that we may soon lack colleges for even the most qualified to enter.

We have come to regard education with less emphasis on the classic concept of academic achievement and more on preparation for successful living and technical skills.

Our role in world leadership, our advances in science, our amazing industrial growth, and our rich contributions to art, literature, drama, music, and the whole varied tapestry of the fine arts, are all nourished in our schools. We have provided specialized institutions to offer this kind of education for all the children of our city. It is a substantial program, but we are getting it done.

We are spending a hundred million dollars a year in building schools, and 400 million to maintain our school system. We are learning that the investment is paltry compared to the dividends it returns among our youth. We are proving that the method works, and it is a model for other communities throughout the Nation.

I am convinced, however, that we have not gone far enough. The system should be widened so that we not only establish schools of special training in specific fields, but that we also improve our ways of identifying those students who can benefit most by intensive and rapid education "in depth." As we try to develop each child's potential, let us make sure we find those who can profitably pursue higher education. Then let us secure the funds and the facilities to avoid the tragic possibility of failing posterity by permitting even one such child to fall by the wayside. In this hour, in this land of ours, we cannot afford to let anything keep out of college or other institution of higher learning even one child who wants such an education and whose abilities demand it.

An education is the birthright of every American child, but we are straining the mandate of democracy if we cut it to the same pattern for all. We must not put the brakes on inspiration, and impede our competitive progress against the intellectual product of other lands in our zeal for equality. Equality, in the educative sense, does not imply sameness of curriculum or slackening of opportunity for mental growth, but means developing each child according to his individual ability.

I have one more proposal to extend for your consideration. We have all given thought, and we have gotten a substantial amount of action, in seeking to improve the earning power of our teachers. In raising their salaries, we have lifted the dignity of the teaching profession, and, I am sure, we are attracting more young people to prepare for a teaching career.

Let me advocate one further step to relieve the dangerous teacher shortage. I would like to see every young man and young woman, who enters college with the sincere purpose of preparing for the teaching profession, insured of the financial ability to fulfill this aspiration. Scholarships from private funds, State or Federal funds, should guarantee that we do not lose this vital talent because of economic need.

I think it is a proposal worthy of thorough study. I know you are among the ones who care and who realize the importance of enough teachers to meet the needs of the future. If we fail the children, now, in this, we fail them forever.

I have spoken to you from my heart of the things that are closest to my heart because I think they are also close to yours. I have been inspired to speak in this fashion by your own courageous identification with the cause of learning. It is evidenced by every act of the Times Square Club and by this annual education meeting in which I am so proud to have played a part:

The award you have granted me, I shall treasure all my life. It will spur me on to work in the flame of your own zeal for the welfare of our boys and girls.

That flame, the flame of education, which you have guarded and kept alive, is the beacon of the future—the hope of all the world.

Long-Range Minerals Program

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 19, 1957

Mr. MURRAY. Mr. President, the executive board of the International Union of Mine, Mill, and Smelter Workers has expressed itself as sharing with many Members of this body the belief that the long-awaited long-range minerals program of the Department of the Interior is a disappointment to the workers and operators in the United States mining industry.

In a statement issued June 8, the executive board pointed out:

The "relief" promised by the administration has precipitated a new crisis that threatens a vital sector of our economy with extinction.

I ask unanimous consent that the statement issued by the executive board of the International Union of Mine, Mill, and Smelter Workers be printed in the Appendix of today's RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

LONG-RANGE MINERALS PROGRAM

DENVER.—The following statement was adopted Friday, June 7, by the executive board of the International Union of Mine, Mill, and Smelter Workers at its meeting here at the Cosmopolitan Hotel:

"The long-awaited long-range minerals program of the Eisenhower administration is a disappointment to the workers and operators in the United States nonferrous mining industry. The relief promised by the administration has precipitated a new crisis that threatens a vital sector of our economy with extinction. Coming immediately after a serious curtailment of the barter program and the announced intention of terminating stockpiling—both of which contributed to lead-zinc price stability in recent years—the new program has created additional anxieties that have already further depressed the price of zinc and promise more mine shutdowns and layoffs.

"Far from realizing its declared purpose of promising a strong, vigorous, and efficient domestic metal industry as essential to the long-term economic development of the United States, the Department's program appears aimed at the liquidation of our domestic lead and zinc mining industry in the interests of giant corporations who find it more profitable to import cheaply produced metals from abroad.

"The toppling of lead and zinc prices within recent months has already brought the shutdown of important mines in Oklahoma, Missouri, Kansas, New Mexico, Idaho, Montana, and elsewhere, and has added thousands of skilled miners, smeltermen, and allied workers to the ranks of the unemployed. Few of the remaining lead-zinc mines still in operation can long survive unless the present downward trend of prices is sharply checked and reversed. No single United States lead-zinc property can continue at its present level of operation under prevailing price trends.

"The situation in copper, while not yet as serious as that in lead and zinc, also contains many dangerous possibilities. A 30 percent drop in the price of copper in the past year plus the continued accumulation of world stocks—in the face of rising supplies—similarly threatens the future life of many United States mines.

"To all of this, the Interior Department's program offers only a gesture in the form of a sliding scale of import duties on lead and zinc, adjustable every 3 months. These added duties, in effect, would most severely penalize countries like Canada—with wage levels most nearly comparable to those in the United States—while easily permitting producers in low-wage countries to jump the low tariff hurdle. The Department's program shows not the slightest recognition of any problem, current or potential, in copper. Nor does it in any way consider possible means of correcting the present imbalance between supply and demand by expanding demand through research on new applications for basic metals.

"We consider the preservation of a domestic mining industry in the United States as essential to a healthy and expanding economy. Our Nation can ill afford the severe consequences to defense and to the economy resulting from the destructive effects of closing down many mines unable to operate within the present price and market structure. Such resulting loss of irreplaceable natural resources and long acquired human skills is a tragic waste.

"We, now, as we have consistently over many years, favor the maximum expansion of foreign trade, both as a means of promoting peaceful cooperation among nations and of providing greater markets for our products. Such expansion, we are convinced, must be based upon a domestic policy of full employment and high wages. We do not now, nor have we ever, subscribed to the theory that expanded foreign trade can only be secured at the cost of liquidating our own industry and our own jobs.

"The present administration's failure to project effective remedies for the now critical situation of the United States nonferrous metals industry places the issue squarely before Congress. Drastic remedies are now required to prevent what could develop into a collapse of an essential United States industry. In the present immediate situation the industry requires and must have some real promise of price stability. That, we are now convinced, can only be achieved through some limitation of imports that are now flooding our markets.

"In the present situation we regard the principles of the Metcalf bill, H. R. 7844, as offering possibilities for affording the lead-

zinc mines a necessary breathing spell. Under the Metcalf bill, import taxes would be imposed whenever the domestic market prices of lead and zinc fall below certain specified peril points.

"Should the situation in copper continue to deteriorate, this union will then urge upon Congress the passage of a bill embodying a similar peril point and import tax for that metal.

"Any limitations of imports—to the extent that it may continue to be necessary—should, we believe, be based upon the more equitable general principles embodied in the Lanham bill, H. R. 2815. In general, under that bill, imports of any product are geared to the estimated consumption needs of the domestic economy, with import quotas established for each country; the quotas for individual nations are based upon the past record of imports with additional allowances granted for rising wage rates. We urge Congress to combine these general principles with those now contained in the Metcalf bill.

"At the same time we frankly recognize that any bill of this sort is not an ultimate solution to the problems of this industry. Unless some of the more basic problems are frankly considered and dealt with, this type of hypodermic treatment, although presently necessary, could create new difficulties that would compound the problem.

"The basic problem that must be met is how to bring world demand into balance with supplies that are increasing and will continue to increase at a faster rate. Any long range program must look for and develop new markets for nonferrous metals, both in terms of new uses and applications, and expanded world trade—particularly to those countries with the greatest potential for economic development.

"We urge upon Congress and the industry the undertaking of a greatly expanded research program for the development of new applications of copper, lead and zinc. We, for our part, will support such programs in every possible way.

"We similarly welcome the proposals of Senators JOHNSON, MAGNUSON, and MANSFIELD for reexamining the avenues of world trade. New trade, if placed upon a realistic business basis, should prove to be mutually advantageous to all countries and could conceivably open up greatly expanded markets for the products of this industry."

"You Killed Our Son"

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 19, 1957

Mr. SPARKMAN. Mr. President, with the ever-increasing number of persons killed and injured in auto accidents on our highways, I think it appropriate to insert in the RECORD an item which appeared in the April 1957 issue of Minutes, an insurance magazine. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

"YOU KILLED OUR SON"

(The following is from a letter written by the mother of a small boy to the woman whose car hit and killed him. It was written out of grief, anger, and desperation. It is not pleasant to read. We publish the letter in the hope that it will cause some drivers to think twice about the terrible responsibility they assume when they get behind the wheel of a car.—THE EDITOR.)

I don't know why I'm writing to you, but I've been thinking and I have to know the answers to three questions. Why didn't you sound your horn? Why, after your husband told you to watch the little boy, didn't you slow down? And why didn't you swerve the car to the right or apply your brakes? You could have, you know. You could have done any or all of these things and Stevie would still be living. Why didn't you?

Can you realize what you've done to us? Until you killed our son we had four wonderful boys we were proud of. We had a happy home and a good life because we were all together. Now, because of you, one of our boys is gone forever. He's lying out there in the cemetery, forever alone. He was never alone in his life until we took him there and left him. I can't eat or sleep; all I do when I close my eyes is dream of Stevie. I see him running alongside the road, I see you hitting him. I dream I have him back again and he's just a tiny baby.

I've tried to forgive you but, God help me, I can't. All I can think is that I would like to see you hurt the way you have hurt us, to destroy your happiness the way you destroyed ours. I keep thinking you still have a happy home and all the children you gave birth to, while I should have 4 beloved sons and only have 3.

Do you know what he died from? You crushed his little head, you broke his left leg and gave him internal injuries. All that, and you said you were only going 35 miles an hour. Do you know that you knocked him out of his little shoes?

Maybe if you could answer the questions I've asked I could forgive you and find peace of mind. Can you answer them, or is it impossible? Aren't you afraid now to let your children out, for fear someone as careless and heedless as you might come along and kill them with a car?

Award of Citation to Gerald D. Crary by Indiana Technical College

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 19, 1957

Mr. MUNDT. Mr. President, Mr. Gerald D. Crary is one of the most illustrious citizens of Deadwood, S. Dak. He also has the rare distinction of having been elected as the imperial potentate of the Ancient Arabic Order of the Nobles of the Mystic Shrine for North America.

I am happy to offer for printing in the Appendix of the RECORD the citation which has been awarded to Gerald D. Crary by the Indiana Technical College, of the great State of Indiana, conferring upon him the degree of doctor of humanities. This is a fitting tribute and recognition of the great public service which "Gerry" Crary has rendered as the Imperial Potentate of the Mystic Shrine during the current year.

I ask unanimous consent that the citation be printed in the Appendix of the RECORD.

There being no objection, the citation was ordered to be printed in the RECORD, as follows:

CITATION

President Keene, Mr. Gerald D. Crary, of Deadwood, S. Dak., is now chief executive of Fish & Hunter, the company he entered as a stenographer at the age of 18. He served successively as treasurer and secretary before he assumed his present position. He has been active in civic and philanthropic organizations as director of the Deadwood Chamber of Commerce, as an officer in the Greater South Dakota Association, and as chairman of the colorful Days of '76 annual fete. He also has the rare distinction of having been elected as the imperial potentate of the Ancient Arabic Order of the Nobles of the Mystic Shrine for North America and in that capacity he is president of the board of Shriners Hospitals for Crippled Children in North America and the Hawaiian Islands.

In his life he has exemplified the pioneering spirit of the great Northwest, a spirit composed of rugged individualism on the one hand and active helpfulness to one's neighbor on the other. From the age of 6 Mr. Crary has lived in a community where "neighbor" has the Biblical definition of "any man in need." Through these many years, while serving his fellow beings, Mr. Crary has acquired wisdom and has come to understand man, his hidden hungers as well as his sublime kinship with his Maker.

Mr. President, because of these accomplishments and others, this altruistic man is recommended for the degree, doctor of humanities.

DR. DIXON.

Gerald D. Crary, because of your self-sacrificing endeavors for your fellowman and of your zealous attention to responsibilities, Indiana Technical College, upon the approval of its board of directors, is honored to pay tribute to you and through the authority in it vested by the State of Indiana, confers upon you the degree, doctor of humanities, honoris causa, with all of the rights, titles, privileges, and obligations appertaining thereto.

President KEENE.

MAY 19, 1957.

"Open Curtain" Policy Worth Trying, Dallas News Says

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 19, 1957

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that an editorial entitled "Proposed Broadcasts to Russian People," published in the Dallas Morning News on June 12, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PROPOSED BROADCASTS TO RUSSIAN PEOPLE

Unwittingly the Kremlin boss, Nikita Khrushchev, may have torn a hole in the Iron Curtain. His recent broadcast to the American people may make it difficult for him to refuse to allow American spokesmen to make similar broadcasts to the Russian people.

Few here have resented the Khrushchev broadcast, loaded as it was with propaganda. But many will support the view of Senator LYNDON JOHNSON and others that efforts should be made to reciprocate. Khrushchev might agree to an American broadcast. If

he refused, he might lose caste with some of the neutrals.

A regular series of radiobroadcasts, and even telecasts, in each direction might help to narrow the breach between the two peoples. If the Russians understood that our aims are only for security, peace, and trade, they might realize the falsity of some of the propaganda they have been fed and might become more friendly toward us.

No realistic persons would expect any quick conversion of the Russian people, but an exchange of views by radio and television could result in better understanding and less tension. The chance for some degree of success would justify the effort.

Juvenile Court Judge Orman W. Ketcham

EXTENSION OF REMARKS
OF
HON. J. ALLEN FREAR, JR.
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Wednesday, June 19, 1957

Mr. FREAR. Mr. President, on May 1, 1957, during an executive session of the Senate, I addressed myself to the nomination of Mr. Orman W. Ketcham to be judge of the juvenile court of the District of Columbia.

My purpose in so doing was to call the attention of my colleagues in the Senate to the possible hazards of placing on the bench of this specialized court any person without the requisite specialized qualifications.

The Washington Daily News in the issue of Friday, June 14, 1957, carries a very interesting editorial, entitled "Danger Ahead," which is very closely related to my remarks of May 1 concerning this nomination.

Mr. President, I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DANGER AHEAD

The District's new juvenile court judge, Orman W. Ketcham, is falling behind in his work.

True, he's new and inexperienced in his judicial role. But the plain fact is, he hasn't been able to keep up. His predecessor did.

It confirms, we think, what the News said before Judge Ketcham's appointment, when we warned against disturbing the functioning of this court by replacing experienced Judge Edith H. Cockrill, simply to create a political plum and reward somebody with it.

Judge Ketcham is a victim of what we believe to have been lack of administrative responsibility in failing to realize that a one-judge court depends upon the skill and ability of one person. A new judge, no matter how able, is bound to operate under a handicap.

We have asked Judge Ketcham for exact figures on the backlog that has accumulated during his 20 days on the bench. He refused to give them to us. His reply: "If or when such figures are prepared for me in the regular course of business, I will be glad to explain them to a News reporter."

Nuts. This kind of stuffed-shirtedness will neither win friends, influence people, or keep the secret.

Operation of the court speaks for itself.

Last Tuesday, for instance, Judge Ketcham set a date in the middle of August for the jury trial of a man who denied parentage of a child born out of wedlock. June to August. When Judge Cockrill was replaced, jury trials were virtually current.

Traffic cases had so piled up, unheard, that on Monday of this week Judge Ketcham scheduled no other cases. Municipal Court Judge Mildred Reeves, substituing for him in his absence at a Capitol Hill hearing on the new juvenile court bill, heard 12 cases in an hour.

Last week he told the News he will ask the commissioners for money to keep the court open on Saturdays, paying overtime to court workers, if Congress fails to approve a second judge.

But actually, of course, it is his part of the court operation that has fallen behind; not that of court workers.

All this, we believe, is due to one simple fact: The court is suffering from an ill-advised political appointment.

We do not see that a new juvenile court judgeship would do much to correct this situation. There would be merely two inexperienced judges instead of one.

If a new juvenile court judgeship had been created before Judge Cockrill's replacement, and if she had been allowed to stay on until the court readjusted itself (even if she were then replaced for political reasons), the court would not have been upset. As it is, the quick move to create a new judgeship unhappily smacks of more interest in another $17,500 or $18,000 political job than in the social service and justice this court was designed to provide.

We've watched Judge Ketcham at work. We're convinced that he is conscientious and is making every effort to do what he believes is a good job.

But the plain fact is it isn't as good as before, and things may get worse. We hope they won't. We hope we'll be the first to announce that juvenile court is up to date in its cases, and that it is running smoothly again.

All we're doing today is raising a warning flag.

Court Ruling Called Blow to Congressional Inquiries

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 19, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Court Ruling Called Blow to Congressional Inquiries," written by David Lawrence, and published in the New York Herald Tribune of June 19, 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

COURT RULING CALLED BLOW TO CONGRESSIONAL INQUIRIES

(By David Lawrence)

WASHINGTON, June 18.—The Supreme Court of the United States has crippled the effectiveness of congressional investigations. By one sweeping decision the Court has opened the way to Communists, traitors, disloyal citizens and crooks of all kinds—in business and in labor—to refuse to answer any questions which the witness arbitrarily decides for himself are not pertinent to a legislative purpose. This means that every time a Senator or a Representative asks a question in an investigation the witness must be given a clear explanation of what the legislative purpose is and this may even have to be confirmed by a resolution adopted in each case by the Senate or the House. Then it may have to be passed upon in a decision by the Supreme Court before it is really valid.

This cumbersome procedure kills future investigations that seek to expose the ways and means by which the Communists infiltrate America. It kills any searching investigation of racketeers in the labor-union movement, or any other kind of corruption. Had the Supreme Court's new law been in effect during the Harding administration it would have killed off any exposure of the Teapot Dome scandals. Had it been rendered in 1950 Alger Hiss could have avoided answering questions asked by the House Committee on un-American Activities, whose charter of authority held ever since 1938 now is torn to shreds by the Supreme Court.

MUST ANTICIPATE QUERIES

Senator MCCLELLAN of Arkansas, Senator KEFAUVER of Tennessee, Senator EASTLAND of Mississippi, and the chairmen of various House investigating committees might as well shut up shop. The power to investigate has been curtailed drastically on the ground that Congress has to particularize in every case and specify in its resolutions exactly why it wants certain questions answered. It must somehow anticipate all the questions the investigating committees may wish to ask. This is, as Justice Clark, a former attorney general, declared in his dissent, both "unnecessary and unworkable." He added:

The resulting restraint imposed on the committee system appears to cripple the system beyond workability.

This is because the Supreme Court has now set itself up as knowing more about what Congress needs to know to legislate than Congress itself thinks it does. In the words of Justice Clark:

"The majority (of the Court) has substituted the judiciary as the grand inquisitor and supervisor of congressional investigations. It has never been so."

LEGAL VACUUM SEEN

All the justices, of course, are honorable men and conscientious in the pursuit of their duty. But for the most part they live in a legal vacuum, without awareness of the actual operations of Communist subversion. To them, apparently, there is no Communist menace, no such thing as infiltration by stooges of the Communists, and if a man admits he has worked and cooperated with the Communists and then refuses to tell who else he met in such activities, this is construed now as a right of silence derived from the first amendment which, now added to the fifth amendment, makes it easy for treason to be protected.

The Supreme Court majority realized, to be sure, the gravity of its decision and tried to soften the blow by minimizing the future danger. All the Congress has to do now, the Court patronizingly suggests, is to take "added care" in authorizing the use of compulsory process. But as Justice Clark realistically points out, the Court doesn't say how this added care could be applied in practice.

The Supreme Court majority—Chief Justice Warren, Justices Frankfurter, Black, Douglas, and Brennan—seemed to think that the desire of the individual to be spared any unpleasant publicity due to his past associations was more sacred and more important than the right of Congress to get information about Communist plots and infiltration in order to pass laws to safeguard the Nation against destruction. The ruling was proclaimed, too, by the Court that any one hereafter can teach and even advocate the forcible overthrow of the Government of the United States, but unless there is conclusive proof that these teachings are part of a conspiracy to incite someone to some action, the

viewpoint expressed is merely "abstract doctrine" and not subject to punishment by any law Congress might pass.

CALLED A FATEFUL DAY

There were other significant cases decided by the Supreme Court on Monday, June 17, 1957, which will make that day a fateful one in American history. State legislatures were told that they, too, cannot investigate and require witnesses to answer their questions except where it can be proved that the State has an overriding interest in a subversive individual which outweighs his right to silence, and this, in turn, might have to be reviewed in each instance by the Supreme Court of the United States.

In another case, the Court didn't decide the merits of the disloyalty charges against John Stewart Service but said the Secretary of State couldn't reverse his Under Secretary who had ruled favorably to Mr. Service. In still another case involving 14 persons convicted of Communist activity under the Smith law, 5 were set free and 9 ordered to stand trial—so as to ascertain the facts as to activities of the defendants relating to one word—"organize"—in the existing law. It could mean activities with reference to a new party or subversive group or a continuing process of organizing in Communist Party circles as the Department of Justice has contended.

Since organization work in the Communist Party now is ruled by the Court to happen only at the creation of the party in 1945 and is adjudged not to be a continuing process, certain defendants are set free because they were not prosecuted within the time prescribed in the statute.

SEES ESCAPE FOR CROOKS

These decisions will cause much consternation throughout the country. They will make happy in some respects, the so-called liberals who have long crusaded against congressional investigations of Communist activity, but it will make them unhappy in other respects because it gives crooked labor racketeers, shady business operators, financial manipulators and other wrongdoers a means of escape from congressional exposure.

Naturally, Moscow should be happy. All they need do now is to instruct their Communist Party in the United States how to adapt themselves to the new ruling. The Communist Daily Worker editorials have assumed all along that the Court would decide some day as it did this week, that a man can betray this country and in certain circumstances get away with it.

Supreme Court Decision in the Communist Cases

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Wednesday, June 19, 1957

Mr. STENNIS. Mr. President, I ask unanimous consent that an enlightening editorial, entitled "Fateful Decisions," from the June 18 issue of the Memphis (Tenn.) Commercial Appeal, one of the Nation's most outstanding and influential newspapers, be printed in the Appendix of the RECORD.

I commend the reading and consideration of the points raised in this editorial to the entire membership of the Congress, as well as the public at large.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FATEFUL DECISIONS

The Government's legal drive against Communists and subversives was further weakened yesterday by three Supreme Court majority decisions.

These make the total of such adverse rulings 13 for 1 year.

They have created such chaos and confusion that Federal prosecutors do not know where to move next.

They threaten the entire internal security structure and will have tremendous impact even on the acts of the Congress.

In one far-reaching decision yesterday, the High Court practically nullified two key sections of the Smith Act—the antisubversion statute under which the Government has been making successful attack against internal Communist strongholds.

In that action, the Supreme Court, with Justice CLARK sharply dissenting, reversed convictions of 14 top California Reds, ordered 5 acquitted and new trials for 9 others.

In so doing the Court held, in effect, that:

"Organizing" the Communist Party is not an indictable offense if the organization work started more than 3 years before the indictment was returned.

To be an indictable act, advocacy of violent overthrow of the United States Government must be an "advocacy of action" and not merely "advocacy of abstract doctrine."

All of the 14 defendants had been convicted of conspiracy to advocate violent overthrow of the Government.

Justices Black and Douglas went even further than their associates. They said they would have acquitted all 14 defendants.

In another of yesterday's decisions, the Court reversed the contempt-of-Congress conviction of John S. Watkins for refusing to identify onetime Communist associates for the House Un-American Activities Committee.

The Watkins ruling could effectively damage future congressional investigations into subversion and particularly communism.

Yesterday's third decision held that former Secretary of State Dean Acheson exceeded his authority when he fired John Stewart Service in 1951 as a result of a Loyalty Review Board finding. The Court did not rule on the loyalty issue itself, but on the procedure used by Mr. Acheson to dismiss him.

The Government was still trying to evaluate the disastrous effect of the Jencks case decision of 2 weeks ago when the new batch of adverse rulings was hatched by the High Court majority to add further uncertainty and create greater confusion in the law enforcement field.

The Jencks decision would open FBI files to criminal defendants. The Smith Act ruling practically eliminates two of that law's features. The Watkins decision makes a comparable finding very likely in the case of Arthur Miller, playwright recently convicted of contempt of Congress. Both had used "conscience" as an excuse for not answering committee questions.

It is for the Justice Department and the Congress to determine how weaknesses in existing laws can be overcome and thus nullify the High Court's extreme liberalism and capricious reasoning.

The decisions which have dealt law enforcement and the Nation's internal safety such heavy body blows may be among the most fateful handed down since the founding of the Republic. They effect every community, every home, and every individual, for they shake the very foundations of our collective freedom.

Lesson for the North Country

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 19, 1957

Mr. SPARKMAN. Mr. President, there recently appeared in the Ogdensburg (N. Y.) Journal an editorial, which was republished in the Florence (Ala.) Times, entitled "Lesson for the North Country," which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

LESSON FOR THE NORTH COUNTRY

Two weeks ago a group of New York State residents were in northern Alabama as the guests of the Reynolds Metals Co. They were taken there in order to see what a large industrial plant like Reynolds could do for a community. What they saw was a revelation.

We in northern New York have waited so long for our dream of industrialization that many residents of this area have begun to be cynical of the prospects for such a development. If the experience of the section of Alabama in the vicinity of the Reynolds plant at Listerhill is any criterion, however, the wildest dreams of the optimists are to be fulfilled.

Before Reynolds moved into the Tri-Cities area of Florence, Sheffield, and Tuscumbia, it was a predominantly rural area in a depressed part of the State. Today it is a thriving industrial area with one of the highest economies in the Southeast. The population of the area has more than doubled. Wages, retail sales, and other indexes of prosperity have skyrocketed to even more than doubled what they were before Reynolds entered the area.

The experience of this region of Alabama indicates what northern New York can expect after the power project is completed. True, Ogdensburg itself is about 40 miles from the site of the Reynolds plant. But Ogdensburg's economy is tied to that of the entire county. We in this city will benefit from increased prosperity, since the only city in the county is a natural trading center for a large area.

Furthermore, workers in the tricities area are transported to the Reynolds plant from a 40 to 50 mile radius. The same will be true here. Furthermore, although Reynolds began in Listerhill with only a reduction plant, aluminum fabricating plants were soon attracted to the area. This also can happen in northern New York.

The area of northern Alabama where Reynolds plant is located is in the Tennessee Valley, in the heart of one of the great public power developments of the world. The three cities of Florence, Sheffield, and Tuscumbia are all serviced by municipal power facilities, buying low cost power from the TVA.

The opinion of people in the area was unanimous that municipal power had been an invaluable partner in their industrial expansion. The profits from the municipal systems had provided the cities with revenue to build new municipal facilities, and also to pay for expert help in seeking allied industries to the Reynolds Co. to further their expansion. Public power had also extended the benefits of electricity to all before. "The TVA taught the private utilities how to make money in this section," the editor of the local paper commented.

Everyone to whom the North Countrymen talked seemed flabbergasted when told that the citizens of Ogdensburg had rejected the same opportunity to capitalize on the benefits of the low cost power to be generated on the St. Lawrence.

Industrialization has brought a whole new outlook to northern Alabama. What was a depressed, defeatist community is now a progressive and publicspirited one. The parallel with northern New York is obvious. We too can have growth and progress if we are alert enough to capitalize on the opportunities which will be ours once the seaway and power project are completed.

The Centennial of Spring Green, Wis.

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, June 19, 1957

Mr. WILEY. Mr. President, Thursday, a week from now, a grand community of my State will begin to celebrate its centennial.

The fine city of Spring Green, Wis., will blow out, so to speak, 100 candles on its birthday cake.

Spring Green is a community well known to us of the Badger State in its own right. But it is known particularly to Wisconsin and to the Nation because it is the home of one of America's greatest figures, the famed architect, Frank Lloyd Wright.

Just last Saturday this remarkable American celebrated his 88th birthday. It was most fitting and customary that on this occasion he looked not backward but forward to a billion-dollar cultural center in Iraq, on which he is about to begin to draw the plans.

Mr. President, I have spoken on previous occasions in tribute to this remarkable figure, one of the truly great architects in American history.

Mr. Wright is a man of bold imagination, forthright courage and deepest conviction.

He is a symbol of American individuality, American nonconformity, American willingness to take on any foe or combination of foes in pursuit of one's ideals.

Folks in Wisconsin at times have had their differences with this great indivdual, but I know of no one who would dispute that we are proud indeed that for more than a half century he has made hs home at Taliesin, near Spring Green, and that America has contributed so towering a figure on the world scene.

I send to the desk now the text of a Wisconsin State Journal article of June 16 with regard to Spring Green's centennial, as well as two earlier articles from the same newspaper with regard to Mr. Wright's 88th birthday, and his plans for the cultural center at Baghdad.

I ask unanimous consent that these articles be printed in the Appendix of the RECORD.

I convey heartiest congratulations to Mr. Wright and to Spring Green, which he has helped make deservedly famous.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Wisconsin State Journal, Madison, Wis., of June 16, 1957]

INCLUDING FRANK LLOYD WRIGHT DAY—SPRING GREEN ADDS TO CENTENNIAL—TALIESIN OPEN HOUSE SCHEDULED FOR CELEBRATION

(By John R. Prindle, assistant State editor)

SPRING GREEN.—When Spring Green celebrates its centennial June 27 through 30, many features will be familiar to those who have attended other centennials in this area.

Beards are being grown, history and tradition are being stressed, women are wearing old-time costumes, and attics and trunks have been searched for clothing and souvenirs of the old days.

FACE PENALTIES

Wearers of beards will go scot free while those who refuse to grow them will be incarcerated. Women who fail to dress in the garb of yesteryear will face certain penalties too. These things are standard in any town celebrating its centennial.

Spring Green will have all this—and more. More because Spring Green is the home of one of America's most widely known and controversial figures—Frank Lloyd Wright.

Taliesin, Wright's Wisconsin home, will be opened to the public during the centennial celebration, and June 29 has been set aside as Frank Lloyd Wright Day.

Wright is scheduled to make a speech on that day, and it's safe to predict he will have something interesting and quotable to say.

(For years Wright has had a habit of saying things that are quoted and remembered.)

IMPORTANT PART

Archie Fleming, Spring Green village president and chairman of the centennial board of directors, said last week that Taliesin is "cooperating 100 percent" with centennial planners and that Frank Lloyd Wright Day will be an important part of the 4-day program.

Eugene Masselink, Wright's secretary, said, "We at Taliesin are glad to cooperate with the village in planning this program. After all, we're neighbors."

Taliesin's contribution toward the centennial will include open house June 27, 28, and 29, during which visitors may tour the grounds, all of Hillside, which includes Wright's studio, farm buildings, and little theater; and most of Taliesin itself. Not open to the public will be only that part of Taliesin which is Wright's own living quarters.

PROVIDE FLOAT

Wright's students will provide a float for the June 30 parade, and the Taliesin student choir will sing during Wright Day. Besides a float, the students will enter a "circus band" in Sunday's parade.

"It may not be your idea of a circus band," Masselink said, "but it's Taliesin's." During all four days of the program, an exhibition of Wright's work will be displayed in Spring Green High school.

A lot of work by a lot of people has gone into the planning of the centennial. Among those who have been the busiest are Mrs. Clarence Scholl and Eldon Pratt, who edited a 152-page centennial booklet entitled "The First 100 Years."

INCLUDES HISTORY

Dedicated to Wright, the booklet includes a history of the Spring Green area, historical photos borrowed from many sources, and a general story of Spring Green's first century. Mrs. Scholl said she spent 3 months preparing the booklet, which now is on sale.

The cover design, a sketch of the village and surrounding country, including Taliesin, was done by Masselink.

Here are some of the events scheduled by Spring Green Centennial planners who have in mind 4 full days of activity:

A centennial breakfast, free entertainment, horse pulling contests, picnics, 4-H Club home demonstrations, Rural Day contests, and the Centennial Queen's Ball, all scheduled for June 27.

CENTENNIAL PAGEANT

A children's parade and games and contests, an afternoon tea honoring old settlers, a Brothers of the Brush and Sisters of the Swish program, and the first presentation of the centennial pageant are scheduled for June 28.

A luncheon for Wright at noon and the pageant at night for June 29.

The big centennial parade at 1 p. m., a concert by the Zor Shrine band, Madison, a horse show, and fireworks are scheduled for June 30, the last day of the celebration.

TAKING PART

Bands from many communities and drum and bugle corps will take part in Sunday's parade.

Assisting Fleming in planning and coordinating the centennial program are Delpha Oleson, secretary-treasurer, and Ken Olson, Ron Fox, and Mitchell Rens.

But besides these program officials, practically everybody in Spring Green and the area is getting into the swing of things.

If Spring Green's centennial isn't a whopping success, with something of interest for everyone, it won't be the fault of Spring Green folks.

[From the Wisconsin State Journal, Madison, Wis., of June 9, 1957]

WRIGHT TURNS MELLOW, IF ONLY ONCE IN A YEAR

SPRING GREEN.—Among the many things that Frank Lloyd Wright has not been called during the many years of his tempestucus career is "mellow."

The internationally famed architect whose home is Wisconsin has, in the past half-century or so, been called many things—ranging from the highest possible praise to something else again.

He has been lauded by emperors and kings and damned by businessmen, officials, and others. He is a stanch believer in what he calls the "uncommon man." But among the ranks of the very people whom he considers to be "uncommon men" you will find those who are both pro-Wright and anti-Wright.

Seldom, if ever, has Wright been referred to as "mellow."

Yet at least once a year—especially lately—Wright does get as close to being mellow as Frank Lloyd Wright ever can.

That's on his birthday.

Saturday was Wright's 88th birthday. He spent it at Taliesin, near Spring Green. Saturday night's birthday party was a quiet celebration that included only a "few family friends." His family, of course, includes the 60 members of his Taliesin Fellowship, Wright's students.

Last year his birthday party was a big one, with scores of guests from all over the country. It was a lavish affair complete with gorgeously gowned women, a millionaire client or two, cocktails, a dinner, and a program in the Taliesin little theater.

This year Wright chose to observe his 88th year quietly.

"It's just another birthday," he said Saturday night. "We blew the whistle last year; this year we're having a quiet family affair."

Part of his decision to have a simple birthday observance may have resulted from the fact that Wright has been a busy man lately. He recently returned to Wisconsin from Iraq, where he has been commissioned to design a billion-dollar cultural center in Baghdad.

He dealt directly with King Faisal of Iraq in planning the huge project (and has said

since that kings are a lot easier to deal with than certain county board and State legislature members) and agreed Saturday night that it was the biggest project he has ever tackled.

"Perhaps it's the biggest job anyone ever tackled," he said.

As practically everyone knows, Wright is involved in another project that is somewhat less grandiose than the Baghdad job and a lot closer to home. It is the Monona Terrace project in Madison.

He expressed the hope Saturday night that a certain bill now before the State legislature would not be passed. Failure of passage would mean the last major obstacle in the path of Madison's Wright-designed lakefront community center was out of the way.

"Madison will always be sorry," he said, "if that project isn't completed, and others throughout the State and the Nation will be sorry, too."

People who have dealt with Wright over the years have called him many things—shrewd, brilliant, a showman, a genius, a charlatan, the world's greatest architect, a man impossible to do business with, a man of great charm, an egotist, a dreamer, a coldhearted businessman.

But at least once a year, on the occasion of his birthday, he becomes a genial host, a kindly man who, as busy as he is, can still find time to thank those who wish him well.

And his formula for 88 years of vigorous life is, "I love my work; I love my wife; and I tell the truth."

[From the Wisconsin State Journal, Madison, Wis., of June 7, 1957]

KING'S EASIER SUBJECT THAN CITY—WRIGHT PLANS BILLION DOLLAR JOB

(By Richard Bradee)

SPRING GREEN.—Frank Lloyd Wright, the famous architect, said he will begin drawing plans Saturday—on his 88th birthday—for a billion-dollar cultural center in Baghdad.

"If old age is like this," he said, "I don't think I'll mind it."

Wright said King Faisal of Iraq has $1,480 million to spend on a 3-year project to make Baghdad "a city that there will be nothing to compare with in the world."

He will design a cathedral, opera house, university, and art gallery for an island in Baghdad.

He said his dealings with the King are pleasant compared with the squabble with the city of Madison over a civic center and auditorium.

"Kingship has its advantages," Wright said. He said that the King doesn't have to worry about "political tycoons" trying to block beauty.

"Trying to get something from the people is different," he said. "There's a total mischief campaign in Madison to stop Monona Terrace."

The Terrace civic center has been fought to the State supreme court and is now the subject of a bill in the legislature.

Wright said it "takes money and intelligence" to build a beautiful city. "Having only money makes it worse than it was before."

He said the King and people of Iraq have both. "Civilization began with them," he said, "and the Arabic people are extremely intelligent."

He said that the idea that the Arabs will succumb to communism is "posh." "The Arab's word is good," he said, "and communism is entirely contrary to their nature."

Wright said that he has no intention of slowing up his work because of advancing age.

He said the Baghdad cultural center is ready for the drafting board. Details of the projects will be revealed later.

His birthday observance will be held at a "quiet celebration" this year, Wright said. "A few family friends."

He said that the "family friends" include the 60 students at Taliesin. "That's my family," he said.

Electronics Spark Arizona Industry

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 19, 1957

Mr. GOLDWATER. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "Electronics Spark Arizona Industry," published in News Front, the picture news magazine for management, May 1957.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ELECTRONICS SPARK ARIZONA INDUSTRY—MAJOR COMPANIES LEAD STATE'S EXPANSION; POPULATION, BUSINESS, FARMING KEEP PACE

Arizona, which now exceeds even California and Florida in rate of population growth, is rapidly becoming a center of the United States newest major industry, electronics.

One corporation alone, the Motorola Co., is turning out 8,000 transistors daily in its Phoenix plant. This is as many of the tiny successors to the vacuum tube as are produced in the rest of the country combined.

Another huge company, General Electric, has just moved its computer division to Arizona's capital. Other electronics giants which have transferred operations to Arizona include Sperry Rand, International Electronics, Collins Radio, and Westinghouse's Mel-Par division.

Combining the electronics and aviation fields are such Arizona newcomers as Hughes, the largest employer in the State, Douglas Goodyear Aircraft, and AiResearch.

The Army Electronic Proving Ground is located at Fort Huachuca in the Tucson area.

In other fields, Reynolds Metals' Arizona plant is the largest aluminum extrusion mill in the world, and National Malleable & Steel Casting operates a major foundry in the State. Light industry also is moving in.

In all, more than 400 manufacturing enterprises have moved to Arizona since March 1948, when the State government, local business groups and the Valley National Bank, the largest in the Rocky Mountain area, combined in an all-out drive to attract industry.

Population, 749,587 in the 1950 census, passed 1 million in 1956, and is expected to reach 2 million in 1975. Greater Phoenix, with 200,000 people in 1948, now has 350,000, and Greater Tucson, 115,000 in 1948, 205,000. Nonagricultural employment has risen since 1948, from 152,000 to 253,000, and bank deposits from $425 million to $859 million. Real estate also is booming.

Arizona has a healthily balanced economy. Mining income, $196 million in 1948, was $352 million in 1955. Crops and livestock produced $229 million in 1948 and $354 million in 1955.

Another important income source is the tourist industry, which, like electronics and other forms of delicate precision manufacturing, is attracted to Arizona largely by the mild, equable, humidity-free climate.

Tourists, most of whom come during the winter season, are expected to spend more than $200 million in the State in 1957, against only $90 million in 1948.

But balancing the climatic advantage, important today when critically scarce engineers and scientists can dictate working conditions, is the fact that Phoenix and Tucson, nestling among high mountains, are potential smog areas. This threat has been obviated by inviting only non-smoke-producing industries.

The products of such industries, fortunately, have usually a very high value-to-weight ratio. This means that freight costs, high because of Arizona's geographic position, are relatively unimportant.

Other obstacles have been overcome by abolishing State taxes on manufacturers' inventories, sales to the Federal Government and goods warehoused for ultimate delivery to destinations outside Arizona.

The Russian Offer

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 19, 1957

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the St. Paul Pioneer Press of June 17, 1957, entitled "The Russian Offer," which relates to the suspension of H-bomb tests proposed by the Soviet and our reaction to that proposal.

I note for my colleagues one short paragraph, which reads as follows:

A temporary suspension of these tests on a trial basis might, however, be justified as a first step toward more significant disarmament agreement, as a means of relaxing tension in world affairs, and as a concession to widespread fears about the effects of radioactive fall-out from nuclear explosions.

I also ask unanimous consent to have printed along with this editorial, a similar editorial relating to the same subject matter, which appeared in the Washington Post and Times Herald of June 15, entitled "Suspension of Testing."

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the St. Paul Pioneer Press of June 17, 1957]

THE RUSSIAN OFFER

The suspension of H-bomb tests proposed by the Soviet Government would be to its advantage in the present armed peace that exists. But if the Russians are willing to give comparable advantages in some other phase of arms control to this country and its allies, it might be a basis for agreement.

For this reason the proposal is worth looking into. Whether it can be made acceptable depends on what the Soviet Government has to offer in compensation.

The reason why the stopping of these tests would be advantageous to the Communist side is because our command of atomic weapons is and will continue to be the chief offsetting factor to the great superiority of the Russians in conventional land power. Further advances in the science and tactics of atomic warfare are more likely to favor the

security of the defense than the interests of the potential aggressor.

If atomic weapons were to be ruled out entirely, for example, while conventional ground forces were left substantially intact, the world would be at the mercy of the huge armed manpower of the Soviet Government.

A temporary suspension of these tests on a trial basis might, however, be justified as a first step toward more significant disarmament agreement, as a means of relaxing tension in world affairs, and as a concession to widespread fears about the effects of radioactive fallout from nuclear explosions.

The Soviet leaders in fact have made this proposal in part at least to capitalize on that fear. They no doubt hope to get a propaganda advantage out of their offer even if they fail to cause the arresting of our atomic progress. This aspect of the proposal must also be given serious consideration. Scientific opinion is sharply divided on the possibly injurious effects on the human race of a continuance of these tests on probably an increasing scale.

Some leaning over backward in deference to such fears would perhaps be justified. The Soviet proposal has one feature that holds promise. There would be an exchange of teams of observers who would be stationed in this country, Soviet Russia, and other nations to see that the terms of the agreement are kept. The larger nuclear explosions are detectable even now all over the world. But there has been much doubt about the smaller weapons. The stationing of these observers could be so arranged that this possibility of evasion would no longer exist. It would also provide a limited experiment in international inspection which will have to be a basic part of any genuine disarmament agreement.

It is also important for future control of atomic weapons that the number of nations possessing them be kept as small as possible. At present only America, Britain, and the Soviet Union belong to the club. If there were to be no further tests, then there could be no further additions to the list to complicate the problem and increase the danger of keeping the peace.

For these reasons a short-term agreement on a trial basis conditioned on sufficient concessions from the Russians is worthy of consideration. If they did not act in good faith the tests could be resumed without any great harm having been done. If they were to prove good faith, then a big step toward real disarmament would be possible.

[From The Washington Post of June 15, 1957]

SUSPENSION OF TESTING

The Soviet Union's proposal of a 2-year ban on nuclear testing, accompanied by an appropriate enforcement by inspection, deserves the most careful scrutiny. This is, on its face, an extremely hopeful development. The first consideration is that it would relieve the world of the danger of further poisoning of its atmosphere by radioactive fallout from experimental nuclear explosions. That objective is certainly of as much concern to the Western powers as to the Soviet Union.

The second substantial advantage in the plan is that it would put into effect an international inspection system. This is what the United States and other free countries have been contending for over a period of many years. To be sure, the proposed international commission, which would report to the United Nations Security Council and General Assembly, would have a very limted function—to check on nuclear blasts in violation of the moratorium. But the important point is to get the principle of international inspection established. If successful in operation in this limited field, it could more easily be extended to other phases of arms limitation.

A third gain from such a step would be the breaking of the disarmament stalemate. All the powers now seem committed to the idea of taking a small first step. This Soviet proposal is a smaller step than the Western statesmen want, and it will have to be matched against the proposal soon to be made by Harold E. Stassen, Chief of the United States delegation to the London disarmament talks, in collaboration with our allies. Long experience has also shown that Soviet plans announced in general terms are likely to appear far more attractive than they are when the fine print is examined. Nikita Khrushchev's comments in Helsinki are sufficient to indicate the need for caution. If this plan proves to be in fact what it purports to be on its face, however, it would be a pity to drain the substance out of it by excessive haggling.

President Eisenhower went pretty far in a recent news conference in linking any ban on tests of nuclear bombs with the abolition of nuclear weapons. But he was speaking of "forever banning tests" and not of a temporary suspension such as the U. S. S. R. has now proposed.

The effect that such a ban would have on the development of an intercontinental ballistics missile with a nuclear warhead, in the light of Commissioner Libby's statement to the Joint Committee on Atomic Energy, will be one of the things the West will have to examine most seriously. If the Soviet Union has such a weapon already, and we do not, suspension would confer unequal advantages. What a conundrum this is for statesmen to ponder.

Alongside such fearful doubts and questions, however, are considerations of human survival of other sorts. We must face up to the fact that whenever nuclear tests are suspended or terminated there will be ignorance or at least doubt as to which country is the most advanced at the instant.

The Soviet proposal certainly cannot be dismissed out of hand or lightly discounted by statesmen who realize that discussions now have reached a stage where the outcome may involve the fate of all mankind.

There Is One in All Our Lives

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 19, 1957

Mr. SPARKMAN. Mr. President, I am sure all of us carry in our memories recollections of one or two outstanding teachers who played an important part in shaping us into the persons we are today. I have in my hands a very moving editorial from the Jackson County Sentinel, published at Scottsboro, Ala. The editor and publisher of the paper is P. W. Campbell.

This editorial points out the tendency on the part of too many of us to forget those teachers of long ago who did so much for us. I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THERE IS ONE IN ALL OUR LIVES

Recently, in This Week magazine, Mr. Bernard Baruch suggested that it would be a good thing if more of us would speak up in grateful praise of those teachers who helped and inspired us to make the most of life.

The article served to remind me that it had been quite a while since I had written to my favorite teacher and a thorough search through all my papers, files, and old addresses revealed the cruel news that her address was no longer available to me.

So it is, now, that a link with my most memorable past has been broken. A connection is no longer there with a woman that I've both loved and despised, laughed at and laughed with, taken the proverbial apple to on many occasions (usually just before an examination), thrown paper balls at on equally as many occasions, mimicked, and often longed to hug at intervals during my association with her.

How she could tolerate me, to say nothing of the other guys and gals in her class—every one of them at least four times as difficult as me, I'm sure—is now beyond my imagination. However, at that time if she undertook to scold me or if she should give me a low mark (or a swat with a board), I could easily believe that she was being hard-hearted to a very unselfish and ambitious student. It all depends upon the way you look at a situation—the perception is altogether different at the various age distances from which it is viewed.

Mrs. Cavender was my English teacher. Not an altogether beautiful woman, she had a large nose and her hair was a bit wispy below the braid across her head, but certainly not unattractive then—or now, I'm sure. She came from an elegant old Georgia family and I learned my high-school English under her supervision in a schoolhouse of the Arkansas Ozarks—far removed she was from the magnolia trees and footmen of her wealthy kin. But she did her dead-level best to become a part of the kids of our community, always taking part in church programs, rummage sales for the boys' and girls' clubs, and chaperoning groups on picnics and hayrides. She always seemed to enjoy it, too.

I was working in the country newspaper office in the town and this was my life. I got $5 a week for working every morning, afternoon, and most nights, plus all day Saturdays at setting type—by hand—and that money was an outright gift so far as I was concerned. I'd have worked somewhere else in order to pay the newspapers for that privilege. How I loved it.

And my greatest admirer and booster was Mrs. Cavender. She always had a word of encouragement for me in my journalistic attempts. She complimented me on the way I wrote up the school plays, the football games, and the things that most folks never seemed to stop to think how it had gotten in the newspaper. Even when I misspelled the words and then set them wrong (I also was chief copyreader) she didn't laugh, just kinda' frowned and reminded me that if I ever wanted to be a newspaperman, I'd have to learn to spell better.

It was a sad day for me when I discovered that she was going to have an addition to her family (she'd been eagerly looking forward to a child for a long, long time). She finished out the year—if she hadn't I would not be able to this day to diagram a sentence—and I'm still looking for an opportunity to someday show off this ability, so far have seen no occasion for ever learning it—or write a decent composition.

I corresponded with her for several years, sent her Christmas presents, a lot of junk jewelry from the South Pacific islands and even went about 50 miles out of my way once while on a business trip to visit with her. Then came my marriage, kids 1, 2, and 3, and we lost track of one another.

Now, the latest blow. I have written to her former address and the letter came back marked, "Moved to Republic of Panama." Well.

She's not exactly the type to go roaming about in banana fields and waterfronts of the canal region without a good excuse.

Anyhow, I'll not worry right now about the reason she's gone South—maybe she's teaching English to the Spanish, she could make 'em wish they'd learn it.

Next to my mother and grandmother, she had as profound influence on my life as anyone I can recall. She's the same thing in my life that every reader of this column has in his or her life—a figure somewhere along the road has encouraged, challenged, or helped shape your future.

We are all grateful—but do we always show it? Sometimes we wait too late.

The Responsibilities of Free Public Schools

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 19, 1957

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article written by Charles H. Tennyson, executive secretary of the Texas State Teachers Association, published in the June 16 Dallas (Tex.) Morning News.

It is a distinguished piece of writing—an inquiry into the responsibilities of our free public schools; in particular, our high schools.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

EDUCATION LAYS BASE FOR PROGRESS—HIGH SCHOOLS HAVE DUAL RESPONSIBILITY

(By Charles H. Tennyson)

The public schools are the starting place, the fountainhead, for dissemination of general knowledge in this country.

It is generally conceded that much of the development in America during the last 50 years has been made possible by that peculiarly American institution, the high school.

The high school has the dual function of preparing students for college and providing terminal education for those who cannot or will not continue their education. In preparing young people for college, high schools must lay a good foundation for the most important task of higher education—teaching students to think.

In our complex society, these functions require not only more teachers, but better trained teachers at both levels. This is all the more difficult today because of the more profitable opportunities open to college graduates. Some areas of our economy each year drain off many of the best teachers and prospective teachers needed to continue the supply of top quality high school graduates. Unless this situation is put into proper perspective we may choke off at the source the supply of highly trained college graduates which industry and business need so badly.

In Texas and nationwide, more students than ever before are graduating from high school and entering college.

A recent United States Office of Education survey disclosed that for every 10 pupils in the fifth grade in 1946–47, 5.5 graduated from high school and 2.8 entered college. A survey 10 years earlier found that only 3.9 graduated from high school and only 1.2 entered college out of every 10 students in the 1936–37 fifth grades.

Texas figures reflect the same trend. The Texas Education Agency's latest statistical report shows that in the last 20 years the number of school-age children has increased 18.6 percent. But the number of high school graduates in the same period jumped 45.5 percent. Thus, not only are more students enrolled in school, but more of them are staying in school for longer periods. These twin problems carry over into the field of higher education.

GROWTH PREDICTED

In 1955–56, Texas had 372,768 high-school students and 64,291 high-school graduates. The Texas Education Agency predicts that by 1961–62 these figures will grow to 503,809 and 87,233, respectively.

This 5-year projection shows a 36 percent increase in the number of students enrolled in high school, and a 63 percent increase in graduates.

It has been estimated that the average college graduate earns $100,000 more in his lifetime than the average person without a college degree. Therefore, while an increased number of college students creates problems for the State, these graduates collectively contribute more in taxes and in service to their society than those who end their education upon graduation from high school or short of a college degree.

The growth of college enrollment is sharply outlined by these figures from the United States Office of Education.

In 1870 there were 3,115,555 United States residents in the 18–21 age bracket, but only 1.7 percent of them went to college.

In 1955 the 18–21 age group totaled 8,577,000, almost triple the 1870 figure, and 32.1 percent of them were in college.

HIGHER REQUIREMENTS

The State Board of Education in Texas has recognized the new industrial revolution which has swept the State since World War II by proposing stronger requirements for graduation from Texas high schools.

These proposals, awaiting final action at this writing, would require Texas high schools to offer more units of study in some fields and would make more of these units a prerequisite to a high-school diploma. More stress is placed on science, mathematics, history and government, and foreign languages.

In this age of technological development and specialization, high schools are placing more and more emphasis upon counseling. This responsibility rests with the superintendent, principal, and teachers, as well as with trained counselors. They must guide the student in selecting those courses which will enable him to succeed in the specialized field which he pursues in college.

Stricter graduation requirements are also a byproduct of the current situation which finds more and more high-school graduates knocking at the doors of colleges and universities. As colleges tighten their requirements in the face of this onslaught, high schools must follow suit or have their graduates placed at a disadvantage and perhaps miss the college opportunity.

The American high school has always reacted quickly to social and economic change. This characteristic is pointed out in the June issue of the Texas Outlook, Texas State Teachers Association magazine, by Dr. J. G. Umstattd, University of Texas professor of secondary education.

As illustrations of the high school's sensitivity to public needs, Umstattd cites the driver education programs to help produce safe drivers; vocational training to supply skilled workers no longer available from Europe; economic education, under leadership of the Joint Council on Economic Education, to increase the economic literacy of America.

Continued broadening of the high school curriculum to meet the needs of youths of all abilities is the most significant adjustment, Umstattd feels. This provides for both the gifted child and the child of lesser ability, both of whom must be taught in our public schools.

One area the secondary school needs to give more attention is foreign languages, Dr. Umstattd contends. He considers this vital to our existence in competition with other countries.

In short, Dr. Umstattd says: "Let the mass media of communication acquaint us today with significant social or economic change, as they do constantly and effectively, and our curriculum committees will be in session after school tomorrow to see what should be done about it."

This is the American high school—no repository of tradition where knowledge is worshipped for its own sake, but, as Dr. Umstattd says, "the agent that transmutes inert knowledge into dynamic power to serve human welfare."

* * * * *

A new dormitory for 300 men will be ready for use in September, and the college hopes to build 3 more dormitories within the next 3 years.

NTSC president J. C. Matthews has announced plans for five additional classroom buildings to be erected in 1958 and 1959. These will include another building for the school of music and new quarters for the school of business administration, school of home economics, industrial arts department, and departments of physics and mathematics.

These will be additions to a 300-acre campus that already holds 33 buildings and 88 smaller structures, including modern dormitories, well-equipped classroom and laboratory facilities, and a library of nearly 300,000 volumes.

Recreational facilities include an outdoor swimming pool, a clubhouse and an 18-hole golf course, a 20,000-seat stadium, 3 modern gymnasiums, new tennis courts, a student union building, and other recreation areas.

Progress is seen in intercollegiate athletics as well. The college began competition this spring in the top-ranked Missouri Valley Conference.

How To Buy Brooklyn Bridge

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 19, 1957

Mr. SPARKMAN. Mr. President, there recently appeared a column entitled "How To Buy Brooklyn Bridge," written by Arthur Upgren, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HOW TO BUY BROOKLYN BRIDGE—PAYING FOR IT THREE TIMES IS NO "SUCKER" DEAL

(By Arthur Upgren)

HANOVER, N. H.—"Interest theory—don't burden me with that stuff," is a common reaction, but the subject ought to be well understood these days now that interest

rates are higher. If you don't like abstract theory, just consider for a moment New York City's Brooklyn Bridge. There's romance about it and I suppose on it, even if there isn't any allure about interest.

The city controller on November 1 paid off the last part of the money borrowed to build the Brooklyn Bridge. The bridge, of course, was finished in 1883 or more than 70 years ago. Happily it is still standing as nobly as ever.

The interest, paid on the money borrowed to build the $25 million bridge, amounted to twice the cost. Looks like wasted money, doesn't it, to pay $50 million in interest for the money borrowed to build a $25 million bridge?

Taxes must have been higher all these 73 years it took New York City to pay off the borrowed money to build Brooklyn Bridge and all the interest on the money.

The other way to have managed it would have been to pay for the bridge all at once when it was built. Then it would not have to be paid for three times as seems to have been the case.

If New York had sought to pay for it all at once, raising the money probably would have proved an unbearable burden. And even if the money had been raised, it would have taken funds away from other needed services such as the police force.

As a matter of fact the bridge probably has paid for itself many times over. If those Brooklyn folk who worked in Manhattan saved a lot of time by using the bridge, their total production was thereby enlarged.

Out of that larger production came larger incomes. Out of larger incomes came an improved ability to pay taxes over the years.

In other words—if the bridge was to be paid for at once—that would be an intolerable burden.

Paying for the bridge over the years was the less burdensome way to pay for it.

"Productive improvements" are what we want in industry and in bridges and tunnels and in the superhighways we are now going to build at a planned cost of $41 billion.

When the improvement—a bridge or a factory—is productive it may be said to pay its own way.

A Danish economist was very envious of all our debts. He knew we had big debts but he also knew we had many capital improvements and household appliances of every kind as well as autos which we have got in return for our debts. Then we pay off the debts and have the goods left over. As a matter of fact New York City still has a fine and useful Brooklyn Bridge "left over."

My Danish economist said: "A young couple doesn't think of paying in one lump sum for all the bread they will eat in their lifetimes. Why should they pay in one lump sum for all the house they want?"

To that can be added that regular repayment of debt out of income starts saving habits which are more likely to continue than if the habit had never been started at all.

Four Lessons From Our 25 Years' Experience With Farm Programs

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Wednesday, June 19, 1957

Mr. WILLIAMS. Mr. President, a few days ago there appeared in the Farm Bureau News an article entitled "Four Lessons" that had been published in the Pennsylvania Farmer.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FOUR LESSONS

In 25 years' experience with governmental attempts to solve farm problems we have learned four lessons, says Charles B. Shuman, president of the American Farm Bureau Federation. Here they are:

1. Prices of farm products are not made in Washington.

2. You cannot control the production of farm commodities by law.

3. We can price our products out of the market.

4. Price has a function. That function is change.

When schemes, plans, and panaceas are proposed to help agriculture it might be well to bear these four lessons in mind. They will make sense to farmers, although they do not supply much thunder for oratory, which may be the reason they are not more widely proclaimed and recognized.

The Congressional Quarterly

SPEECH
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

The SPEAKER. Under previous order of the House, the gentleman from Florida [Mr. SIKES] is recognized for 30 minutes.

(Mr. SIKES asked and was given permission to revise and extend his remarks.)

Mr. SIKES. Mr. Speaker, on June 11 my colleague from the First District of Florida [Mr. CRAMER] spoke at length on the subject of the Congressional Quarterly and of that private publication's method of measuring the support that Congressmen give to the President. I have asked Mr. CRAMER to be present in order that I may be completely fair to him.

The Congressional Quarterly has established itself as a nonpartisan recorder of the affairs of Congress and of related affairs; in fact, it has made quite a reputation in this field and it is now subscribed to by more than 230 American newspapers of every political hue besides many Members of both Houses of Congress. Many of the Washington correspondents who cover the affairs of the Congress refer to it regularly.

The Congressional Quarterly was founded in 1945 and since then has become a very practical place for a voter or an editor or others interested in Congress to check up on all the rollcall votes taken in the House and the Senate. This is no small service for before 1945 it was extremely difficult to go back and check on the actual votes taken by Members of Congress. My friend from the First District pointed out the fact that the Congressional Quarterly was founded by Nelson and Henrietta Poynter, who also publish the St. Petersburg Times, which is distributed primarily in the First District. Because the St. Petersburg Times usually takes the Democratic viewpoint, the gentleman assumes this viewpoint is carried over in the editorial operations of the Congressional Quarterly. This I think is an unfair and inaccurate assumption.

The Congressional Quarterly would lose its usefulness if it took a partisan point of view and to say it does is a disservice to the variety of newspapers and others interested in Congress who subscribe to that publication, as well as to the men and women employed by the Congressional Quarterly, who work so diligently to present a clear, accurate picture of congressional activities.

For example, Mr. Speaker, newspapers with such divergent points of view as the Chicago Tribune, the New York Post, the St. Louis Post Dispatch, the Kansas City Star, the Boston Herald Traveler, and that fine publication owned by the family of the distinguished minority leader of the Senate, Mr. KNOWLAND, the Oakland Tribune, all subscribe to the Congressional Quarterly.

At the moment, Mr. Speaker, the Republicans are annoyed that their nonsupport of the President is exposed with such a searching analysis as that made by the Congressional Quarterly. However, it seems to me a somewhat unimaginative and shortsighted point of view. Suppose, for instance, in 1960, a Democratic President is elected. The Republicans than may be very happy to have this same measurement of presidential support available to them. And, incidentally, the same analysis of presidential support now in use was conceived before the present administration took place. The characterization that the gentleman from Florida [Mr. CRAMER] made of the St. Petersburg Times is also misleading. It is my understanding that the St. Petersburg Times has frequently supported members of the Republican Party, and I am informed that in the last election in November 1956, the St. Petersburg Times supported the candidacy of the gentleman from Florida [Mr. CRAMER].

Mr. CRAMER. Mr. Speaker, will the gentleman yield at that point?

Mr. SIKES. I yield to the gentleman from Florida.

Mr. CRAMER. I would like to say to my distinguished colleague—and I am delighted that he brought the fact out—because it gives greater credence to my statement of June 11 as being impartial and not arising out of any feeling of animosity on my part toward the paper as such. When that support was proffered I told them I did not want it. I repudiated it. The character and the nature of the recommendation was anything but complimentary. It was about as backhanded a recommendation as I have ever seen. After saying "These are reasons we have never backed him before," they said, "We think we will have to back him this time because his opponent is less acceptable to the paper than he is." That is about what it amounted

to. I appreciate the gentleman's information, but I suggest if he will read the editorial he will see it was not such an endorsement that either a Democrat or a Republican could be proud of it. This exemplifies clearly the type of support Republicans get from this admittedly Democratic newspaper.

Mr. SIKES. The newspaper stated it had endorsed the gentleman. The fact remains that the paper was for him, and against his Democratic opponent. That I insist constitutes an endorsement. Now to proceed; just last year, as will be seen on page A6222 of the CONGRESSIONAL RECORD of 1956, the senior Senator from my State [SPESSARD L. HOLLAND] had this to say about the St. Petersburg Times:

> The Republicans are in [Mr. Poynter's] debt because his newspaper stanchly supported the two-party system when they were weak in his area in numbers and funds.

The senior Senator from Florida also said that "in my years of careful reading of Congressional Quarterly reports, I have found no bias carried over to it from the editorial attitudes of the St. Petersburg Times."

As the Harrisburg (Pa.) Patriot said on September 2 of last year, when a similar controversy over CQ figures occurred:

> It all depends upon whose political ox is gored by a particular CQ report of voting or its breakdown of that voting.

While Mr. CRAMER and others on his side of the aisle have flinched at the careful analysis of the Republican Party's support of the President thus far this year, the distinguished minority leader of the Senate used those same CQ figures in his case, to say on the television program, Face the Nation, on June 9:

> As a matter of fact, according to Congressional Quarterly, I stand among the six highest Republicans, percentagewise, in support of the President's program, both domestic and foreign, with a percentage, I think, of 89 percent.

I would like to go into some of the specific criticisms that my colleague made of Congressional Quarterly's methods. I make note of the fact that he also made comparison between my voting record and the President's program which hardly were calculated for my advantage. On that I state flatly I am answerable to the people of the third district—not to Mr. Eisenhower; not to any other President, and this is not said in disrespect of the office of President. The gentleman shows a misunderstanding, I believe, of the purpose and the methods used by Congressional Quarterly. Congressional Quarterly does not evaluate the performance of Congress or of individual Members. It merely records the performance of Congress and its Members based on rollcall votes. We Members do the voting.

Perhaps it would be well to ask under what circumstances Members from the other side of the aisle think that Congressional Quarterly is being unfair.

Mr. HOFFMAN. Mr. Speaker, will the gentleman yield there?

Mr. SIKES. I yield to the gentleman.

Mr. HOFFMAN. I examined the Congressional Quarterly Almanac. In it I read the statement on page 82 for the Senate, where they said they counted rollcalls where Members were not present as a vote against the administration. Does the gentleman think that is a fair way of counting?

Mr. SIKES. I am inclined to believe that the gentleman does not have a complete understanding of the method of scoring. Let me go a little further, and I think I can outline what the procedure is.

Mr. HOFFMAN. May I ask the gentleman this question? Does the gentleman mean that he doubts that that is in the Quarterly, in the Almanac?

Mr. SIKES. I have not seen the material in question. The information which is available to me is that Congressional Quarterly scores all known votes of Members. If a Member does not vote they send him a questionnaire which he is requested to use to show how he would have voted had he been present. That information is included in their tabulation. If the Member does not provide Congressional Quarerly with the information on his stand he cannot expect credit for having supported the President.

Mr. HOFFMAN. As to that I do not know, but what I am referring to is the statement in the Quarterly Almanac that they do record a Member as voting against the President's policy if he is absent on rollcall or does not vote.

Mr. SIKES. Again specifically let me say I have not seen the item the gentleman has referred to. I think the method of scoring is fair to everyone and I point out again that absence does not prevent inclusion of a Members' stand in a Member's Congressional Quarterly record on voting.

Mr. HOFFMAN. If I can get it back from the Library, there would be no objection on the part of the gentleman to including that in my remarks at this point?

Mr. SIKES. Of course not.

Mr. HOFFMAN. Here is the statement to which inference was made. On page 81 of the Congressional Quarterly Almanac, volume 9, 1953, we find this language:

> Failures to vote are counted as "times at bat," so that such failure reduces effective support score as much as an "anti-Eisenhower" vote.

This was to the vote in the House.

And, over on the next page, 82, we find this language:

> Failures to vote are counted as "times at bat," so that such failure reduces effective support score as much as an "anti-Eisenhower" vote.

This was to the vote in the Senate.

Mr. DEROUNIAN. Mr. Speaker, will the gentleman yield?

Mr. SIKES. I yield to the gentleman.

Mr. DEROUNIAN. In the July 27 issue of the RECORD last year, on page 13,754, in the remarks of Senator SCHOEPPEL, he introduced a letter from MARGARET CHASE SMITH, United States Senator from Maine, in which she is bemoaning the fact that the Congressional Quarterly has been unfair to her in its appraisal of her votes with the President. She says this:

> I was absent on 9 of the votes this year in the Congressional Quarterly analysis—and all 9 were marked as being against the President in spite of the manner in which I was announced.

Mr. SIKES. Had the gentlelady filled out the questionnaires submitted to her by Congressional Quarterly, she would have been recorded for or against on each of the votes in question. Since there was nothing in Congressional Quarterly records to show her stand, that organization could hardly be expected to assume she supported the President in the cases in point. Perhaps there is a better way to handle the matter of absent votes. I do not champion Congressional Quarterly's procedure. I am simply explaining it; but I must point out it applies the same way to all of us.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. SIKES. I yield to the gentleman.

Mr. GROSS. I believe the gentleman, earlier in his remarks, said that the Republicans were annoyed by this voting record as stated by Congressional Quarterly.

Mr. SIKES. That, of course, was a general statement. I realize there are some distinguished Members on both sides of the aisle, and my good friend from Iowa is one of them, who are completely independent and each of whom votes his own mind and conscience all the time.

Mr. GROSS. I want to thank the gentleman for making that exception.

Mr. SIKES. Perhaps we might ask under what circumstances Members from the other side of the aisle think that Congressional Quarterly is being unfair. For instance, one of the major studies of Congressional Quarterly is called the Presidential Box Score.

On May 27 this publication issued its news story on the presidential box score which mentions the degree of action which the Congress has given to the President's legislative program, and the story began as follows:

> The Democratic 85th Congress has approved only 6.6 percent of President Eisenhower's legislative program thus far this year.

Many Republicans have used this story to belabor the Democrats who control this Congress. I wonder if they think this is an unfair story from the Congressional Quarterly.

My colleagues' principal argument, however, is with a periodic analysis done by Congressional Quarterly called Presidential Support and Opposition. This analysis measures the individual performance of each Member of both Houses in relation to actual, specific requests made by the President.

I might point out that Congressional Quarterly analyses began during the Truman Administration and were not prepared merely to measure the current administration's program.

The support and opposition tabulation shows how the President fares when each Member has a chance to go on record with a yea or nay vote. That would appear to be another refutation of the allegations that absenteeism need

count against a Member's support of the President.

Mr. CRAMER. Mr. Speaker, will the gentleman yield?

Mr. SIKES. I yield to the gentleman from Florida.

Mr. CRAMER. I read from the Congressional Quarterly for the week ending May 17, 1957, page 600, in which they say "Support and Opposition." Then they analyze support and opposition and they say, and this is in that Congressional Quarterly itself in reporting on this analysis:

> Failure to answer a yea-or-nay vote for whatever reason thus may serve to lower a Member's score because these scores as well as composite scores that appear below are tabulated solely on the basis of yea-and-nay votes, and pairs and other announced stands do not count.

Thus they clearly say in their own publication that where a person does not vote it does serve to lower a Member's support score.

Mr. SIKES. I repeat, it is my information that each Member who does not vote on a record vote is given an opportunity to state his position and be tabulated by being sent a printed questionnaire from the Congressional Quarterly on which he is invited to show how he would have voted had he been present. If he submits that information I am told it is counted in his score.

Mr. CRAMER. What happens if it is not sent in? Then it automatically goes against him; is that correct?

Mr. SIKES. If he does not declare himself I am at a loss to understand how he can expect to be listed as supporting the President's program. If any Member wants to be recorded as supporting the President, he has opportunity to do so.

Mr. PRICE. Mr. Speaker, will the gentleman yield?

Mr. SIKES. I yield to the gentleman from Illinois.

Mr. PRICE. I, of course, am not familiar with the method of scoring in the Congressional Quarterly, but certainly I can see the merit of scoring if a person would miss nine votes on matters that were considered of importance, a part of the administration's program, for I certainly could not see how they could be construed as supporting that program.

Mr. SIKES. If he were very particularly interested in the President's program and were not prevented by illness it would appear he would attend and vote for it.

Mr. PRICE. That is right.

Mr. SIKES. The Senate and the House decide the issues on which they take rollcall votes. The Congressional Quarterly decides whether or not these issues represent part of the President's personal program based on public statements and messages issued by the President himself.

Mr. CRAMER. Mr. Speaker, will the gentleman yield?

Mr. SIKES. I yield.

Mr. CRAMER. The gentleman has put his finger on the matter at issue: The Quarterly decides what issues are to be included in the tabulation and how support by Ike is to be determined. I trust that the gentleman appreciates that my whole approach to this situation is not one based upon whether the St. Pete Times endorses or does not endorse me, and on whether I am opposed in any way to the editor of the St. Petersburg Times or not. I will suggest to the gentleman though that when there appears in your district as appeared in mine in the Times an article of this nature based upon the Congressional Quarterly which clearly attempts to mislead the people into believing that there is a congressional revolt finding the Democrats stronger for Eisenhower than the GOP and your name appears in a column below showing that you supported the President according to the analysis of that Quarterly much less than some of your colleagues on the other side of the aisle—and I have no quarrel as to how they vote one way or the other—you, too, would be a little concerned about the basis for coming to this conclusion. I trust the gentleman appreciates that my approach was to try to examine the basis for these conclusions and to show in my opinion that the manner in which they are arrived at is not fair, realistic, or basically honest.

Mr. SIKES. May I say to the gentleman, I did not yield for a lengthy statement. The gentleman made his statement on this subject on June 11 and failed to accord me the courtesy of informing me he was bringing my voting record into the discussion. Now I would like to proceed. If the gentleman has a question to ask, I will be glad to yield to him for that purpose.

Mr. CRAMER. I would be delighted to ask the gentleman a question and appreciate his willingness to enter into this "give and take" on this matter.

Mr. SIKES. I am glad to yield to the gentleman for a question.

Mr. CRAMER. And I would be delighted to try to get my friend, the gentleman from New York [Mr. DEROUNIAN], to yield some of his time to you, if you see fit. But, do you believe it is a fair and impartial analysis where, as I pointed out in my statement, a $30,000 appropriation cut is judged on the same basis as a $50 million appropriation cut for the sake of weighing both votes equally?

Mr. SIKES. I must say to my friend, you cannot weight a vote by the amount of money involved or by the magnitude of the question. The President has programs that have many facets. I am sure the gentleman does not limit his support only to those facets of the President's program which are of major magnitude; therefore, he must expect to be scored on all those things that the President has expressed an interest in.

All rollcall votes and issues where the President's position is known before the vote are included in the tabulation. That means big issues, little issues—all issues that are a part of the President's program. This method results in the inclusion of some noncontroversial votes as well as the exclusion of certain important rollcall votes on which the President's specific position is not publicly clear at the time the vote is taken. Any departure from this method would lead to a subjective weighting of the issues, and I fear this would result in even more serious and constant challenge by Members on both sides of the aisle who might disagree with the weighting.

I think I should remind my colleagues on the other side of the aisle that during the election campaign last fall the Republicans created what they called a truth squad. This Republican truth squad actually used the Congressional Quarterly figures to support their position. In Kansas City on September 27, for instance, the senior Senator from Nebraska [Mr. HRUSKA] said, and I quote:

> The Congressional Quarterly shows that Republicans supported Mr. Eisenhower 72 percent of the time on 99 rollcalls while the Democrats voted with the administration only 48 percent.

Now, I do not always like the results of the Congressional Quarterly studies, and I do not always agree with their findings. However, I do think it is unfair to point an accusing finger at the Congressional Quarterly and say that it is biased and unreliable. For more than 13 years, the Congressional Quarterly has been presenting the record of Congress, the rollcall votes, the activities of congressional committees, the record of pressure groups on Congress and so on in a way that has helped newspapers and others vitally interested in our activities to understand and present those activities in clearer and more intelligible form. It seems to me this activity has resulted in a distinct advantage to American citizens and that the Congressional Quarterly has played an important part in the improvement of citizen understanding of politics and congressional activity in the changing American scene.

I would say that it would be a distinct disservice for partisan forces to engage in a calculated attempt to destroy such a service, no matter how embarrassing the objective results of that service may prove to be from time to time.

Mr. CRAMER. Mr. Speaker, will the gentleman yield?

Mr. SIKES. If the gentleman desires me to yield further, I shall be glad to.

Mr. CRAMER. I do not think we are actually in so much basic disagreement as might appear. My position, of course, is that I do not agree with the basis used, the foundation for coming to the conclusion of the percentages that are published throughout the Nation as "from the CONGRESSIONAL RECORD." As a matter of fact, I suggest the gentleman may have gotten as confused as I did in trying to follow some of the conclusions arrived at. The Quarterly tried to give the impression that the information came from Congress.

Mr. SIKES. Let me comment on that. My colleague made use in his statement to the House of studies prepared last year by the senior Senator from Kansas [Mr. SCHOEPPEL], and the gentleman from Pennsylvania [Mr. SIMPSON]. I should point out that these gentlemen prepared these analyses in practically the same way used by the Congressional Quarterly.

They did not weight the issues; they included all rollcalls in which, according to their belief, the President stated his position; in fact their analyses resulted in the inclusion of more rollcall votes than

the Congressional Quarterly did. The Senator from Kansas even included in his rollcalls the single vote cast when several treaties were ratified en bloc.

Mr. CRAMER. Mr. Speaker, will the gentleman yield further at that point.

Mr. SIKES. I yield.

Mr. CRAMER. That is precisely the point I suggested to my distinguished colleague: The Senators who analyzed it felt that some determination as to the President's position should be based upon what position the leadership of the Democratic Party and Republican Party took on the floor of the Senate; that when the minority leader of the Senate takes a position that that should give some indication as to whether or not it reflected the position of the President of the United States. The Quarterly at no time considered any position taken by the leadership on the floor of the House as to whether or not the President was for or against a particular bill.

Mr. SIKES. And I stated very clearly that the Congressional Quarterly uses those issues in which the President has made a definite statement before a vote is taken to show whether he is for or against a particular program. The Republican leadership in the Congress frequently is in disagreement with the stated position of the President.

Mr. PRICE. Mr. Speaker, will the gentleman yield?

Mr. SIKES. I yield.

Mr. PRICE. Would it not be very difficult if you were to base it upon the position taken by the minority leadership when we have had many instances of one party leadership going one way and the other party the other?

Mr. SIKES. That is very clear, and certainly it is true that it would be unrealistic for scoring to be based on any person's statements other than the President.

Mr. THOMPSON of New Jersey. Mr. Speaker, will the gentleman yield?

Mr. CRAMER. Mr. Speaker, will the gentleman yield further?

Mr. SIKES. I have yielded a number of times to the gentleman from Florida. I now yield to the gentleman from New Jersey [Mr. THOMPSON].

Mr. THOMPSON of New Jersey. Is it not generally felt that the President is considered as the leader of the Republican Party?

Mr. SIKES. I think that has generally been considered the case, but apparently there has been frequent confusion in the Republican Party about who is the leader or which way the leadership is going.

Mr. THOMPSON of New Jersey. I will agree.

I noted with some amusement from the program of the young Republicans, who are in Washington this week, that they are having a beauty contest. Undoubtedly, they have many beautiful girls. I notice they have 7 contests, I suppose 1 for each of the wings of the Republican Party. But the fact is that the President is the leader and Congressional Quarterly has always used his policies and has never used a rollcall, to my knowledge, unless the President has had a stated position in regard to that particular matter. Is not that true?

Mr. SIKES. That is true.

Now, if I may proceed with my statement, I think that my friend from Florida has noted that his own score under the analysis of the gentleman from Pennsylvania, in which my friend appears to place considerable faith, results in a poorer showing than the gentleman from Florida made under the analysis conducted by the Congressional Quarterly which he has criticized rather severely.

Mr. CRAMER. Mr. Speaker, will the gentleman yield?

Mr. SIKES. I yield to the gentleman from Florida.

Mr. CRAMER. I think that clearly shows the very point I am trying to make in reference to someone representing to the people they are making an objective analysis of how a Member votes as it relates to the President's position. I think that is a very tenuous proposition. The Congressional Quarterly analysis proves how misleading such an approach can be.

Mr. SIKES. What the gentleman would like to do is to prepare his own scoring method rather than to abide by one that has been set up to apply to all of us?

Mr. CRAMER. That is hardly a fair statement. The point that the gentleman brought out in regard to the Congressional Quarterly making a choice in the crux. It makes the choice as to what the President's position is.

Mr. SIKES. After the President has made statements or after he has sent messages to the Congress to show his position on an issue, there can be no question about his stand in these cases. Therefore, the Congressional Quarterly scores a Member on whether he votes for or against those items. That is about as plain as can be.

Mr. CRAMER. If we will assume that is correct for the sake of argument, can the gentleman explain why on that standard there was eliminated from this particular analysis of only 22 votes 3 crucial votes on H. R. 190 dealing with a resolution on the budget which was sent to the President and asking that he indicate where it should be cut? Does the President need to make a statement he does not desire that resolution passed? Yet it was eliminated from the Congressional Quarterly analysis. This illustrates how foolish and misleading the requirement of a statement by the President as to support as used by the Quarterly is—it is about as foolish as eliminating all statements of support—as the lack of it—as stated by the Republican leadership in the House or Senate.

Mr. THOMPSON of New Jersey. Mr. Speaker, will the gentleman yield?

Mr. SIKES. I yield to the gentleman from New Jersey.

Mr. THOMPSON of New Jersey. The fact is that the President, despite newspaper speculation and so on, acceded to the request of Congress and sent a message back here, which was a very helpful one, outlining some specific cuts, did he not?

Mr. CRAMER. May I ask the gentleman, Does he think the position of the President was in favor of that resolution or there was any doubt on the floor of the House to the effect he was against it, particularly due to the fact that practically every Republican opposed it and every Democrat voted for it?

Mr. THOMPSON of New Jersey. There is frequent doubt here as to exactly what the President wants because we have the gentleman from Indiana saying one thing and the gentleman from Massachusetts another, or one group doing one thing and another group doing another. It is awfully hard unless the President has taken a specific stand. It is even more difficult to determine what the President meant when attempts to answer press questions. He did like the resolution regarding the budget.

Mr. CRAMER. There are many of those situations, but I submit again on this particular resolution there was no question in anybody's mind that the President opposed it and it should have been included in any fair and impartial analysis of voting up to that point. That is the only point I make.

The SPEAKER pro tempore (Mr. EVINS). The time of the gentleman from Florida has expired.

Mr. DEROUNIAN. Mr. Speaker, I ask unanimous consent that the gentleman from Florida be given 5 minutes of my time.

The SPEAKER pro tempore. Under a previous order heretofore entered, the gentleman from New Jersey is recognized next.

Mr. DEROUNIAN. I thought the gentleman's time was vacated and put over to another day.

The SPEAKER pro tempore. Then the next previous order is for the gentlewoman from Massachusetts, who will be recognized for 5 minutes.

Mrs. ROGERS of Massachusetts. Mr. Speaker, I shall be glad to withhold my time.

The SPEAKER pro tempore. If there is no objection, the gentlewoman may yield her 5 minutes to the gentleman from Florida.

Mrs. ROGERS of Massachusetts. Mr. Speaker, I would like my time later.

Mr. DEROUNIAN. Mr. Speaker, I am yielding 5 minutes of my time to the gentleman.

The SPEAKER pro tempore. The gentleman is recognized for an additional 5 minutes.

Mr. THOMPSON of New Jersey. Mr. Speaker, a parliamentary inquiry.

The SPEAKER pro tempore. The gentleman will state it.

Mr. THOMPSON of New Jersey. Mr. Speaker, I was not aware that my time for today had been yielded. I did request my distinguished friend from Florida to ask for an hour tomorrow because I thought what I would say today would carry on for an hour.

Mr. SIKES. Mr. Speaker, may I say to the gentleman that I regret to advise my friend from New Jersey I misunderstood his desires and I did ask that his time be vacated today. He has time on tomorrow.

Mr. THOMPSON of New Jersey. I thank the gentleman and I hope he will be here tomorrow so that we can continue this discussion.

Mr. SIKES. Mr. Speaker, perhaps I should ask what my status is at this time.

I am a tenant in the well of the House by suffrage of the gentlewoman from Massachusetts [Mrs. ROGERS] and of the gentleman from New York [Mr. DEROUNIAN]. I am grateful to both for their courtesy.

Mr. GROSS. Mr. Speaker, will the gentleman yield?

Mr. SIKES. I yield to the gentleman from Iowa.

Mr. GROSS. I am just curious to know, Mr. Speaker, how a Member's vote would be analyzed by the Congressional Quarterly under these circumstances. The President supported the natural-gas bill. It came to Congress with the support of the administration, and those who voted for it, I assume, supported the administration. I happen to be one of those who voted against the natural-gas bill. Later the President vetoed it. I wonder if the gentleman could tell me how the Members were represented under those circumstances.

Mr. SIKES. The gentleman has a keen mind, and this would be such a challenge to his own ingenuity that I would not deprive him of the opportunity to analyze that problem.

Mr. METCALF. Mr. Speaker, will the gentleman yield?

Mr. SIKES. I yield to the gentleman from Montana.

Mr. METCALF. Mr. Speaker, I propounded a question in the short time which was allotted to me the last time this matter was brought to the floor to the gentleman from New York [Mr. DEROUNIAN]. I am interested in the question the gentleman from Florida [Mr. CRAMER], raises: How are you going to weight these things? I am rather disturbed by having a rather high support of the President. I do not like to have a 95 percent support of the President's alleged program. I would like to know how gentleman from Florida [Mr. CRAMER], would weight these things. Is a vote on a $15 million item 15 times as important as a vote on a $1 million appropriation? I hope that when the gentleman from New Jersey [Mr. THOMPSON], comes in tomorrow or when the Gentleman from New York [Mr. DEROUNIAN], is talking, we can get into this a little deeper, but I would like to hear from the gentleman from Florida, if the gentleman from Florida in the well now will yield.

Mr. SIKES. I yield.

Mr. CRAMER. I would like to say to my distinguished colleague that the thing that bothers him is exactly the same thing that bothers me.

Mr. SIKES. Will the gentleman tell us whether he would weight a $1 million vote only one-fifteenth as much as a $15 million vote?

Mr. CRAMER. The gentleman indicated very clearly by his question what the problem is. The question is not whether I would evaluate $1 million as against $30,000 or $30,000 as compared to $50 million, as occurred in the HEW appropriation bill. But, there is no one in the country that would weight them both the same, does not the gentleman agree, particularly due to the fact that the President contrary to the Quarterly did not even favor the $50 million appropriation?

Mr. PRICE. Mr. Speaker, will the gentleman yield?

Mr. SIKES. I yield to the gentleman from Illinois.

Mr. PRICE. It is entirely possible by reducing one item $30,000 and reducing another item by $1 million you may eliminate 2 important programs of equal importance in some way.

Mr. SIKES. Does not my friend from Florida realize that if you were to try to weight these questions, try to establish a basis of the comparative value or importance of these programs, that you would never arrive at any system on which any two people could agree? Such a method of scoring would never be accepted by the public.

Mr. THOMPSON of New Jersey. Mr. Speaker, will the gentleman yield?

Mr. SIKES. I yield to the gentleman from New Jersey.

Mr. THOMPSON of New Jersey. Everything being relative, it might be helpful if the gentleman from Florida [Mr. CRAMER], were to devise some scheme whereby these things could be weighted, because it would apply equally to the Republicans and to the Democrats, and the percentage would be relatively the same.

I have some suggestion with reference to the Congressional Quarterly, and I hope to suggest to the gentleman from Michigan [Mr. HOFFMAN], an amendment to his bill to prohibit them from using the name. There is an old bourbon whisky named Old Senator. I do not think that should be used. And, there is a distinguished restaurateur, Mike Palm, who calls his establishment Relaxatorium, and I think that is a little unfair to imply that we have part of Mike's business. There are numerous instances which I will cite tomorrow.

Mr. SIKES. In conclusion, Mr. Speaker, an interesting revelation emerges from a comparison of the Schoeppel-Simpson analysis for the 1956 session of the 84th Congress and the Congressional Quarterly analysis for the same period. It is illustrated by the following tabulation:

	GOP score	Congressional Quarterly score
SCHOEPPEL:	*Percent*	*Percent*
1956 Presidential support	67.5	69
1956 Presidential opposition	19.3	20
SIMPSON:		
1956 Presidential support	60.6	68
1956 Presidential opposition	9.8	17
CRAMER:		
1956 Presidential support	78.7	79
1956 Presidential opposition	19.7	17

While some of the gentlemen on the other side of the aisle are unhappy about the discosure of their lack of support for the standard bearer of their party, I must say they cast their own votes, the record speaks for itself.

Mrs. Meyer Discusses Our "Primitive" Counties

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. ABBITT. Mr. Speaker, Mrs. Agnes E. Meyer, wife of Eugene Meyer, board chairman and owner of the Washington Post, made a very scathing attack upon the way of life of Virginians when she addressed the Arlington County Teachers Association on May 29, 1957.

Mrs. Meyer's speech has been commented on editorially by several of the outstanding editors in Virginia—one of these by the editor of the Winchester Evening Star, the Honorable Harry Flood Byrd, Jr. The Winchester Evening Star has one of the best editorial staffs of all of the Virginia newspapers, and on Tuesday, June 18, 1957, there was an editorial entitled "Mrs. Meyer Discusses Our 'Primitive' Counties."

Under leave to extend my remarks, I include this fine editorial in the hopes that Mrs. Meyer, and others of like mind, will have an opportunity of reading this editorial.

The editorial follows:

MRS. MEYER DISCUSSES OUR "PRIMITIVE" COUNTIES

Mrs. Agnes E. Meyer, the power behind the Washington Post, she being the dynamic wife of the owner, made an interesting speech in Arlington the other day. Her home is Mt. Kisko, N. Y.; she also maintains a residence in Washington, D. C.

That Mrs. Meyer and the Washington Post are not fond of Virginia's government is apparent to even the Post's most casual reader. But we found Mrs. Meyer's lengthy speech quite interesting (although it could have been shortened to a few paragraphs and still said the same thing). First, Mrs. Meyer urged her Arlington audience to take heart that "ultimate victory (for integration) is assured everywhere, including the State of Virginia." The Post and Mrs. Meyer were the foremost advocates of an integrated school system in Washington. (The schools are now 68 percent Negro).

After leaving her favorite subject, Mrs. Meyer then expressed her views about Virginia's present political leaders. Said Mrs. Meyer:

"They are pseudo-aristocrats, with no concept of noblesse oblige. They are hollow men who illustrate the menace which a great tradition can become if it does not change with changing conditions. They resemble the worn-out aristocracy whose blind authoritarianism caused the French Revolution. They are treating your country now in the same oppressive manner with which the French Royalists tried to crush the onward march of human freedom."

Wow. Things really are tough.

But then Mrs. Meyer continues with the following, which suggests that Arlington is an oasis in a Virginia jungle:

"It seems to me that your wealthy, progressive, truly democratic county can make a good case that you should not be treated on a par with the more primitive rural counties of Virginia."

Wow, again. "Primitive" counties, she says.

Of course, the folks in our Virginia counties, such as Frederick and Clarke and Shenandoah, do not have the great financial resources as does Mrs. Meyer, nor the benefits of Washington society, but isn't it a bit harsh to call us primitive? Although we do not have Washington's glittering social activities, neither do we have the high crime rate nor the daily muggings which take place in Mrs. Meyer's town.

Of course, the Star, being published in what she regards as a primitive area, doesn't have the same outlook on life as does Mrs. Meyer. If she wants to consider the Virginia county folk as primitive, that is her American right.

Address by Sherman Adams, the Assistant to the President, at the Commencement Exercises of the University of Maine, Orono, Maine, on June 9, 1957

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. McINTIRE. Mr. Speaker, recently the State of Maine was honored by the presence of the Honorable Sherman Adams, the assistant to the President, when he addressed the graduating class and guests at the commencement exercises at the University of Maine. Under leave to extend my remarks in the RECORD, I include the following address of Mr. Adams:

ADDRESS BY SHERMAN ADAMS, THE ASSISTANT TO THE PRESIDENT, AT THE COMMENCEMENT EXERCISES OF THE UNIVERSITY OF MAINE, ORONO, MAINE, ON JUNE 9, 1957

It was no hardship for me to come to Orono today. This is a day I have been looking forward to for a long time. It gives me an opportunity not only to get acquainted with you but to renew some associations with Parmachenee and the Magalloway.

Most of my time is spent in Washington. This is no slight to New Hampshire, nor to my native Vermont. I would trade the Potomac for any river in New England, including the Penobscot, though I wish both ran a little clearer. Rock Creek Park, where I live, is as attractive a place as there is in America, but I will take the Katahdin country any day.

Another thing, I have noticed that people in Washington seem to get into each other's hair. On the whole, the folks down in Maine seem to get along fairly well together. Perhaps that is because "good fences make good neighbors," as Robert Frost has pointed out.

No educational institutions in America can vie with the renowned colleges and universities of New England. Maybe they produce more dissenters and controversial characters than their fair share. But, for the long pull, their graduates are more dependable, if for no other reason than that they live longer to be depended upon.

The chief ingredient of a great school of learning is an intellectually aggressive body of teachers. Such property is a well nigh indispensable working tool in overcoming the passivism of the student mind. Here in New England parsimonious legislators, prodded by incisive presidents and enlightened boards of trustees, are becoming more inclined to appropriate the money to increase salaries of the faculty to a level more in proportion to their net worth. Mirabiledictu!

The modern university must do much more than educate. Inherent in the education must come both the need and the yearning for becoming educated. Life is not a having or a getting, but a being and becoming, as Matthew Arnold said. If, indeed, the getting were the end of the road, then we surely belie the need for all this preparation which you and America's graduates everywhere have worked so hard to achieve. In the becoming there must be the sense of understanding the relationship of an education to security and a peaceful world and a further sense of responsibility of actually putting an education to work in that cause. Of that I shall have something more to say presently.

A college education tempers the temperament. It gives the student a better notion of what his intellectual faculties are for and provides some exercises in their application. It is my purpose this afternoon to invite your attention to a few increasingly important pursuits to which your minds and hearts can be most beneficially devoted.

As the world moves on, it needs and its conflicts change: its governments and the aspirations of people change. It is increasingly apparent to each one of you, I am sure, that the purposes, the philosophy and the outlook of free peoples everywhere have an effect upon the security, the standards of living, and the peace of mind of the people of the United States. We look at a free nation and we must ask—Is liberty really their desire? Does the individual count, or is he simply a number? Is this nation destined to work for peace and respect the integrity of other nations? Now, how do we best get along with these people?

And now, what do you think your responsibility is in finding an answer to such a question? Here you are, in a sense, at the beginning of things. What you do with yourself is left pretty much to you. Outside of military service to your country, you can do pretty much what you want to do—live in Maine instead of Washington, select your source of livelihood, choose your habits of recreation, of education and religion. You can if you wish use your leisure time camping in front of a television screen, or frequent a race track, or exercise your mind in such profound research as is provided by the magazine Confidential: or you can devour the comics instead of the editorials if you wish.

On the other hand, you can resolve to take charge of yourself, develop your talents and contribute to good citizenship, strengthen yourself and your country. And you can stop to figure out just where you want to go and how you are most likely to get there.

I have no doubt you are as proud as we are in New Hampshire of New England's poet laureate. These verses I know many of you will recall:

"Two roads diverged in a yellow wood,
And sorry I could not travel both
And be one traveler, long I stood
And looked down one as far as I could
To where it bent in the undergrowth;

"Then took the other, as just as fair,
And having perhaps the better claim,
Because it was grassy and wanted wear;
Though as for that the passing there
Had worn them really about the same,

"I shall be telling this with a sigh
Somewhere ages and ages hence:
Two roads diverged in a wood, and I—
I took the one less traveled by,
And that has made all the difference."

Robert Frost is speaking of one of our great freedoms, the freedom of choice. The way you take, the convictions you hold, the opinions you express along with millions of others who have had the advantage of this preparation at the University of Maine, will shortly commence to make a difference—to yourselves and to your country.

One of the great advantages of continuing to become educated is the advantage of knowing what you are talking about. The great ideological struggle of our generation is well drawn and undoubtedly will be won. But there is another conflict, perplexing and difficult, in this growing, pulsating country of ours. This is the struggle against being just ordinary, becoming an also-ran citizen, with a good enough attitude and a can't-do-much-about-it philosophy. While we are wary of conformty, we often default to the conformist through failure to use our own mental processes to seek the truth and a conviction.

Too much freedom is often too little self-discipline. A man's first lesson on attaining the age of responsibility is to learn how to control himself. That brings me to an old legend.

You students of ancient history may remember that Alexander the Great, during his conquest of India in 325 B. C., once stormed a great fortress. As the king went over the wall, his side was pierced by an arrow, which settled in the bone under the heart. His aides being unable to remove it, the physician, Critodemus, found the arrowhead so firmly embedded that it had to be cut out. He told Alexander, and called upon several of his aides to hold him during the operation. Alexander stayed them, saying, "the man who has learned how to hold himself needs no one else to hold him."

In this business on self-control, one of the first exercises is to think about your own place in your community and your responsibility to your State and to your Nation. There are some exciting pursuits in the world today that I want to speak of. If we have few geographical frontiers, there are many intellectual frontiers that challenge the ingenuity of the human mind. If you are the young man who seeks a frontier and a challenge, examine if you will the economic and political perplexities confronting this Nation and the world today.

Let's start out by a comparatively simple one, and let's call it the explosive index. To be sure, this is only a statistic, but it is an ominous one. This statistic, which we call the explosive index, increased from a factor of 1 in the Middle Ages to a factor of 8 on the day before Hiroshima. Next day it jumped to 10,000. At Eniwetok this index became 10 million. Thus, in just over 10 years, the capacity of man to destroy the world has increased something more than a million times.

Now, we are, as every graduate here knows, diligently seeking a peaceful world. In this quest some of you can enlist in what is by all odds the greatest cause in the world today. Such a career is not necessarily the most lucrative nor the most comfortable. Nor is it the easiest way of winning a livelihood. However, considering its many facets, it is not only the most important but could be the most satisfying and rewarding of any venture which you could undertake.

Why is this so?

Well, how we get along with England and France is obviously of great importance.

But it is no longer unimportant how we get along with Vietnam and Pakistan, Saudi Arabia and Morocco, Indonesia, and Ghana, and the host of small nations all over the world. They have all become important. Each one presents a separate and a unique problem. Each possesses national characteristics, a national personality, and each reflects the particular aspirations of its own people.

Some of these nations have become newly independent, some are weak in resources, others wracked by disease. Most of them lie along the perimeters of the Soviet world, from the Baltic to the Adriatic and the

Aegean Seas, past the Red Sea, the Arabian and China Seas, to the Yellow Sea and the Sea of Japan. They are a chain of nations which are the objects of Soviet aggression and subversion and are literally battlegrounds upon which we wage peace today.

The Soviets vary their efforts; some have been military, some are economic, others political or diplomatic. Some of these areas are now quiet. Others are still active. Not one of these areas can be regarded as finally lost, nor as finally won, although these people are slowly and surely edging toward freedom's cause.

Most of these small countries have problems of survival, of obtaining enough to eat, something to wear, the bare necessities of shelter, of schooling, even the rudimentary conveniences of this modern age. Their people have little interest in the doctrinaire debate between communism and democracy. Their primary problem is existence.

The remedies to these weaknesses they must find if they survive. These weaknesses are not going to be removed simply by our dollars or by our foodstuffs or by modern machinery, or wholly by new techniques or modern methodology. All these help, but there is another critical need. It is hope, incentive, the will to survive.

In such hope lies the strength which they need. What is of the utmost importance to you and your future is that such strength is about as indispensable to us as it is to them.

All of this complex problem, every aspect of it, calls urgently for our understanding and best efforts. As in most worthwhile accomplishments, to have an understanding of what this is all about takes long apprenticeship, a kind of internship, but it is the important world's work, whether it be in diplomacy, foreign economic policy, administration of economic aid programs, or whatever activity you choose.

Diplomacy is the politics of international affairs, so I suppose it could be said that diplomacy is the politics of peace, and the diplomat the architect of stability and freedom. Modern diplomacy demands skills of many kinds—it demands political scientists, economists, linguists, administrators, historians, lawyers, and, not least, it demands salesmen—salesmen of freedom.

Foreign service nowadays includes a good deal more than conventional diplomacy. The mutual security program, so-called foreign aid, requires agricultural, industrial, and technical specialists by scores. These people are more than teachers and demonstrators. They are truly missionaries for our values and way of doing things. All of these have the task of spreading the truth about freedom to oppose the propaganda of slavery. Foreign service includes as well certain forms of informational work, requiring diverse abilities of high order.

Never in American history has there been a time when you could serve your Nation in so many places and in so many ways.

In this world of change, forms of government change, problems of government change, policies change, and, above all, people change. With the diversity of personalities, of heritages, interests and needs, the problems of foreign representation become far more intricate and demanding than they were in the old days of royal succession and social diplomacy.

If I have any explicit hope to express about the future of any one of you, it would be that among you, there might come to a few an unquenchable urge to put your talents to the test of such service. The University of Maine could bequeath no more precious heritage.

Our land is rife with carping critics who derogate the goals we seek and the manner by which they are being achieved. You will never become sure footed and resolute by allowing yourselves to be put to rout by the timid and benighted souls whose horizons are fenced in by their unwillingness or inability to face up to the challenge of this moment. "It is not the critic who counts," as Theodore Roosevelt said. "Not the man who points out how the strong man stumbled, or where the doer of deeds could have done them better. The credit belongs to the man who is actually in the arena; whose face is marred by dust and sweat and blood; who strives valiantly; who errs and comes short again and again; who knows the great enthusiasms, the great devotions, and spends himself in a worthy cause; who, at the best, knows in the end the triumph of high achievement; and who, at the worst, if he fails, at least fails while daring greatly, so that his place shall never be with those cold and timid souls who know neither victory nor defeat."

Whatever your lot in life, I hope one thing will always remain clear in your minds. Whatever your pursuit, whether you ever serve a day in public service, you have the citizen responsibility to take time enough from the daily duties to know what is going on, to form an opinion, and to keep your point of view both current and decisive. It is your privilege and responsibility to express a conviction. An educated person can do no less than to speak and to vote with current knowledge of the overwhelming responsibilities to which our Republic has fallen heir. A sure death for freedom, an inevitable loss of every real privilege to which an individual here in America is today the inheritor, can result from visionless, ignorant citizenry, national leaders, and policies.

So let us tend to the business of knowing what we are talking about. If today's apparent conflict is one of economic theories, or forms of government, the underlying struggle deals with the nature of man. It is a struggle that goes to the roots of human spirit, and its lights and shadows fall across the whole sweep of man's destiny.

Today we are a great Nation in a world that is ideologically divided against itself. What power lies in man to resolve the philosophical conflicts of the human mind must now be directed to find the means whereby human beings can live together on the same planet.

To this elusive purpose the ingenuity of man must be relentlessly dedicated. Each of you must assume his share, his place and his duty.

In this great adventure (and a great adventure it is) the great ally is not the thing seen, the argument or the weapon, the stratagem or the invective; but rather the unseen, the conviction and the faith. The new horizons are the concepts still unborn in man's mind to which dissident mankind can turn, in the confidence of his soul, that in them lies an acceptable human common denominator. This task is never done while there is a mind left to be persuaded or a peace to be won. And in all this life your work is the bread—and fun is the leavener.

And so let us say "so long" to each other and to the University of Maine, and may luck and laughter reward your labor and lighten the burdens on whatever road you undertake to travel.

National Better Newspaper Contests

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 4, 1957

Mr. DAWSON of Utah. Mr. Speaker, one of the many attractions of living in rural areas or small towns in this great country of ours is the hometown paper, more often than not a weekly with a total circulation which does not approach the street sale alone of a metropolitan daily.

These newspapers serve an entirely different purpose from their larger daily brethren, but they form as integral a part of that inestimable institution, the American Press. They prove, every week of the year, that the highest standards of journalism are not confined to, have no relation to, the size of newspaper circulation, staff, or plant.

Recently, the National Editorial Association announced the winners of its 1957 National Newspaper Contests. I am proud to notice, and to call to the attention of the House, that 2 of the plaques in the under 2,000 circulation class were won by Utah weeklies. The Springville Herald won first place for best news story with its outstanding account of a railroad wreck, and the Nephi Times-News won third place in service to agriculture. Our congratulations should go not only to those papers, but to their readers.

Corps of Engineers and Bureau of Reclamation Multiple-Purpose Projects With Power in the United States of America

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. EVINS. Mr. Speaker, under unanimous consent, I ask that there may be reproduced in the RECORD a list of Corps of Engineers and Bureau of Reclamation multiple-purpose projects with hydropowered public power throughout the United States.

The letters and lists follow:

DEPARTMENT OF THE ARMY,
OFFICE OF THE CHIEF OF ENGINEERS,
Washington, D. C., April 23, 1957.

Hon. JOE L. EVINS,
House of Representatives,
Washington, D. C.

DEAR MR. EVINS: The attached tabulation of Corps of Engineers' multiple-purpose projects with power is furnished in reply to information requested in your letter of April 12.

Under A of the enclosure are listed those projects at which all generating units that have been scheduled for installation are in commercial operation. Under B are listed those projects where one or more of the generating units scheduled for installation are in operation and work is in progress installing the remaining scheduled units. Under C are listed the projects under construction at which no generating units are as of April 15, 1957, in operation.

It is a pleasure to be of assistance to you, and it is hoped that the data tabulated on the enclosure will supply the information you desire. Should any further data be required, I wish you will let me hear from you.

Sincerely yours,

J. L. PERSON,
Brigadier General, United States Army, Assistant Chief of Engineers for Civil Works.

Corps of Engineers, U. S. Army, multiple-purpose projects with power, Apr. 15, 1957

A. IN OPERATION—ALL SCHEDULED GENERATING UNITS INSTALLED

Project	Corps of Engineers district	Location	Installed capacity (kilowatts)	Average annual generation[1] (1,000 kilowatt-hours)
Albeni Falls	Seattle	Idaho	42,600	172,000
Allatoona	Mobile	Georgia	74,000	169,000
Blakely Mountain	Vicksburg	Arkansas	75,000	156,000
Bonneville	Portland	Oregon-Washington	518,400	3,601,338
Bull Shoals [2]	Little Rock	Arkansas-Missouri	160,000	[3] 658,000
Center Hill	Nashville	Tennessee	135,000	351,000
Clark Hill	Savannah	Georgia-South Carolina	280,000	698,000
Dale Hollow	Nashville	Tennessee	54,000	120,000
Denison	Tulsa	Oklahoma-Texas	70,000	267,000
Detroit-Big Cliff	Portland	Oregon	118,000	465,174
Fort Gibson	Tulsa	Oklahoma	45,000	190,500
Fort Randall	Omaha	South Dakota	320,000	[4] 1,660,500
Gavins Point	do	South Dakota-Nebraska	100,000	[4] 635,400
John H. Kerr	Norfolk	North Carolina-Virginia	204,000	438,000
Lookout Point-Dexter	Portland	Oregon	135,000	373,200
McNary	Walla Walla	Oregon-Washington	980,000	6,400,000
Narrows	Vicksburg	Arkansas	17,000	28,400
Norfork	Little Rock	Arkansas-Missouri	70,000	[3] 184,000
Philpott	Norfolk	Virginia	14,000	25,400
St. Marys	Detroit	Michigan	18,400	135,500
Tenkiller Ferry	Tulsa	Oklahoma	34,000	114,300
Whitney	Fort Worth	Texas	30,000	81,071
Wolf Creek	Nashville	Kentucky	270,000	867,000
Total: 23 projects	13 districts	16 States	3,764,400	17,799,743

B. IN OPERATION—SCHEDULED GENERATING UNITS BEING INSTALLED

Project	Corps of Engineers district	Location	Installed capacity (kilowatts)	Capacity currently under construction (kilowatts)	Average annual generation[1] (1,000 kilowatt-hours)
Chief Joseph	Seattle	Washington	576,000	448,000	6,487,000
Fort Peck	Garrison	Montana	85,000	80,000	[4] 1,056,600
Garrison	do	North Dakota	240,000	160,000	[4] 2,119,530
Jim Woodruff	Mobile	Florida-Georgia	20,000	10,000	210,000
Old Hickory	Nashville	Tennessee	25,000	75,000	420,000
Totals: 5 projects	4 districts	5 States	946,000	773,000	10,293,100

C. UNDER CONSTRUCTION—NO SCHEDULED GENERATING UNITS IN OPERATION

Project	Corps of Engineers District	Location	Initial installed capacity (kilowatts)	Average annual generation[1] (1,000 kilowatt-hours)
Barkley	Nashville	Kentucky-Tennessee	130,000	600,000
Buford	Mobile	Georgia	86,000	170,000
Cheatham	Nashville	Tennessee	36,000	160,000
Cougar	Portland	Oregon	25,000	146,900
Dardanelle	Little Rock	Arkansas	120,000	636,000
Eufaula	Tulsa	Oklahoma	90,000	366,000
Fort Gaines	Mobile	Alabama-Georgia	130,000	436,000
Greers Ferry	Little Rock	Arkansas	96,000	189,000
Hartwell	Savannah	Georgia-South Carolina	198,000	453,000
Hills Creek	Portland	Oregon	30,000	163,286
Ice Harbor	Walla Walla	Washington	270,000	1,780,000
McGee Bend	Fort Worth	Texas	45,000	121,640
Oahe	Omaha	South Dakota-North Dakota	595,000	[4] 2,851,200
Table Rock	Little Rock	Arkansas-Missouri	200,000	[3] 581,000
The Dalles	Portland	Oregon-Washington	1,092,000	[5] 5,081,000
Totals: 15 projects	9 districts	13 States	3,143,000	13,726,976

Totals A, B, and C:

Total number of projects	43
Number of corps districts	14
Number of States	20
Total installed capacity in operation (Apr. 15, 1957) (kilowatts)	4,710,400
Total capacity under construction (Apr. 15, 1957) (kilowatts)	3,916,000
Total average annual generations, all projects (1,000 kilowatt-hours)	41,821,780

[1] Energy values are "at site" figures.
[2] 2 additional units of 40,000 kilowatts each are presently planned for installation by December 1960 at the Bull Shoals project. Average annual generation with the 2 additional units will be 702,000,000 kilowatt-hours including the effect of other projects on output.
[3] Includes the effect of other projects on output.
[4] Salable energy which is estimated as 90 percent of gross generation (median year).
[5] Annual primary energy.

UNITED STATES DEPARTMENT OF THE INTERIOR,
BUREAU OF RECLAMATION,
Washington, D. C., April 17, 1957.

Hon. JOE L. EVINS,
House of Representatives,
Washington, D. C.

DEAR MR. EVINS: In response to your letter of April 12, 1957, we are attaching a copy of the Bureau of Reclamation tabulation, dated December 31, 1956, which we believe furnishes the specific information you requested, on powerplants authorized, constructed, or under construction by the Bureau, as well as plants for which the Bureau has marketing responsibility.

In addition, we are enclosing copy of map No. X–W–7 entitled "Reclamation Power Facilities Existing and Under Construction."

Sincerely yours,

DON S. CAMPBELL,
Acting Assistant Commissioner.

U. S. Department of the Interior, Bureau of Reclamation hydroelectric powerplants, Dec. 31, 1956

A. CONSTRUCTED AND OPERATED BY BUREAU OF RECLAMATION

[3] Leased to Public Service Company of Colorado for operation.

Women and Partnership

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. SCUDDER. Mr. Speaker, women understand and appreciate the advantages of our free-enterprise system. They know that the system was not founded on Government competition with its citizens and that such competition if continued and expanded will ultimately destroy the system.

The women of California, through their Federation of Women's Clubs, overwhelmingly approved a resolution asking Congress to approve private development of the Trinity River project power facilities.

We seldom go wrong in following the advice of our women.

Under leave to extend my remarks, I would like to include at this point the May 10, 1957, editorial from the Alameda Times Star, entitled, "Women and Partnership":

WOMEN AND PARTNERSHIP

A significant new voice was added last week to the growing popular support of the administration's policy of withdrawing from direct competition with private business wherever possible and of entering into partnership with industry whenever certain phases of Federal activity can thus be handled most effectively.

In approving overwhelmingly a resolution asking Congress to sanction private development of Trinity River project power facilities, the California Federation of Women's Clubs took the reasoned stand that the immediate cost savings to the Government and the long-range tax savings to the public are of paramount importance. No ideological pitch for public power can refute or mitigate the appeal of sound, hard, simple facts.

The federation comprises an intelligent and very representative cross-section of all segments of California life. Its members are particularly sensitive to the needs of the taxpayer. When it speaks, it speaks with the voice of the people—and once again the people have spoken out firmly for reason, not fancy, in the Government's conduct of public affairs.

Westminster Choir of Princeton, N. J., Made Impressive Contribution to United States Foreign Relations on Recent Good-Will Tour

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, the Westminster College Choir, of Princeton, N. J., on its recent tour abroad under the authority of the Humphrey-Thompson Act, Public Law 860, 84th Congress, made an impressive contribution to the fund of good will which other peoples have for the people of our country.

It is clear that nonprofessional, as well as professional, cultural groups and organizations, have an important role to play in our relations with other peoples.

I call to the attention of my colleagues the great work of the Westminster Choir of Princeton, N. J., and include the following reports for this purpose:

INTERNATIONAL EXCHANGE PROGRAM
OF THE AMERICAN NATIONAL
THEATRE AND ACADEMY,
New York, N. Y., March 25, 1957.

MEMORANDUM

To Frank Thompson.
From Robert C. Schnitzer.

Here is another example of the bonuses derived from attractions sent by ANTA under the State Department's Cultural Presentations Program for the President's Special International Fund. Following is a quotation from a report on the Westminster Choir's appearance in Lahore, Pakistan:

"Lahore is still talking favorably about the Westminster Choir, which was here from February 6 to the February 10. People were impressed with the quality of the music, the charm and graciousness of the choir members and their willingness to meet any and all requests. Even the Pakistan Times, which specializes in critical comments about America, was moved to praise and the expression of wonder that so many Pakistanis turned out to hear this competent group.

"An extra arranged after the choir arrived in Lahore turned out to be a highlight both from the point of view of the choir's collection of tour impressions and our development of Pakistan-American relationships. It was a demonstration of 13 bagpipe bands of the Pakistan Army. Lt. Gen. Mohammad Azam Khan was host for the occasion; the pipers performed admirably while the choir members enjoyed a photographic field day. The choir sang three numbers followed by an exchange of complimentary statements by the General and Choir Director Williamson. The 2½-hour get together closed as more than 500 Pakistani soldiers and officers stood at attention while the choir sang one stanza of The Star Spangled Banner and the bands played the Pakistani anthem."

WESTMINSTER CHOIR COLLEGE,
Princeton, N. J., June 7, 1957.

Mr. ROBERT C. SCHNITZER,
ANTA, New York, N. Y.

DEAR MR. SCHNITZER: I felt that you might be interested in knowing a few of the follow-

ups that we have started through our tour around the world.

We purchased a $600 saxophone and sent it through our Ambassador, Mr. Bishop, in Bangkok, Thailand, to the Blind School in Thailand. This is the school that intrigued our choir very much. It is run by the Catholic Church, but blind people in Thailand are almost helpless. They have a little orchestra, and they learn to tune pianos, but there are few pianos in Thailand. We also sent them a check for $100, which we hope to do every year in the future. Westminster Choir and Dr. and Mrs. Williamson paid for the saxophone; our student body is sending the $100.

We also sent $100 to the trade school in Bangkok. This is a school where orphan boys learn trades. Every boy who finishes there is working, rather a rare thing in the Orient. We hope to continue that pledge through the years.

We also sent $100 to an orphan school in Korea, a school that interested us very much.

We have a young Korean graduating this year with his master's degree, who returns to be head of the Korean broadcasting station. He and his family helped greatly with our concerts in Korea. Our 2 concerts there cleared $1,500, which they are planning to use to help young musicians who wish to come to America to study. Our faculty helped this young man secure a gift of $1,000, and our student body gave him $212. He has purchased at a low fee, through one of our faculty, a Moeller organ which he is taking back with him to be used in a big Presbyterian church there, where he will be organist and choirmaster in addition to being head of the broadcasting station.

We have also sent two checks for $100 to the American Farm School in Greece, a school that is doing much to build the economy of Greece. They have suffered through communism, but have never relaxed in their efforts. Our school will send them $100 a year through the future, and our students are going to adopt an orphan boy in the school and pay $400 a year for his tuition. Mrs. Williamson also sent $100 to the Farm School.

This summer Mrs. Williamson and I go to Japan. Our first school will be Sendai, August 19–23. Our second school will be Osaka, August 26–30. Our third school will be Tokyo, September 2–6. Our fourth school will be the Japan Choral Union in Tokyo, made up entirely of professional musicians who want to learn how to sing, September 8–10. Osaka and Karuisawa, (Tokyo) is entirely a program to work against communism. They already have over 500 students enrolled in the last school in Tokyo, and they say that I will have over 500 in each one of my schools.

We have been asked to do the same thing in the Philippines and Thailand, but I cannot do that until next year. We have also been asked to come back to Pakistan to develop a new form of radio music, and we think that perhaps that can be done sometime during the year. These schools are paid for by the governments of these countries.

And lastly, we are planning and developing new courses of study so that the people who come here from the Orient and Asia—and quite a few will be coming this year—may know that we are working on a program that includes the economy, the politics, the culture, the arts and the religions of these different nations. We think we will be able to secure a very wonderful man to head this work, and be able to get a grant from a foundation to carry it on.

I wanted you to know these things because they all are a development of our world tour. We shall always be grateful to you personally, and to ANTA, for this wonderful experience that was ours, and for the splendid development that is arising as a result of that tour.

Cordially yours,

J. F. WILLIAMSON,
President.

WESTMINSTER CHOIR COLLEGE,
Princeton, N. J., March 11, 1957.

Mr. ROBERT C. SCHNITZER,
ANTA International Exchange Program, New York, N. Y.

DEAR MR. SCHNITZER: The tour of Westminster Choir is now past. It was for us a fantastic experience, each day so exciting that we forgot the events of the day before. Counting occasions when we sang three or more numbers, we sang a total of 146 times, to 227,840 people.

In Japan, our first concert in Tokyo the house was sold out with 3600 present. Our second concert was sold out with 8500 people present. In Japan most of the time they had from 500 to 2000 standing or sitting on the floor.

Our largest crowd was in Okinawa, where we sang to 23,300 people, having 20,000 in one great crowd. Sold out houses seemed to be the rule, even ending that way in our last two concerts in Yugoslavia.

In Seoul the local people cleared $1500, which they plan to use to send very talented young people to America for study. Mrs. Williamson and I have been invited back to Japan next winter for a 6 week course, to help them train a new type of director. Unfortunately, they tell us that there are over 4000 choirs directed by Communists, and these choirs are working against the government. Money has been placed in a New York bank by Japanese people so that we can go back and work with the U. S. I. S. in training 150 very talented young leaders between the ages of 25 and 35, who in turn will train other leaders to displace all the Communist leaders. They have also asked us to help them develop a new book to displace the Communist song book.

Korea has asked us to have a summer school.

Okinawa is engaging one of the members of the choir to teach in the university there, and to set up choral and string units throughout the island and to train future choir leaders for them.

The Philippine University has also asked to have a summer school, but things there are in very good control. The outstanding choirs are directed by our graduates.

Three of the leading musicians of Hong Kong are coming to the Choir College next year. They have enough influence that they will not need outside help because the best choir there now is directed by one of our graduates.

In Burma the Communist newspaper fully reviewed and greatly praised Westminster Choir. Heretofore they had damned everything American.

Thailand has asked for a couple from Westminster Choir College, who will travel to different centers over the state, setting up training schools for young individuals who have some musicianship and who in turn can establish choirs throughout the country, this to be done under supervision of the Choir College.

In Laos we had a most successful concert, the first program that the junior chamber of commerce had carried out.

In Vietnam the local committee cleared $1,700. This will teach 1,600 people after 4 months' training to master a little of reading and writing.

In Cambodia the Minister of Education has asked us to negotiate with him to find a young man who can come in and start the young people in training to direct choirs, and also in training to help them thinking along broader lines of freedom.

In Singapore we had most successful concerts, but in Penang and Ipoh we heard the shots being fired when the last difficulty they had there started. In Kuala Lampur we had 3,500 people present at one concert and the USIS is very anxious to have a man on their staff who can help set up centers where choirs can be established.

In Ceylon we had a pleasant stay with good concerts, but no interest expressed in the broader way, only by the Embassy.

In India there was very active interest. The gentleman who is on the board of directors of the Bank of India—he and his wife are extremely wealthy—is coming to Princeton in May to visit us to see what can be done about taking a Westminster person back to India, at their expense, to help set up an approach through which western choral music may begin. For the present I do not see great hope, because they are just at the stage where they are worshiping their eastern music, and that does not allow for participation.

In East and West Pakistan we had a very wonderful experience. The director of the broadcasting station of Pakistan, in Karachi, has asked us to send a faculty member there for 3 months, to train their musicians and help them to learn how to develop western choral music. We have promised to do this, but it will take our best man as it is a very difficult task.

Iran is much interested and wants us to help them through the university. The Government is very favorable and, if a way can be found to set plans in operation to do this, we shall carry out their wishes.

In Iraq we found decided prowestern feeling, but not interested in choral music, although they sold out both concerts.

In Lebanon there is great interest because they have found that a Mohammedan and a Christian can sing in a choir and neither one lose face. We have promised to help them and, as soon as things quiet down, help all the Near East universities.

Greece and Yugoslavia were great experiences, but they are not ready yet to think about things such as choirs.

Looking back over the entire trip, I feel that it will greatly change the course of our college, as 10 or 12 people have already applied for places in our student body. I am certain that the best way to help all of these peoples is through training their own nationals and sending them back, although summer schools will help to a certain extent if they finance them themselves.

I have several recommendations I am making to you in person but this, in a very brief way, embodies the impressions that will be lasting with me as to our tour. After all, the wild enthusiasm that we seemed to meet means nothing unless we can crystallize the interest in choral work in these nations. Orchestral work is not possible for these people for a long, long time, so their growth must be along choral lines.

Cordially yours,

J. F. WILLIAMSON, *President.*

Our Farm Surplus Compared With Peacetime Supply of Tungsten

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. JOHNSON. During the current debate on the minerals purchase program we have heard reports that there is enough tungsten to last this country

through 26 peacetime years or through 6 war years. The information throws a new light on farm surpluses about which we have heard so much in recent months, particularly from the Secretary of Agriculture. I think the Secretary of the Interior may be backsliding a little in his job in not keeping the American citizen as well informed on strategic mineral stockpiles as the Agriculture Secretary does on food and fiber.

Millions of our city friends have been deluged for years with a flood of articles, newscasts, cartoons, pictures, and televised reports on our farm surplus. There are Americans who automatically get a mental picture of a mountain of potatoes or a mound of butter whenever they hear the word "surplus." There are probably a hundred for anyone that gets a mental image of a barrel of tungsten.

The reports on available tungsten remind me that our stockpiles of farm goods as of December 31, 1956, were not as big as some folks might have been pounded into believing. I have not been away from the farm long enough to forget that something called food is as important to a military and civilian population in time of crisis as is tungsten.

So that we will compare our farm surplus properly with the 26 years' peacetime supply of tungsten I would like to report that as of December 31 we had:

Wheat to last 13 months and 20 days.
Cotton to last 9 months and 23 days.
Corn, 4 months and 21 days.
Peanuts, 3 months and 9 days.
Flaxseed, 3 months and 13 days.
Grain sorghum, 2 months and 19 days.
Rye, 3 months and 8 days.
Barley, 2 months and 22 days.
Cheese, 1 month, 28 days.
Soybeans, 1 month, 22 days.
Dried milk, 28 days.
Oats, 16 days.
Tung oil, 10 days.
Honey, 2 days.
And no butter.

Atom Test Danger

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very thought-provoking article which appeared in the Boston Daily Record on June 10, 1957:

ATOM TEST DANGER

Challenging indeed is the testimony of scientists who have warned Congress that continuance of atomic-weapon tests may seriously impair the health of future generations.

The scientists, however, tempered their statements to sound more like inspired guesses than flat assertions.

This attitude was well illustrated by Dr. James F. Crow of the University of Wisconsin, who estimated as "a rough guess" that in the next 100 or so generations, testing as now conducted might result in 1 million stillbirths.

This and other tentative predictions provoked equally learned dissents. The most forceful came from Dr. Joel Hildebrand, emeritus chemistry professor of the University of California and past president of the American Chemical Society.

Dr. Hildebrand refused to join the protesting scientists listed by Dr. Linus Pauling, Caltech biochemist, to whom he wrote:

"As a citizen I think * * * that the risk to persons should be estimated against the risk to human freedom of abandoning what appears at present to be its main defense in a world where international agreements are continually violated * * *.

"Your statement that 'each nuclear bomb test spreads an added burden of radioactive elements over every part of the world' is not a true indication of the dangers, in absence of quantitative comparisons with natural radiation and current X-ray usage * * *. Scientists should be sure of their ground before they claim scientific authority for alarmist assertions."

There is no doubt that many people feel the tests should be stopped. Not only to forestall possible dangers to generations to come but to avoid the heavy economic burdens they impose.

But this cannot be done by the United States alone.

Today, it requires the firm commitment of Russia and Britain as well.

Tomorrow, it will need the dependable agreement of many other nations.

This is only one of the political facts of life that scientists, brilliant in their own specialties but generally naive in human affairs, must face.

They are understandably terrified by the power they have themselves created. But they remain blind to the danger of war, which nuclear weapons now deter by the sheer threat of their existence.

In the face of today's harsh and inescapable menace to world peace, President Eisenhower's political and military advice is to be preferred to that of scientists who may have strayed into strange social and diplomatic fields.

This is specially more sound when the President himself prefers the opinion of the National Academy of Sciences, which, he commented, "has no ax to grind," and which does not believe the threat as serious as the protesting scientists assert.

Washington Report by Congressman Bruce Alger, Fifth District, Texas

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 16, 1957

Mr. ALGER. Mr. Speaker, each week I send a newsletter to my constituents, available to any who want to receive it and so indicate. This effort, like others, to inform the people is but a manifestation of my belief that Government benefits and succeeds to the same degree that an informed public takes effective action. I believe in an informed electorate. I regret having overlooked placing each week's newsletter in the RECORD. From this date forward I shall do so.

The newsletter for June 8, 1957, follows:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas, June 8, 1957)

The civil rights bill, which protects or violates your civil rights, depending on your viewpoint, is now before us for a 2-week struggle. The battlelines were clearly defined by the vote on the rule, 290 to 117, which made consideration of the bill in order. Both heat and light will be generated over the merits of the bill itself. The South's acceptance of defeat is best evidenced by southern Congressmen's pinning their hopes on the right of trial by jury amendment. Existing States rights to trial by jury for criminal contempt cases have been eliminated by the bill's provision making the United States Government a party to each civil rights case, which automatically eliminates jury trial. The basic arguments in granting trial by jury are: For—jury trial is basic right of Americans and must be preserved; against—juries in South may not be impartial. Sectionalism (North versus South), incitement to race differences, and pure politics, where the Negro vote is sought, all conspire to fan prejudice and emotionalism, and obscure basic principles and the most intelligent solution to the problem. The 14-page bill, 60-page report, and 1,800 pages of hearings, provide the material for debate plus Members' own observations. Included is my testimony before the Judiciary Committee during study of the bill. Well—we'll see what develops—more next week.

A modern dilemma faces us in the arms race. In our defense effort through military strength, should we continue to develop and test atomic weapons with real danger to ourselves and future generations from fallout and radiation? Or should we agree to disarmament with the untrustworthy foe thus risking the loss of the atomic race and our slavery or extinction? Is it civilization's extinction threatened either way—one slower than the other? Are there, therefore, in view of the danger, just grounds for playing politics or for soul-searching, prayerful dedication with every ounce of intelligence to finding the answer. Is there an answer? There must be. What is it?

Another dilemma faces American citizens. Will we preserve traditional constitutional government or embrace socialism? Khrushchev gave his estimate this week: "United States will go socialist without Soviet action, and the grandchildren of Americans will live under socialism." He knows what many Americans do not—socialism and communism are economically quite the same—and that a free country can embrace socialism without intentionally planning it. Public housing, public power, farmer and citizen subsidization, progressive income tax, which takes from thrifty and gives to the thriftless or indigent—these and many others are socialist tenets, and they are now firmly entrenched in the United States economy, which has survived not because of, but in spite of them, much as a ship moves despite barnacles. Socialists, moreover, may agree not to use the word socialism, but rather New Deal, Fair Deal, or other modern terms calculated to appeal to apathetic or unaware citizens who unfortunately are more generous in their tax gifts to Government than in their study of the course of their Government. Labor has been the target to help socialism spread, and so we have leaders like Mr. Walter Reuther, who intentionally or not pleads for socialism, praising the big budget, condemning businessmen, and fostering brutal strikes (the Kohler plant, for example). Where is the point of no return between economic freedom and Government regulation?

The ADA (Americans for Democratic Action) National Director Edward Hollander testified for natural-gas price control by Government, and I saw socialism's exponent in

the flesh. In my questioning him I learned: (1) He helped originate the ADA yardstick and graded the Congressmen (which for 2 years resulted in my receiving a zero); (2) he said ADA was against Government price control, then contradicted himself, asking for gas-price control, and admitted also being for removal of Government controls in 1953; (3) he proclaimed the insatiable greed of oil companies and then admitted he owned stock in numerous oil and gas companies; (4) he could not differentiate between principles of socialism and ADA tenets.

The natural-gas hearings are over. There may now be a struggle in committee between those favoring the present complete Government control by the FPC and those favoring partial or complete freeing of the independent gas producers from Government regulation of price at the well head.

The Girard case, the American soldier who killed a Japanese woman while on duty, demonstrates again that our soldiers should always be under United States jurisdiction.

The World Atom Pool

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks in the RECORD I include two editorials from the Council Bluffs Nonpareil, Council Bluffs, Iowa, written by Mr. Dillard Stokes.

Mr. Stokes has made a deep, conscientious study of the current, far-reaching world problem regarding the proposed atom pool. His position on same deserves the fullest consideration by every Member of Congress and all who have responsibilities in this important problem.

The editorials follow:

[From the Council Bluffs (Iowa) Nonpareil of June 9, 1957]

THE WORLD ATOM POOL

(By Dillard Stokes)

WASHINGTON.—The antics of Mr. Beck, the troubles of the New York Yankees, and scare stories on atom bombs are drawing more notice lately than the world atom pool, and the treaty to set it up in business.

These are exciting matters and the treaty is not. Yet in the long run the pool may turn out a more considerable item of the public business than the labor racketeers and the whole American League put together.

Also, the treaty may have much to do with whether people in Columbus, Cincinnati and Council Bluffs either are bombed out of their homes or taxed out of their undershirts.

The basic facts are plain and prosy: 80 nations sent envoys to a string of conferences, at which they framed "The Statute of the International Atomic Energy Agency."

The agency—if it gets going—will get atomic material—the stuff that makes bombs and powerplants—from some nations and turn it over to others "for peaceful uses."

The 80 nations, by signing the statute, are bound to nothing, unless they also ratify it, as a dozen or so have done. Russia was one of the first.

And now the statute, which in law is a treaty, is about to come before the United States Senate.

Shall this Nation ratify the pact, and go along with the plan?

That's the question up to the Senators. The answer could hardly be reached without more facts, and then it depends on the weight they carry.

Thus, it turns out that only three nations have any fissionable material to hand over to the pool. Of these, the United States would put up 5,000 kilograms (about enough to make 100 atomic bombs), Britain has offered 20 kilograms, and Russia has promised 50 kilograms.

And then, the pool will be controlled by a majority vote of its members.

El Salvador will have 1 vote; whoever is running Haiti for the week will have 1 vote; General Trujillo will have 1 vote; India, 1 vote; Rumania, 1 vote; the United States, 1 vote—every member will have 1 vote except Russia, which will have 3, besides the Iron Curtain satellites.

There is nothing in the treaty to keep Red China out of the pool—or Outer Mongolia, or East Germany, or North Korea, or North Vietnam.

The State Department thinks it can round up the votes to keep the Red Chinese out; but does not claim this is a sure thing.

For Americans, the atom pool plan raises some questions—perhaps they ought to be called doubts. They are political, economic, and military, and all three are grave indeed.

The uranium this country is to hand over to the pool is supposed to be for peaceful purposes.

But (as the State Department puts it) "a stockpile honestly intended for future peaceful use is indistinguishable from one intended for future military use, and could, in fact, be turned to military uses."

Once they've got it, in fine, the wrong people could make quite a bang out of that uranium.

Also, it did cost the American taxpayers around $80 million.

[From The Council Bluff (Iowa) Nonpareil of June 16, 1957]

ATOM POOL A MOUSETRAP?

(By Dillard Stokes)

WASHINGTON.—Certain mice once faced a grave political question.

These were fine, fat, juicy mice who had done well for themselves in the rich fields they called home. Their problem was posed when their tribe was asked to join a dinner party of cats.

There were many who felt the tribe ought to go ahead. These speakers made quite a point of the fact that if the mice did not join there would not be any dinner party.

It also was urged that—although some of the cats were lean and predatory to a degree—the whole affair would be run on a very high plane.

The mice would have one vote, each tribe of cats would have one vote. All matters would be settled in democratic fashion by majority vote, including what—or whom—to have for dinner.

None of the mice has been seen lately, and their journal is missing. So the United States Senate does not have their decision for its guidance in dealing with a very similar question.

This is, whether to commit a great mass of wealth and a portion of the national destiny to the world atom pool, in which this Republic would have one vote out of 80.

The treaty that would set up the pool will shortly come before the Senate in some manner.

The aim is to spur atomic energy, under international controls, for peaceful purposes.

The pool would get fissionable matter from the three nations able to make it, and make it available to the many nations that are not.

Of these three nations, the United States would supply 5,000 kilograms of uranium, Russia 50 kilograms, and Britain 20 kilograms.

Once the pool got the atom fuel, the Nation that provided it could not get it back, nor have anything to say about what was done with it.

Such questions would be settled in the pool, or by its governing board.

In this setup the tiniest, weakest, and poorest nations would be equal in political force with the largest, strongest, and richest.

Voting strength sometimes is allotted this way in our high school and college debating societies. There the members are not deliberating actual questions, only hypothetical ones. Their decisions do not affect actual interests, only make-believe ones.

The atom pool is not going to resolve make-believe interests but real ones. On its votes will depend the bread and butter—and maybe the lives and future—of the people in the nations that take part.

How will the nations of the world cast their votes? How except as serves their own interests?

And if the United States has put up its uranium, placed in the control of the pool, will not the pool members dispose of it? Not as will please this Nation, but as will profit them?

Apportionment of political power according to the military and economic power of member nations always has been a hard problem.

When it arose in Philadelphia 170 years ago it was found insoluble. No formula would serve. Out of this came the great compromise—equality in the Senate, and representation in the House according to population.

No such compromise was urged when the atom treaty was being drafted. Even if there were such a plan, a grave question would be left:

The States felt they had to set up this Federal Republic. But does the United States have to join a world organization to advance the peaceful use of atom power?

Murderous Mao

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting article which appeared on June 15, 1957, in the Boston Daily Record:

MURDEROUS MAO

Despite all our knowledge of the horrors of communism there is a shock of revulsion in reading the calm admission of Mao Tse-tung, chief of state of Red China, that 800,000 Chinese were slaughtered in consolidating his power.

Mass murder in Communist nations is not news. When the Hearst task force was on its Asian tour last year, an Indian official estimated the number of liquidated Chinese in the millions.

The shock lies in the almost casual corroboration of mass murder as an instrument of politics, in an official speech by the head of the Red Chinese Government, as reported in the New York Times in a story filed by its excellent reporter, Sydney Gruson, from Warsaw.

That Warsaw dateline is important.

Mr. Gruson was able to obtain in Poland, thousands of miles from Peiping, a sum-

mary of speeches made by Boss Mao in February and March of this year.

Our first thought is that if American newsmen were allowed in Red China by our State Department this big story would have been reported when it happened, and not months later, and would have been available to all the American people, as it should have been.

There is further significance in the Warsaw dateline. Unquestionably the summary of the Mao speeches came from an official Polish source. They contained remarks repulsive to the interests and dogma of the Soviet Union.

Mao said, for instance, there can be and are contradictions between Communist rulers and the people; small-scale strikes are beneficial; Communist populations ought to be exposed to a certain amount of negative propaganda; i. e., ideas from the free world as carried by the Voice of America.

Finally, he said, the persistent use of terror is self-defeating as was evidenced in the Hungarian uprising when the Communist Party simply disappeared in a matter of a few days. He added that the use of Russian troops was regrettable.

If Poland were an abject slave of Soviet Russia this information would not have been leaked to Mr. Gruson, and if he had gotten hold of it somehow he never could have filed it from Warsaw.

Here is further evidence (1) that Poland is not as firmly chained a satellite as, say, Czechoslovakia, (2) that Mao is extending his influence into Poland to a degree that must be of grave concern to the Kremlin, and (3) that Mao may be building up his power to become the strongest single leader in the Communist world.

But more mass murder, of course, if necessary.

It is far from conclusive evidence, but it is something to think about.

Invest in America

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 19, 1957

Mr. SCUDDER. Mr. Speaker, investment in America through our free enterprise system has made America great while big central government control of industries has weakened or destroyed every government that has tried it.

California has a chance to invest in America through one of its industries, the Pacific Gas & Electric Co., entering into a partnership arrangement with the Federal Government for construction of the Trinity River project. Most of its citizens who would benefit from the development and who would pay the bill want the company to build and operate the power facilities. But there are those—most of whom are not directly affected by the project—who want the Federal Government, and only the Federal Government, to construct and operate these power facilities at a cost to the taxpayers and water users.

Under leave to extend my remarks I would like to include at this point an April 19, 1957, editorial from the Oakland Tribune entitled "Pass It Along":

PASS IT ALONG

The week of April 28 to May 4 will be observed as Invest in America Week, and Gov. Goodwin J. Knight is asking California to take advantage of it to "familiarize themselves with the advantages of the free-enterprise system."

It is good advice, and Governor Knight would do well to pass it on to Washington for the consideration of those elements that would prefer to stifle a basic element of American life in favor of governmental control and operation financed by public taxation.

California at this time is a good place from which such advice can come. There is underway in Washington an attempt to throttle a major project under free enterprise which means a great deal to northern California. That is the program by which the Pacific Gas & Electric Co. would go into partnership with the Government to construct hydroelectric facilities on the Trinity River.

Secretary of the Interior Fred Seaton has given the program his endorsement. An influential group of San Francisco businessmen have followed suit. Many other civic organizations have given their support. But necessary congressional approval of the partnership is threatened. The threat comes from those who are obsessed with the credo of letting the taxpayer foot the bill and Federal bureaucracy direct operations.

It would thrust free enterprise and private capital aside and deprive consumers of the capacity of free enterprise to get the job done. Free enterprise is not only interested in keeping construction and operating costs down, but it also pays taxes on its investment and profits.

"Mayflower II" and Naval Review Mark Contrast in Ocean Travel

EXTENSION OF REMARKS
OF
HON. RICHARD E. LANKFORD
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 19, 1957

Mr. LANKFORD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to insert an editorial which appeared in the Evening Capital, of Annapolis, Md., on June 18, 1957. This editorial is most timely and points up very concisely the strides that our Navy is making in strengthening the security of our Nation. Coming from the home of the Navy, this editorial is most apt and I recommend its reading to all Members.

The editorial follows:

"MAYFLOWER II" AND NAVAL REVIEW MARK CONTRAST IN OCEAN TRAVEL

The fact that the *Mayflower II*, 53 days out of Plymouth, England, reached Provincetown, Mass., on the same day that the great International Naval Review of the warships of 18 nations was held in Hampton Roads, Va., served graphically to stress the development of ships over the years.

The 90-foot, 180-ton, square rigged bark, replica of the original *Mayflower* which brought the Pilgrims to New England in 1620, served two purposes in connection with the naval review. First, it stood in contrast to the jet planes, aircraft carriers, missile ships, and the great passenger liners of the present day, and also tended to stress the growth in power and prestige of the United States since the Pilgrims first set foot at what is now Plymouth, Mass.

It brought home the great advance in ocean transportation from sail, through steam, to the present nuclear-power planning. The fast destroyers and cruisers and other ships in the naval review are a far cry from the original sail driven little *Mayflower*.

But there was another angle to the naval review that added to its color and also brought a note of sadness to many of the veteran naval men. That was statements of high officials that the battleship is moving back into the shadows.

Secretary of the Navy Thomas S. Gates summed this development up when, as he watched the battleships *Wisconsin* and *Iowa* pass by stated: "I don't think you'll ever see a battleship in another naval review. It is possible that battleships may become platforms for guided missiles but we have no present plans along that line."

The *Iowa*, flagship of the midshipmen's practice cruise squadron, and the *Wisconsin*, both 45,000 tons, are the only 2 battleships now on active duty in the Navy. Thirteen others have been tucked away in the mothball reserve fleet. Deactivation of the *Wisconsin* will begin in November and the *Iowa* will leave the line next year, according to Secretary Gates. When they are shelved, the Navy will be without a battleship in active service.

The two United States battleships in the review were steaming toward an uncertain future. As he watched them pass, Adm. Raleigh A. Burke, Chief of Naval Operations, remarked:

"They're old, yes, and you might say obsolete. But if need be they will still sweep a mine for you or sink a submarine. It's just a harder job with older equipment."

So it appears that the future of the great battlewagons, the floating forts, whose guns have covered landings of American troops in wars, and which have written their share of the Nation's history, may be headed toward the shadows, and may become as obsolete as the *Mayflower II* and the original *Mayflower*. For the Navy is moving full speed ahead into the guided-missile era.

"The Navy is going through the greatest transition in its entire history." Former Secretary of the Navy Charles S. Thomas put it: "All at one time it is changing to nuclear power, from guns to guided missiles, from gunpowder to atomic weapons, and in the air from propeller to supersonic [jet] planes."

The trend toward an all-missile fleet is illustrated by the fact that the Nation's first guided-missile ship, the converted World War II cruiser *Boston*, was commissioned some 18 months ago. It can fire a salvo of four radar-guided 1,700-miles-an-hour Terrier missiles every 30 seconds.

Vice Adm. Thomas S. Combs, Deputy Chief of Naval Operations, told Congress the Navy expects to have at least 47 guided-missile ships in the fleet by 1961.

By latest count, the fleet has at least 21 guided-missile ships, including 8 cruisers, 10 attack carriers, 2 submarines, and a destroyer.

An Associated Press story from Washington recently quoted Capt. John D. Lamade, Deputy Chief of Navy Information, on four reasons why guided-missile cruisers, frigates, destroyers, and submarines are superseding the battleship. These reasons follow:

1. The battleship requires too much manpower, about 2,700 officers and men, by comparison with smaller ships capable of delivering knockout blows with long-range guided missiles.

2. The vast bulk of the battleship is no longer needed to provide firing platforms. Guided missiles need no such platform to sponge up recoil. Moreover, the development of nuclear power has eliminated the necessity of the battleship's huge space for fuel storage. Small atom-driven ships can now do the job.

3. The battleship is too cumbersome to maneuver with high-speed, quick-turning craft of the modern naval task force.

4. Finally, the battleship, costing over $100 million, is too expensive in a day when even a submarine can pack a 7-ton Regulus guided missile capable of hurling a nuclear punch at a target 500 miles away.

But despite this summary of objections to the battleship there are those who caution against too soon casting them into the discard. It has been pointed out that the battleship, theoretically, has been consigned to the scrap heap with the invention of nearly every major weapon from the torpedo to the aerial bomb, and that now the guided missile has set off the same cry of doom for the great ships.

The need of precise, accurate shore bombardment, in a small nonnuclear war, to blast out shore fortifications has been cited, along with the functioning of a battleship as a radar-control center operating with fast carrier task forces. The Navy says they might serve in a limited role, such as convoy duty, in a conflict where nuclear weapons are kept under wraps.

The Navy's current program calls for the following guided-missile ships, 1 nuclear-powered aircraft carrier to be completed in 1961; 12 cruisers, including a nuclear-powered ship, 14 destroyers, 18 frigates, 8 submarines, 5 with nuclear powerplants.

No Taxes Required

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. NATCHER. Mr. Speaker, a great many people in this country are concerned over the amounts requested in the 1958 budget for use in the operation of our Government. There are many persons who do not believe this budget is consistent with good government. They feel that in order to stabilize our economy and encourage its sound growth there must be a reduction in Federal spending. We all know that it costs considerably more to operate our Government now than at any time in its history. With approximately 59 cents of every dollar to be expended for major national security, the overall amount, of course, is much larger than one would have, in the past, ever dreamed of. But, in spite of the present-day situation, the various departments and agencies of the Government can be operated economically. Such economy cannot only be practiced by our Federal Government, but by the States and municipalities located therein. In many States of these United States prosperity is evidence by reason of economical administration of those in authority. A great many of our cities are managed, or operated, by citizens who give of their time and energy in order to practice economy and insure prosperity within their respective municipalities. In the Second Congressional District of Kentucky we have a small city with a population of 11,132, according to the 1950 census. The good people residing in this city—Madisonville, Ky.—for the third consecutive year will pay no property taxes or poll taxes. Here we have an unusual instance where taxes are not necessary due to the fact that the mayor, the city councilmen, and all city employees, operating in unison, are able to use the profits obtained from the municipally owned light and water departments to run the city. And here is exemplified economy with accompanying prosperity. It is clearly shown what can be accomplished by honest, civic-minded officials of a fine, progressive city.

Mr. Speaker, on June 11, 1957, there appeared an article in the Madisonville Messenger, of Madisonville, Ky., which I am sure the Members of this body will be interested in reading.

The article is as follows:

NO TAXES FOR THIRD YEAR HERE, COUNCIL RULES

Madisonville residents will pay no property taxes or poll taxes in 1957—the third straight year of exemptions for property owners here.

The city council last night passed an ordinance to that effect.

The ordinance reads, in effect: "an ad valorem tax of 'no' cents on property subject to taxation in Madisonville is levied for the year of 1957" and "no poll tax on male residents" for the year 1957.

The ordinance includes a paragraph which states: "There is also levied for the year 1957 a tax of 20 cents on each $100 of the fair cash value of shares of bank and trust companies for general city expenses."

MADE NEWS 3 YEARS AGO

The Madisonville city council made news all over the Nation 3 years ago when it passed an ordinance abolishing city taxes. Nineteen hundred and fifty-seven will be the third consecutive year that property owners here will not have to pay property or poll taxes.

The "no taxes" provision was one of the main talking points of the present city councilmen in their successful bid for renomination in last month's primary election.

In other council action last night:

City Treasurer Lamoine Barton submitted her report for the month ending May 31. It showed the city had a balance of $16,986.10 at the close of business at the end of last month.

Chief of Police W. H. Collins, in his report for last month, disclosed collections of fines and costs for May totaled $859.50.

Nine thousand five hundred dollars was transferred from the city's light and water department fund to the general fund.

The 2-week payroll, ending June 15, for city employees was allowed. Bills were approved and ordered paid.

National Cash Register Co., an Innocent Vehicle for Communism

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. PILLION. Mr. Speaker, the National Cash Register Co., of Dayton, Ohio, published a special edition of its factory news magazine in September 1956 for distribution to its many thousand employees.

This magazine purports to report a trip through the U. S. S. R. by S. C. Allyn, president of the National Cash Register Co. The magazine contains 60 pages of beautiful colored scenes depicting a most happy life under Soviet rule.

The text of the magazine does contain some mild criticism of communism. However, the overall impact of the magazine is most favorable to the Communistic system. The magazine is obviously slanted to give a most favorable impression. It does not contain a true or balanced series of scenes of the more somber and squalid conditions under which the Russian people live.

This magazine is of greater propaganda value to the Communist ideology than the Soviet's official propaganda magazines. It demonstrates how well meaning patriotic citizens become innocent vehicles for the advancement of the Communist cause.

Dr. Frederick C. Schwarz is the executive director of the Christian Anti-Communist Crusade, which is dedicated to exposing Communist ideological fallacies. His critical review of this publication of the National Cash Register Co. follows:

APRIL 23, 1957.

Hon. JOHN R. PILLION,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN PILLION: The special issue of the NCR Factory News of September 1956 on the U. S. S. R. indicates how unwittingly the cause of communism can be served by American business. It is an extremely effective piece of agitational literature that will help communism.

As you know, the Communists are spending vast sums of money on a literature campaign. They, themselves, divide their literature into two types: propaganda and agitation. They define propaganda as "that which conveys many ideas to a few people" and agitation as "that which conveys one idea to many people." Propaganda is directed to the intellectual few; agitation to the undiscerning multitudes.

The great majority of the Communists' budget on literature is spent on agitation not propaganda. The two ideas they are trying to transmit to people in all countries are, firstly, that conditions of life in Communist countries are good now and rapidly getting better and, secondly, that conditions in America are bad now and rapidly getting worse. They seldom try to propagate both these ideas in the same piece of literature.

The magazine published by the National Cash Register Co. most effectively conveys the first of these agitational ideas. The magazine consists of two parts. There is a display of photographs, many of them in color, with brief captions, and an accompanying text. It is a fair assumption that many more people look at the photographs and the captions than will read the text.

The text is reasonably objective, whereas the photographs and captions bear a striking similarity to those in official Communist publications. The undiscerning could scarcely fail to be profoundly influenced by them. They convey a picture of life under communism attractive in the extreme. The natural question will arise in the minds of the viewer; why are we so concerned about communism, why is it necessary to spend such vast sums on defense if life under communism is so good. It can do nothing but confuse those who look through it and weaken their will to resist the infinitely dangerous and extremely insidious Communist advances.

Nothing illustrates more clearly than this volume the dangers inherent in delegations to Communist countries.

Yours very sincerely,

FRED C. SCHWARZ.

Ainsworth Irrigation Project

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. MILLER of Nebraska. Mr. Speaker, yesterday, in general debate, I talked with Mr. JENSEN, a member of the committee, relative to the rather critical report on the Bureau of Reclamation which appears on page 14, and I quote a section of that report:

During the course of the hearings, a number of the Bureau witnesses demonstrated an apparent lack of preparedness and an inexcusable unwillingness to provide factual and responsive answers to questions of the committee members. The committee expects and is fully entitled to prompt, comprehensive, and responsive answers. It does not expect to be put through the process of digging out facts piece by piece in a time-wasting and unnecessary process.

I also referred to the fact that two projects in the Fourth District of Nebraska had been eliminated from the appropriations bill.

I can understand that the committee must have a very difficult time in judging the merits of all projects that they must consider. There are some 280 flood control and irrigation projects in this bill. If the official witnesses from the Bureau of Reclamation were not prepared and did not give proper and comprehensive answers then it would be difficult to arrive at the feasibility of any one of these projects.

Now coming back to the two projects in Nebraska, I shall deal first with the Ainsworth project.

Mr. Speaker, the Ainsworth irrigation project is a part of the Missouri Basin plan and has been authorized for construction by Public Law 531 of the 84th Congress. This project has proven its feasibility and has been recommended by the Department of the Interior and was in the President's budget request to Congress.

The folks in this district have entered into repayment contracts that have been approved. The project has passed every test required by the Department of the Interior and the Bureau of the Budget and this year they asked for $1,100,000 to get construction started.

It is different than some projects in that there is very little flood control in its plans. As you know, flood control is nonreimbursable and in some projects it is quite a large sum.

Under reclamation law, the farmers receiving the water have agreed to pay back as much as they can under reclamation law. That has been reclamation law for many years.

The project consists of a dam built on the Snake River, known as Merritt Dam. There is ample water in the Snake River for the project. There is good soil and good people ready to utilize the water in this semiarid section.

Nebraska, in this area, has been visited with severe drought for several years. When the project is completed, it would relieve the drought situation and make this community a thriving, productive one because of the new security and new wealth created by the production of new crops from the irrigated area.

The Appropriations Committee for Public Works has seen fit to disallow the budget estimate of $1,100,000 to get this project started. They say this, in part:

Testimony received by the committee indicates that an increase in income of $53.92 per acre will result through application of irrigation water to the land.

They further state:

Repayment from the land is only about 30 percent, leaving 70 percent of the total repayment allocation to be made up from the Missouri River Basin power revenues.

The committee further says:

They are concerned about the amount of irrigation repayment obligations being loaded on the income from the sale of power in the basin. In the case of this particular project the committee fails to understand why more favorable repayment contracts requiring a larger repayment on the part of the beneficiaries of irrigation cannot be arranged.

I would point out to the honorable committee that of all the projects in the Missouri River Basin, those in Montana, North Dakota, South Dakota, Wyoming, and Nebraska, that the average repayment by irrigated land is about 17 percent. In the project approved in the upper Colorado River Basin last year, the repayment from irrigated land is about 12 percent. Actually, the repayment of $8.82 per acre is more than that estimated by the Bureau of Reclamation.

The Bureau of Reclamation officials tell me that the repayment contracts for the Ainsworth and Farwell projects are among the best in the Missouri River Basin States. They point out that the Ainsworth project pays back 30 percent of the cost while the balance comes from the Missouri River Basin account. I think those figures are correct. But we do have some projects in the Missouri River Basin that the irrigators pay [illegible]ttle as 10 percent. The bal[illegible]ng credited to flood control, fish [illegible]ldlife and from power revenue [illegible]ved from the basin.

There is little flood control in the [illegible]worth project. I am sure my colleagues understand that when flood-control money is in an irrigation project it is not paid back.

Under reclamation law, the farmers pay back as much as they can. In the case of the Ainsworth project all moneys will be paid back over a period of 50 years. That part charged to power is paid back with interest.

I am making an appearance before the committee in the other body and I hope that when they put the moneys back in the bill for the Ainsworth project, the conferees will consider the facts relative to the Ainsworth project. Again I repeat that their report of the repayment of 30 percent is far above the average in the Missouri River Basin.

Of course, it is hard for the folks in the Ainsworth project to understand why the Committee on Appropriations disapproved their project since they have met all of the requirements made by the legislative committee, the Department of Interior, and the Bureau of the Budget. This includes a repayment contract.

I would point out to the committee, on pages 886 and 887 of the hearings that the benefit-cost ratio, as estimated by the Reclamation Bureau, was 1.62:1, and all other benefits in which the Corps of Engineers are figured into the benefit-cost ratio the testimony on page 887 shows it to be 1.5:1. The benefit-cost ratio of the Ainsworth project is listed on page 890 to be 2.16:1. In other words, the Ainsworth project, which had budget approval, has a better benefit-cost ratio than the average for the Missouri River Basin.

The people of the district can hardly understand the action of the committee because they have complied with all the legislative requests, including repayment contracts. The project was approved by the Department of the Interior and was in budget requests. There is ample water; there is good land and good people to work the land. Perhaps someone on the committee will be able to offer an explanation as to why this project has been refused. They should also tell Congress and the people what is necessary in order that it be approved.

The only conclusion I can reach is that the committee was unable to understand the merits of the project because of the poor showing made by the Bureau of Reclamation witnesses.

The people of the district will appear before the other body, along with Senators and Members of Congress, and it is our hope that a better presentation can be made and placed in the bill when considered by the other body. I am confident this will be done and when the bill comes back to conference the project will be given the green light.

Wool Carpet Bill, H. R. 2151

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. COLLIER. Mr. Speaker, I submit herewith a letter dated June 14 referring to H. R. 2151 which I believe merits serious consideration of the Members of Congress:

CHICAGO, ILL., *June 14, 1957.*
Re wool carpet bill, H. R. 2151.
Hon. HAROLD R. COLLIER,
Member of Congress, United States House of Representatives, Washington, D. C.

DEAR MR. COLLIER: In this country the carpet industry has, for over 150 years, produced woven soft surfaced carpeting for our American homes.

This industry is almost completely dependent on certain specific coarse types of wool not produced in the United States These types of wool must be imported from other countries whose sheep flocks are of the undeveloped and lower crossbred type that produce the coarse wools which are so necessary to the manufacture of carpets.

Since 1890 wools used in the manufacture of carpets in the United States have been admitted without payment of any import duty, up to grade 40's. Until recently, there has been a sufficient supply of these grades of wool. However, the available world supply of these grades of wool has been greatly reduced by the lack of trade with such Iron Curtain countries as China and Tibet. The diminishing supply of these grades of wool, together with an increased demand by the world carpet industry, have created a serious raw wool shortage in the United States which undoubtedly will become more acute as time goes on.

The enactment of H. R. 2151 will help relieve the increasingly acute wool shortage by enabling United States carpet manufacturers to compete in the world markets for an increased number of grades of wool without affecting domestic production of wool or any domestic industry. I urge that you lend your support to this bill. The United States demand for carpeting of all kinds has increased considerably. More than 15,000 retail establishments and their employees across the country are vitally interested in best serving the wants and demands of Mrs. American homemaker. The additional wool is needed to enable the retailer to supply that class of customers who normally demand carpets made of wool.

It is extremely important that this bill be enacted. Its passage will have a definite bearing on the future of the carpet industry, and at the same time permit the retailer to continue to make available to the United States consumer, woven soft surfaced carpeting of good reliable quality at reasonable and consistent prices.

Very truly yours,

A. O. TUREK,
Manager, Federal Taxes, Sears, Roebuck & Co.

House Foreign Affairs Subcommittee Hold Hearings in Gary, Ind.

EXTENSION OF REMARKS
OF
HON. RAY. J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. MADDEN. Mr. Speaker, on May 20, a subcommittee of the House Foreign Affairs Committee, under Chairman A. S. J. CARNAHAN, held hearings on our foreign-affairs problems in Gary, Ind. Forty-two witnesses testified. The following is the testimony of Robert Tobias, representing the Indiana Council of Churches:

A STATEMENT OF FOREIGN POLICY AND MUTUAL SECURITY TO THE SUBCOMMITTEE OF THE CONGRESSIONAL COMMITTEE ON FOREIGN AFFAIRS, GARY, IND., MAY 20, 1957

My name is Robert Tobias. I am here on behalf of the Indiana Council of Churches, whose member churches comprise the majority of the adult population of Indiana.

What I have to say does not necessarily represent the point of view of every member of the Protestant and orthodox churches in Indiana. It does reflect the conclusions of some representative church leaders who have given particular consideration to foreign policy insofar as mutual security and foreign aid are involved.

PROGRAMS ABROAD

We believe that certain specific programs are essential elements of a constructive foreign policy.

1. Mutual military defense: Military defense is necessary so long as men or nations threaten the processes of free and responsible thought, communication, and determination.

This is the common problem of many nations. It should be undertaken in partnership with them, sharing in personnel, planning and resources, insofar as possible through the United Nations.

It should be accompanied with adequate safeguards to keep the program defensive in fact as well as intent, with resolute efforts toward international understanding and permanent peace, with plans for disarmament and peaceful development of nuclear power and with responsible supervision of program and expenditure.

2. Mutual economic development: World economic development should be guided by planning on a long-range, worldwide basis.

National economic problems and policies, as well as private industry, should be informed and guided by world concern and consultation.

Our Nation should be ready to provide technical cooperation and financial support for commonly agreed projects, to assist in developing world markets, to facilitate trade and foreign exchange.

3. Economic grants, technical assistance, and self-help: Our grants to underdeveloped areas should be expanded to the extent of our possibilities and their responsible use in needy areas.

Provision should be made for emergency grants without extended delays.

Insofar as possible, planning and administration of grants should be on a multilateral basis.

Grants should be extended to people in need regardless of likely constribution to our own defense programs.

Grants should be so administered as to encourage eventual self-support and creative participation in the community of nations.

4. Cultural exchange: The understanding and friendship necessary for peaceful existence and cultural development ultimately depend upon mutual acquaintance among the peoples of the world.

A very greatly enlarged program of cultural exchange, public and private should be undertaken which would provide for sharing of arts, ideas, philosophies, etc., as well as technologies.

It should be multilateral, in principle excluding no peoples from its compass.

THE CHURCHES' PROGRAMS

The churches intend to continue their own worldwide programs of assistance, of fellowship and witness, representing last year upward of one hundred million dollars and well over ten thousand staff persons abroad. While this is not intended explicitly as a moral and spiritual counterpart for mutual assistance programs through government channels, it has positive implications for our national programs abroad.

METHOD AND SCOPE

1. Programs abroad should be planned and administered on a cooperative basis with other nations, insofar as possible within the U. N. framework.

2. Programs abroad should be above domestic partisan politics.

3. Programs abroad should be planned on a longer term basis. While relief projects can be operated on a year-to-year, hand-to-mouth basis, projects effecting most significant changes often require several years' development.

4. Inasmuch as all programs abroad tend to establish the particular government, regime or party through which they are channeled, safeguards should be taken to insure that such governments represent the majority will of the people, or, as a minimum, that it is the will of the people to have mutual assistance even if channeled through existing governments.

5. Programs of mutual economic development, technical and economic aid and cultural exchange reach beyond the concerns of military defense and should be independent of it.

6. Mutual economic development, technical and economic aid, and cultural exchange programs clearly need to be expanded by increased support and extended into new areas.

SUPPORT OF CHRISTIANS IN INDIANA

Members of our churches in Indiana are already aware that there are needs abroad. We believe we have responsibilities there which spring from the fatherhood of a just and loving God over all men, and our consequent brotherhood with all men. For this reason the ultimate criteria of our labors abroad may not be so much what they accomplish for us, but what they say by way of thanksgiving to God and participation with Him in His ultimate concern for the world.

In the immediate situation, the kind of support our constituency will give to national foreign policy and program will probably center around these four questions:

1. Is it imaginative and courageous? Are we just plugging dikes or are we helping people move forward?

2. Does it permit us a sense of mission as a people? Foreign aid programs, of late linked with military security, have been presented for support on the basis of enlightened self-interest. Americans are capable of nobler motives than this and, indeed, yearn for a sense of mission without which a Nation disintegrates. Americans should not be sold short on this point. Further, many realize that while it is historically true that help given to others often helps us, it is no less true psychologically and theologically that to seek to help ourselves by helping others ultimately helps no one.

3. Can the Nation be informed? If Americans have seemed weary in well-doing, it may mean they are not aware of the good that is being done abroad. An extensive program of information covering what is happening in the lives of people abroad seems imperative.

4. Are programs abroad creating understanding, trust, and friendship? Americans will be able to judge this largely on the basis of contacts with people. This may again suggest increased cultural exchanges, but also the need for a real sense of partnership in the purposes and administration of overseas programs.

Our constituency in Indiana has responded heartily to the needs of fellowmen abroad as presented through their churches. We believe they would undertake with hope the added responsibilities of an American foreign policy and an expanded program which informs them of the facts, which deals with the hopes of other nations imaginatively, courageously and constructively, and which springs from a sense of our own mission in the world in partnership with the responsible representatives of other peoples and reaching beyond the solution of our present conflict with Soviet communism.

Respectfully submitted.

ROBERT TOBIAS.

Congratulations to Texas Gas, and Felicitations to William Elmer

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial

entitled "Congratulations to Texas Gas, and Felicitations to William Elmer," which appeared in the June 13, 1957, issue of the Messenger and Inquirer, of Owensboro, Ky.

Bill Elmer is an outstanding young businessman who has attained success by reason of native ability, integrity of purpose, and hard work. He is well qualified to fill the place left vacant by the death of his illustrious predecessor.

The editorial is as follows:

CONGRATULATIONS TO TEXAS GAS, AND FELICITATIONS TO WILLIAM ELMER

Much has been said about Owenboro's natural resources, but too little is heard about our greatest asset—our human resources.

Many of our outstanding citizens are natives, but others have been furnished by industries locating here. Exemplifying the latter is Texas Gas Transmission Corp.'s new president, W. M. Elmer, who was promoted to the position at a board meeting Tuesday in Pittsburgh.

The description "outstanding" has been attached to Elmer on several occasions. Only 2 months ago he was cited as an outstanding example of the type of young executives attached to Texas Gas and coming under the leadership of the late W. T. Stevenson.

That was at a stockholders meeting, where praise is not passed lightly. However, Elmer is probably best known to the general public in connection with that description because of his selection as Owensboro's outstanding young man of 1950, and his subsequent choice as 1 of 3 outstanding young men of the State.

At 42, Elmer becomes one of the Nation's youngest corporation heads. A glance at his life's work to date shows a man continually progressing step by step toward success and leadership.

Elmer has risen from boyhood to one of the Nation's foremost industrial posts by his own efforts, hard work and lots of it. A native of Rochelle, Ill., he helped pay his way through college by playing the saxophone. He received a bachelor of science degree from the University of Illinois in 1936.

He was an auditing supervisor with the Navy Department during World War II and later became comptroller for Memphis Natural Gas Co., a predecessor of Texas Gas. He was later employed by Arthur Andersen & Co., Kansas City, as his predecessor W. T. Stevenson had been when he was starting his business career.

Elmer joined Texas Gas in 1947 and was elected comptroller the following year. Together with Stevenson, he worked to induce the corporation to locate its general offices in Owensboro.

In 1950 Elmer was elected vice president and treasurer and was made senior vice president in 1955. He was elected executive vice president of the company last April.

His service in these many capacities, and under the outstanding leadership of his predecessor, have made him well qualified for the title he holds and the tremendous responsibility it carries.

He and his family have endeared themselves to Owensboro in many ways through their unselfish participation in numerous projects to benefit the community. It is readily apparent that Elmer is ambitious for Owensboro as well as for Texas Gas. We anticipate his continued valuable assistance in helping to make Owensboro a good place to live and an inviting spot for new industry.

We congratulate Texas Gas on its having a man of Elmer's boundless energy and ability ready to move in as head of its vast interests as president of the company, and we felicitate Elmer on this expanded opportunity for service to his great organization, and to the community which he and it have chosen as their home.

Government Efficiency is a Large Order

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. PILLION. Mr. Speaker, this is the third of a number of articles dealing with the problem of waste and confusion in our Federal Government which I am pleased to insert in the public interest.

These articles were written by Mr. Clarence Francis, national chairman, Citizens Committee for the Hoover Report, and were published in a pamphlet entitled "The Coupler" by the Symington-Gould Corp., of Buffalo, N. Y.:

GOVERNMENT EFFICIENCY IS A LARGE ORDER

The Federal Government has undergone tremendous growth within the last 23 years. In this period, the executive branch has expanded from 400 to more than 2,000 departments, agencies, boards, bureaus, and commissions, some of which employ more people than General Motors. Total Federal civilian employment, in fact, has risen from 580,000 to 2,250,000. Military personnel have increased from 254,000 to nearly 3 million. Today, about 1 in every 13 employed Americans works for the Federal Government.

In money terms, it is easy to see that the Federal Government is the biggest business in the country. Last year, the Federal Government spent $66.4 billion. This amount represented 21 percent of the total national income, or $1 out of every $5 that we, as a people, make or earn by our efforts.

LITTLE CHECK ON INEFFICIENCY

Amidst this rapid growth and this huge spending, very little attention has been given to overall efficiency and economy. Is it surprising, then, that the Hoover Commission found identical things being done by different divisions of the Government?

For example, three independent air transport services are being run by the Navy and Air Force. Often no charge is made for carrying goods or personnel. Wasteful practices result: In July 1954, 13,000 pounds of furniture and, in September of the same year, 25,000 pounds of cement were flown from this country to Bermuda.

Moreover, many of these activities are carried on in competition with private enterprise.

HINTS OF WASTE APPARENT TO EVERYONE

Many Americans, either as civilian employees or as members of the armed services, have had a glimpse of waste in the Federal Government. As just plain citizens, many have complained at the redtape and delays as they tried to get some business information or a passport. In uniform, they have seen huge stockpiles of materials rusting at military installations.

The Hoover Commission confirmed our worst suspicions about this waste. Here are some of the findings on surplus property:

The Army Signal Corps had an authorized stock level of almost 1.5 million dry-cell flash batteries. This is an 8.5 year's supply of an item which lasts 2 years at the most.

Surplus disposal procedures are lax. One Government agency offered tungsten powder at auction, and accepted a bid of $1.20 a pound from a dealer who already had assurances that another Government agency would pay him $4 a pound. This, fortunately, was stopped.

The Army was found to have a 10-year supply of WAC uniforms but it went right on buying more such uniforms.

With such confusion, is it any wonder that the Government periodically finds itself loaded with piles of surplus stocks?

HOW TO CUT: AX OR PRUNING SHEARS?

Examples of Government waste and inefficiency are not new. They have been discussed often in the past. However, the Hoover Commission has shed new light on an old problem.

In the past, the problem has seemed large and confusing. Many sought an easy answer. They suggested, for example, that spending on Government services be cut by a certain percentage across the board. This meant that everything the Government did would be cut by a certain amount.

Kirwan Digs Us Again

EXTENSION OF REMARKS
OF
HON. FRANK M. CLARK
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. CLARK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Lincoln (Nebr.) Star of June 11, 1957:

KIRWAN DIGS US AGAIN

Representative MICHAEL J. KIRWAN, of Ohio, chairman of the House Public Works Appropriations Subcommittee, is conducting no love affair with the State of Nebraska. Apparently he is convinced that Nebraskans are political schizophrenics.

In two successive sessions of Congress he has put his foot down on committee endorsement of Nebraska's request for funds and approval for a federally built Fort Randall-Grand Island transmission line. He has said in effect that he is fed up with a Nebraska congresosnial delegation opposing Federal public power activities in principle and deed, but clamoring for funds and improvements when Nebraska public power agencies are needing.

Now in another area of Nebraska need Representative KIRWAN has arisen, cleared his voice, and given vent to a cynical shaft. When a Nebraska delegation appealed for a $3,327,500 appropriation to continue the conservation and flood-control work on the Frenchman-Cambridge project, KIRWAN observed that the Nebraska Unicameral Legislature had lately frowned on Federal spending and said so officially in an economy resolution. Asking Nebraska to make up its mind on what it wants KIRWAN was quoted as saying "If they do that (pass a no-aid resolution) out there on a nice clear day in the State legislature, then you come in on a cloudy day before Congress we would like to be enlightened as to what they want."

Nebraska perforce admits to a divided mind. A case can be made for inconsistency on the part of a State that formerly deplores aid programs while straining itself to get $9 for $1 Federal money for its highway system, and asks for millions for the purpose of flood control and conservation. But Representative KIRWAN is to be reminded that division of mind is a wholesome and universal characteristic of the American system. It is not peculiar to this one State or that. Indeed, were it not for political difference of opinion, Representative KIRWAN might not now be in Congress chiding Nebraska. He didn't get there by an unanimous vote in Ohio.

It is a good doctrine both for Nebraskans who, by testimony or resolution, attempt to be the controling voice of the State, and

Representative KIRWAN, who wishes to be a sound lawmaker, that issues should be weighed on their merits in terms of the national welfare and those merits do not include the condition of one's spleen. The Frenchman-Cambridge work is in the field of flash floods, of capital losses, of erosion of valuable soil, and of security of life and property both in downstream Nebraska and Kansas. By those considerations should the propriety or impropriety of remedial work be judged.

Floridian Invented the First Ice-Making Machine

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. FASCELL. Mr. Speaker, I am sure all of the members of the Florida delegation here in Congress would enthusiastically agree that there are many, many fine things to be said about the Third District of Florida and the outstanding member and dean of our delegation, BOB SIKES, who has represented this area with skill and integrity for more than 20 years in the Florida State Legislature and the United States Congress. I would like to call attention to an additional contribution to our society which has come from the Third District of Florida. I refer to the achievements of one Dr. John Gorrie, of Apalachiola, Fla., who was responsible for starting the whole concept of two of the greatest human comforts of the world today—air conditioning and the artificial production of ice. It would be impossible to estimate the value of Dr. Gorrie's accomplishments in the fields of health and industrial progress which our society has been able to make because of his discoveries. I pay tribute to this outstanding gentleman from the Third District of Florida. He is not forgotten. A recent newspaper article in the Miami Herald sets forth his inspiring efforts and the roadblocks he had to overcome The article follows:

[From the Miami Herald of June 9, 1957]

FLORIDIAN INVENTED THE FIRST ICE-MAKING MACHINE

(By Blanche S. McKnight)

He is one of the least known of our great Americans and yet he changed the world by solving a problem that had baffled mankind throughout history.

He is Dr. John Gorrie of Apalachicola who succeeded where Galileo and Benjamin Franklin had failed in efforts to conquer heat and produce artificial cold. Dr. Gorrie started the whole concept of two of the greatest human comforts of the world today—air-conditioning and artificial production of ice.

But strange to say, he is rarely mentioned in history books, encyclopedias or trade journals. Outside of Florida, probably only one person out of every 100 has heard his name or associated it with the invention of artificial ice.

Now, more than a century after his death, Florida is constructing a memorial museum to perpetuate his memory and tell the story of his battle against disease which resulted in his invention of an ice-making machine. In 1955 the State Legislature appropriated $20,000 for the museum in Gorrie Square, Apalachicola, and delegated the job to the Florida Park Service. Work was begun last fall.

Dr. Gorrie lived less than three score years, from 1803–1855, but in those drama-packed years there is a story of a never-ending battle against disease, outstanding in scientific achievement yet a melancholy and tragic story, embittered by disappointment. His most ingenious invention, the ice-making machine was ridiculed as a crack-pot idea and he was unable to find a financial backer for his revolutionary cooling machine.

The greatest drawback to the growth of the town was the prevalence of malaria and other subtropical fevers which were taking a huge toll of lives annually, besides threatening the successful colonization of Florida along the Gulf Coast. Rich and poor, white and black, often entire families were wiped out by the fevers.

Dr. Gorrie became known throughout the South as a pioneer in health and sanitation, but in his large practice of medicine, he found it almost impossible to treat successfully violent and long-drawn out cases of fever in the hot months. People died by the scores.

But the one idea Dr. Gorrie recognized as a must was plenty of ice to cool fever-ridden patients. According to his biographers, the doctor was truly a harassed man, making wearisome rounds in the merciless Florida sun, traveling from the humble homes of the poor and Negro slaves to the mansions, thence on to the Marine Hospital where he was the physician in charge.

To him, plenty of ice was the most needed commodity in the South. Likewise it was the most difficult to procure. All ice had to be transported from the North by wagon train and sailing boat. The ice served as ballast for the ships, but ships were very uncertain. If they did arrive, the ice cost from 50 cents to $1 a pound.

Dr. Gorrie was practical. He reasoned that since ice had been brought from the North as early as 1797 and the supply was still uncertain, little could be expected from that source.

Hence, he tried out a theory or treatment on evaporative cooling. History challenged him, for evaporation was one process that perplexed the ancients and medievalists. Gorrie persisted in his efforts and built a device which held buckets of ice suspended from the ceiling and over which a current of air was passed, thus creating the same effect as modern air-conditioning.

While pursuing these experiments in air-cooling, quite by accident, he produced small blocks of ice about the size of ordinary building bricks. Something went wrong in the windowless and doorless room where he was working and he found he had a cake of ice on his hands.

Now he determined to achieve the impossible. He set to work to produce a machine that would turn out a dependable supply of ice.

His experiments extended over a period of 4 to 5 years before he finally succeeded in making ice. By 1844, he was cooling mechanically two rooms in his home that he used for hospital purposes. A year later his machine was producing 8-inch blocks of ice.

It was not until 1850, however, that he completed the first practical model of his mechanical ice-making machine.

It now looked as if success had at last rewarded Dr. Gorrie's efforts, but his machine was ridiculed by the press, especially in New York and New England, where the cutting of natural ice was profitable. When he sought capital in New Orleans, Boston, and other cities, no one was willing to risk funds.

Disappointed and brooding over lack of finances, Dr. Gorrie became ill and died June 16, 1855, at the early age of 52.

Hawaii Pledges Not To Seek Statehood

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. PILLION. Mr. Speaker, it is claimed by the proponents of statehood for Hawaii that the United States is under an obligation to grant statehood.

The following article reprinted from the Honolulu Advertiser of January 9, 1957, reveals that the people of Hawaii had pledged themselves not to seek statehood at the time that Hawaii was annexed to the United States:

HAWAII'S STATEHOOD PLEDGE CHALLENGED

(By Kathleen D. Mellen)

Last Thursday evening, January 3, I heard a radio commentator make the charge—in a most aggrieved voice—that the American Congress has for six decades violated its pledge to make Hawaii a State. That no such pledge was made at the time of annexation is easily proven by even a casual study of the records of that period and because such an indictment of Congress is totally false I, as a loyal American, resent its constant repetition by statehood spokesmen. Such misrepresentation does nothing to make friends for us in Washington nor does it present America in a true light before the young Americans growing up in Hawaii. Therefore I ask your permission to present the true story of annexation proceedings as shown in the written records of that time.

Annexation of these islands to the United States was desired by a mere handful of Hawaii's total population and was approved on the mainland by an even smaller proportion of American citizens. The arguments put up by Americans against annexation were so hot and furious as to inspire Paul Neumann, a witty Honolulu lawyer, to say that its local promoters were making Hawaii look like "a streetwalker pushing herself on America."

Proponents of annexation, both here and on the mainland, took the stand at all times that they did not want statehood, the local leaders giving a solemn pledge that they would never ask for it because "it is not desirable nor is it wanted." The Honorable Samuel Damon told Washington newsmen: "Hawaii will never ask to become a State, because someday we might hold the balance of power in the American Senate, and that would not be desirable. * * * If we can come into the Union as a Territory * * * that would suit us just fine."

Chief Justice Albert Judd told the Boston Herald: "As to the question of statehood, I do not think that any sensible man in the islands expects or wants it. A Territorial government as a permanency is what is desired."

In January 1898, when Sanford B. Dole went to Washington to make a plea for annexation, newspapers there and here carried the statement that Washington was considering annexation, but would "add an amendment that will prevent Hawaii from ever becoming a State. President Dole has agreed to this." Mainland newspapers voiced approval of such an amendment, and the San

Francisco Call urged that the islands be put under military rule for all time.

Annexation in any form was opposed by the Springfield Republican which warned that "Some day they will try for statehood which might eventually be given them by some political party eager for their votes in competing for control of the United States Senate." And Carl Schurz, writing in Harper's Weekly said that the Hawaiian sugar planters would ask first for annexation, then for statehood. He warned: "The Americans should be prepared for the wild scheme which is likely to be sprung upon us * * * Some day, owing to some exigency, they would be precipitated as a State of the Union and through * * * their Senators and Representatives take a part in governing the rest of us in this Union." He advised the American people to "ponder that" before allowing them to come into the Union in any form.

When annexation was finally achieved the statement by a prominent Island Republican that the Republicans had promised eventual statehood for Hawaii brought a prompt rebuke from the New York Tribune which said: "If the Republican Party should ever favor such a thing it would cease to be Republican. * * * The salvation of this Republic requires that limitation of statehood be strictly to this continent. * * * No political party here has declared in favor of making Hawaii a State * * * and the Republicans dwelling in our Hawaiian dependency should not attempt to meddle with our policies. * * * We have treated Hawaii kindly but if the people abuse our generosity they will suffer for it."

I could give a long list of such authoritative quotations but these should be sufficient to prove the absolute falsity of the oft-repeated charge by statehood spokesmen that America has acted in a traitorous manner toward Hawaii. To accept the true situation and to cease hurling insults at Congress would serve our cause far better.

Spelling Champ Mary Ellene Salmon in Capital for Finals

EXTENSION OF REMARKS
OF
HON. WILLIAM H. NATCHER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. NATCHER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an article entitled "Spelling Champ Mary Ellene Salmon in Capital for Finals," which appeared in the June 3, 1957, issue of the Madisonville Messenger, of Madisonville, Ky.

By reason of her selection as tristate spelling champion for Kentucky, Indiana, and Ohio, Mary Ellene Salmon has exemplified what can be accomplished by making use of native ability and scholastic pursuits.

The editorial is as follows:

SPELLING CHAMP MARY ELLENE SALMON IN CAPITAL FOR FINALS

Mary Ellene Salmon, 13-year-old daughter of Dr. and Mrs. James L. Salmon, 208 North Main, left Sunday morning for Washington, D. C., where as tristate spelling champion, she will compete with 66 top spellers of the Nation at the 30th Annual National Spelling Bee.

Miss Salmon was accompanied by her sister, Lucy, and Mrs. Robert C. Tucker, 134 Waddill Avenue, her spelling instructor. At Evansville, they were joined by Nancy Brem, Evansville, who is in charge of the tristate area for the spelling bee contest. The group boarded a plane there and arrived in Washington Sunday afternoon.

Representing the Evansville Press as the tristate spelling bee champion, Miss Salmon will be in Washington for 1 week.

SISTER ALSO HOPKINS CHAMP

Since winning the Tri-State Bee, Miss Salmon has continued studying under the instruction of Mrs. Tucker, meeting with her twice a week for an hour's spelling session.

In 1955, Mary Ellene placed fourth in the tristate bee; in 1956 she was second and this year she was champion.

Lucy Salmon, her sister, was once spelling champion of Hopkins County, too, but lost out in the 1954 tristate bee.

Spellers in the national bee will visit the White House, Lincoln, Jefferson, and Washington Memorials, the FBI, Smithsonian Institute, Mount Vernon, Annapolis, and go on a cruise down the Potomac River while in Washington.

The spelling bee finals will be held on Friday, June 7, at 9 a. m., in the Department of Commerce auditorium. Bee headquarters and the contestants' residence while in Washington will be at the Sheraton-Park Hotel.

A total of $4,075 in awards will go to the final winners, as well as a weekend trip to New York City for the champion.

Statement of Rabbi Abraham J. Feldman, President of the Synagogue Council of America, Hartford, Conn., Before the House Foreign Affairs Committee in Support of the Mutual Security Act of 1957

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 7, 1957

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

STATEMENT OF RABBI ABRAHAM J. FELDMAN, PRESIDENT OF THE SYNAGOGUE COUNCIL OF AMERICA, HARTFORD, CONN., BEFORE THE HOUSE FOREIGN AFFAIRS COMMITTEE IN SUPPORT OF THE MUTUAL SECURITY ACT OF 1957

I am grateful for the opportunity to speak in my capacity as president of the Synagogue Council of America, which, as you know, is the central national coordinating agency for the rabbinic and congregational associations of the three branches of Jewish religious life in this country. These are: The Rabbinical Assembly of America and the United Synagogue of America, of the conservative movement; the Rabbinical Council of America and the Union of Orthodox Jewish Congregations of America, of the Orthodox movement; and the Central Conference of American Rabbis and the Union of American Hebrew Congregations, of the reform movement.

I do not presume to speak for each of the several million members of these organizations, but I am presenting the views adopted, after consideration, by the official leadership of these movements.

The Synagogue Council of America and its constituent agencies, on the basis of fundamental Jewish religious teaching, support the programs of our Government for extending long-range economic and technical assistance to the less-developed nations and people of the world. We believe that these programs, which are designed to help less fortunate peoples and their governments to preserve their newly won freedom and to move forward on the road to economic independence, are of crucial importance in the struggle to achieve peace and freedom, stability and justice.

We endorse in principle the proposals for an enlarged foreign-aid program submitted to the Congress of the United States by President Eisenhower on May 21, 1957, and as amplified by Secretary of State Dulles on May 22, 1957, before the Senate Foreign Relations Committee.

As a teacher of religion and a spokesman for the organized Jewish religious community, it is beyond my training and competence to seek to evaluate that aspect of the foreign-aid program relating to military defense assistance and defense support. In this area, the policy considerations are so complex, the military and security factors are so involved and technical, that it would be folly for me, as a layman, to try to pass judgment on the budgetary estimates for military security needs. Suffice it to say that we, of the Synagogue, hold that such a fateful decision, upon which rests the security of so many millions of human souls, must be arrived at in calm perspective above the storm of political partisanship. If any error in calculation is to be made, then certainly it were better that the errors should fall on the side of preserving the safety of the American people and the free world.

In reflecting further on the military security program, the synagogue groups of our country recognize the inescapable need for adequate military security and support programs for collective security, both within and without the United Nations. However, we feel strongly that the increasing reliance on military might alone, and at the expense of positive social, economic, political, and psychological strategies, constitutes a threat to peace. We believe that the scriptural concept of "Not by might, nor by power, but by My Spirit," has the highest contemporary relevance and that our Government should pursue with vigor and statesmanship every avenue which might hopefully lead to a reduction of the demoralizing armaments race and a limitation on the nuclear bomb stockpiling and testing.

We of the synagogues of America welcome in the proposed foreign-aid program the separation of the economic assistance (i. e., developmental assistance, technical cooperation, and special aid) from the military-defense program. This distinction—and it is an important one—between economic aid rendered for defense purposes in connection with our military interests and assistance provided primarily for the benefit of the people of the respective recipient nations has been long overdue. The separation of these programs, with its clarification of the fact that our nonmilitary development aid budget constitutes but one-tenth of 1 percent of our gross national product, must impress every mature mind among our citizenry with the reasonableness of this proposal and the urgency for its enactment into law in its present form. The contemplated development loan fund established initially on a 3-year basis of sustained operation, it seems to us, is a constructive move toward helping economically backward countries achieve a balanced economic development based mainly on their own needs rather than on the self-interest or foreign policy considerations of our Government.

As a spokesman for Judaism, I feel constrained to point out our profound religious concern over this factor of motive in providing nonmilitary economic assistance. We have observed that our Government seems to find it necessary constantly to reassure the

American people that the major or sole reason for helping the nearly 1 billion people in Asia and Africa who are afflicted with the age-old scourges of poverty, disease, and ignorance, that our principal motive in offering them aid is our own self-interest, our foreign policy.

Now, ladies and gentlemen, no one with any sense of responsibility can gainsay the importance of the desperate struggle for the loyalties of the uncommitted nations which contain nearly one-third of the world's population. As long as communism remains committed to worldwide revolution, we must make, wherever possible, friendly and dependable allies in the cause of democracy. But we must urge and stress the thought that there is a moral need to distinguish between what we do to assure our survival and what we do as a matter of humanity and unselfish moral obligation.

As religionists, we feel profoundly that the utilitarian motive of benevolence is not worthy of the United States. The moral character and destiny of America compel the higher motives of compassion, of brotherhood, of respect for human personality. These are both the cornerstones and keystones of our democracy which we may ignore or neglect only at our own peril. As the President said in his message to the Congress:

"Our helping hand in their struggle is dictated by more than our own self-interest. It is also a mirror of the character and highest ideals of the people who have built and preserved this Nation."

Religion, as taught by synagogue and church, enjoins us to help other nations out of love of God and man. I quote the words of Deuteronomy (15:7):

"If there be among you a needy man, thou shalt not harden they heart, nor shut thy hand from thy needy brother. * * * Thou shalt surely open thy hand unto him and shalt surely lend him sufficient for his need."

We should help these tragic people in need without expecting them to become our satellites. Grants-in-aid and loans may help us to acquire bases and other elements of military security, but these cannot buy friends or friendship. As our Nation, which is so privileged, shares its technology, its economic abundance, its life-preserving resources, our actions will demonstrate our concern for the welfare of other human beings.

In administering our material wealth and technical skills as a trust given us by the Creator for use in the service of mankind, we shall bring hope to millions of people in the underdeveloped parts of the world.

Now—this we can do with a constructive and long-range program of economic assistance and international trade which may ameliorate the despair and hopelessness which engulf so large a portion of mankind and will assure not alone the dignity of life, but life itself.

We of the Synogogue Council of America devoutly hope that the Congress of the United States will enact this legislation to help in the words of the psalm, "rescue the poor and needy; deliver them out of the hand of the wicked."

This, we believe, is the great moral and historic obligation which confronts our country in its role as the leader of the free world.

Our people support the foreign-aid program which appears to be the surest vehicle we now possess in our waging of peace for all men everywhere.

Justification of Farwell Irrigation District

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. MILLER of Nebraska. Mr. Speaker, the appropriation bill for public works for fiscal year 1958 gives moneys for some 280 flood control and irrigation projects located all over the United States. I want to call the attention of the committee to a project in Nebraska known as the Farwell irrigation unit. This district consists of about 52,000 acres and is a part of the Sargent unit that is already under construction. It is a part of the Missouri River Basin development.

The Farwell project was authorized last year. A repayment contract was completed and accepted by the Department of Interior. The President included an item of $750,000 to start construction of the project. The Appropriation Committee has seen fit to eliminate this project and on page 18 of the report you will find their explanation.

I would point out to my colleagues that this is the only irrigation project in the Missouri River Basin that has a conservancy district which has been organized and was authorized to help with the ultimate repayment of the construction of the project. There is no hydroelectric development in the Farwell unit. It will tie in with the Sargent irrigation district which has already been started and in the end will irrigate a total of 68,700 acres.

The committee, in their report on the Farwell unit, complains that "the revenues of the Missouri River Basin project are expected to carry more than 60 percent of the repayment costs applicable to irrigation." Mr. Chairman, there are 13 projects in the 7 States making up the Missouri River Basin area. The average repayment of these irrigation projects is about 17 percent. They go as low as 8 percent repayment over a 50-year period. There is no project that reaches the repayment provisions of the Farwell project.

I would point out, Mr. Speaker, that the folks living in this district are in full accord with the irrigation project. There is no dissension. They have met all of the requirements placed on the project by the Legislative Committee, the Interior Department, and the Bureau of the Budget. It is indeed a little hard to understand why the project was not given the green light.

It is interesting to note that the United States in 8 years has spent under their foreign aid program $355,800,000 on 197 projects in 46 countries for irrigation, hydroelectric projects, and drainage projects. Indeed, several large contracts have been made in the last 60 days for additional projects in Formosa and Indonesia.

It seems to me we ought to remember that the funds invested in reclamation are an investment in America, an investment to meet the demands of this growing, dynamic country.

There has been some question raised about surplus crops being produced on irrigated land. In the case of the Farwell project some eight or nine thousand acres of wheat now being raised would be diverted to production of alfalfa and other forage crops.

I did want to remind my eastern colleagues that the farmers on irrigation projects are excellent, permanent customers for the manufactured products of the Eastern States.

Mr. Speaker, I have just received a telegram from the board of directors of the Farwell project. It reads as follows:

Apparently the House committee was critical of benefit-cost ratio but we do not understand why such criticism should be made at this time. The Farwell unit was justified by the Interior Secretary and was authorized by Congress on the basis of the total benefits that will accrue from its operation.

He found the benefit-cost ratio to be 1.88 to 1 for 100 years as the minimum useful life of the works. For a 50-year period the ratio was 1.45 to 1. As concerns repayment, our people have already signed repayment contracts as between the Farwell Irrigation District and the Loup Basin Reclamation District and the United States, pledging revenues from the reclamation district levy, and the full ability of the irrigators to pay for project operation and maintenance and toward the costs of construction.

We believe our returns toward project costs in this respect are more favorable than most projects today. This is true, especially considering that our project involves an unusually small amount of nonreimbursable costs—less than 4 percent—for flood control and fish and wildlife as shown in the report.

Platte and Loup Valleys in Nebraska have received only one small irrigation unit as a part of the Missouri River Basin project development, yet these valleys contain a large percentage of the basin in terms of land suitable for irrigation and of people who could and who have the right to be benefited through irrigation development.

Our people have noted the favorable action of the Budget Bureau recommending an appropriation of $750,000 to initiate construction of the unit at this time and have taken heart in knowing that all other agencies of the Government have also aproved our project. They are now disappointed and rightly so in the action of the House Committee not to recommend the appropriation.

This telegram is signed by the directors of the Farwell Irrigation District.

Mr. Speaker, in conclusion let me repeat it is difficult for the folks in the Farwell Irrigation District to understand why the project was eliminated by the Appropriations Committee. I do not believe they are especially bitter or resentful but they are confused and actually hurt when they realize that this Congress in the last 8 years has spent

more than $355 million on 197 irrigation, hydroelectric, and drainage projects in 46 countries and then refuses funds for a project that is really just an investment in the resources of the country, a project that pays back all of the money over a period of 50 years. Indeed, Mr. Chairman, in the last 60 days several lush contracts have been let for more irrigation and drainage in Formosa and some other eastern countries, including Spain. These projects in foreign countries pay back not one dime, nor do they have legislative approval, nor are they required to furnish feasibility reports, and yet the money is furnished by the taxpayers in America, including those in the Farwell unit.

The folks in the Farwell Irrigation District, both in the country and in the towns, have joined together to form a conservancy district. In other words, the people in town will help to carry on and pay for some of the charges on the irrigation costs. It is the only project of that type in the Missouri River Basin. The people in this area are honest, sincere, hard-working folks. It is an established community. All they need is water on their good land in order to make the area a real Garden of Eden. Mr. Chairman, it would be quite different had the project not had Department and udget approval. It would be quite different if the repayment charges would be less than those on the other projects. The project has a much higher ratio of repayment than the other 13 projects in the Missouri River Basin.

We hope to make a complete presentation to the other body and I feel certain that they will include the item in the appropriation bill. I trust a conference will take into consideration the facts that justify the Farwell Irrigation District.

Inflation—One Easy Lesson

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. DAGUE. Mr. Speaker, the real picture of how inflation works is pointed up by the following example which appears as an advertisement in the June 21, 1957, issue of U. S. News & World Report:

You repair shoes, he pumps gasoline, I raise chickens. We sell to each other and to the man next door—a retired schoolteacher on a pension.

Somebody convinces me I can make just as much for less work, so I raise fewer chickens but increase the price of those I do raise.

But you aren't going to repair more shoes in exchange for a chicken; he isn't going to give me more gasoline for a chicken. It's the same chicken; I haven't made it worth any more to you. So all you do is raise the price of repair work; he raises the price of gasoline. But the retired schoolteacher can't raise his pension; he just gives up chicken.

So all I've done is lose one customer, and traded dollars with the others.

If I had worked more efficiently (maybe invested in a mechanical brooder) I would have had more chickens to trade for more repair work and more gasoline, and by cutting costs and prices a bit, got two teachers as customers instead of none.

And more people could be enjoying chicken.

In the same issue of the same magazine there appear some very convincing data on who is to blame for the wage-price spiral.

Since 1950 pay for labor has increased 22 petrcent, while the worker's output has increased 11 percent, which can only result in an inflationary impact.

The industrialist has two things to consider; namely, accumulating reserves necessary to the repair, modernization, and expansion of his plant—which benefits labor—and the payment of a return to the stockholders who have invested in the plant. These investors, since the money they have invested represents the result of their labors, have as much right to increased earnings as do the employees. It is, therefore, significant that dividends paid to stockholders, in 6 years, dropped from 3.8 percent to 3.5 percent of national income. At the same time, industry's profits, after taxes and dividends, dropped from 3.4 percent to 2.1 percent. Recalling that in the same period labor increased its take by 22 percent, it is pretty clear that someone is talking through his hat when he denies that wage increases, unless they are geared to increased productivity, do not initiate the price spiral.

And then to return to the retired school teacher—to all of us who live on fixed incomes—how far does this crazy business go until we are all forced to stop eating chicken?

Herein, in my opinion, lie the seeds of our economic destruction.

Amazing, Eh What?

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. ROONEY. Mr. Speaker, under the permission heretofore granted me by unanimous consent of the House, I include the following very interesting newspaper article by Joseph Young, published in the Evening Star, Washington, D. C., Tuesday, June 18, 1957:

PRIVATE MAIL CONTRACT SUGGESTED BY PRESIDENT

(By Joseph Young)

Apparently annoyed at the all-out pay-raise fight being made by the postal employee unions, President Eisenhower is reported to have told a group of Republican Congressmen that a lot of the Nation's postal problems could be solved by the Government turning over its postal operations to a private firm.

According to some Republican Congressmen present at one of last week's breakfasts given by the President for the legislators, several of them suggested that the administration drop its opposition to postal and Federal pay increases and indorse a moderate rise.

During the reportedly heated discussion that followed among the Republican Members, President Eisenhower was said to have told them that "it would solve a lot of problems if the Government could contract with a private firm to deliver the mail."

Representative CORBETT, Republican, of Pennsylvania, one of those present and a top member of the House Civil Service Committee, was one of those urging administration support of a pay raise.

According to several members present, the President listened while Mr. CORBETT compared postal wages with the salaries paid in the Pittsburgh area where common laborers are hired at $2.30 an hour. The President is then reported to have observed that present postal wages were ample in some low-cost areas and to have raised the question of whether it might be feasible to provide regional variations in pay or even provide a special allowance for high-cost areas.

It was pointed out to the President that rural lawmakers, particularly southern Democrats, who wield great influence in Congress, have always opposed that and consequently there was very little chance that Congress would approve such a system.

Whereupon, according to those present, the President commented that neither the executive branch nor the Congress should have to spend so much time worrying about such problems as setting the salaries of postal workers.

It was then that the President reportedly made his comment about how it would solve the problem if the postal service could be turned over by Federal contract to a private firm. He went on to explain that the contract could provide—as other Federal contracts do—that the employees must be paid the prevailing wage in whatever area they worked.

The President's suggestion did not rouse much enthusiasm, either among Members of Congress or of postal employee unions.

The feeling was that the cost to the Government would be greater. First, the majority of postal workers are concentrated in the country's 100 high-cost cities and, based on comparable industry wages, their pay would be raised more than lowered. Also, any private firm would, of necessity, have to have a reasonable margin of profit for its operations.

Finally Members of Congress feel that a private firm would not be willing to maintain the scope of present service in 36,000 cities and 30,000 rural areas. Only those areas whose operations showed a profit would be serviced under private operation, they declare.

Some of the Members present at the breakfast said afterward that they didn't believe the President was too serious about the proposal. They said they felt the off-the-cuff expression was just the President letting off steam due to his irritation over the serious Federal pay-raise drive now going on in Congress.

J. Blake Timmons

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. ROGERS of Texas. Mr. Speaker, it is with heavy heart that I report the demise of a notable and illustrious Texan. Amarillo and the Panhandle of Texas has

lost a valuable and valiant citizen in the passing of J. Blake Timmons, judge of corporation court, who was struck down in his young manhood by a crushing illness. Only in the past few months has he been unable to carry on the duties of his office, and it is the marvel of his friends that he bore up so long in the face of his waning strength.

Judge Timmons was a man of high character and he had that fine quality of great courage and kindness of heart. He possessed in an extraordinary measure the confidence and devotion of his many friends and associates. He met his final test as he met all others. Whether in service of his country or in the everyday trials of life, he could take it. His innate cheerfulness would not let him be cast down and he went bravely forward in the faith of a new and better life, and in the consolation of the infinite and eternal care of his Heavenly Father.

Statement of President Garcia of the Philippines on Signing the Bill Outlawing the Communist Party in the Philippines

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. McCORMACK. Mr. Speaker, President Carlos P. Garcia of the Philippines has just signed a bill passed by the Philippine Congress outlawing the Communist Party in that country. The law prescribes imprisonment for party members and death for party organizers and leaders. Upon signing the bill, President Garcia issued a statement that, for its courage, forthrightness and statesmanship, will take its place among the valuable state papers of the free world.

It is evident that in the Philippines there is no weakening, but on the contrary, a decided strengthening of the determination of the people to fight a godless ideology such as communism. The Philippine Congress, in passing such a bill, has shown the collective wisdom of its constituency and it is a clear expression of the Filipino's unswerving will to oppose the blandishments, the intimidations, the prevarications of communism. President Garcia in signing it is demonstrating to the world that he is a worthy successor of his great predecessor, Ramon Magsaysay.

Let us take a lesson from this example of unrelenting fight against an ideology that does not rest in its effort to destroy the democratic way of life. While we have heads of state like President Garcia who are stalwart champions of democracy, we in America need have no fear that the Philippine Government will continue to be led with wisdom and statesmanship and that the Filipino people will continue to be our worthy allies in upholding all that is best and all that is noble in the democratic creed.

The following, Mr. Speaker, is President Garcia's forthright statement on signing the bill outlawing the Communist Party in the Philippines, which I commend to all those of our countrymen who need an injection of courage to continue our fight against communism:

STATEMENT OF PRESIDENT CARLOS P. GARCIA OF THE PHILIPPINES UPON SIGNING THE BILL PASSED BY THE PHILIPPINE CONGRESS OUTLAWING THE COMMUNIST PARTY OF THE PHILIPPINES

I have signed into law the bill outlawing the Communist Party of the Philippines.

With this law, our people have not only officially made the fight against communism a matter of national policy but we have also acquired a potent weapon in the fight against subversion.

Successful as we have been in breaking the backbone of armed Communist resistance, we find ourselves seriously handicapped in countering effectively the more insidious activities of Communists who have ostensibly forsworn violence and sought expediently the protection of the very laws of the land which they seek to destroy.

Thus, even with our success in the military field the congressional Committee on Anti-Filipino Activities, after conducting the most comprehensive and authoritative study ever made on the problem of communism in our country, concluded that communism remains a real and continuing threat to the national security. It is to the credit of this committee that the bill outlawing the Communist Party was conceived and recommended. It is, likewise, to the credit of the champions of civil rights in Congress that necessary safeguards were made such that the legitimate exercise by citizens of their rights shall remain inviolate. What the present law punishes is not dissent nor heresy but subversion and conspiracy.

Communist sources, as well as the evidence of our own experiences, establish the fact that the objectives of communism are the destruction of our social, political, and economic system, and their replacement by a foreign and godless ideology guided and directed from abroad. These same sources, as well as our experience, establish the Communist means of achieving these objectives as including armed force, sabotage, espionage, and the many sinister forms of subversion. Far from contenting itself with seeking victory, as do other political minorities, by legal democratic process, Communist doctrine flatly denies the possibility of legal success and prescribes criminal conspiracy as its orthodox tactics.

Under the circumstances it is clearly the right and the duty of this Government to invoke the police powers of a sovereign state to protect itself and the institutions entrusted to its care from criminal attack.

The passage of this law reaffirms the position which our Government has taken, and will take, vis-a-vis communism: A firm, unequivocal, and uncompromising stand against freedom's most odious and implacable foe.

In this vigorous and reasoned counter offensive to Communist aggression, I feel that we are serving the cause of the free world as well as our own best interests. If our neighbors can derive benefit or guidance from our experiences and approach, we will have made a substantial contribution to the peace and security of this area.

I assure lovers of freedom and democracy's friends everywhere that during my incumbency as President of the Republic of the Philippines, I shall not only see to it that the anti-Communist program of my illustrious predecessor, Ramon Magsaysay, will remain intact, but I shall also push it through with the same dedication and with unrelenting vigor.

Old Fashioned Bread

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks I should like to insert in the RECORD the following article, "A New Kind of Old-Fashioned Bread," which appeared in the April 1957 issue of the American Legion magazine:

A NEW KIND OF OLD-FASHIONED BREAD—GRANDMA'S LOAVES WERE TASTIER AND MORE NOURISHING BECAUSE OF AN INGREDIENT NOW BEING RESTORED TO BREAD

(By James C. G. Conniff)

One day during prohibition police descended on a brewery in Morris, Ill., and padlocked it. Of course this wasn't the only brewery that suffered such a fate during the so-called noble experiment, but this particular padlocking had a strange aftermath. It cut down some of the available supply of beer in the early 1930's, of course, but, more important, it is going to mean a world that is better nourished than it is at present.

Not long after the law closed down the brewery, a miller leased it with the idea of using part of the beer-aeration machine to clean his wheat. In the course of converting the machinery a fluke occurred of the type that has time and again changed the course of human history. The miller's plant manager decided to turn on the blower device full power for a quicker cleaning job, using controls to keep the wheat from taking off in the gale. It worked, but it did something else that hadn't been counted on. The mighty air currents also cooled the rollers that ground the flour, and there was no sign of the wheat germ which is left as residue in modern milling operations. This tiny but vital part of the wheat had all been crumbled into the flour.

Being a conventional man, the miller was mightily upset to find his machinery doing such an unconventional thing. Indeed, so upset was he that he closed down temporarily to put things to right. Now usually when wheat is milled, the wheat germ that is left in it has to be fine-combed out. This is because the germ has been flattened instead of pulverized like the rest of the flour, and because the oil in the germ has been heated, hurrying a chemical action that impairs the keeping quality of the flour.

Naturally the miller was sure that his unconventionally processed flour would soon spoil because the wheat germ had not been milled out of it. But, strangely, it remained fresh. He tried to peddle the freak flour, but nobody was having any; so he relinquished his lease on the brewery and quit for keeps.

That might have been the end of the matter, only for a man by the name of Dan Brown, from Chicago. Dan, a former newspaper circulation executive, had for years been trying to find out how to mill flour and leave the wheat germ in, without having the flour go bad. This pursuit might indeed be called an inherited trait since his grandfather, Dan T. Hedges, a Sioux City, Iowa, banker, had spent a $502,000 fortune trying to solve the same problem.

The two Dans were not just anxious to enjoy the taste of old-fashioned bread of the type that was baked a hundred years ago; they, and more particularly the grandson, knew that modern milling methods removed a lot more than taste when the grain was ground into flour.

The secret lies in a blackish speck at the base of every grain of wheat: the wheat germ. This oily speck, the heart of the wheat, is no bigger than a poppyseed on a hard roll. Yet into its subpinhead confines are crammed almost all the nourishing vitamins, minerals and vitality-building acids for which wheat is famous.

In gradma's flour the wheat germ got well crumbled by the stone grinders of yesteryear. Before their spilled riches could make the flour go bad, she'd used it up. In grandma's bread you thus got all the nourishment and that moist, unforgettable flavor.

But about 1870 high-speed steel roller mills brought here from Hungary began the mass production of bread that in the end put grandma out of business. Unfortunately, those rollers also took much of the nourishment out of bread. With it went the flavor.

Spun at high speed through revolving steel, the wheat grains pulverized all right, but the wheat germs didn't. Moving metal heats up. The heat got to the oil in the wheat germs and made them soft. Instead of shattering, they flattened. Heat and oil meant quick spoilage of the flour; so the wheat germs had to be fine-combed out.

Never wasteful where the dollar was at stake, the millers caked this wheat-germ discard and sold it to farmers for livestock feed. It put solid meat on pigs and beef cattle in no time. Among humans, only health-craze addicts bothered with it.

The now wheat-germ-free flour kept well enough. But the bread it made, when fed to lab rats as their only diet, brought death from nutritional deficiencies.

Even so, it wasn't till 1940 that the States began forcing bakers by law to put back in bread, via chemical additives, some of the plundered nutrients of the wheat germ. This now all but universal enrichment program is a repair move in the right direction. But that's about all it is. Enriched bread still provides only a fraction of true wheat-germ potency.

Till World War II, in other words, the bread that couldn't keep a lab rat alive was the same bread you fed your children. Since then it's been improved, but only some.

Kids, as everybody knows, are smarter than lab rats. Luckily, so are most grownups. From 1870 to 1940 kids and their folks simply ate less and less bread. Grandpa wolfed 250 pounds of grandma's bread a year. Today even his growing great-grandson, who needs it most, puts away an indifferent 100-plus. This steady drop in bread consumption worried the big bakers. But what did they do to counteract it? They just bleached the flour in their dud loaf whiter still. They loaded it with extenders and spoilage retardants and they baked it light as the air it was pumped full of. Then they spent millions on "educational" advertising to convince the American public it wanted this tasteless plug.

Confident that Americans deserved better in the way of bread, Dan Brown made an intensive study of milling practices, and in this he was aided by his grandfather's copious reports. When in 1935 he heard about the miller's experience in the brewery, he pricked up his ears. Could this be the elusive secret his grandfather had spent a fortune on? Taking time off from his newspaper circulation job in Chicago, he went down to Morris for samples of the odd flour. It tested out as true wheat germ. Dan even found he could still make tasty bread from the ancient stuff.

His head spinning, he tapped the family till to buy the miller's interest and lease the magic brewery. From the Sioux City attic he dug out a complete file of his grandfather's reports. Within a year, in 1936, he had the combination—and the flour—that grandfather dreamed of. But perfecting the process for which United States patents were finally granted in May 1950 cost Dan another $2½ million.

The wheat-germ factor occupies no more than 3 percent of the flour's volume; yet in totally independent analyses researchers from the University of Chicago under Dr. Anton J. Carlson and biochemists under Dr. Philip H. Derse at the Wisconsin Alumni Research Foundation have pronounced it the key to this flour's overwhelming superiority on all counts.

For low-caloric count and minimum carbohydrates, enriched white flour compares unfavorably. Weight-watchers will also be glad to hear that wheat germ flour has more protein. It is lengths ahead on vitamin content and the vital trace elements (nutrients other than the big three: niacin, riboflavin, thiamine).

Better for you than even whole wheat, wheat germ contains seven times more vitamin E than any bread going. Vitamine E is the heart disease preventive that is so helpful to recovery after a coronary too.

However, experienced millers told Brown he couldn't make flour like that. Grandma, they pointed out, got away with using fresh stone-ground flour because for home baking she needed only relatively small quantities. And she baked so much that her flour had no time to spoil.

You couldn't do that on a commercial basis, the millers warned. Commercial flour has to be stored. It has to keep. Dan went ahead anyway.

As proof that he was right in believing he could make such flour, today his process is patented here and in 32 foreign countries, with 6 more to come. It yields a natural wheat-germ flour that will not only make a loaf to rival grandma's best; it will also keep indefinitely at 55–90° F. Bread, sweet and crusty, was made from a barrelful of the stuff that had been stored and forgotten for 4 years. The United States Department of Agriculture and the State of Georgia found Dan's wheat-germ flour fresh and wholesome after 2½ years.

From the results of these tests, millers privately came to agree Dan had something worthwhile. But even if sure of a market, they said, how could they afford to shut down their mills long enough to switch over from ordinary flour? And what about the cost of conversion?

Dan has worked out with his engineers a system by which even the biggest mill can convert—without loss of production—in less than 30 days. The cost is merely a drop in the advertising bucket.

Consumer reaction has been more than heartening. When 500 Chicago ladies of the Illinois Club Women's Service Forum sampled 3 breads identified only by number, 421 said they'd buy No. 3 bread (Dan's) if they could get it. While only 263 said they baked at home, 291 said they'd like to with that No. 3 flour (also Dan's) because of its rich texture and creaminess. And 418 found the No. 3 bread the tastiest by far.

In Michigan sales of wheat-germ bread in test marketings soared 100 percent a year. Macon, Ga., had a 30 percent jump in 90 days. The important thing here is that the bread being tested was not labeled wheat germ. It sold on taste alone, and the word got around.

When the United States Quartermaster Depot in Chicago tested 600 barrels of the stuff in 2 Army camps, 85 percent of the soldiers voted for nothing but wheat-germ bread from then on. Unhappily, they never got it. The year was 1942 and Uncle had other more pressing tasks. Washington, cautioning Dan not to let the enemy get hold of his process, promised to get back to him later.

It hasn't yet, though Secretary of Agriculture Ezra Taft Benson has personally endorsed the value of wheat-germ flour to our national health and farm programs.

Why the holdup in giving the people of the United States, and the world, a superior flour that could have been made available two decades ago? Actually, at the present time it can be had only here and there—in parts of Florida, Michigan, Texas, Georgia, and Illinois. But that isn't Dan's fault, nor is it because of any lack of effort on his part. He'd like the whole country to share this bodybuilder and taste treat. To that end he puts in a 14-hour workday, including weekends.

Only now are results of all this missionary work beginning to show. For the first time the millers and bakers—the people who decide what kind of bread you're going to eat—seem to be in a mood to listen.

"Milling executives of companies representing 75 percent of our national capacity," Dan told this writer, "have assured me they will make wheat-germ flour available as demanded and required by today's bakers."

More and more independent bakers, needled by customers hungry for real bread, are eager to take the millers at their word. Right now these small bakers' only source of wheat-germ flour is Dan's own six-story mill at Morris, Ill. But its 1,700 sacks a day—enough for 1,500,000 loaves a week—are only a puff compared to the typhoon of demand that Dan feels sure is bound to come.

Further on the bright side, advertising managers representing 7 of our top 12 baking chains have seen Dan privately to map out campaigns for when enough local pressure from you, the consumer, forces them to market wheat-germ bread nationwide.

To reach such a turning point, this enriched industry had to come a long way. It had to stop thinking in terms of money invested in costly machinery which turned out flour of a sort, even if it did mangle the vital wheat germ. It had to stop thinking in terms of stopgap measures to restore wheat's nutritional values by dosing it with all kinds of oddments out of the pharmacopoeia. And it had to stop thinking in terms of using advertising copy as a substitute for the important element missing from its flour.

Obviously this called for some major adjustments in thinking, but in a free-enterprise system it is necessary for suppliers of goods or services to adjust when their bosses, the buying public, call for changes. And they're beginning to insist on flour with the natural goodness left in. Where the new flour is coming into use, comparisons are inevitable; and the word is getting around to the effect that it's possible to get bread that tastes the way bread should taste. Possibly you've tried the new kind of bread, but if not you will before long because its coming is as inevitable as 1958 model automobiles next year. And if you want to hurry the revolution in the bread business, start calling for it now. Not in a demanding way, of course, but persistently. Indeed, since some suppliers are a bit sluggish, it may be necessary to be ultrapersistent, with some of the crusading zeal that marks Dan Brown.

Incidentally, there's more than the zeal of a businessman that fires Dan when he's trying to sell wheat-germ flour. He wants healthier Americans, and he knews that a well-fed nation is a strong nation. Also, he'd like to see use made of his process to help whittle our wheat surplus by sharing with needy peoples a flour that is truly nutritious and capable of being stored indefinitely.

From sheer gratitude and affection, English-descended Dan Brown has himself, through Seumas MacManus, offered his wheat-germ process to the people of Ireland free of all royalties.

"I feel a tremendous debt to Ireland for my wife, Margretta Curry," says Dan, "and a splendid son, and now little Mollie."

Dan will tell you with pride and frankness that he not only loves his 1-year-old daughter Mollie, but considers her one of the most convincing arguments for wheat-germ bread. When she was born at the end of 1955, he

was 57, "an age when most men are having grandchildren."

A royalty-sharing foundation which Dan Hedges Brown set up as a memorial to his grandfather, Dan T. Hedges, is probably the most unshakable evidence of all that Dan means every word of it when he says he hopes a really good bread will help good people everywhere understand and assist one another. This foundation, set up under Illinois law, gives to charity 40 percent of all royalties on Dan Brown's wheat-germ process forever. Dan has earmarked 20 percent of his wheat-germ royalties for the American Legion. A shavetail bayonet instructor at Camp Pike in Word War I, he helped found Sioux City's Monahan Post No. 64 in 1920. He also served as adjutant and vice commander in charge of membership. Dan was later with William Randolph Hearst Post No. 478 in Chicago, and is now active in Morris (Ill.) Post No. 294. His wheat-germ money will be used for academic and 4–H Club scholarships, awarded jointly by city and country Legion Posts to deserving boys and girls.

Dan is a prominent Mason and a good Episcopalian. But in line with his benevolent philosophy, he is assigning 5 percent of royalties to the Catholic Archdiocese of Chicago where Samuel Cardinal Stritch has long been his very good friend. Another 2½ percent goes to the Franciscan missionaries. Chicago's Shrine Hospital gets 5 percent and Dan's University of Chicago fraternity, Psi Upsilon, 7½ percent.

To show that Dan Brown's spirit of good will is infectious, both the Imperial Recorder of the Nobles of the Mystic Shrine and the editors of the Vatican newspaper, Osservatore Romano, have gone out of their way to publicize wheat-germ bread.

"Something big is happening," wrote Walter Persegati at the start of a long editorial in the semiofficial publication a year ago. "A new white flour for a real bread has been discovered. This makes good news for humanity."

Message From Garcia

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 19, 1957

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of June 19, 1957:

MESSAGE FROM GARCIA

In the face of Supreme Court decisions on domestic communism, the action taken today by Philippines President Garcia stands out impressively.

President Garcia signed into law a bill outlawing completely the Communist Party in his country.

This may have come as a surprise to Americans who thought the Philippines no longer were troubled by the communist menace.

But as Mr. Garcia said, tho they have broken up "armed" communism, "we find ourselves seriously handicapped in countering effectively the more insidious activities of Communists who have ostensibly forsworn violence and sought expediently the protection of the very laws of the land which they seek to destroy."

In such fashion apparently the American Communists have beguiled the majority of our Supreme Court Justices. The Communists disavow violence, conspiracy or ties with Moscow. And the High Court seems to regard them as no more menacing than just another political party with dissenting views.

From long and bloody experience, the Filipinos know better. Their conclusion, as President Garcia puts it, is that "Communism remains a real and continuing threat to the national security." Communism's worldwide aims are indivisible, wherever the area of their operations, whether in the Philippines or the United States.

"Communist sources, as well as the evidence of our own experiences," says President Garcia, "establish the fact that the objectives of communism are the destruction of our social, political and economic system, and their replacement by a foreign and godless ideology guided and directed from abroad."

In outlawing the party, all necessary safeguards are taken for preservation of Philippine civil rights. As pointed out by the able successor to the late President Magsaysay—himself an ardent champion of the democratic processes—"the legitimate exercise by citizens of their rights shall remain inviolate.

"What the present law punishes is not dissent nor heresy but subversion and conspiracy."

So speaks a leader wise in the ways of the Communists.

The Girard Case

EXTENSION OF REMARKS

OF

HON. WALTER ROGERS

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 19, 1957

Mr. ROGERS of Texas. Mr. Speaker, I am in receipt of a resolution from Commander Fred H. Squyres and the members of Frank King Post, No. 249, of the American Legion, at Wellington, Tex. Their comments are timely, and it is evident that considerable time and thought have preceded the preparation of the resolution. I am pleased to give my colleagues benefits of their sentiments regarding the Girard case by inserting herein their resolution:

Whereas Frank King Post, No. 249, of the American Legion, of Wellington, Tex., of the Department of Texas, at its regular business meeting held on the 6th day of June 1957, after much deliberation and consideration regarding the United States Government turning over for trial to the Japanese authorities a member of the Armed Forces of the United States, namely Army Sp3c. William S. Girard: Be it therefore

Resolved, That it is the opinion of this group that the United States Government committed a grave wrong and injustice to this member of the Armed Forces and that such a policy as followed by the Government in this case is a violation of our rights as American citizens. It is further the opinion of this group that our Government is committing a wrong in drafting the young men of our country into the service for the defense of our country and involuntarily sending them overseas to foreign nations and placing them under the jurisdiction of those foreign nations. We believe that our President and the other Government officials should take immediate steps to right this wrong. By this resolution we do not attempt to say that the Japanese officials will willfully discriminate against this man, but we believe that our Government has committed a wrong, and should right this wrong.

In witness whereof, we request our commander to attach his signature and send copies of this resolution to the President, Secretary of State, Senator LYNDON B. JOHNSON, Senator RALPH YARBOROUGH, United States Representatives WALTER ROGERS and OLIN E. TEAGUE, and other interested officials, as well as sending a copy to our department commander.

FRED H. SQUYRES,
Commander of Frank King Post, No. 249, American Legion, Wellington, Tex.

Statement of Principles Adopted by the American Jewish Committee at Its 50th Anniversary Meeting in New York City, April 14, 1957

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 18, 1957

Mr. SCOTT of Pennsylvania. Mr. Speaker, under leave granted, I am inserting in the CONGRESSIONAL RECORD a statement of principles adopted by the American Jewish Committee at its 50th anniversary meeting in New York City, April 14, 1957. This statement was first published by the Chicago chapter of the American Jewish Committee:

We, the members of the American Jewish Committee, reaffirm on our 50th anniversary the principles which have guided us during the past half century.

Our purposes, as recited in our charter, are to protect the civil and religious rights of Jews in any part of the world and to secure equality of opportunity. These purposes can be attained with assurance only in societies which guarantee equal rights and opportunities to all, without distinction as to race, creed, color, or national origin.

We join with all Americans of good will to achieve a complete realization of America's ideals, and with men and women everywhere to establish fundamental human rights. We support our Government, as well as the United Nations and its specialized agencies, in their efforts to establish universal standards of freedom.

We also support our country's leadership of democracy's resistance to the totalitarian forces which have suppressed liberty and justice in many lands and are intent on conquering or subverting the nations where freedom flourishes or struggles to assert itself.

In the quest for national security our country must not weaken the constitutional protections won through the bitter experience of mankind. The mainenance of those rights in a time of danger and anxiety will attest to the strength of our democracy.

We pledge ourselves to continue the fight against those who through bigotry and prejudice imperil the rights of the members of any group, thus dividing our country and undermining American liberty.

It is now possible to envision a society that attaches primary value to the individual and treats each person solely on his own merits. Those who are the targets of prejudice can make a significant contribution to the pursuit of equality. Besides joining in the larger fight against prejudice, they should guard against accepting for themselves their detractors' false and derogatory appraisals of them. Self-respect is a most effective antidote to projudice, and happily

it is encouraged by the American pattern of religious, ethnic, and racial diversity.

Judaism, as a great historic religion, has developed traditions of deep moral, social, and cultural significance. Among these are reverence for learning, a prophetical passion for social justice, the insistence that charity is a form of justice to the less fortunate, abhorrence of war and love of peace, and the conviction that each human being, created in the image of God, is the equal of every other. We should know our heritage, so that it may ennoble our lives and help us to enrich our contributions, in concert with our fellow citizens of all other faiths, to American civilization.

Under the American system of voluntary association, individuals join together in organizations which best express their views. We believe in cooperation within areas of agreement for the more effective achievement of common goals, but we also believe that no one organization can speak for the Jews of America or of the world. Therefore, the views, policies, and programs of the American Jewish Committee can be determined only by our own members and governing boards. As always, we stand ready to work with others for the accomplishment of common aims in ways which will not impair the integrity of our organization or our independence of decision and action.

Since the Balfour Declaration in 1917, the American Jewish Committee has aided in the upbuilding of Palestine as a haven and a spiritual and cultural center. We hailed the creation of the State of Israel and the heroism which made the state a reality.

Citizens of the United States are Americans and citizens of Israel are Israelis, with all that this implies. The Government of Israel speaks only for its own citizens. America is our home and our interests as citizens are those which we share with all other Americans. As Americans devoted to democratic principles, we have a deep interest in the development of a democratic state in the Middle East, while as Jews we express our natural sympathy with our fellow Jews who need or desire to create an enduring home for themselves in Israel. By its warm and unlimited welcome to Jewish refugees in their desperate need, Israel is rendering an indispensable and invaluable service to humanity. We believe that not only American and other democratic interests, but also humanitarian needs in the Middle East will best be served by a thriving and democratic State of Israel. Therefore, within the framework of American interests, we shall continue to aid in the development of Israel's capacity to provide a free and dignified life for all its inhabitants.

The United States and the United Nations have an obligation to further the cause of peace. We urge them to seek the aid of all who desire just and humane solutions for the problems of the Middle East and to exert their influence for peace in that area and throughout the world.

On this 50th anniversary, we rededicate ourselves to individual dignity and freedom, the traditions of our faith and peace among all men.

Isn't This Something?

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. ROONEY. Mr. Speaker, I was utterly amazed to read the following highly interesting article by Richard J. H. Johnston, published in this morning's New York Times:

WEEKS NOTES LOSS OF VOTER SUPPORT—HE SAYS AT CHICAGO BUDGET HURTS EISENHOWER IN PARTY AND READS CRITICISMS

(By Richard J. H. Johnston)

CHICAGO, June 18—Sinclair Weeks, Secretary of Commerce, said here today that President Eisenhower's popularity had declined because of his $78,800,000,000 budget for the next fiscal year.

"Maybe they'll throw us out, I hope they will like the successors they'll probably get," Mr. Weeks told a battle of the budget luncheon sponsored by the United Republican Fund of Illinois.

In preface to his prepared address, which was a defense of the administration, its record and the controversial budget now before Congress, a sheaf of letters.

The letters, he said, denounced the administration and its policies and were from Republicans to Charles H. Percy, president of the party fund here, who was presiding at the luncheon.

QUOTATIONS FROM LETTERS

From one letter Mr. Weeks read the following:

"I didn't believe there could be a bigger liar in the White House than Truman, but we have one now. Eisenhower was going to balance the budget, cut taxes, and reduce Government employment. He hasn't done any of these things."

From another letter he read:

"There is no difference between the Eisenhower palace guard and the leftwingers of the Democratic Party."

Another writer said that he had contributed heavily in the past to the GOP, but "I will give no more money to the party."

Quoting from other letters also carrying denunciations and expressions of disillusionment with the Eisenhower administration, especially in regard to its fiscal policies, Mr. Weeks commented that the poll speaks for itself in recording the declining popularity of the President.

The readings left the audience silent.

In his prepared address Mr. Weeks denied that the administration had failed to fulfill its campaign promises or that it was dominated by New Dealers and Socialists.

In defense of the budget he declared: "They say we have the biggest peacetime budget. Maybe it is. But this is a strange world we live in today. This is no normal peacetime existence. This is the age of atom and hydrogen bombs. There is no use being second best. Russian jet bombers are only 6 hours away from Chicago."

RECITAL OF ACHIEVEMENTS

In spite of high costs, Mr. Weeks said, the administration had, in the last 5 years, "turned a $9,500,000,000 deficit under Truman into 3 balanced budgets, cut taxes $7,500,000,000 in 1954, and removed from the Federal payroll 248,000 civilians and 725,000 military personnel."

In further defense of the administration, he asserted: "We haven't packed the Supreme Court or seized the steel mills. There is no corruption in Government now. The regulatory bodies of the Government have been reorganized and made over. If you have to do business with them now you will find a friendlier attitude."

He said that "we have moved toward medical research, not socialized medicine, and we are moving away from socialized agriculture."

"We found a definite pitch toward a Federal power monopoly and we have substituted a program of partnership between the Government and private enterprise," he proceeded. "We have taken the Government out of business."

He said the Democratic administrations had imposed taxes for the purpose of changing the social order.

He said that "business hasn't had as good a friend in Washington since Herbert Hoover was in the White House."

"Living, as we do, in a world of tension, beneath the ominous cloud of nuclear explosion, everyone feels safer with Dwight D. Eisenhower in the White House," he declared.

They'll Be Sorry

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. ABBITT. Mr. Speaker, the House of Representatives, one of the great deliberative bodies of the world, on yesterday voted to turn the clock back to medieval days by voting to deprive American citizens of the right of a trial by jury. I am a great believer in the people of America making the right decisions when they have all of the facts. I believe when the facts are known that the citizens of this great Nation will compel the House to reverse itself and restore the time-honored right and privilege that we in this country have had since its founding at Jamestown in 1607; that is, the right of a trial by jury.

In a very pointed editorial, the Lynchburg News on Monday, June 17, 1957, pointed out the dangers of this wicked legislation which was just passed yesterday.

Under leave to extend my remarks, I include that editorial entitled "They'll Be Sorry":

The House of Representatives has voted to violate by legislation that part of the Bill of Rights which guarantees a citizen of the United States the right of trial by jury in cases in which the Attorney General thinks it necessary in order to get a conviction. The vote was 199 to 166 with the Northern Democrats and Republicans ganging up, with a few honorable exceptions to foster a conspiracy of the National Association for the Advancement of the Colored People. They think they are penalizing a certain section of the country, but in truth they are depriving citizens of every section of the country of a treasured right. In the guise of protecting "civil rights" they are destroying one of the most cherished of all civil rights. They will now move on to compound the felony and pass the bill that contains many other evil provisions and planting deep the seeds of oppression everywhere in the Nation.

They call themselves "liberals." They are better described as reactionaries. They turn backward toward the time when the power of the King's court was inadequately limited and the rights of individuals severely restricted, toward the time when courts were oppressors rather than defenders of the people. As freedom from government by injunction becomes more and more restricted, as we may be sure it will, those who move so recklessly now will find their own shoes pinching, and for it they can blame only themselves, their cowering in the face of

threats from minority pressure groups and their bogus liberalism. But the thought that the boomerang will return home to strike is small compensation for those it hits now.

Twenty-Billion-Dollar Flop

EXTENSION OF REMARKS
OF
HON. BURR P. HARRISON
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. HARRISON of Virginia. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include an article appearing in today's issue of the Washington Daily News in which Mr. Dickson J. Preston points out some of the evils of the national scandal, known as the soil bank.

I should like to add one fact not developed in the Preston article and that is that we could defeat this disgraceful program were it not for Secretary Benson's stubborn and determined efforts in its defense. Every objection which Mr. Benson makes to the program of rigid price supports applies also to the soil bank, and yet with amazing inconsistency Mr. Benson condemns high price supports and defends the infamous soil bank:

TWENTY-BILLION-DOLLAR FLOP: THE DOLES ARE FANTASTIC AS BIG FARM GIVEAWAY PROGRAM ROLLS ON

(Second of a series)

(By Dickson J. Preston)

Out in McLean County, Ill., in the spring of 1956, Farmer John Jones put in his usual crop in the usual way.

He planted some corn, some wheat, some soybeans. He kept some of his land in pasture. And he put 169 acres in alfalfa and clover for hay.

Later on, he read in the paper that Congress had voted a new farm gimmick, called the soil bank. The Government was going to pay farmers for holding down their acreage of corn and other surplus crops.

So Farmer Jones cranked up his Cadillac convertible and went to town. There he pointed out to a committee representing the Agriculture Department that if he hadn't planted alfalfa and clover on those 169 acres, he might have planted corn.

The committee agreed. And last fall, for the corn he didn't plant on the land he never intended to plant it on, Farmer Jones was paid $10,903 by the United States taxpayers.

ILLUSTRATION

There you have what the House Appropriations Committee staff calls an interesting illustration of the soil bank in operation in the first year. It is a real case, except for Farmer Jones' name (and the Cadillac, which might have been a Chrysler). And it is by no means the only startling example.

In Butler County, Ky., another farmer wanted to place in the soil bank some land which he hadn't used for years. He was told he'd have to cut the 6-foot-high underbrush and shrubbery. Then he was paid for not planting corn on the land thus cleared.

A Kansas man worked an even better deal. He leased 420 acres from the Army Engineers. For agreeing not to grow wheat on this land he received his full annual rental of $1,475 plus a profit of $1,004. And he still had the right to grow other cash crops on the Government land.

Some of the payments—voted in the name of helping the small farmer—ran into high finance.

Garvey Farms of Colby, Kan., drew $61,354 for not growing wheat on some land it owned in Colorado. Adams Bros. & Co., Odebolt, Iowa, collected $49,278; George G. Chance, Bryan, Tex., $48,093; J. W. B. Farms, Liberal, Kans., $45,817.

HIGH DOLES

Altogether, 11 farm enterprises took doles of more than $25,000 apiece. One of them was the W. T. Wagonner Trust Estate, of Vernon, Tex., a ranch so vast it uses helicopters to round up its cattle.

The soil-bank giveaway reached 547,924 people last year. They collected $260,362,982. This summer its operations are more than doubled. Next year, unless Congress kills it, it will be equally big.

And what did we get for our money?

In the corn belt, 1956 payments totaled $179,664,064. Yet corn production increased by 200 million bushels over 1955. Throughout the country, in spite of the soil bank, conservation payments, acreage allotments and every other crop reducing device, farm output rose.

The soil bank is by no means the most expensive of our farm subsidizing plans. This year the Commodity Credit Corporation is shelling out $2 billion in support price loans. On most of these the farmers will simply default, leaving CCC to sell the crops it receives as security at a loss.

BIG BUSINESS

Like the soil bank, these operations are big business in many cases.

The Delta & Pine Co. of Scott, Miss., biggest beneficiary in 1955, collected $1,974,356 in cotton loans. It paid back the Government with interest—but Delta is a giant corporation, makes large profits and has excellent private credit. Incidentally, it's British owned.

The fact is that in Secretary Benson's own words, present farm policies "have helped the larger producers of a small handful of favored crops, and * * * have made little contribution to the solution of the problem of the low-income farmers."

Mr. Benson also has this to say:

"Our American taxpayers would gladly shoulder this and even greater burdens if they felt that these sacrifices were temporary measures necessary to get the farmer back on his feet.

"The American people will not, however—and should not—continue such expenditures indefinitely if the basic problems are not being solved."

With those words, the great majority of taxpayers would agree.

Recent Supreme Court Decisions Cause for Real Concern

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. BOSCH. Mr. Speaker, the recent decisions of our highest Court in the land should give real concern to the American people as well as to Members of Congress, the duly-elected representatives of the people.

It is inconceivable that the "men in the Ivory Tower" should be so impractical as to draw a protective cloak of respectability around those who would directly or indirectly destroy this Republic.

I cannot believe that the forefathers of our country ever intended that the first, fifth, or any other amendment to our Constitution should be used as a shield by those opposed to our way of life.

I believe these recent decisions, including the baring of FBI files, are bound to give a privileged sanctuary to those dedicated to the Communist conspiracy.

I am convinced, Mr. Speaker, that Congress must reassert its legislative authority or be charged with neglect of office in permitting another branch of government to dilute or negate acts of Congress.

I have today introduced legislation with reference to procedures, in court, in cases involving the disclosure of confidential reports or files in any civil or criminal proceeding.

Mr. Speaker, I trust this legislation will receive early consideration.

Thomas Butler

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. ROONEY. Mr. Speaker, I am sure the following article from today's Washington Daily News with regard to Tom Butler, who has been a barber in the House Members' barbershop in the Capitol for the past 29 years, will be found highly interesting. Tom has been cutting my hair ever since I came to the Capitol and as far as I am concerned he is the most diligent, conscientious, and the best. The article follows:

HE GOES AT TOO FAST A CLIP TO WATCH HOUSE SPLIT HAIRS

"Someday, when I retire, I'm going up there just to see what goes on," Thomas Butler said, jerking his finger at the ceiling.

The spot he indicated is covered on the floor above by the Speaker's stand in the House. At the moment the Speaker's chair was occupied by Sam Rayburn of Texas, who has been getting his hair cut by "Old Tom" in the House barbershop for 27 years.

"I've worked here for 29 years and have never been in either the House or Senate Chamber," Tom said. "The trouble is, when Congress is in session, I'm in session, too."

CLOSE SHAVE

"The closest I've come was several years ago when I walked by one of the House galleries. I was going to peek in, but I didn't. I don't know why."

A barber for 43 of his 63 years, Tom lets out no secrets of his distinguished clients. They are all Members of the House, except Senate Majority Leader LYNDON JOHNSON of Texas.

"I cut his hair while he was in the House, and he just kept coming back after he went on to the Senate," Tom said.

NATIVE

Tom said he was born in the District a couple of blocks from Griffith Stadium (I've never seen a professional baseball game

either), and except for a short time in California, he has lived here all his life.

"I've never had any occasion to mix in politics, so I don't talk about it to my customers, and they almost never talk politics.

"If they ask me where I'm from, I say from the District and California, and that's that," he said. "Mostly, they talk about the weather, or ask how you are. Some of them crack jokes."

Virginian Defends Stand on Integration

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. TUCK. Mr. Speaker, under leave granted me to extend my remarks in the Appendix of the RECORD, I include a very interesting letter by W. D. Gourley on the editorial page of the Richmond News-Leader of June 17, commenting upon a visit and speech made in Arlington County, Va., by a Washington woman by the name of Mrs. Meyer. From statements attributed to this woman, it would appear that she is a zealous integrationist and violently opposed to the political and living conditions of the people of the great Commonwealth of Virginia. The letter written by Mr. Gourley is as follows:

VIRGINIAN DEFENDS STAND ON INTEGRATION

EDITOR, THE NEWS-LEADER:

Although I do not have the privilege of coming from the high I. Q. Arlington section of Virginia, I would very much like to take issue with several of Mrs. Meyer's demagogic statements made in her speech to the Arlington County Teachers' Association.

As for our 18th-century-minded Virginia State government, I would not hesitate one second to stack their record against that of any State north of the Mason-Dixon line.

Virginia, to my recollection, has had no race riots, prolonged labor violence, looting of the State treasury, labor racketeering, acid throwing, shakedowns, Dave Becks, and innumerable other scandals such as appear every day in the press from so many "Meyer-minded," 20th century, enlightened, integrated States to the north and west of Virginia.

As for the rich people running Virginia—from my very limited contact with rich people in Virginia, I find that they are the least worried about school integration since they are the ones integration would least affect. So Mrs. Meyer would have the Federal Government outlaw private schools to force the rich into integrated public schools. What a wonderful example of big government tyranny for a States rights, small government advocate, such as Mrs. Meyer claims to be, to threaten Virginia with.

She mentions what a wonderful effect the 1954 Supreme Court decision has on democratic people everywhere. What effect did the Clinton, Tenn., and the University of Alabama riots, which were a direct result of that decision, have on those same democratic people? There is no doubt that the results of that decision provide more grist for the Communist propaganda mill than segregation ever did or ever will.

As for Governor Stanley dictating to us, I hope that we American Virginians shall be able to dictate to him that we do not want, under any circumstances, integration forced on us anywhere in Virginia by an omnipotent Federal Government, through its political-minded courts and officials, and that we will back the government of Virginia with our votes or anything else he needs to keep our schools segregated and our States' rights inviolate.

It seems that Mrs. Meyer's whole warped outlook is indicated in her last sentence which could be interpreted to mean she is in favor of what she believes is right being forced on the people of Virginia, no matter what the cost to them in their blood, sweat, and tears.

Very truly yours,

W. D. GOURLEY.

Rhodes Fires Blank Shells

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. McCORMACK. Mr. Speaker, I ask unanimous consent that the splendid editorial from the Sioux Falls (S. Dak.) Argus-Leader be included in the RECORD, entitled "Rhodes Fires Blank Shells."

The editorial, written in the best tradition of this Nation's free and independent press, is an objective and fair answer to South Dakota Republican State chairman's attacks being made upon our distinguished colleague, the Honorable GEORGE S. MCGOVERN, of South Dakota.

Mr. Speaker, in my many years of service in this body and as majority leader I have never known a more conscientious Member than Mr. MCGOVERN. I have noted his deep concern for the interests of his district, his State, and our Nation. He is in constant attendance at debates on the floor of the House and in his important committee, the Committee on Education and Labor.

Following recent consultation with me on the problems of the Nation's farmers, a matter on which he has become a leader in this body, our colleague discussed with me a visit to his district in South Dakota. I advised him that he would miss no important business in the House and commended his decision to visit his constituents. We all realize, Mr. Speaker, that nothing is more important to a Member than to learn first-hand the problems of his district, and to keep in close touch with the people of his district.

The editor of the Sioux Falls Argus-Leader realizes well the foregoing facts and has set them forth brilliantly in this excellent editorial.

The editorial follows:

[From the Sioux Falls (S. Dak.) Argus-Leader of June 13, 1957]

RHODES FIRES BLANK SHELLS

Glen Rhodes, of Presho, new Republican State chairman in South Dakota, has been speaking quite freely of late.

But perhaps, unless he gives more logical thought to what he says, it would be better for his party if he didn't speak so much.

What we have in mind are two comments that Rhodes made this week, both in reference to Representative GEORGE MCGOVERN, a Democrat.

The first one was an instance in which he took issue with MCGOVERN in respect to a comment about the price of eggs.

MCGOVERN had said that he was disturbed by the low price the farmers were receiving for eggs and that he was asking Ezra Benson, Secretary of Agriculture, to do something about it.

SAME POLICY ON CORN?

That, in the opinion of Rhodes, was all wrong. It indicated, he said, that MCGOVERN didn't understand farm problems and that the real answer to the problem was for the farmers and the poultrymen to produce fewer eggs.

A comment such as that which was made by Rhodes is quite typical of what one hears regularly from New York and other areas far removed from the farm. If Rhodes is to continue the same thought in respect to all of his farm utterances, he will present the same solution for the wheat, corn and other agricultural production problems. Just induce the farmers to produce less—and the law of supply and demand will make the proper adjustment. In taking this viewpoint, indicated by his comment on eggs, Rhodes is completely out of step with the policy enunciated by the Republican Party in South Dakota in its platforms and also with the positions so vigorously and long maintained by Senators KARL MUNDT and FRANCIS CASE, Representative E. Y. BERRY, and Gov. Joe Foss.

VISIT BACK HOME

The second comment by Rhodes that was out of line was a criticism of MCGOVERN's recent trip back to South Dakota. He should have stayed in Washington attending to business, Rhodes said, instead of being back in the State for a few days visiting with the home folks. If MCGOVERN had made the trip to dodge some significant rollcalls or had missed votes of particular importance, the criticism might have been in order. But there were no such rollcalls while he was gone.

And it's good business for our Members of Congress to take advantage of frequent opportunities to return to their home State to find out what the people are thinking. Surely MCGOVERN was not to be criticized on this count.

We fear that the statements by Rhodes were made in response to a general appeal that he should go out after MCGOVERN. So he began to shoot blindly in his general direction. But what he must realize, if he is to serve his party well, is that he must have some ammunition and the result is that both charges have been boomerangs that hit him instead of MCGOVERN.

Mrs. Meyer's Manifesto

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. ABBITT. Mr. Speaker, there appears in the Richmond Times-Dispatch daily a very enlightening, interesting, and educational column under the pen name of Ross Valentine. The writer deals with everyday subject of interest to our people.

On Sunday, June 16, 1957, the article was entitled "Mrs. Meyer's Manifesto." This has reference to the address that the wife of the owner and chairman of the board of the Washington Post and

Times Herald made to the Arlington County Teachers Association on May 29.

Mrs. Agnes E. Meyer reportedly is a millionaire. Apparently Mrs. Meyer and her cohorts are trying to invade the Old Dominion and bring with them their sociological, socialistic philosophy which is so foreign to our people in Virginia.

I commend the writer who uses the pen name of Ross Valentine on his article dealing with Mrs. Meyer's Manifesto. It is such a clear analysis of the address that, under leave to extend my remarks, I include the article which is as follows:

MRS. MEYER'S MANIFESTO

(By Ross Valentine)

It's more than 20 years at least, since my last visit to Union Square, Manhattan. Things may have changed for all I know, since the early thirties. Then the west side of the little park between Fourth and Fifth Avenues was the mecca of radical soap-box orators. Too bad some of the more passionate harrangues could not have been tape-recorded for posterity. It would have provided us with a record of the earliest beginnings of the ideology and methodology first embraced by the Socialists, but since appropriated by leftist Democrats and more recently by some of Ike's new Republicans.

The orators were an odd, generally frowzy lot. Their accents ran the gamut from Vladivostok to Budapest. But all had one method in common—no matter what political or economic topic they picked as a target of their attacks on capitalism—it was always approached from the angle of "class warfare." The honest "working class" arrayed against the "stupid bourgeoisie" and the "selfish rich." Invariably, the orator had an American flag stuck in one corner of the soap box, a cynical symbol of patriotism.

I was reminded of the orators of Union Square the other day, when I read the full text of a speech made to the Arlington County Teachers Association, on May 29, by Agnes E. Meyer, coowner with her husband, Eugene, of the Washington Post and Times Herald.

Mrs. Meyer is not a resident of Alexandria. Her home is Seven Springs Farm, in Mt. Kisco, N. Y. She has been called "the most influential woman in Washington, D. C.," where she also maintains a residence.

She has been registered as a Republican since the early twenties, but held influential posts under the New Deal and Fair Deal; was a member of Mr. Truman's Committee on Higher Education, is a member of the National Citizens Committee for Public Schools, a member of the American Academy of Political and Social Sciences, and is also a trustee of Barnard College, the feminine faubourg of Columbia University, of which Dwight D. Eisenhower served as president, while waiting for bipartisan liberals to dress him up as the new Mr. Republican.

You may wonder why Mrs. Meyer's manifesto made me think of speeches heard in Union Square. If you have read it in full on the editorial page of Wednesday's News Leader, you will know why. But in the event that you missed this most revealing document, I shall quote verbatim, a few significant passages from the desegregation speech made by "the most influential woman in Washington."

"* * * Washington, Jefferson, Madison, and John Marshall * * * would have sympathized with you far more deeply than the ruling despots in your State capital."

(My dictionary defines "despot" as "a ruler who wields absolute, arbitrary power." i. e., power not subject to popular consent.)

"They (the ruling despots in our State capital) resemble a wornout aristocracy whose blind authoritarianism caused the French revolution."

"They are treating you now in the same oppressive manner with which the French royalists tried to crush the onward march of human freedom!"

"If your State officials carried this contempt for the people so far as to close all public schools in any one of your counties, * * * the future existence of all private elementary and secondary education would be seriously threatened. Just let your power-drunk Virginia officials try this rash experiment. There is already a ground swell of indignation in this country that wealthy people can afford luxury schools, with elaborate buildings, small classes, swimming pools and hunting fields for their children—while the public schoolrooms look like cattle yards in many communities. * * *

"All Virginia needs to do to accelerate the nationwide impatience of the American masses with private education is to close the public schools in one of its counties.

"* * * the next step would be Federal legislation to the effect that every American child must attend public schools during the elementary and secondary grades. * * *

"In the long run we Americans are not going to allow this country of ours to be split, either on economic or color lines, because the selfish and thoughtless rich and a few bigoted southern demagogs think they can escape their responsibility toward the free education of American children. * * *

"If your class-conscious State officials raise the question * * * they will start a prairie fire that will not burn itself out until all private elementary and secondary education will be restricted, if not destroyed. There isn't the slightest doubt which will win out in our urbanized mass society. * * *

"The wealthy people who are interested in maintaining their private luxury schools, and the United States Chamber of Commerce, as well as your Virginia Chamber of Commerce would do well to warn the leadership of Virginia and all Southern States."

Thus in America's predominantly classless society, liberalism, as always, reaches the end of the line—with the disruptive appeal which fomenters of discord everywhere have used to divide and conquer—to set the envious against the rich, to mesmerize individuals into considering themselves not human souls, but units in an urbanized mass society—to resort—when persuasion fails—to the threat of an all powerful central Government, influenced, in this instance, by the most influential woman in Washington.

No one should question Mrs. Meyer's right, as an outsider to express her opinion on what she conceives to be the autonomous right of counties to submit to integration.

This is (still) a free country, where opinions may be freely expressed.

It is distasteful, and unrewarding, to refute a lady who has reached her 70th year. But neither her age, nor the fact that she is of the gentler sex, should shield her from deserved censure for injecting class warfare into the perplexing problem Virginia is trying to solve as dispassionately as possible.

In indiscriminately accusing the rich, the public-spirited members of chambers of commerce, Virginia's legislature and officials of hostility toward the public schools, Mrs. Meyer has rendered a grave disservice to both races, over whose education she expresses such deep concern.

From Hand to Mouth on $68

EXTENSION OF REMARKS

OF

HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 19, 1957

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. Arthur Bloomfield from the San Francisco Call-Bulletin, of May 25, 1957, which was sent to me by a friend. It tells such a human story regarding the plight of those in the postal service that I think it will afford valuable documentation of the need for a postal salary increase at this time:

COSTS ABSORB MAIL SORTER'S PAY—FROM HAND TO MOUTH ON $68

(By Arthur Bloomfield)

As Edward Ungaretti got home from his job as a post office clerk he lit up an ancient gas heater in the corner of his small living room at 250 Collins Street.

Then he put an undecorative pan of water on top of the heater so no fumes would escape.

Sitting nearby were his wife Angelina and their 11-months-old child, Cheryl Ann.

"This is all the heat there is in the flat except for the fireplace," said Ungaretti, "and it's in another room, and it isn't very big.

"There are five rooms to heat, altogether."

Ungaretti, who sorts mail among other chores, has been with the post office for 8 years.

TAKE-HOME PAY

His take-home pay, however, has been somewhat like a bird with an injured wing which can't get much altitude.

It's $4,285 a year, so weekly take-home pay adds up, or subtracts down to the grand total of $68.

Seventeen years from now, if wages remain unchanged, Ungaretti's pay would be an annual $4,710, with a weekly take-home of about $74.

"I like my job and the people I work with," smiled the 33-year-old but graying clerk.

"But we live from payday to payday. If we missed a check, it would kill us. We'd have to borrow. And I can't even get a $200 loan from the bank because I have no collateral."

OTHER WORRIES

Ungaretti had other worries than how to keep his family warm.

He was wondering just how he'd have spare time to study for the test the post office gives every 9 months on mail sorting.

"I can get dismissed if I don't pass the test," said Ungaretti, explaining that postal districts change from time to time as new streets are added, and new pigeonholing techniques must be mastered on off-duty time.

"You see, I have to take extra jobs to help pay the back bills, so there's little spare time. I get up at 4:30 a. m. to get to my 3-hour job with a private mail pickup firm."

WORK NIGHTS

"After that's through at 8:30, I go to my regular job at Rincon Annex at 9.

"Sometimes I work nights, too, for my wife's uncle—doing janitorial work.

"Naturally, when my vacation time comes, I take a job—and that's no vacation."

Ungaretti said he's considered leaving the post office for his original trade, as a sheet-metal worker, but as he puts it:

"I've got too much time in with the post office, and if I went back to sheet metal, I'd be the first to be laid off in a slump."

A visitor to the Ungaretti home was Emmet C. Andrews, a vice president of the National Federation of Post Office Clerks, who said that a pay raise for postal employees would actually save the Nation approximately $2,500,000,000 annually.

The national annual turnover in post-office workers could be reduced from 500,000 to 200,000, he said, quoting an official estimate of the cost of training a postal employee at $3,000.

As Andrews was speaking, the heat went out, and Ungaretti had to get up from his chair and light the stove again.

Reds Get the Green Light

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. ABBITT. Mr. Speaker, never before in the history of this great Nation has the Supreme Court been held in such low repute by our people. I am convinced that the majority of our citizens have lost faith in the Court in the past few years and particularly in the last 12 months.

Examples of what is happening to the American people by the action of our so-called Supreme Court and the lack of respect of the people for the Court were set out in a well-worded and cogent editorial that appeared in the Richmond Times-Dispatch on Wednesday, June 19, 1957. The editorial is entitled "Reds Get the Green Light."

Under leave to extend my remarks, I include that editorial which is as follows:

REDS GET THE GREEN LIGHT

On Monday the United States Supreme Court decided to adjourn until October 7. It was the most popular decision of its 1956–57 term. During the next 3½ months the country's blood pressure will have a chance to return to normal.

Before it adjourned, however, the Court on Monday handed down two decisions which roused a storm of censure:

1. It freed 5 of 14 California Communist leaders and ordered new trials for 9 others convicted in lower Federal courts for violation of the Smith Act, which prohibits "organization" for the purpose of "advocating" the overthrow of Government by force and violence.

2. It ruled that Dean Acheson, when Secretary of State, had wrongfully discharged John Stewart Service (a Foreign Service officer). This reversed the 1956 judgment of the court of appeals which had ruled that Mr. Acheson, in dismissing Service, had acted within his discretionary powers as head of an executive department.

The first decision aroused sharp criticism because, by splitting hairs, the Court imputed false intent to Congress (in passing the Smith Act.)

The second usurped discretionary executive powers by denying the right of a department head to discharge a member of his own staff, after that person had been cleared as a security risk. Implicitly, this decision may also be considered as confirming a Federal employee's vested interest in his job.

In its broadest aspects, the case of the 14 Communists hinges on a definition of the word "communism."

When spelled with a small "c," it refers to the political ideology which advocates common ownership of property (especially of the means of production), as opposed to private property.

Spelled with a large "C," it means the Soviets' international conspiracy, centered in and directed by the Kremlin, advocating the overthrow (by violence, infiltration and subversion) of all non-Communist governments now extant, in order to create a world commune, under the overlordship of Moscow.

It is obvious that the Court (with only Justice Clark dissenting) willfully ignored the second definition, which covers Communist activities ever since the late Josef Stalin seized despotic power over Communist Parties everywhere. The Court apparently assumed that communism is an abstraction, and that those who organize Red cells in America and advocate overthrow of the Government have no connection whatever with a Kremlin-based power-bloc openly hostile to the United States.

The Court found that the so-called American Communist Party in its present form had not been in existence before its reorganization in 1945, and that the Federal indictment against the 14 Californians had not been brought until 1951—so that the 3-year statute of limitations had run out.

It also ruled that their advocacy of abstract doctrine was "not enough to offend the Smith Act," and that the trial judge erred in failing to stress the difference between abstract and direct action.

Had the Court rested its decision on that one point, it would have justified reversal. Instead, the Court went out of its way to split hairs over what it called the "ambiguity of the word organize" in the Smith Act.

"Where there is no ambiguity in the words (said the decision), there is no room for construction."

Yet the Court apparently chose to forget that there is no ambiguity in the words of article X of the Constitution which prohibits the Court and the Federal Government as a whole from intervening in the administration of State-supported schools.

But when it came to the rights of 14 Communists, the Court leaned far backward and imputed ambiguity to the word "organize," in order to protect the right of the individual.

One can hardly blame Representative HOWARD W. SMITH, veteran Member from Virginia, and sponsor of the Smith Act, for saying that there would be little use in amending the Smith Act, so long as the law turns into whatever the present Court interprets it to mean.

"And," he added, "I do not recall any case decided by the present Court which the Communists have lost."

As matters stand now, Monday's decision bars any Smith Act indictments under the organize section. They may organize to their heart's content.

Playing Down Pickup

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. ROBERTS. Mr. Speaker, the Automobile Manufacturers Association took a significant step in the direction of talking horsesense instead of horsepower to the American car-buying public when it resolved to urge its members to refrain from stressing speed in automobile advertising and to not participate in speed races.

The Special Subcommittee on Traffic Safety, of which I am privileged to serve as chairman, likes to think it may have had some influence in this decision. We visited Detroit last year and held a hearing in that city. We hail the AMA resolution as one of the most significant developments yet toward our goal of attempting to reduce the toll of highway accidents.

Under leave to extend my remarks, I would like to include the following editorial which appeared June 10, 1957, in the Anniston, Ala., Star:

The board of directors of the Automobile Manufacturers Association is to be commended, we submit, for recommending unanimously that member companies refrain from suggesting speed in passenger car advertising and other promotional efforts of whatever nature.

The board has voiced the desire of United States auto makers to encourage owners and drivers to evaluate passenger cars in terms of useful power and ability to afford safe, reliable, and comfortable transportation, rather than in terms of capacity for speed.

All volume producers of passenger automobiles in the United States are represented in the Automobile Manufacturers Association.

The recently adopted resolution even goes so far as to enjoin against the supplying of so-called pace cars or official cars in connection with automobile racing.

This new approach to automobile merchandising strikes us as eminently thoughtful. And no doubt much of the credit for today's greater appreciation of the dangers of high speed is owing to Representative KENNETH ROBERTS of this congressional district.

For several months greater highway safety has been a particular concern of his by reason of his chairmanship of a special traffic subcommittee of the House Interstate and Foreign Commerce Committee.

Cutting the Budget

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. O'KONSKI. Mr. Speaker, Federal spending has reached such a high level that the people are finally protesting in no uncertain terms. Federal spending is more inflationary than any other factor in our economy. What good are social-security checks or veterans' pensions or retirement payments if inflation eats them up?

Recognizing this danger I have always voted to make cuts in the national budget. The record below shows how I have done so each year.

Budget cuts voted by O'Konski

Year:	Billions
1943	$4
1944	6
1945	5
1946	10
1947	8
1948	7
1949	5
1950	8
1951	6
1952	7
1953	15
1954	10
1955	7
1956	6
1957 (this year)	8

NATIONAL DEBT LIMIT INCREASES

In 15 years I voted for only one national debt limit increase. This was at the height of World War II in 1953. Since that time I have voted against three other national debt limit increases.

TAXES

In 15 years I have voted for only 1 tax increase. This was at the height of World War II. I voted for the one tax cut since. I feel a tax cut now is long overdue. I will vote for a bill that will raise tax exemptions from the present $600 per dependent to $1,000 per dependent. This is how any fair and substantial cut in taxes should be made. It should have been made years ago. The less the Government takes in taxes—the less it will spend.

Hon. Edmond FitzGerald, New Member, New York State Parole Board

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. ROONEY. Mr. Speaker, I was very pleased on yesterday to learn of the appointment by Gov. Averell Harriman of Edmond Fitzgerald, chief probation officer of the county court of Kings County, to membership on the New York State Parole Board.

I have known Ed FitzGerald since I was assistant district attorney of Kings County trying cases in the county court of that county beginning January 1, 1940. I know of no better man who could be selected for membership on the State parole board. He has great ability and integrity for such an important position.

Under the permission heretofore granted me by unanimous consent of the House, I include the following newspaper article by Richard Leahy, published in the New York World-Telegram and Sun of Tuesday, June 18, 1957:

FITZGERALD, STATE'S GAIN, WAS IRISH FREE STATE LOSS

(By Richard Leahy)

Edmond FitzGerald, chief probation officer of the Kings County Court since 1940 and Gov. Averell Harriman's latest nominee to the State Parole Board, is a veteran of the Irish Republican Army with strong opinion about British monarchy.

Because of those opinions, he gave up a teaching job in Ireland and came to the United States in December 1924, as second secretary of the Irish Free State legation in Washington.

And because of those same opinions he quit his legation post a month later and came to New York to work as an accountant.

PLEDGE TOO MUCH

Seems that in those days, even though Ireland was free of its British overlords, Irish officeholders were still required to take an oath of office including a pledge of loyalty to His Brittanic Majesty.

That was too much for Mr. FitzGerald.

In 1930 he became an American citizen and, that same year, headed the civil service list for parole officer in the new State Division of Parole.

He rose through the ranks and was an executive case supervisor when he switched over to the Kings County post after the Amen investigation.

He is ranked as one of the country's top men in his field.

In 1949–50 this Irishman transplanted to Brooklyn spent 3 weeks in Israel advising the Israel Government on modernizing its whole penal system, which he called a direct inheritance from the corrupt old Ottoman Empire:

The onetime member of the Irish Republican Army noted in passing that the British, during their occupancy of Palestine, had failed to add anything to the Ottoman system.

Now 55, Mr. FitzGerald lives with his wife, Frances, and their four children in Brooklyn. Born in Brandon, County Kerry, he was graduated from Brandon National School and St. Brendan's Seminary, Killarney.

NO VOCATION

He won a scholarship in 1920 to Maynooth, Kildare, Ireland's famous training school for the priesthood, but decided "I was not blessed with a vocation." Instead he received a 4-year scholarship to the National University of Ireland branch at Cork City.

During his first 2 years he cut 35 percent of his classes to serve with the 2d Battalion, 1st Cork Brigade of the IRA, battling the British Tommies and Black and Tans.

When the Irish civil war broke out in 1922 after the signing of the peace treaty with England, he tried to stay neutral between the Free State men, headed by Michael Collins, IRA leader who fell at the hands of his own fighters, and Eamon De Valera, who headed those who stubbornly demanded a republic.

HONOR GRADUATE

He was graduated with first class honors in 1924 and was teaching in Listowel as he was asked to sign that oath of allegiance.

He turned it down and 2 months later was in the Washington post. When the same oath was offered there, "I picked up my hat and walked out."

And if New York State ever decides to affiliate with the British Commonwealth and expects him to swear allegiance to Her Majesty, Queen Elizabeth II, he'll probably reach for his hat and take another walk. Those Kerry men are "divvils" when it comes to making up their minds.

Trade With Red China? Never

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. BYRD. Mr. Speaker, we have long been aware that, once the Presidential election was out of the way, the recognition of Red China would again become a real issue in this country. The time will soon be at hand for us to face this decision. I believe it may be sooner than we anticipate.

The Chief Executive last week expressed the view that he sees little advantage in maintaining tighter restrictions on trade with Red China than with Russia.

Our trade restrictions against Communist China date to the early days of the Korean war. The western powers at that time agreed to forbid trade with Red China in a list of strategic materials much more comprehensive than the list of goods already barred in trade wth all Soviet bloc countries. The United States established a complete embargo on American trade with Communist China. The fact that some western powers are now opening trade channels with Red China is no reason for us to take a similar position. This fact is emphasized in the editorial appearing on the front page of the June 20 issue of the National Tribune—the Stars and Stripes. The editorial asks this pointed question:

Do we need it (money) so much that we must forsake all the principles we have been taught and which we respect, just in order to make a little more?

The contention is made that the Allied countries will benefit as much from increased trade as would the Communists. Advocates of this position say that the removal of trade restrictions will complicate Sino-Soviet relations. They maintain that a decreased Chinese dependence upon Russia would be a good thing. I cannot subscribe to such a philosophical indifference. On the contrary, I believe that such action would only hasten the growth and development of twin monsters.

In calling to the attention of our colleagues the editorial I wish to take this opportunity to refer to the hearing before the House Committee on Un-American Activities on February 1, 1957, at which time the committee received testimony from Dr. Chiu-Yuan Hu, an adviser to the Chinese mission of the General Assembly of the United Nations. A synopsis to the printed hearing sets out the highlights of Dr. Hu's testimony. I urge my colleagues to study carefully this synopsis, which is as follows:

Dr. Chiu-Yuan Hu is an adviser to the Chinese mission of the General Assembly of the United Nations. He is a professor of modern history at the National University in Formosa. His testimony is based on an extensive system of contacts which he has been able to maintain with sources of information inside of Red China. Highlights of Dr. Hu's testimony follow:

That the Chinese Communists have physically exterminated 20 million human beings since they took over the mainland of China in 1948; that some 25 million more Chinese are in prison, brainwashing schools, or in slave-labor camps; that Chinese youth from kindergarten to the university are being taught to hate America by what is known as the three-look movement—look to America with hatred; look to America with contempt; look to America with superiority.

Dr. Hu also ridiculed the claim, often advanced by advocates of recognition of Red China, that the Communists had established "effective control" over the mainland. He said that the Chinese Reds themselves in their radio broadcasts, as well as printed material, quote statistics on hundreds of thousands of counterrevolutionary bandits having been exterminated. Dr. Hu testified that this could only mean that there are military operations, guerrilla warfare, and widespread resistance in extensive areas throughout China.

Dr. Hu also testified that the annual export of narcotics from Red China is steadily increasing and is estimated at 1,500 tons for 1956. This tremendous amount of narcotics is sold all over the world, and the money realized is immediately converted within the same country into subversive channels, thus effectively removing from police detection the sources of funds used by local Communists.

Dr. Hu also ridiculed as wishful thinking the notion that the Chinese Red leadership might, at some time in the future, follow the example of Tito. He stated that all the leading Chinese Communists had been trained in Moscow and that the Chinese Communist Party is the only Communist Party which has never had a schism, split, or any serious deviation from the line as laid down by the Kremlin.

Dr. Hu estimated that there were some 50,000 Soviet advisers, technicians and experts in Communist China today helping the Reds develop their industrialization and militarization programs. He also said that the Soviets had an iron grip on strategic resources, including oil and uranium in the provinces of Sinkiang, Mongolia, and Manchuria and that Manchuria is being developed by Russia and Red China into a gigantic military buildup area for future use against South Korea and Japan.

Dr. Hu also testified that several billion dollars of American property invested in churches, hospitals, schools, and missions had all been seized by the Chinese Reds and converted to Communist use.

Dr. Hu concluded his testimony by warning Americans against the danger and fallacy of "coexistence with the Moscow gangsters." He also stated that admission of Red China to the United Nations or United States recognition of Red China would mean the death knell of anti-Communist resistance on the part of 500 million Chinese who historically and traditionally have been friendly to this country. Dr. Hu laid the blame for the loss of China to the Communists and on "pseudoexperts on the Far East" in this country.

The following is the editorial from the National Tribune-the Stars and Stripes:

GOD OR MAMMON?

There is a decision to be made in this country in the near future as to our attitude toward Red China in the matter of trade.

Great Britain has already made her decision and in order to bloster her own economy has come to the conclusion that trade with Red China will be beneficial to the folks at home. This decision has reached the point where not only ordinary materials, manufactured in the British Isles, might prove useful to Red China or any other nation, are included but, also, strategic materials which might one day be used in driving the British out of their last stronghold in the Far East, Hong Kong.

Norway is reported to be following the lead of the British in opening up trade lanes to supply the Red Chinese with most vital necessities. Shortly, signs indicate, that other nations of the world will do likewise despite assurances that aid to communism, as it exists today on the Chinese mainland, is a distinct danger to all the freedom loving peoples of the world.

Only last week, at his press conference, President Eisenhower expressed the view that he sees little advantage in maintaining tighter restrictions with Red China than on trade with Russia. In so speaking our President would appear to be embracing the views of Britain and other nations that trade with the Peiping Government is more important than violating all the principles we have held so dear. With the help of the Soviet regime, the Chinese on the mainland have been able to overrun millions of people by sheer power and against the will of these millions who desire only to live in peace.

We do not hold too strong a brief for Chiang Kai-Shek who appears to have had his day and whose rule seems destined to fall in not too short a time.

We do feel, however, for the people who have stuck by Chiang these many years and for the people on the Chinese mainland who have little or no use for the Red tyrants who rule them.

The United States of America has spent billions of dollars to resist Red rule throughout the world, most of it in the Far East. Our taxpayers have given of their hard earned dollars to see that communism should not spread.

To what effect? Communism still spreads and now, this country, according to our leaders is ready to help further the spread of communism to aid a nation which is devoted, not only to the downfall of all Asia, but to the eventual destruction of our own way of living here in the United States.

Money as such is a wonderful thing. We are all trying to get enough of it to enable us to live out our final years peacefully. We have learned its value. We have seen it build up a country superior to all other countries (and we say this without braggadocio). We appreciate what it can do to alleviate the suffering of not only our own but other people throughout the world. It is true that we make it but we have never been unwilling to share it with others in need.

We know that without it we cannot prosper—we cannot even live—but the question arises in our minds, "Do we need it so much that we must forsake all the principles we have been taught and which we respect, just in order to make a little more?"

Britain needs to expand her trade. So do other nations of the world. We would not argue against them on this proposition. In fact, we would be glad to see their trade increase because we know that the more they make and have to spend, the more they will have to come to us for certain things which they, by themselves, cannot provide.

This makes some kind of sense to us though making no profession of knowledge of world economics. If you can buy from me at a reasonable price and I can sell to you at a reasonable profit, both parties to the trading should be happy.

We say: Let Britain and other countries open all kinds of trade with Red China. Let us only pray that later on, when Red China is satisfied that it is strong enough to take over, that these trading nations shall not reap a bloody harvest which may bring them only sorrow and extinction.

In the meantime, let the United States remain steadfast to the principles from which it was evolved. No kind of tyranny can be permitted under our free manner of government, and never, for the sake of a few extra dollars let it be said that we traded our heritage for a mess of pottage.

God knows we want to live peacefully with all the nations of the world but must we buy that peace for "30 pieces of silver"?

If we have come to this then let us discard all the fine phrases of our Declaration of Independence, of our Constitution, the splendid utterances of our founders and go out on the market seeking the best bargain we can find.

But let it be remembered that the leader of our Christian world has told us "You cannot serve God and Mammon." Let us make our choice. Shall it be gold or truth—integrity or financial gain?

Surely the solid, sound thinking people of our country will never be willing to sacrifice principle to financial gain. Surely a second look at the possibilities which confront us will bring our leaders to a realization that there is more in the world than money.

Remember: "You can't take it with you" but you can take with you the thought that however much you may have been tempted you have stood steadfast and never let the love of gain override the truths which we have all been brought up to revere.

With few exceptions the veterans of our great wars have stood firmly against resumption of open trade with the Reds in China. Here are men and women who have sacrificed for their country—men and women who have considered the facts carefully—men and women who hold above all the love of their country. Their voices should be heeded before this country of ours takes any step to deal with our avowed enemies.

The Death's Head Symbol

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. MULTER. Mr. Speaker, the following article by Joseph Alsop, which appeared in the New York Herald Tribune of June 16, 1957, is worthy of the attention of our colleagues:

THE DEATH'S HEAD SYMBOL
(By Joseph Alsop)

AMMAN, JORDAN.—The squalid mud huts climb the scarred slopes or huddle in the stony valleys in half a dozen areas of this hilly little desert city. "Refugees from Palestine, these are," says the taxi driver pointedly, when you pass one of these melancholy settlements.

Here is human habitation reduced to the Neolithic level. The family housing in the 8,000-year-old fortified village just so amazingly discovered near Jericho was quite as good as this. Besides, those forerunners of all the civilization that was to come after, who had even invented organized warfare, as their strong town walls testify, at least had fields to plow and jobs to do. The Arabs driven out of Israel have no fields, and very few have jobs.

Some live in organized camps. Some, like so many here in Amman, live in shantytowns of their own construction. All receive rations from the United Nations. If it were not for this ration of a few measures of flour and a few spoonsful of oil, a large majority would simply starve to death.

Thus about a million persons have been living (and of this million, about half in little Jordan) ever since the Palestine war in 1948. The world has comfortably forgotten about them. But they should not be forgotten. If only because the refugee problem is like a deep infection of the blood, which inflames every other problem in the whole Middle East. And this is a good time to remember them for a particular reason.

Henry Labouisse, the quite spoken but determined American head of the special U. N. organization that handles the refugee problem, has recently passed through here on a fairly desparate mission. He was seeking local support, before going home to America to defend himself against threatened cuts in his relief budget. The very fact that Labouisse should have to undertake such a mission seems all but incredible, when you consider the character of his budget.

In brief, Labouisse has $25 million a year to provide about a million people with food and medical care. He used to have an additional $15 million to provide schooling for the hundreds of thousands of refugee children, to purchase clothing and the like, and to help refugees who may wish to strike out on their own. But this $15 million has already been cut to $12 million.

Consider those charming statistics. Consider that the total outlay for each refugee's food, clothing, health, education, shelter, and everything else is not much above $40

a year. Yet there is serious danger that even the U. N. appropriation for food and medical care will be considerably cut.

Labouisse's problem is gravely complicated by the fact that his money comes from a sort of club of voluntary contributors among the U. N.'s member nations. The United States already puts up about three-quarters of the total.

But it does not matter much whether the American Treasury pays the whole bill. It will be criminal lunacy to allow Labouisse's appropriations to be cut at this juncture. One sure result, for instance, will be such refugee riots here in Jordan as may well overturn the new and boldly independent government of young King Hussein.

But that is not the end of the story. Nine years have worn away the angry obstinacy with which the refugees used to reject any alternative but a return to their lost homes. "Give us justice," they still cry; but especially among the younger refugees, there are many who might now accept other alternatives besides repatriation.

Labouisse has only been able to offer a little more than $400 in aid to any refugee who wishes to surrender his ration ticket and make a new start on his own. Yet he now has several thousand applicants for this not especially golden opportunity.

This is only one sign that the atmosphere has changed. The time is ripe, in Labouisse's opinion, for a bold new program which would not solve this insoluble problem, but would at least reduce its terrible dimensions. Such a program might comprise an offer of repatriation (which would not be accepted while Israel endures) or compensation (which would be accepted with alacrity); plus better financing for those wishing to make a new start; plus visas, including American visas, for those wishing to emigrate to a new land.

Such an attack on the refugee problem would call forth cries of phony outrage from the unscrupulous Arab politicians who use these pitiful people as political pawns. But the simple fact that the refugee problem has been neglected for so long is the death's head symbol of the inanity of American Middle Eastern policy. Good conscience and good policy both call for action now.

Mr. Farmer: Do You Know Your Son Is Worth Only $725 as a Soldier

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. O'KONSKI. Mr. Speaker, I wonder how many parents of servicemen know that their unmarried son, if killed in the service, is worth only $725. Believe it or not, such is the case.

In the only economy act of last year the Congress struck out the $10,000 free life insurance. So, if your unmarried son is killed in the service, all the parents will get, if the mothers' and fathers' combined income is over $2,400 per year, is 6 months' pay and $125 for the funeral.

So many billions have been given and are being given all over the world, the Government could not afford to keep up the $10,000 insurance policy on servicemen.

So, fathers and mothers, after you raise your boy to 18 and he goes into the service, the Government now expects you fathers and mothers to pay for his insurance. If you do not, the boy is not insured.

And get this, you will have a hard time buying this insurance for him. If he is in the Air Force, it is almost impossible. If you do get insurance, you will pay on the nose and good. Yes, mothers and fathers, if you have a boy in service, you better check on this or you are in for some heartbreaks.

The Late Judge Edward A. Richards

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. KEOGH. Mr. Speaker, a lifelong resident of Brooklyn, Judge Edward A. Richards, was born in the old town of New Lots, now the Borough of Brooklyn, on March 3, 1879. He was a product of the New York educational system having been graduated from the Boys' High School in Brooklyn, and from the New York University Law School with the degree of bachelor of laws. He was admitted to the bar in New York State in 1900. In 1907 he was elected justice of municipal court of the city of New York for a term of 10 years, and was reelected in November 1917. In the second year of his new term he resigned to become president of the East New York Savings Bank.

When he became president of the East New York Savings Bank the bank's assets totalled only $6 million, and there were only 8 employees. His success as president is attested to by the fact that the bank's assets at the time of his death in October 1956 were $530,207,231, and the employees numbered 337. He had served as a trustee of the bank since June 8, 1911.

Judge Richards was a member of the law firm of Richards, Smyth & Conway which later became Richards, Symth & McGrath. He was also an instructor for 2 years in the law of torts at the Brooklyn Law School, St. Lawrence University. The National Association of Mutual Savings Banks honored him by election as its president from June 1925 until October 1926.

Judge Richards had been a member of the legislative committee of the savings banks association of the State for more than 25 years and served on many other committees of the State association. He was instrumental in having three important proposals of legislation passed, first, permitting savings banks to establish branches; second, permitting savings banks to install and operate safe deposit boxes, and third, permitting savings banks to operate school savings banks.

He was one of the chief advocates of life insurance for savings banks, and later became president of the Savings Banks Life Insurance Fund, which office he held for a number of years.

His active life was devoted to undertakings in many fields as is indicated by his membership in the Brooklyn Bar Association for more than 50 years, and a member of its judiciary committee for many years; the Lawyers Club of Brooklyn; the Bankers Club of Brooklyn; the Brooklyn Chamber of Commerce director for more than 25 years; the board of directors of the Brooklyn and Queens Young Men's Christian Association for more than 40 years, and vice president and trustee since 1947; the board of managers of the Highland Park Branch of the YMCA since 1909, and chairman of the board since 1914. He was a director and vice president of the Brooklyn Council of Boy Scouts and was chairman of their finance and campaign committees for several years. He was also a director of Brooklyn Chapter American Red Cross, Tyrian Lodge, No. 618 F. & A. M. for over 50 years; and master of the lodge for 2 years; and of the 22d Assembly District Regular Democratic Club. A devoted member of the Episcopal Church, he was senior warden of Trinity Episcopal Church of East New York for many years, prior to which he had been a vestryman or warden of former St. Clement's Church, Pennsylvania Avenue, Brooklyn for many years.

He was also a member of the executive committee and the standing committee of the Episcopal diocese of Long Island and a trustee of the estate belonging to the Episcopal diocese of Long Island, and of the Chapter Cathedral of the Incarnation in the diocese.

For a time he was the president of Concord Freeholders, Inc., comprised of 18 mutual savings banks in the State of New York, which built three 15-story apartment houses costing more than $5 million known as Concord Village, and was the president of Arlington Village Development Corp. comprised of 4 Brooklyn savings banks which built a $2 million garden housing project in East New York.

In 1956 Judge Richards was awarded the gold medal for most distinguished service for Brooklyn by the Downtown Brooklyn Association.

The Court Crushes Private Rights

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. ABBITT. Mr. Speaker, many of us are alarmed at the continual trend of the decisions enunciated by the so-called Supreme Court of the United States of America. We were, of course, shocked at their decision on Monday, May 17, 1954, which is so frequently referred to as "Black Monday." From that day on, the Court has continued to depart from time-honored legal principles and precepts. They have thrown to the wind all legal precedent and now no attorney can advise his client with any degree of satisfaction as to what might be the

ruling of the Court. Apparently, the Court has set out to make its own rules and regulations, write the laws and precedents in each individual case. It has assumed the authority of judge, jury, and executioner. It has arrogated unto itself all necessary legislative power and authority without regard to the consequences that will follow.

A good example of this quasijudicial, legislative and executive function of our Supreme Court is pointed out cogently in an editorial in the Richmond Times-Dispatch of Friday, June 14, 1957, entitled "The Court Crushes Private Rights." The editorial deals with the decision of the Supreme Court in the Girard will case which has caused widespread adverse comment by lawyers and laymen alike.

Under leave to extend my remarks in the RECORD, I desire to include this editorial together with an article by Ray Tucker which is referred to in the editorial. They are as follows:

[From the Richmond Times-Dispatch of June 14, 1957]

THE COURT CRUSHES PRIVATE RIGHTS

The full purport of the United States Supreme Court's amazing Girard College case is only now being grasped in Virginia and throughout the country.

Every educational institution chartered by the State—whether religious, charitable, or whatnot—apparently is now under the guns of the Court, if it refuses for any reason to admit Negroes. The same apparently goes for all other types of corporations, such as theaters which have State charters, and apartment houses or single residences built, in whole or in part, with public funds, or whose mortgages are governmentally guaranteed.

Today's column by Ray Tucker gives an idea of what the future holds. We recommend a careful reading.

In the Girard College case the Supreme Court unanimously overruled the Pennsylvania Supreme Court, which had held 5 to 1, that Stephen Girard had a right to leave his millions for the education of poor white male orphans, if he wished to do so.

The reason for upsetting this will, written in 1831, was given by the Nation's highest court as follows: "The board which operates Girard College is an agency of the State of Pennsylvania." Hence refusal to admit colored students is a violation of the 14th amendment.

The reason for holding Girard College to be an agency of the State was that its funds are administered by the board of city trusts of the city of Philadelphia. Not a cent of State or city money has ever gone to the college.

Justice Bell, of the Pennsylvania Supreme Court, said, with much justification, in his opinion upholding the Girard will:

"Appellants argue that Girard's will discriminates against Negroes. It could just as readily be argued, it would be just as irrelevant, that it similarly discriminates against all girls—white, red, yellow, brown and black—against white boys who are not orphans—against white boys who are not poor—as well as against all poor boys who are not born in Philadelphia. * * *

"It follows logically and necessarily that if an individual cannot constitutionally leave his money to an orphanage or to a private home and college for poor white male orphans, he cannot constitutionally leave his money to a Catholic, or Episcopal, or Baptist, or Methodist, or Lutheran * * * or for other religious or charitable purposes."

Even the strongly integrationist and militantly liberal New Republic is shocked by the Court's failure to give any clear reasons for its action in the Girard case. The magazine said:

"We have previously called attention to the Court's unbroken practice since the second public school segregation cases in 1955 of summarily disposing of cases involving racial segregation. The present case is a particularly egregious example of that practice. * * * The Court has a responsibility, constitutional and moral, to explain by reasoned exegesis the grounds of its decisions and their connection with what has gone before. * * * The decision was made without argument and without even plenary briefs directed to the merits of the case. There are violations of orderly and decent procedure which the Court would hardly permit in a lower court."

A long list of Virginia educational institutions which hold charters from the State—some of them connected with religious denominations, others having no such affiliations and privately operated—is given in our news columns today. It is possible that some, or all, of them will be sued, if they refuse to admit Negro students.

It is even possible, as Ray Tucker points out in his column, that doctors, lawyers, or other professional people who have State licenses will now be confronted by a mandate that they accept Negro patients or clients.

Thus the once universally recognized right of an individual to dispose of his own property, to conduct his own business or profession, or in various other respects to order his private affairs, may have been annihilated by the Supreme Court. The far-reaching consequences of that arrogant action can as yet hardly be grasped, or even imagined.

[From the Richmond Times-Dispatch of June 14, 1957]

LAST STRAW ON THE CAMEL'S BACK

(By Ray Tucker)

WASHINGTON, D. C.—The legal possibilities opened up by the famous Girard College decision represent a threat of almost complete Federal control of the Nation's society and economy, in the opinion of expert lawyers and legislators here. The suits started or prepared under the Supreme Court's holding account for this conclusion.

The Girard ruling applied only to education on its face, but it is believed that it can be projected into almost every human activity financed in full or in part by public money—Federal, State, or local—or even if a governmental agency merely handles the funds.

Numerous legal actions, from New York to California, have been undertaken in an attempt to apply the decision to other fields. A Negro in New Rochelle, N. Y., has brought action against an apartment house for its discrimination policy because its mortgages are insured by the Federal Housing and Veterans' Administrations.

A Los Angeles Negro sued a dentist there for refusing to treat him because of his race. The basis for the action was that the dentist was a publicly licensed purveyor of an essential service, and, therefore, he was required to treat all comers.

Although the court held against the complainant, it did so partly because of reluctance of the judiciary to intervene in confidential relations between physician and patient. It apparently left the case open to appeal—an action usually taken in these matters with the aid of the National Association for the Advancement of Colored People's (NAACP) legal aid.

Federal, State, or municipal agencies have financial relations with almost every college in the country. They provide funds for the ROTC, research, dormitory and hospital construction, extension courses in this country, and to the Armed Forces abroad. Under the pending school-construction program, the administration will virtually rebuild our high-school system.

Many institutions of higher learning have certain specifications, based on religion, sex, age, residence, married status, and intellectual attainments. Under the Girard ruling, which involves private rather than public funds, they may become subject to the same challenge—and outcome—as the Philadelphia college.

A large percentage of private construction today is financed or insured with Federal taxpayers' contributions, including millions who believe sincerely in segregation. Uncle Sam has invested billions in defense plants for contracts, plant construction, machinery, and supplies. He finances farms, mines, and shipbuilding.

Were the Reconstruction Finance Corporation operating today, the Girard ruling would undoubtedly affect every large and small borrower, from great railroads to small retail outlets, that obtained funds from the late Jesse H. Jones' agency.

In short, the high tribunal appears to have paved the way for a more comprehensive National Employment Practices Commission than F. D. R. or Harry S. Truman, at the inspiration of extreme New Dealers, ever dared to propose to Congress. Capitol Hill rejected far milder programs after the war.

It is understood that, as possibly in New Rochelle and Los Angeles, the NAACP will launch a nationwide battery of suits to extend the decision as outlined here.

Another body which will consider and probably assail the Supreme Court's action is the governors' conference at its meeting later this month.

State executives have been denouncing persistent Federal encroachments for years, but many feel that the Girard extension of antidiscrimination philosophy is the last straw on their sovereign shoulders.

No Rights for American GI's

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. O'KONSKI. Mr. Speaker, we have frittered away $65 billion all over the world since 1945 worrying about the liberties of other people in other lands. But at the same time we take away the rights of American GI's serving in foreign lands.

We worry about trial by jury, the fifth amendment, bail, and other rights for Communists here in America but we give up those rights for GI's all over the world.

How Congress stands idly by while this is going on is something I will never understand. Let us take a look at this sad and strange development our leaders say that the Status of Forces Treaty is justified because it is reciprocal—that in giving up jurisdiction over our own soldiers, we acquired jurisdiction over foreign soldiers stationed here.

What every American ought to know is that American constitutional rights are not for sale or trade on any terms.

If the American Government acquired jurisdiction over 100 million foreigners in exchange for sacrificing the constitutional rights of one American citizen, it

would still be an immoral and unconstitutional deal.

The Status of Forces Treaty was a bad bargain for America—even if we ignore principles and make a factual comparison of what we gave with what we got.

There are no foreign troops stationed in America. Altogether, there may be in the United States as many as 15,000 foreigners who are here on some kind of military mission—as observers, experts, or special trainees. On the other hand, there are approximately 1 million American troops stationed abroad. Our troops are sent abroad to protect foreign nations. The foreign soldiers visiting in the United States are not here for our good.

In acquiring jurisdiction over 15,000 visiting foreigners, we nullified the constitutional rights of more than 1 million American soldiers.

Suppose 1 of the 15,000 foreigners does get in trouble here in the United States?

Whoever he is, wherever he's from, whatever he does, he gets the full protection of the American Constitution.

In America, any spy, subversive, or criminal of whatever kind is guaranteed a fair jury trial in open court. He can invoke the fifth amendment, refuse to testify, and heap abuse upon official representatives of our Government. But an American soldier who is drafted and forced to serve abroad can now be arrested on trumped-up charges by foreign police officers, tried in a foreign court, sentenced, and punished, without even having an American official present at his trial.

American soldiers, stationed in some 72 foreign nations, have been forced to give up their own careers, their own families, their own homes, to go abroad and serve the interests of foreign people. But this is not enough. They must also be deprived of their most precious constitutional rights in order to keep our foreign friends friendly.

An American soldier in trouble abroad is at the mercy of people whose language he may not speak, and who may hate him merely because he is an American.

He has no guaranty of a public trial, or even a trial by jury; no guaranty of freedom of speech; no protection against unreasonable searches and seizures; no protection against excessive bail or excessive fines; no presumption that he is innocent until he is proven guilty; no requirement that his guilt must be proven beyond reasonable doubt.

Families of servicemen protest that their relatives are subjected to indignities, suffering, and denial of their rights as American citizens in Iceland—where the biggest political party is the Communist party; where the second biggest newspaper in the nation is a Communist newspaper; and where anti-American feeling is bitter.

We have these status of forces agreements with Moslem countries, where the penalty for petty theft is to cut off the right hand of the offender.

American servicemen are subjected to abuse and injustice in France, where 1 out of every 4 public officials is a Communist.

In both Japan and France, it is customary for prosecutors who are not satisfied with sentences imposed on Americans, to appeal the case. This calls for a new trial, with new evidence; and it puts Americans in double jeopardy, subjecting them to more than one trial for the same offense. Such a thing is unconstitutional in the United States.

In Japan, the wheels of justice turn slowly. Criminal cases are frequently adjourned and interminably delayed; but the defendant—even though he may later turn out to be innocent—stays in jail until the verdict is finally in. What a shame on our Nation and a Congress which permits this.

Statement on United States Immigration Policy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 9, 1957

Mr. MULTER. Mr. Speaker, I am pleased to direct to the attention of our colleagues the following statement issued by the American Jewish Committee at a meeting of its administrative board on May 7, 1957. The meeting was held on the occasion of the 50th anniversary of the founding of the America Jewish Committee.

The statement follows:

STATEMENT ON UNITED STATES IMMIGRATION POLICY

On this 50th anniversary of the founding of the American Jewish Committee, we reaffirm our dedication to the goal of an enlightened and liberal immigration and nationality policy, which will bring this vital aspect of American life into consonance with traditional American ideals. Such a policy, we feel, will promote unity at home and advance our relations with the other nations of the free world. We are gratified that our point of view is shared by the leading American organizations of all faiths and by the Nation's major citizens' groups, that it has been affirmed in the 1956 platforms of both the Democratic and Republican Parties and by their principal spokesmen, and that it has been publicly supported by President Eisenhower.

In a special message to Congress on January 31, 1957, the President proposed a series of interim reforms in American immigration policy. Among the President's recommendations were an increase in immigration quotas, a method of utilizing unused quotas, and a plan for admitting each year a reasonable number of escapees from Communist countries.

Although the President's recommendations do not provide for elimination of the discriminatory national-origins system, we support them, nevertheless, as an important step in that direction. We urge, however, that his proposal for admission of refugees from communism be expanded to include refugees from other governmental systems which engage in religious or political persecution. With this additional recommendation, we call upon the Congress to implement these proposals of the President by immediate and effective action.

A Good Teacher Is an Inspiration Forever

EXTENSION OF REMARKS
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. BENNETT of Florida. Mr. Speaker, I recently received 2 very inspiring letters from 2 very wonderful persons. One of these persons was my first-grade teacher, Miss Fannie Cumming, who taught in the Tampa grammar schools for half a century and is still busy about doing many good things for people in Tampa, Fla. The other is Miss Carol Roseborough, who taught me in the second grade, also in the Tampa, Fla., schools, where she taught almost as long as Miss Cumming. In the letter I received from Miss Roseborough she included the Bible ABC Verses, which I used as a youngster in her class in order to better understand the alphabet and in order to better understand spiritual laws. Certainly, my recent communications and thoughts of these grand teachers who taught me in my early years have underlined for me the truth that a good teacher is an inspiration forever. I am deeply indebted to these fine teachers and to the others who have helped me through my life. I include hereunder the Bible ABC Verses to which Miss Roseborough addressed her recent letter and which I used so many years ago in the Tampa, Fla., public schools.

The verses follow:

BIBLE ABC VERSES

A: A soft answer turneth away wrath.
B: Be ye kind one to another, tenderhearted, forgiving each other.
C: Cease to do evil, learn to do well.
D: Do good unto all men.
E: Everyone shall give an account of himself before God.
F: Fear God and keep his commandments.
G: Give thanks unto the Lord; for He is good.
H: He that ruleth his own spirit is better than he that taketh a city.
I: In Thee, O Lord, do I put my trust.
J. Judge not that ye be not judged.
K: Keep thy lips from evil and thy tongue from speaking guile.
L: Little children, love one another.
M: My son, if sinners entice thee, consent thou not.
N: Now is the accepted time.
O: Owe no man anything but to love one another.
P: Praise ye the Lord, let all the people praise Him.
Q: Quit you like men, be strong in the Lord.
R: Remember the Sabbath Day to keep it holy.
S: Suffer the little children to come unto Me, for of such is the Kingdom of Heaven.
T: Thou, God, seest me.
U: Unto Thee, O Lord, do I cry for help.
V: Verily, verily, I say unto you, ye must be born again.
W: Watch and pray lest you enter into temptation.
X: Except you become as a little child ye cannot enter the Kingdom of Heaven.
Y: Ye are the salt of the earth.
Z: Zealous in all good works.

In Memoriam, His Excellency Most Rev. Richard Thomas Guilfoyle, D. D.

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. VAN ZANDT. Mr. Speaker—

Behold a great priest who in his days pleased God.

The Cathedral of the Blessed Sacrament, Altoona, Pa., was the scene on June 17, 1957, of a solemn pontifical Mass of requiem for His Excellency Most Rev. Richard Thomas Guilfoyle, the third bishop of the Roman Catholic Diocese of Altoona, Pa.

Persons from all walks of life and various religious faiths joined the thousands of Catholics in the eight-county diocese in expressing sorrow on the death of Bishop Guilfoyle.

Although in frail health for the past several years, Bishop Guilfoyle was determined to continue his episcopal duties, and during the last month of his life he ordained a class of new priests, distributed diplomas at the commencement exercises of Altoona Catholic High School, and blessed the new Immaculate Conception Chapel at St. Francis College, Loretto, Pa.

One week previous to his death, Bishop Guilfoyle participated in the solemn requiem Mass for a diocesan priest, the late Reverend Father Michael Brett, Johnstown, Pa.

Laboring zealously for over 20 years as shepherd of the Altoona diocese, Bishop Guilfoyle witnessed the fruits of his efforts both spiritually and materially. New churches and schools were elected, and his ardent desire to improve church property and finish construction of the Cathedral of the Blessed Sacrament began to show promise of fulfillment when nearly $4 million in cash and pledges were raised in 1956 to finance a 5-year building and improvement program. The success of this campaign for funds was a personal tribute of love and respect for Bishop Guilfoyle and of his marked ability as an administrative and spiritual leader.

When the late bishop's successor, in the years to come succeeds in completing the Cathedral of the Blessed Sacrament a task so nobly begun by Bishop Guilfoyle, the success of the building program will reflect in a grtat degree the labor, love, sacrifices, hope, and constant prayers of the late bishop in his effort to perfect the beauty of this edifice dedicated to the extension of God's Kingdom on earth. To have played an important part in building such an imperishable monument to one's daily activities during life is the crowning achievement of human existence.

Deeply spiritual, yet endowed with a sparkling sense of humor traditional with his race, Bishop Guilfoyle shunned the limelight and the plaudits of the multitude. Entering the seminary from the coal pits of Jefferson County, Pa., where he was employed at the tender age of 15, Bishop Guilfoyle, by diligent study, arose to the exalted position of a prince of his church. Throughout his priestly life he had contacts with persons prominent in the business and industrial world, yet as a priest—and later as a bishop—he never lost the common touch. This humble and self-effacing bishop felt more at home in the enjoyment he obtained from mingling and talking with the masses of humanity, as he sought to aid them in walking humbly with their Lord and their God.

With deep humility and sincerity of purpose as twin attributes of his noble character, and with an awesome regard for his sacred calling as his greatest love, Bishop Guilfoyle found keen enjoyment from his love of mingling and talking with the children and youth of the Altoona diocese. He had a special affection for the orphans in the diocese and never missed an opportunity to visit the orphanage of the Altoona diocese.

As a youth, the late bishop was a lover of sports, with the result that he maintained an avid interest in athletic events, participating in athletics during his college and seminary days and continuing his interest after his ordination to the holy priesthood. Before failing health robbed him of leisure moments, it was a familiar sight to see him at athletic contests between church groups, urging young athletes to victory. At times he would actively engage in practice sessions, often donning athletic equipment to take his place on the team or to act as umpire, referee, or coach as the occasion demanded, to the sheer delight of diocesan youth. In short, Bishop Guilfoyle derived great enjoyment from associating with young people and was, in turn, the beneficiary of their love and admiration.

This bond of mutual love and friendship was of an enduring nature and was exemplified in a spiritual manner when, on June 15, 1957, over 1,000 children attended the special children's Mass of the Pentecost at the Cathedral of the Blessed Sacrament, the first of the church services to be held prior to the solemn pontifical Mass of requiem for their beloved friend and bishop. The choir at the children's Mass was composed of altar boys in whom Bishop Guilfoyle always exhibited great interest. He obtained much joy from his association with them.

The Altoona diocese has lost a faithful shepherd of souls in the death of the Most Reverend Richard Thomas Guilfoyle.

The following news articles and editorial from the Altoona (Pa.) Mirror regarding Bishop Guilfoyle's death reflect his many sterling qualities and his prominence in the spiritual life of the eight counties comprising the Altoona diocese of the Roman Catholic Church.

I wish to join people of all religious faiths in paying a tribute of reverence to the memory of the late Bishop Guilfoyle and to extend sincere expressions of deepest sympathy to the surviving members of his family of 5 brothers and 1 sister.

In like manner, I extend my sympathy to the secular priests and members of religious orders in the Altoona diocese on the loss of a truly great spiritual leader.

It should prove a source of consolation to the Catholic population in the Altoona diocese that Bishop Guilfoyle realized his fond ambition in life of being a true shepherd of his flock. To attain that goal despite ill health, he persevered until death with patience, courage, and fortitude in the performance of the sacred duties of his office. This patient and determined attitude revealed his depth of character and his love for the souls committed to his care.

In tendering this last tribute of respect to a noted churchman, the memory of the active and fruitful life of the Most Reverend Richard Thomas Guilfoyle, D. D., brings to mind the words of the poet:

Were a star quenched on high
For years would its light
Still streaming downward from the sky
Fall on our mortal sight.

So when a great man dies
For years beyond our ken
The light he leaves behind him lies
Upon the soul of men.

[From the Altoona (Pa.) Mirror of June 11, 1957]

BISHOP GUILFOYLE DIES—FUNERAL MASS ON MONDAY

His Excellency, Most Rev. Richard Thomas Guilfoyle, third bishop of the Altoona Roman Catholic diocese, died at 6:20 o'clock last evening in Mercy Hospital after a heart attack. He was 64.

Bishop Guilfoyle had complained of breathlessness shortly after 3 o'clock yesterday afternoon and asked to be taken to the hospital for oxygen. He walked unassisted from the bishop's house at 1211 13th Street at 3:30 o'clock and was driven to the hospital by Rt. Rev. Msgr. Thomas E. Madden, chancellor of the diocese. He was admitted at 4 o'clock.

Near him at the time of his death were Monsignor Madden and Rev. Father Vincent Burke, T. O. R., who administered the bishop the last rites of the church. Bishop Guilfoyle was conscious until the end.

Authorities said that although the bishop had a heart condition for several years, he had suffered from a diabetic condition for the past 15 years.

Last public appearance of the bishop was Wednesday, when he handed diplomas to members of the Altoona Catholic High School graduating class during its 32d commencement at the Cathedral of the Blessed Sacrament. On Monday, at Johnstown, he gave absolution at the funeral Mass of Rev. Father Michael Brett.

Unassuming and retiring by nature, Bishop Guilfoyle in recent years appeared less frequently in public. Devoted to children, he used much of his failing energy in attendance at juvenile events and visits to nearby orphanges.

Installed as bishop of the diocese December 15, 1936, he became the third priest to ascend to the office since the diocese was created May 30, 1901. He succeeded Most Rev. Bishop John Joseph McCort, who died April 21, 1936. The first bishop, Rt. Rev. Eugene A. Garvey, appointed by Pope Leo XIII, died in October 1920.

During his two decades as bishop, the Altoona diocese expanded from a Roman Catholic population of 100,000 to 150,670, according to the 1957 official figures. Churches and missions grew from 130 to 135. The diocese contained 160 priests then to 252 today.

At the beginning of Bishop Guilfoyle's tenure, there were 50 parochial schools con-

ducted in the diocese as compared to 54 elementary schools today. There are five high schools. In addition to St. Francis College and Seminary at Loretto, the Franciscan order has added Highland Hall Preparatory Seminary at Hollidaysburg.

Bishop Guilfoyle started a new parish, St. John Vianney, at Mundy's Corner in 1950. Last year he established two new parishes in the greater Johnstown area, St. Clement's and St. Andrew's.

Bishop Guilfoyle was born December 22, 1892, at Adrian, Jefferson County, 1 of 9 children of Michael and Bridget (Ryan) Guilfoyle. The boy whose career began at 15 with a coal-miner's cap gave little indication that at 43 his head would carry a bishop's miter.

But during the following year he held long conversations with Rev. Father Joseph Zubricky, pastor of St. Adrian's Church near Punxsutawney. Young Guilfoyle quit the mines and entered St. Bonaventure High School at Allegany, N. Y., continuing through college and seminary there.

He was ordained a priest June 2, 1917, at Buffalo, N. Y., by the late Denis Cardinal Dougherty, who at that time was bishop of Buffalo.

After his ordination, Father Guilfoyle was named assistant pastor at St. Stephen's Church, Oil City. He remained there only a short time before being appointed by Bishop John Mark Gannon, D. D., bishop of Erie, as his secretary. He served 15 years as secretary to Bishop Gannon. Thirteen years of that time he also served as chancellor of the Erie diocese. Bishop Gannon last week celebrated his 80th birthday at Erie.

Father Guilfoyle's elevation to bishop was announced by Pope Pius XI in Rome on August 11, 1936.

The consecration of the former chancellor was performed November 30, 1936, at St. Andrew's Cathedral in Erie, a rite which elevated him to the se at Altoona. He was formally installed with impressive rites at the Cathedral of the Blessed Sacrament, December 15, 1936, with Cardinal Dougherty presiding.

Bishop Guilfoyle, who had held 2 duties simultaneously in the Erie diocese, was replaced by 2 men after his elevation to the episcopacy. Rev. Dr. Raymond Mcquillan was named chancellor and Rev. Father Alfred Watson became secretary to Bishop Gannon.

Possibly the highest honor paid the bishop during his 20 years as Shepherd of the Mountains came only last year when the diocese raised the largest single amount of money ever obtained in a fund campaign.

Nearly $4 million in cash and pledges was obtained to finance a building and improvement campaign during the next 5 years in the diocese which covers 6,710 square miles and includes the counties of Blair, Bedford, Cambria, Centre, Clinton, Fulton, Huntingdon and Somerset.

Bishop Guilfoyle was the only member of his immediate family to enter the priesthood. Preceding him in death on October 2, 1953, was a brother, James Francis Guilfoyle of Punxsutawney, who died at the Altoona Veterans' Administration hospital.

Surviving are 5 sisters and 1 brother, Miss Margaret Guilfoyle, Edward Guilfoyle and Mrs. Mame Devlin, all of Punxsutawney; Mrs. M. T. O'Neill of Youngstown, Ohio, Mrs. Nell Bechtold of Greensburg, and Miss Katherine Guilfoyle of Pittsburgh.

[From the Altoona (Pa.) Mirror of June 17, 1957]

MANY PRESENT AT FUNERAL FOR BISHOP OF CITY—ARCHBISHOP OF PHILADELPHIA HEADS CLERGY—CATHEDRAL FILLED TO CAPACITY FOR FINAL RITES—NUNS AND LAITY PRESENT

The Roman Catholic Church today performed the last rites for the third bishop of the Altoona diocese, His Excellency, Most Rev. Richard Thomas Guilfoyle, who died suddenly of a heart attack a week ago.

The solemn ceremonies accorded a prince of the church were held in the Cathedral of the Blessed Sacrament before an overflow audience of the faithful over whom Bishop Guilfoyle had ruled for nearly 21 years.

The pontifical Mass of requiem was the final act in a mourning period during which thousands of Catholics filed before the prelate's bier at the episcopal residence from Wednesday until yesterday, when the body was moved to the cathedral to lie in state for the last hours before the mass.

Filling the cathedral for the services were clergymen, not only from the Altoona diocese, but from others throughout the eastern United States, as well as representatives from the sisterhoods. But the majority were Roman Catholic laity from the flock under the late bishop's spiritual guidance.

Services began at 4:45 o'clock this morning with the chanting of the final portions of the office of the dead, the first part of which was conducted yesterday afternoon at the time of the transfer of the body to the cathedral.

MONSIGNORI PARTICIPATE

The office of the dead was chanted for about 45 minutes, during which the choir sang 8 psalms, and lessons pertaining to the dead were sung by 3 monsignori—Rt. Rev. Msgr. Thomas E. Madden, administrator; Rt. Rev. Msgr. Thomas J. O'Shea, of Bellefonte, and Rt. Rev. Msgr. I. J. Denny, cathedral rector.

Celebrant for the solemn pontifical Mass of requiem which followed immediately was Most Rev. John F. O'Hara, C. S. C., archbishop of Philadelphia.

The extremely solemn mass, which includes the consecration of the holy communion, was sung prior to the funeral sermon by Most Rev. John F. Dearden, D. D., bishop of Pittsburgh, who eulogized the late bishop's service for the divine kingdom.

Then followed the final absolution by the four bishops who assisted Archbishop O'Hara. They were Most Rev. Edward P. McManaman, D. D., auxiliary bishop of Erie; Most Rev. George L. Leech, D. D., bishop of Harrisburg; Most Rev. Hugh L. Lamb, D. D., bishop of Greensburg, and Most Rev. Jerome D. Hannan, D. D., bishop of Scranton.

OTHER PRELATES ASSIST YOUNGSTOWN

Other bishops attending were Most Rev. Hubert J. Cartwright, auxiliary bishop of Wilmington, Del.; Most Rev. Callistus Smith, auxiliary bishop of Buffalo, N. Y.; Most Rev. Emmet M. Walsh, bishop of Youngstown, Ohio; Most Rev. Lawrence F. Schott, auxiliary bishop of Harrisburg; Most Rev. Coleman Carroll, auxiliary bishop of Pittsburgh, and Rt. Rev. Denis Strittmatter, O. S. B., archabbot of St. Vincent's, Latrobe.

Other prelates assisting in the mass included: Archpriest, Rt. Rev. Msgr. Thomas E. Madden; deacons of honor, Rev. Michael F. Mackowiak of Windber and Rev. Joseph A. Banik of Barnesboro; deacon, Rev. Patrick V. Fleming; subdeacon, Rev. Eugene O. M. Bradley of Gallitzin.

Master of ceremonies, Rt. Rev. Joseph McGlynn, personal attendant to the archbishop; assistant master of ceremonies, Rev. Roy F. Kline of Altoona and Rev. Edward McConnell of Bedford.

After the mass concluded early this afternoon, the body of Bishop Guilfoyle was removed to the crypt in the cathedral to lie beside his predecessors in administration of the Altoona diocese.

Pallbearers at the burial were the same who officiated at the transfer yesterday. They were: Rev. Eugene C. Parrish of Altoona, Rev. John J. Crawley and Rev. Lambert M. Beiter, both of Huntingdon; Rev. Casimir Ossowski and Rev. Joseph F. Pier, both of Johnstown; Rev. A. J. Chervenak of Portage; Rev. John A. O'Toole of South Fork and Rev. Francis L. Gorney of Gallitzin.

Commentator for the radio broadcast was Rev. Joseph Kinlry of Johnstown.

The rites were preceded with an impressive procession of clergy from the cathedral school, across 13th Avenue, to the large gray stone edifice itself.

TAKE PART IN PROCESSION

First in the line of march were the altar boys, in their cassocks and surplices. Then followed more than 300 priests in the various colorful robes of their offices, followed by the various monsignori, after whom walked 15 bishops. Then came the officiating clergy for the Mass.

During the Mass itself, the bishops and monsignori sat in the sanctuary and the contingent of priests in the forward rows of seats in the cathedral. Archbishop O'Hara occupied the episcopal throne, flanked on either side by a knight.

The diocesan priests' choir led the assembled clergy in singing at the double rites, Rev. Joseph Krisock, of Ebensburg, conducted.

Black crepe covered the portal and other sections of the cathedral. The altar was draped with the bishop's coat of arms, the center of a triangular motif.

The casket was draped with deep purple velvet.

Doors to the cathedral were opened at an early hour and the church was quickly filled to capacity.

LIFE, WORK OF BISHOP CITED AT OBSEQUIES

(The complete text of the sermon by His Excellency Most Rev. John F. Dearden, D. D., bishop of Pittsburgh, Pa., is carried herewith:)

"Now I exhort the presbyters among you—I, your fellow presbyter and witness to the sufferings of Christ, the partaker also of the glory that is to be revealed in time to come—tend the flock of God which is among you, governing not by constraint, but willingly, according to God; nor yet for the sake of base gain, but eagerly; nor yet as lording it over your charges, but becoming from the heart a pattern to the flock. And when the Prince of the shepherds appears, you will receive the unfading crown of glory" (I Peter 5: 1–4).

In this solemn action of prayer the church begs God's mercy on the soul of a departed bishop. The prayers that are offered are substantially the same as those offered for any of her departed children. But there is one difference, small but impressive. Time and again throughout these obsequies whenever the occasion offers, the title "bishop" is introduced into the prayers. It is "Richard, a bishop" for whom the church prays today.

At no time do titles count less than in death. Marks of distinction that carry weight during life mean little when the span of earthly existence is ended. In the light of our faith, nothing could be clearer than this.

How truly the church knows that the title will count for little before the judgment seat of God unless to underscore additional responsibilities for which an accounting must be made. And yet, with all her awareness of this truth, she employs frequently in this ceremony the title of ecclesiastical honor.

In this context it can convey but one meaning. This is an expression of the church's respect and reverence for an office established by Christ. She still treasures in hallowed memory and living reality the commission given by the divine Master to the apostles. Sent forth in His name under Peter to teach, to rule, and to sanctify, their work is her glory and the principle of her being. Without them and all that they represent, her mission among men is empty and hollow.

This solemn occasion brings home to us with renewed force the office of a bishop in

the church. Month after month and year after year we are witnesses of his activity and sharers in the fruits of his labors. As the priest in his parish, so the bishop in his diocese lives in the midst of his people, dispensing to them the graces of salvation. And as it happens with a priest, so also with a bishop, his work and his life are so intimately interwoven with the lives of his people that it is taken as commonplace and ordinary. And yet in the fullest sense of the term according to the designs of Christ himself, his life and his work, because of their far-reaching spiritual importance, must rise above the common.

This is a truth that is impressed upon every bishop from the earliest days of his episcopal duties. His appointment as bishop comes to him from the chief bishop of Christendom, the holy father. The vicar of Christ speaks forth and calls this priest to the fullness of holy orders and to an apostolic charge. The very manner of his commission and the channel through which authority comes to him makes clear the bond of apostolic succession that unites him to the Apostles.

On the day of his consecration, a bishop pledges in solemn fashion to carry out the duties of his office. In reply to questions that are put to him by his consecrator, he promises to "teach the people for whom [he is] ordained, both by word and by example"; "to show fidelity, submission, obedience * * * to our holy father * * *"; "[to] be given up to divine affairs and abstain from worldly matters * * *"; "* * * to observe * * * and to teach others to observe humility and patience"; "to be affable and merciful to the poor * * * and all those in need."

These are weighty and solemn promises. They spell out in detail a bishop's duty to endeavor according to the teaching of St. Peter (I Peter 5: 3), to become "from the heart a pattern to the flock." Time and again a bishop meditates on these solemn truths. No one is more keenly aware than he of how heavy is the charge that has been laid upon him and how far short he falls of meeting its full responsibilities.

For more than 20 years, Bishop Guilfoyle served as the shepherd of the see of Altoona. He brought to his office broad and rich priestly experience. He drew upon that experience in conducting the weighty administrative duties of his office as bishop of Altoona.

And yet for all his administrative talent, he was a man of simple tastes and habits. His unaffected and unassuming manner is known to all his priests and people. Through his direct and kindly manner, he established an easy contact with the humble of this world.

He had a deep and an abiding concern for the poor and needy. They knew him well and they sensed his warm charity toward them.

As is so fitting, he had an absorbing interest in all the works of Christian education. Where Catholic schools could be established, he encouraged and fostered them in every way possible. To provide with adequacy for the religious education of those unable to attend parochial schools, he insitituted and developed a strong program according to the pattern of the confraternity of Christian doctrine. Through these channels he endeavored to discharge his duty of forming the young according to the spirit of the divine Master.

At all times he showed an absorbing desire to shun anything that would bring honor or draw attention to him personally. He lived without ostentation. Yet coupled to his personal desire to avoid publicity was a profound and sensitive appreciation of the lofty sacredness of his office as bishop. This will explain at least in part his great love and concern for all the solemnities of the liturgy of the church. For to this cause he was truly devoted.

In the discharge of his duties as bishop of this important see, he never hesitated to call upon the collaboration of his priests, religious and the laity. And knowing him so well, they offered a devoted and generous support in all the undertakings of the church. So many important works were undertaken and prospered under his attentive guidance and the interested support of all his people.

We recite these qualities of the revered Bishop Guilfoyle with no thought of doing in his death what he would have found distasteful in life. But it is fitting today to call to mind these bonds that joined him so intimately to his priests and people. For the long years of devoted labors that he spent in this diocese have won for him a special place in its heart. His memory will be treasured. For like a good father, he has left his impress upon this diocese as a devoted father leaves his impress on the character of his children.

Our union in prayer this morning is a mark of our affection and esteem for him. It must be a pledge of our continued readiness to pray God's mercy upon him. As a bishop stands before the judgment seat of God to render an account of his life and his ministry, he has much for which he must render an account. His stewardship is arduous and weighty. And whatever measure of imperfection has crept into it through human weakness must be satisfied for. It is in this hour that he would turn with special earnestness to his priests and religious and people to beg them to pray to God for him. Their prayers and sacrifices will win for him more speedily a judgment of mercy and love.

Toward the close of the ceremony of the consecration of a bishop a prayer is addressed to God in behalf of the new successor of the Apostles. It is the traditional prayer of the church for her bishops. With propriety then we address it to God once again, begging that what it pleads for may have been attained by our revered and beloved Bishop Guilfoyle.

"O God, the Pastor and Ruler of all the faithful, look down in Thy mercy upon this Thy servant, whom Thou has appointed over Thy church, and grant, we beseech Thee, that both by word and example he may edify all those who are under his charge, so that with the flock entrusted to him he may attain unto life everlasting through Christ our Lord."

[From the Altoona (Pa.) Mirror of June 12, 1957]

BISHOP GUILFOYLE

The name of His Excellency, Most Rev. Richard Thomas Guilfoyle, D. D., will stand long in this community and the annals of his church for leadership, character, sympathy, understanding, unselfish, and patient service and, above all, as a stanch champion of the Christian cause and a devout servant of the Prince of Peace.

Bishop Guilfoyle was great not only because he scaled the heights in his chosen work for God and mankind. In his lifetime, he stood as a supreme example of the dedicated man, consecrated to the advancement of God's Kingdom in the world.

Inherently a shy man, his reserve disappeared only when he was in the company of his closest associates or when he found time to mingle among children and young people who were nearest and dearest to his heart in doing everything possible in their behalf.

Driven by a life force that would not let him spare himself or anyone who worked with him. Bishop Guilfoyle became a living symbol of a spiritual leader whose interests never deviated from the call of duty, and his pursuit of the ultimate in successful effort for his church ended only when he died.

Not the smallest measure of his devotion was manifest since his health became impaired quite a number of years ago. Lesser leaders might have been content to offer mere token service only long enough to bring their active careers to an end. Bishop Guilfoyle continued at the helm of his large jurisdiction with unfailing courage, steadfastness of purpose, unbroken faith and heroic fortitude.

In his ceaseless strivings, Bishop Guilfoyle spurred both clergy and laity on to greater achievements. In every facet of life, he clung to principle as determinedly as he labored unrelentlessly for his God and the church. He endowed all around him with his simplicity, by his precept and his own example of a pure life.

On June 2, just 9 days prior to his unexpected passing, Bishop Guilfoyle observed the 40th anniversary of his ordination to the Catholic priesthood. This event, like all other such occasions in his life, passed without ostentation; in fact, without any notice. This was his personal wish. In this as in all of his activities, he shunned the limelight.

Bishop Guilfoyle was in his 20th year as titular head of the Altoona diocese. His accomplishments were many as an able administrator. Foremost, his daily life followed the same true pattern of the sacred principles he propounded from the altar.

In the passing of Richard Thomas Guilfoyle, life is bereft of a devoted servant of God and an outstanding and distinguished citizen.

Why So Interested in Farmers' Welfare?

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 19, 1957

Mr. O'KONSKI. Mr. Speaker, thousands of city folks often ask me how come I have such a deep interest in the farmers' welfare and security when my district is not predominately agricultural and a marginal farming area at most. Many of them wonder:

First, why I was the first Member of Congress to introduce a bill to include farmers under the social security program way back in 1943, my first term in Congress?

Second, why I always supported and still support 100 percent parity for farm products over any plan proposed thus far?

Third, why I voted against continuation of the new racket called mistakingly the soil bank program for large corporation farms?

Fourth, why I never vote on a basis of party line on farm bills but always vote for the best interest of the farmers, whether it is a Democratic or Republican bill?

Fifth, why I always go all out for support of the Farmers Home Administration, Rural Electrification Administration, and every other agency for rural progress?

Sixth, why my office has processed more than 5,000 loans to small family farms and go all out to give any farmer who requests it a helping hand?

In answer I state that I understand the farm needs because the first 22 years of my life were spent on a small family farm. Except during schooling hours, the first 22 years of my life I worked on my father's farm.

From 7 years of age to 22 I did every type of farm work—milking cows by hand, plowing, seeding, haying, feeding chickens and hogs, butchering, threshing, hauling, and fertilizing. There is not any kind of farm job I did not do between 7 and 22 years of age. In fact, my entire family life has been centered on farming in which I have brothers engaged and now own the small family homestead farm on which my mother lives. This gives me a basis of interest and understanding of what farming is.

SOCIAL SECURITY

I never could understand why it took so long to get farmers under social security. During the war years when income was high it would have been a much better deal. In 1943 I introduced, my first term, a bill to bring farmers under social security. It took years to get it through. Each year the list of supporters grew—most of them introducing the same bill I introduced in 1943. We finally put it over but too late to help a lot of needy farmers.

ONE HUNDRED PERCENT OF PARITY ONLY ANSWER

I have always supported 100 percent of parity as the only answer to the farm problem—but with limitations. For instance, I do not feel that the Government should pay any subsidy, any parity or any aid of any kind to any farmers whose gross income is over $15,000 per year. Any farmer with that kind of gross income needs no subsidy or parity or Government aid of any nature.

The chief difficulty with the new soil bank program is that it helps the corporation farmer who needs no help and it does nothing for the small family farm. How can any intelligent person approve a program where the Government pays a corporation farmer from $40,000 to $60,000 under the new soil bank program. This is preposterous and wrong as wrong can be.

The 90 percent parity program which Benson junked cost the taxpayers less than half of what the new soil bank racket is costing the taxpayers. If we had adopted the surplus disposal plan, the food stamp plan, and an adequate school milk and school lunch program earlier, the 90 percent parity program would have done the job that needs to be done; especially so in the dairy industry.

As the program now stands, the agricultural program is costing the taxpayers twice as much as the 90 percent parity program—the corporation farms are draining the United States Treasury and the small family farmer gets nothing. What a farce.

I have no objection to the original soil conservation program which is available to the small family farm. This is a good program and I support it.

ONE HUNDRED THOUSAND CORPORATION FARMS CAUSING ALL THE TROUBLE

There are about 5 million farms in our Nation. Of these 100,000 are large corporation farms and 4,900,000 are small family farms. The new soil bank program is all for saving the 100,000 corporation farms and doing nothing for the 4,900,000 small family farms. The 100,000 large corporation farms get more money from the Treasury than the 4,900,000 family farms put together. There is no sense to such a program. It is unfair to the taxpayer and to the family type farmer.

The solution is simple. It is not the small family farm causing the surplus. It is the 100,000 large corporation farms who cause the surplus. Therefore, if we stop any subsidy or payments by the Government to these large corporation farms to grow what we do not need, we can save the small family farm. Who can justify paying a city gentleman farmer who turns his golf course over to the soil bank and collecting $45,000 from the Government? This is sheer nonsense. If we stop subsidies and parity payments to the large 100,000 corporation farms and those whose income is in excess of $15,000 we will have gone a long way in solving the surplus production problem.

TOO MUCH POLITICS IN FARM PLANS

The basic trouble in Washington on the farm problem is politics. Most Congressmen vote on a party basis on farm issues. Republicans fight a plan just because it is proposed by Democrats and vice versa. For instance, even after a year of failure of the new soil-bank program, I was asked to vote for it for another year because it was a Republican plan. This I could not do. Playing politics with the farmers' misery is sheer nonsense. I have never cast a vote on party lines. I ask only one question: Is it good or bad for the people of the Nation? I do not care whether it is a Republican or Democratic proposal. If it is good, I will vote for it; if it is bad, I will vote against it.

Years ago I proposed a food-stamp program for the aged, the veterans, the disabled, and the needy. But because it was first a Democratic plan the Republicans opposed it. This type of voting is no good for our people. I support the food-stamp plan because it is good for everyone, and will solve a lot of our surplus problem. It will cost far less than the new soil-bank racket now going on.

REA AND FHA

Any agency which really helps the family farmer always gets my wholehearted support. I would hate to see Wisconsin farmers without REA. They would still be milking by lanterns. I have always boosted REA because in the end it costs the taxpayers nothing and it has done more for farming than anything ever coming out of Washington.

FHA has also been a wonderful agency of help to farmers. Through my office alone more than 5,000 loans were processed for farmers. Any farmer needing my personal help to give him a boost in getting a loan always got it. Not once have I let any farmer down when he requested my help.

MY RECORD

In my 15 years in Congress not once did I ever vote against the interests of the family farmer. My work and vote has always been on his side. Whenever the farmer needed my help on social security, loan, draft, or needing his boy home because of some disaster in the family, I never let them down. Always I went to bat for them and in 95 percent of the cases with success. The small family farm is the greatest asset our Nation has. If we put him out of business the consumer and the taxpayer will pay a heavy price.

THIS IS NOT PRINTED OR MAILED AT GOVERNMENT EXPENSE

JUNE 19, 1957.

Hon. ARTHUR SUMMERFIELD,
The Postmaster General,
Post Office Department,
Washington, D. C.

MY DEAR POSTMASTER GENERAL: Enclosed is a sample reprint of the CONGRESSIONAL RECORD. I intend to mail out 100,000 copies of same. Realizing the huge deficit in the Postal Department, it is not my intention to further add to that deficit.

Under special permit available to any commercial enterprise, what would be the cost of mailing 100,000 of these reprints? Whatever the cost is I will make payment to the Post Office Department for that amount.

Since this is a reprint of the official record, I am aware that I would not have to do this. But I will pay for this mailing at the regular going commercial rates so as not to add to the postal deficit.

Looking forward to hearing from you, I am,
Sincerely,

ALVIN E. O'KONSKI,
Congressman, 10th District of Wisconsin.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

Appendix

Theodore Roosevelt and Family Life

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Thursday, June 20, 1957

Mr. YOUNG. Mr. President, the Theodore Roosevelt Centennial Commission is making plans for the observance next year of the 100th anniversary of the birth of President Theodore Roosevelt. In connection with this forthcoming celebration, I believe it is appropriate to call attention to the great respect and love Teddy Roosevelt had for his family and for his home life in general. Therefore, I ask unanimous consent to have printed in the Appendix of the RECORD a short description of his outstanding devotion to his family circle, entitled "Theodore Roosevelt and Family Life."

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THEODORE ROOSEVELT AND FAMILY LIFE

Of the 34 Presidents of the United States thus far, the 26th, Theodore Roosevelt, is preeminently associated in the minds of his countrymen with 2 personal traits: Love of "the strenuous life," as evinced in innumerable feats of ranching, big-game hunting, swimming, boxing, wrestling, tennis-playing, wood-chopping, hiking, horseback riding, cliff-scaling, exploring, and the like; and, dearer to him than all of these, as the symbol of a supremely happy family life. In his writings, whether in his first boyish letters to friends and relatives or in the mature productions of his busy and tumultuous career, his affection for home and hearth is everywhere evident. It will crop out anywhere: In a discussion of grave public issues he will suddenly brush the subject aside and refresh his mind with a visit, as it were, to the family circle. In his letters and recollections his thoughts cling to Sagamore Hill, the beloved home at Oyster Bay. In his autobiography he writes:

"Sagamore Hill takes its name from the old Sagamore Mohannis, who, as chief of his little tribe, signed away his rights to the land two centuries and a half ago. The house stands right on the top of the hill, separated by fields and belts of woodland from all other houses, and looks out over the bay and the sound. We see the sun go down beyond long stretches of land and of water. Many birds dwell in the trees round the house or in the pastures and the woods near by, and, of course, in winter, gulls, loons, and wildfowl frequent the waters of the bay and the sound. We love all the seasons; the snows and bare woods of winter; the rush of growing things and the blossom-spray of spring; the yellow grain, the ripening fruits and tasseled corn, and the deep, leafy shades that are heralded by 'the green dance of summer'; and the sharp fall winds that tear the brilliant banners with which the trees greet the dying year.

"The sound is always lovely. In the summer night we watch it from the piazza, and see the lights of the tall Fall River boats as they steam steadily by. Now and then we spend a day on it, the two of us together in the light rowing skiff, or perhaps with one of the boys to pull an extra pair of oars; we land for lunch at noon under wind-beaten oaks on the edge of a low bluff, or among the wild plum bushes on a spit of white sand, while the sails of the coasting schooners gleam in the sunlight, and the tolling of the bell buoy comes landward across the waters. (Autobiography, pp. 308–309, vol. XX, national edition.)

"Out of the fullness of the heart the mouth speaketh." Roosevelt never wrote more eloquent words, for he wrote of that which was closest to his heart—home and family. "There are many kinds of success in life worth having," he writes in his autobiography. "It is exceedingly interesting and attractive to be a successful businessman, or railroad man, or farmer, or a successful lawyer or doctor; or a writer, or a President, or a ranch man, or the colonel of a fighting regiment, or to kill grizzly bears and lions. But for unflagging interest and enjoyment, a household of children, if things go reasonably well, certainly makes all other forms of success and achievement lose their importance by comparison." (Ibid., p. 327.)

No one can understand the real Roosevelt—get him "in the round"—who has not at least glanced through the charming Theodore Roosevelt Letters to His Children. As one commentator remarks, it is a book to be read by everyone who wishes to see the many sidedness, and especially the gentleness, of the wielder of the big stick. A letter written during his Presidency to his 15-year-old son Kermit about a weekend in the Roosevelt camp in Virginia is typical:

"Next day we spent all by ourselves at Pine Knot. In the morning I fried bacon and eggs, while mother boiled the kettle for tea and laid the table. Breakfast was most successful, and then mother washed the dishes and did most of the work, while I did odd jobs. Then we walked about the place, which is 15 acres in all, saw the lovely spring, admired the pine trees and the oak trees, and then mother lay in the hammock while I cut away some trees to give us a better view from the piazza. The piazza is the real feature of the house. It is broad and runs the whole length and the roof is high near the wall, for it is a continuation of the roof of the house. It was lovely to sit there in the rocking chairs and hear all the birds by daytime and at night the whippoorwills and owls and little forest folk. * * * As we found that cleaning dishes took up an awful time we only took two meals a day, which was all we wanted. On Saturday evening I fried two chickens for dinner, while mother boiled the tea, and we had cherries and wild strawberries as well as biscuits and corn bread To my pleasure mother greatly enjoyed the fried chicken and admitted that what you children had said of the way I fried chicken was all true" (the Letters of Archie Butt, p. 3).

Here is another to his eldest son, Theodore, Jr.:

"WHITE HOUSE,
"June 21, 1904.

"DEAR TED: Mother and I had a most lovely ride the other day, way up beyond Sligo Creek to what is called Northwest Branch, at Burnt Mills, where is a beautiful gorge, deep and narrow, with great boulders and even cliffs. Excepting Great Falls it is the most beautiful place around here.

"* * * Sunday we spent at Attorney General Knox's at Valley Forge, and most unexpectedly I had to deliver a little address at the church in the afternoon, as they are trying to build a memorial to Washington. Think of the fact that in Washington's army that winter among the junior officers were Alexander Hamilton, Monroe, and Marshall—a future President of the United States, the future Chief Justice who was to do such wonderful work for our Government, and the man of most brilliant mind—Hamilton—whom we have ever developed in this country" (ibid., pp. 468–473).

To Quentin, the youngest, aged 6, a letter with pen illustrations by the writer:

"WHITE HOUSE,
"June 21, 1904.

"DEAR QUENTY-QUEE: The other day when out riding what should I see in the road ahead of me but a real Br'er Terrapin and Br'er Rabbit. They were sitting solemnly beside one another and looked just as if they had come out of a book; but as my horse walked along Br'er Rabbit went lippity lippity off into the bushes and Br'er Terrapin drew in his head and legs till I passed" (ibid., pp. 467–468).

To Kermit, upon Roosevelt's election to the Presidency, 1904:

"I tell you, Kermit, it was a great comfort to feel, all during the last days when affairs looked doubtful, that no matter how things came out the really important thing was the lovely life I have with Mother and with you children, and that compared to this home life everything else was of very small importance from the standpoint of happiness" (vol. XXIII, p. 387, Memorial Ed.).

To Kermit, again:

"WHITE HOUSE,
"April 22, 1906.

"[Quentin] is a funny small person if ever there was one. The other day we were discussing a really dreadful accident which had happened; a Georgetown young man having taken out a young girl in a canoe on the river, the canoe upset and the girl was drowned; whereupon the young man, when he got home, took what seemed to us an exceedingly cold-blooded method of a special delivery letter to notify her parents. We were expressing our horror at his sending a special delivery letter, and Quentin solemnly chimed in with 'Yes, he wasted 10 cents.' There was a moment's eloquent silence, and then we strove to explain to Quentin that what we were objecting to was not in the least the young man's spendthrift attitude" (ibid., p. 505).

Archie Butt, military aide to both Presidents Theodore Roosevelt and William Howard Taft, whose letters covering the last year of the former's and the first 3 years of the latter's term, furnish an invaluable background for the domestic life and atmosphere of the two presidential households, writes in his first letter to his mother from Oyster Bay in the summer of 1908:

"The greatest surprise to me so far has been the utmost simplicity of the home life at Sagamore Hill. I am constantly asking myself if this can really be the home of the President of the United States, and how is it possible for him to enforce such simplicity in his environment. It might be the home of a well-to-do farmer with literary tastes or the house of some college professor. * * *

"Miss Ethel [the Roosevelts' daughter] was late in coming to dinner and every one, including the President, rose. From the conversation which followed I learned that it

had always been a rule in the household for the boys to rise when either their mother or father or sister came to the table. In fact, Kermit said that since such was the custom the girls ought to make it a rule to be on time for their meals, and this remark started the Roosevelt ball rolling. The President said that he thought Ethel ought to try to be on time, too; that he preferred that no notice be taken of him when he came to his meals late, but that since Mrs. Roosevelt (with a deferential wave of the hand toward her) insisted upon this modicum of respect being paid to the President he always tried to be on time to his meals. Mrs. Roosevelt said that she did not insist upon the mark of respect being paid to the President but to their father, whereupon all laughed, and Ethel said she would try to be on time to all her meals except breakfast. * * * By the way, the bell is a cow bell, just the kind you hear on cows in the cow lot, but sounds as sweet as any other when one is hungry" (the Letters of Archie Butt, pp. 63–65).

"One thing [the President] does do most successfully, he makes you forget that you are in the house with the President, and that you are merely the guest of a very charming, witty, and hospitable gentleman" (ibid., p. 69).

"Before getting ready for church we began to make plans for the afternoon, and I soon saw that the President was not to be included in any of the arrangements for the day. He told me later that he did not regard it as either wicked or careless of holy things to play tennis or golf on Sunday, but he simply did not do any of these things on Sunday on account of the effect it might have on other people.

" 'I never want to see the observance of our American Sunday changed,' he said. 'There is a great deal to condemn in it, possibly, from a foreign standpoint, and a great deal that is narrow, but I believe it is wholesome and strengthening. It is very hard not to be able to shoot, for instance, on Sundays, but then the majority of our people believe it is wrong and I certainly would be the last to try to change their opinions. If I were a private citizen I would possibly join you today in tennis, but were I to do so as President all the papers in the country would have something to say about it and the example might be harmful to many. I am afraid that I sometimes shock the sensibilities of our people, but I never want to do so in any matters pertaining to the morals or the religious prejudices of the people" (ibid., pp. 76–77).

The above gives something, both of the home life of Theodore Roosevelt and his views as to what constituted the proper atmosphere of an American household. Above all, the excerpts given in the foregoing illustrate, as nothing else, perhaps, could do, the man's deep love of the wholesome and the true—his belief in, and reverence for, the good, old-fashioned virtues of the good, old-fashioned home. In the Butt letters, referred to above, the writer quotes a fellow guest, a future Ambassador and Under Secretary of State, as remarking, "What a wonderful man and what a still more wonderful woman. What a privilege it is to have seen this household as we have seen it."

"Yes," Butt replies, "that is the greatest thing he has yet done, to hold his family simplicity and homelike love and surroundings as he has done here."

There was the real, the true, Theodore Roosevelt—the Roosevelt his friends and family knew and loved. Now let us listen to a few words from the public man on a subject so near his heart:

"Nothing outside of home can take the place of home. The school is an invaluable adjunct to the home, but it is a wretched substitute for it. The family relation is the most fundamental, the most important of all relations." (At semicentennial celebration, founding of Agricultural Colleges, Lansing, Mich., May 31, 1907.) Memorial Edition XVIII, 189; National Edition XVI, 144." Theodore Roosevelt Cyclopedia, page 230.

"No institution will take the place of a home, and all proposals for rearing and educating children outside the home and supplying the place of parents by trained educators indicate a morbid pathological condition in the woman making the proposal." (Outlook, January 3, 1914.) Memorial edition XIV, 174; National Edition XII, 203." Theodore Roosevelt Cyclopedia, page 230.

"No piled-up wealth, no splendor of material growth, no brilliance of artistic development, will permanently avail any people unless its home life is healthy, unless the average man possesses honesty, courage, common sense, and decency, unless he works hard and is willing at need to fight hard; and unless the average woman is a good wife, a good mother, able and willing to perform the first and greatest duty of womanhood, able and willing to bear, and to bring up as they should be brought up, healthy children, sound in body, mind, and character, and numerous enough so that the race shall increase and not decrease." (Before National Congress of Mothers, Washington, March 13, 1905.) Memorial Edition XVIII, 226; National Edition XVI, 165. Theodore Roosevelt Cyclopedia, page 230.

"The basis of good citizenship is the home. A man must be a good son, husband, and father, a woman a good daughter, wife, and mother, first and foremost. There must be no shirking of duties in big things or in little things. The man who will not work hard for his wife and his little ones, the woman who shrinks from bearing and rearing many healthy children, these have no place among the men and women who are striving upward and onward." (Before Young Men's Christian Association, New York City, December 30, 1900.) Memorial Edition XV, 533; National Edition XIII, 497. Theodore Roosevelt Cyclopedia, page 230.

"Exactly as it is true that no nation will prosper unless the average man is a homemaker; that is, unless at some business or trade or profession, he earns enough to make a home for himself and his wife and children, and is a good husband and father; so no nation can exist at all unless the average woman is the home-keeper, the good wife, and unless she is the mother of a sufficient number of healthy children to insure the race going forward and not backward." (Metropolitan, May 1916.) Memorial Edition XXI, 145; National Edition XIX, 142. Theodore Roosevelt Cyclopedia, page 230.

On the evening of January 5, 1919, Roosevelt sat reading in his bedroom at Sagamore Hill. The years of the Presidency and those of big game-hunting and exploration in far-off lands were long since past. The great war had come and gone. "The old lion", as his boys called him, was sadly battered and bruised: half-deaf and blind in one eye, he had returned from a siege at the hospital to observe Christmas in the old home. By his side, playing solitaire, sat Mrs. Roosevelt, the incomparable companion through the years, the beloved wife and mother he had so admired and extolled. Presently, having finished her game of solitaire, Mrs. Roosevelt rose to leave the room. Suddenly Roosevelt put down his book and looked at her. He said, "You will never know how I have loved Sagamore Hill."

By 5 o'clock the next morning he had left it forever.

General Wedemeyer on Soviet Relations

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. PHILBIN. Mr. Speaker, I think the Members of the House would be very much interested in the recent radio address of Gen. Albert Wedemeyer, as reported by the distinguished Brooklyn Tablet which I am inserting in the RECORD.

The general is certainly one of our most experienced living military men. He has had many important assignments in the Army and is especially qualified regarding conditions in China and Korea where he served in posts of high responsibility.

General Wedemeyer is a careful student of the Communist movement and threat to American institutions and free institutions everywhere and his views will be interesting to Members of the House and worthy of the careful consideration of the executive department and all Americans interested in safeguarding our way of life.

The article follows:

SAYS UNITED STATES SHOULD END RELATIONS WITH SOVIET—IN ADDRESS GENERAL WEDEMEYER SPEAKS LANGUAGE OF DISILLUSIONED PATRIOT

I am grateful for the opportunity of explaining to my fellow Americans why I believe the United States should withdraw recognition from the Soviet Union and its satellites.

May I emphasize that the thoughts I express are my own and that I accept full responsibility for them.

During the past several years I have traveled considerably throughout this great land, talking to business and professional men, to farmers and to laborers, in fact to men and women in all walks of life.

Ten years ago if I had suggested that we expel all Communists and that we break off diplomatic relations with the Soviet Union, most of my countrymen would either have greeted such a proposal with indifference or they would have violently disagreed with it.

May I explain why this was true? World War II had just ended and, through the efforts of Allied propagandists, the Soviet Union was a popular ally. Her armies unquestionably had made an important contribution to our hard-earned military victory.

Further, Americans were fed up with war. We wanted to return to our families, our jobs, and our friends. Anyone who would help us to achieve those goals could win our support. Also, many of the world leaders praised Stalin. Harry Truman himself told us that Uncle Joe was a jovial fellow. We were given reassuring bits of evidence confirming the so-called equitable and peaceful agreements reached at Teheran, Yalta, and Potsdam.

"Anyway," we asked, "why should we bother about the Chinese, the Greeks, the Italians? If they want to be Communists, that is their business."

Yes, that was America back in 1946, 1947, and 1948. There was little or no interest

in the portentous events occurring in other parts of the world. We were equally naive or apathetic with regard to Communist activities on our own doorstep.

Responsible Government leaders poohpoohed the idea of Communist infiltration into the Government, even when there was no longer room for reasonable doubt, Mr. Truman referred jokingly to "red herrings."

However, there were some farseeing Americans who had long realized that communism was as great a threat to our security and liberty as naxism, fascism, or the military jingoism of Japan. In spite of the insults and diatribes by certain elements of the press and radio, these courageous Americans carried on their campaign to collect facts concerning Communist infiltration and subversion.

They were finally able to present irrefutable evidence involving acts of espionage and sabotage in the United States by foreign agents and individual American traitors, some of whom were in key positions in our Government.

But a great change has taken place in our country since that unfortunate period. Today, when it is suggested that we expel all Communists, and that we break off diplomatic relations with the Soviet Union and its satellities, there is enthusiastic response across the length and breadth of the land, except perhaps in official Washington.

As is often the case when the facts about a situation are available to the American people, their intuitions and judgments are sound. They are usually far in advance of their Government leaders in recognizing dangerous developments, and in recommending the positive steps that should be taken to cope realistically with them.

SOVIETS FAIL TO MEET REQUIREMENTS

What does our own State Department consider as the generally accepted criteria or qualifications that a foreign government must meet before it is recognized as a legitimate government? And how does the Soviet Union measure up to these tests for recognition?

First, a government must have effective control over the territory of that particular country. The Soviet Government certainly has effective control over its territory. Everyone is familiar with the ruthless and barbaric methods of Communist control.

Second, according to our State Department, a country must have sovereign independence. Not a single State under Soviet control or within the Soviet orbit could possibly meet this requirement.

Third, the government must be truly representative in character, that is, the people must determine how and by whom they will be governed. It is common knowledge that the people behind the Iron Curtain have no voice whatsoever in their government.

Fourth, the government must honor its foreign commitments and treaties and must adhere to a well-established standard of decency in the treatment of foreign nationals within its borders. Here we find an undeniable record of Soviet atrocities, broken agreements, treaty violations, sabotage, kidnapings, brain washing and every conceivable act of terrorism.

Although the Soviet Union unquestionably fails to meet the prescribed tests of our State Department, yet there still are proponents of continued diplomatic relations with the Red governments.

They argue that we must maintain diplomatic representatives in the capitals of the countries behind the Iron Curtain in order to obtain information. They refer to foreign capitals as the windows through which our diplomats may observe developments and thus transmit vital intelligence back to Washington. But it simply does not work out that way, at least not in the Soviet Union or in any Communist capital.

In all Communist countries the representatives of western nations, and especially our own, are constantly hounded by secret police, subjected to indignities and humiliations, and harassed by restrictive regulations. They are watched wherever they may go. Everything they see and hear is carefully censored.

My fellow Americans, why continue this farcial exchange of diplomatic amenities? These Communist governments do not legally represent their own people, for they seized and now maintain themselves in power by murder, lies, intimidation, and secret police.

If we broke off diplomatic relations with them, the people they have enslaved would be overjoyed and resistance movements would gain confidence and momentum.

Further, we would be rid of thousands of Communist spies, saboteurs, and propagandists, operating under the cloak of respectability in Soviet embassies, consulates, and undercover rendezvous in the various parts of our country.

Like many of you, I supported the Republican Party in 1952 and again in 1956. I heartily approved of the Republican pledge to place America's interest first in the international field and, further, to cope with communism, both at home and abroad, realistically and courageously. Here is a direct quote from the Republican platform:

"To repudiate the futile, negative, and immoral policy of containment; to make liberty into a beacon light of hope; to repudiate all commitments contained in secret understandings, such as Yalta, which aided Communist enslavement; to make it clear on the highest authority of the President and Congress, that the United States seeks the genuine liberty of these captive peoples."

I like that statement. It might very well have been written by a tried and true patriot of yesteryear—for example, a Patrick Henry or a Thomas Paine. Apparently millions of other Americans liked that statement too, for they enthusiastically gave the Republican candidates a mandate to carry out their program. We sensed a return to a type of leadership in the Washington, Lincoln, Cleveland, and Teddy Roosevelt pattern—a dynamic leadership based on courage and realism.

FOUR YEARS OF NONFULFILLMENT

Like many other American voters I have waited patiently for more than 4 years for the fulfillment of those campaign pledges. While it is not my purpose to single out individuals for criticism, or indulge in acrimonious discussions, I do intend to use every legitimate and honorable means of urging those steps, which I believe to be, nor necessarily in the interest of a particular leader or political party, not in the interest of a lobby or pressure group, but in the best interests of our country.

We all recognize that the job of President of the United States is probably the toughest one in the world. We are aware of the pressures of professional lobbyists with their selfish interests. Also a newly installed administration must continually cope with subtle resistance by firmly entrenched bureaucrats.

Whatever the cause, we are still immersed in deficit spending—trying to buy votes at home and friends abroad. More than 4 years have passed and still our Republican leaders do not seem inclined or able to make the basic changes in the New Deal philosophy which the American voters strongly repudiated at the polls.

If you and I really believe that diplomatic relations should be broken off with the Soviet Union and its satellites, is it not apparent that we must carry out a grassroots campaign? Let the impetus come from every crossroad, village, farm, city, and State.

I can imagine no more appropriate place to launch a fight for true Americanism than right here in the heartland of our Nation. May I suggest that everyone within range of my voice should read the recent Indiana State Concurrent Resolution No. 1, which boldly proclaims admiration of the current Hungarians fight for liberty. It is to the credit of every citizen in the State of Indiana that the resolution was passed unanimously by the Indiana State Legislature and then signed by Governor Handley on March 7.

Not only are Americans worried about the international situation, but they are gravely concerned about exorbitant taxes, deficit spending, and astronomical budgets. In varying degrees these problems are caused by our foreign policies, particularly with regard to communism.

I feel confident that sizable economies could be effected if we would break off diplomatic relations with all Red regimes, repudiate all agreements made with Communist governments since 1933, and adjust realistically our program, of economic and military assistance to other countries that are directly or indirectly strengthening Communist nations.

Every move on the international chessboard should be made from here on out with a view to conserving our national resources, both human and material, while preserving American ideas and ideals of justice, dignity of man, and decency in all human relationships.

The "Open Curtain" Proposal

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, June 20, 1957

Mr. JOHNSON of Texas. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a thought-provoking editorial on the "open curtain" proposal, which appeared in the June 17 edition of that excellent newspaper, the Christian Science Monitor.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A FAIR EXCHANGE

Addressing millions of Americans through the medium and the courtesy of a television interview, Soviet Party Boss Nikita Khrushchev early this month said, "Let us live in peace. Let us develop our economy. Let us compete. Let us trade with each other. Let us exchange experience in agriculture, in industry, in the field of culture."

Democratic Senator LYNDON JOHNSON recommended not merely one response to the Khrushchev talk but a continuing program of exchange of radio and television time between the United States and the Soviet Union in order that the peoples might become better acquainted with each other.

Republican Senator KNOWLAND endorsed this, and Secretary of State Dulles pointed out that such an "open curtain" would be in line with extensive proposals the American delegation made at the Geneva Conference more than a year and a half ago. Communist officials at that time ignored or rejected the proposals but they have never been withdrawn.

Now Mr. Khrushchev has come back to the theme in his effort at bonhomie in Finland; and two other members of the Soviet Presid-

ium, Deputy Premiers Mikoyan and Molotov, have said they are in favor of such cultural exchanges.

With such commitments the State Department certainly should go ahead, as it probably is doing, to prepare and submit specific proposals to Moscow. The 17-point plan offered in 1955 included a request for exchange of half-hour broadcasts once a month.

The United States has nothing to fear from exposing radio listeners and TV viewers to the transparent fallacies of repetitious Communist spokesmen, but Russians might gain a great deal from an opportunity to hear and see regular broadcasts from the United States.

The Student Exchange Program

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, June 20, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from Dr. E. B. J. Postma, rector of the Netherlands College for Representation Abroad.

This letter clearly describes in an unanswerable manner some aspects of the exchange program. I cannot believe anyone can doubt the value of this program after reading this letter.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NEDERLANDS OPLEIDINGS INSTITUUT
VOOR HET BUITENLAND,
Breukelen, June 15, 1957.

Senator Dr. J. WILLIAM FULBRIGHT,
Senate Office Building,
Washington, D. C.

DEAR SENATOR FULBRIGHT: Although the privilege of meeting you has never been my good fortune, I cannot resist the urge within me to write and tell you how genuine and deep was my satisfaction on learning that you had been honored with a doctorate in the political and social sciences by the University of Amsterdam. Although it is not customary to offer congratulations to one whom the writer does not know personally, I feel on this occasion that I am writing more in the capacity as a grateful friend than as a stranger.

Already in 1948, when the Fulbright program was still in its infancy, the Netherlands College for Representation Abroad began to profit from your inspired plan to intensify educational exchange between foreign countries and the United States. Since then, the benefits which my college has derived from the Fulbright project, have been rich and multifarious. First, I have been privileged to welcome to my teaching staff no less than five American guest professors and a sixth will join us next September. In helping to promote the curricular and extracurricular aims of the college these American teachers have made an indispensable contribution to the life of our residential community and have helped our students to open their eyes to the world beyond the frontiers of their own country. Secondly, by next September more than 60 of the students who have graduated from this college since 1948, will have crossed the Atlantic to enjoy the rich experience of further studies at colleges and universities in America. The majority of these were enabled to do so through the possession of a United States Government travel award.

In recent years the college has been able to reciprocate at least a fraction of your country's generosity by establishing tuition and maintenance scholarships for the use of American students who wish to come here for 1 year. There are 4 such students in our midst at the present time and 5 have been enrolled for next year.

It is not possible to calculate the cumulative value of the vast plan of which you were the author, but, in terms of international understanding and for its effect in enlarging youthful experience and broadening horizons, it must be very large indeed.

In am proud that a university in the Netherlands, in deciding to confer a doctor's degree on you, has expressed by its action the gratitude which so many of the citizens of this country feel toward you and all of your compatriots who have helped so devotedly to further the realization of your original ideas.

Yours sincerely,
E. B. J. POSTMA,
Rector.

A Newspaper Reader Thoughtfully Discusses Newspapers and Government

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, June 20, 1957

Mr. JOHNSON of Texas. Mr. President, the Letters to the Editor columns of our newspapers often contain material of a thought-provoking nature. Such a letter is one written by Mr. Joseph D. Peno, Jr., of Jasper, Tex., to the editor of the Beaumont (Tex.) Enterprise and published in the June 12 issue of that outstanding newspaper.

I ask unanimous consent that Mr. Peno's thoughtful discussion of newspapers and government be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

KEEPING AN EYE ON GOVERNMENT

EDITOR ENTERPRISE: I was glancing over the editorial page of your newspaper the other day, and after reading several of the articles therein I stopped and began to think about what I had been reading.

I was reading about what a particular individual had to say about the administration in Washington today. Some of what he said was favorable, some was not.

A fact that many people do not realize is that political criticism is one of the most important planks in building a successful democratic government. As history has recorded, one political party cannot function in a true democratic fashion unless the other is there to keep it in line.

Two excellent examples of one-party rule are nazism and communism. We, as American people, do not want either.

It would be a good practice for every American man, woman, and child to read his newspaper. Therein are contained and recorded the latest steps taken by our present-day Government, subject to the skepticism of you and your neighbor, for you to discuss, compliment, or protest. The editorial page contains views on the latest happenings as seen through the eyes of the several prominent newspapermen, editorialists, and people like yourself, who have taken interest and want to say what they think.

Legitimate griping is as American as apple pie and baseball, and is indeed necessary to the preservation of our country and the principles thereof.

JOSEPH D. PENO, Jr.
JASPER, TEX.

Moscow-Cairo Maneuvers

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Thursday, June 20, 1957

Mr. JAVITS. Mr. President, while we are deeply interested in the disarmament negotiations in London, we should not permit our views to be so diverted as not to recognize the fact that the Soviet Union, while professing friendship for all, is arming Colonel Nasser with a new weapon which could cause untold trouble for the world. His government has just announced that he has received three submarines from the Soviet Union, which could be used to torpedo ships to bar the Gulf of Aqaba or other waters accessible to such submarines.

I call this situation to the attention of the Senate because I think it is vital that we understand the situation very clearly. This demonstration, involving the giving of Soviet submarines to Colonel Nasser, who certain has not gained an enviable reputation for responsibility in the use of weapons entrusted to his control, is coupled with the fact that a considerably larger Soviet fleet is putting on a demonstration in the eastern Mediterranean. The American officer in charge of the American Sixth Fleet says that it is of such size as to interfere with the operations of his own vessels.

While we are deeply interested in the disarmament negotiations, we had better keep our eye on the ball everywhere, especially the Near East.

In this connection, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Moscow-Cairo Maneuvers," published in the New York Times of today.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MOSCOW-CAIRO MANEUVERS

While the Soviets profess friendship for all and advance new disarmament proposals which President Eisenhower regards as hopeful and worthy of sympathetic study, a new Soviet intervention in the Middle East is creating tensions in the area. This intervention, which is obviously designed to bolster the sagging Moscow-Cairo axis against the effects of the Eisenhower doctrine and in particular to strengthen President Nasser against Arab anti-Communist forces, has two aspects.

One is a display of Soviet naval power in the eastern Mediterranean, to which half a dozen warships of the Soviet Black Sea fleet are now due to steam through the Dardanelles. They are ostensibly en route to the

Baltic Sea to join in Soviet naval maneuvers. But their more evident purpose is to provide a counter to the recent display of power by the American 6th Fleet, which saved Jordan from being swept into the pro-Communist orbit. According to Vice Admiral Brown, commander of the 6th Fleet, the prospective Soviet cruise will undoubtedly affect the operations of his ships and could provide a warning of impending trouble.

The other aspect is the sale of three Soviet submarines to Nasser, announced by his own government agency. It may be doubted that Nasser counts on them as defensive weapons against the armadas of the West. But he presumably does count on them as offensive weapons in his continued state of war with Israel to resume the blockade of the Aqaba Gulf. This blockade was broken by the Israeli invasion of Sinai, and the gulf has been kept open by the United Nations forces occupying Nasser's gun positions seized for them by Israel. An underwater attack on ships using the gulf may therefore seem to Nasser to be a logical complement to his undercover attacks not only against Israel but also against Arab rulers he cannot control. It would enable him not only to circumvent the United Nations forces and their peaceful mission but also to compel dissenting Arab rulers to kowtow to him on this issue in the name of their common crusade against Israel.

The explosive potentialities of the new moves by the Moscow-Cairo axis are evident and it behooves both the United Nations and the United States to be on guard against them.

Resolution by Lake County, Calif., Board of Supervisors on Middle Creek Project

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. SCUDDER. Mr. Speaker, yesterday I addressed the House on the Middle Creek flood-control project which is situated in Lake County, Calif.

Last year the Congress appropriated $70,000 to complete the planning phases of the project. It is now ready for initial construction, and $300,000 for this purpose was approved by the Bureau of the Budget and recommended in the Federal budget for fiscal year 1958. The necessity and financial feasibility of the project is beyond question.

However, a few people took it upon themselves to make an issue of local responsibility. As a result, a local election held on the 7th of May failed to carry by the required two-thirds majority. This cast a shadow of doubt on whether local maintenance and operation requirements would be met, and the House Appropriations Committee deleted the $300,000 for the Middle Creek project from the fiscal 1958 public works bill.

Their position was undoubtedly influenced by the following telegram:

Make the following information available to appropriate committee re budgetary provisions for Middle Creek flood control in Lake County, Calif. By special election on May 7, this year, called by Lake County supervisors to form district in area of benefit for purpose of accepting Middle Creek flood-control project, same was decisively defeated. Middle Creek project having been rejected by people in area of benefit, there now is no need for budgetary provision $300,000 to start Middle Creek project and budget should be cut accordingly.

COMMITTEE FOR PRACTICAL FLOOD CONTROL,
CLAIR JONES,
Chairman, Upper Lake, Calif.
By PHIL N. CRAWFORD,
Attorney for Committee.

Mr. Speaker, the words "decisively defeated," as used in the telegram, are a misrepresentation of fact. The actual vote cast at the May 7 election was 211 for the formation of a tax district, and 199 against.

The majority of the people favored the formation of a district, even though they fell about 60 votes short of the required two-thirds majority.

In my remarks yesterday, I referred to the fact that since the election, more than 50 percent of the landowners in the project area have petitioned the Lake County Board of Supervisors to zone them into the county flood-control and water-conservation district. This is conclusive proof that the people want the project, and are willing to assume the cost of local responsibility.

The board of supervisors has complied with their request and by resolution adopted on the 17th of June 1957 announced their intention of zoning the Middle Creek project area into the county district. This will resolve all doubt of local responsibility, and I hope the matter is properly resolved to permit restoration of the $300,000 to H. R. 8090, the public works appropriation bill for fiscal year 1958.

For the information of my colleagues and to put on record the real desire of these people, I desire to include the aforementioned resolution with my remarks, as follows:

RESOLUTION

The Board of Supervisors of the County of Lake, State of California, and ex officio Board of Supervisors of the Lake County Flood Control and Water Conservation District of the County of Lake, State of California, does hereby resolve, and it finds and determines and hereby declares:

1. That there is established in the Lake County flood control and water conservation district a zone known as Lake County flood control and water conservation district, zone No. 3.

2. That it is the intention of the board of supervisors of Lake County flood control and water conservation district to undertake and to assume the annual maintenance, operation and replacement costs of that certain project known as the Middle Creek flood control project, to be constructed and engineered by and through joint efforts of the United States of America and the State of California, as more fully appears in a letter from the Reclamation Board of the State of California, dated January 4, 1957, to the clerk of the board of supervisors of the county of Lake, an assumption agreement between the Reclamation Board of the State of California and the county of Lake submitted by said board of supervisors on or about January 9, 1957, but not yet executed, and a map of the location of improvements of said project dated February 20, 1957, and approved by the Corps of Engineers, United States Army, all of which said documents are filed in the office of the county clerk of the county of Lake, State of California, and which said documents are by reference made a part of this resolution.

3. That said project is for the common benefit of the zone herein sought to be created.

4. That the cost of said project shall be borne by Lake County flood control and water conservation district, zone No. 3, and the engineering estimates of the cost of said project to be borne by said zone are in the amount, of an annual cost for said maintenance, operation, and replacement, of $17,400.

5. That Monday, July 8, 1957, at 2 o'clock p. m. at the board of supervisor's room in the courthouse at Lakeport, Calif., is the time fixed for a public hearing upon this resolution, at which time said board of supervisors shall consider all written and oral objections and evidence, for or against said proposed project.

6. That reference is hereby made to that certain map entitled "Location of Improvements—Cache Creek Basin, Calif., Middle Creek Project" filed in the office of the county clerk of the county of Lake, State of California, which said map shows the general location and general construction of said project.

7. That the county clerk of the county of Lake, State of California, and ex officio clerk of the Lake County flood control and water conservation district, is hereby directed to give notice of said hearing on this resolution in accordance with the provisions of section 12 of chapter 62 of the statutes of 1954 commonly known as the Lake County Flood Control and Water Conservation District Act.

The foregoing resolution was passed by the board of supervisors of the county of Lake, State of California, and ex officio board of supervisors of the Lake County flood control and water conservation district, county of Lake, State of California, this 17th day of June 1957, by the following vote:

Ayes: Earle W. Wrieden, J. H. Pearce, Clyde E. Duggar, L. J. Hamilton, L. D. Kirkpatrick.

Noes: None.

Absent: None.

L. D. KIRKPATRICK,
Chairman of the Board of Supervisors of the County of Lake, and Ex Officio Chairman of the Board of Supervisors of the Lake County Flood Control and Water Conservation District.

Attest:

THOS. L. GARNER,
County Clerk and Ex Officio Clerk of the Board of Supervisors of the Lake County Flood Control and Water Conservation District.

Brass Had Ohio But Wants More

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. ENGLE. Mr. Speaker, the action of our committee and of this House in passing the bill limiting military land withdrawals on the public domain has received favorable comment throughout the Nation. An example of that comment is the excellent editorial appearing in the June 9, 1957, issue of the San Francisco Chronicle. The editorial calls this legislation "an official project of notable public service."

The editorial does, in my opinion, give me as the author of the bill too much credit. This legislation was coauthored by the following Members of Congress: Mr. DAWSON, of Utah; Mr. SAYLOR, of Pennsylvania; Mr. JOHNSON, of Wisconsin; Mr. METCALF, of Montana; Mr. THOMPSON, of Wyoming; Mr. UDALL, of Arizona; Mr. BARING, of Nevada; Mrs. PFOST, of Idaho; and Mr. DIXON, of Utah.

In addition some mention should be made of the excellent staff work of our committee, which spent literally weeks of painstaking work unraveling the complicated pattern of military landholdings. In particular I want to mention the outstanding work of our counsel, Mr. George Abbott. It is correct to say, I think, that he knows more about this legislation than anyone else associated with it, and has given invaluable aid not only to our committee but to the Senate committee in its consideration of the bill.

The San Francisco Chronicle editorial follows:

BRASS HAS OHIO BUT WANTS MORE

CLAIR ENGLE, who represents California's sprawling Second Congressional District—the Nation's roomiest—is chairman of the House Interior and Insular Affairs Committee; as such, he has spent more than 2 years on an official project of notable public service.

By dint of long study and numerous hearings, he has uncovered staggering evidence of a great and growing greed of the armed services for public lands. So striking were the findings that the House promptly enacted a bill—introduced by ENGLE—to restrict this prodigal grabbing of the public domain and to halt the attendant abuses. The Senate now has the bill and should grant it prompt and favorable consideration.

For the established fact is that the Armed Forces are not only gobbling up land by the millions of acres but are compounding their gluttony by refusing to share the land with each other, by letting much of it stand unused, by converting some into exclusive fish and game preserves for the brass where State fish and game laws are inoperative, where licensing and limits do not prevail.

It is estimated that the military has thus far preempted some 26 million acres of the public domain—an area the size of the State of Ohio—enough real estate to comprise a 12-mile strip stretching from New York to San Francisco. It is reaching for another 8 million acres.

This industrious land grabbing has intensified in recent years. In California, for instance, the military had 3,666,000 acres at the middle of last year—an increase of more than 1.2 million in 10 years. All told, the Federal Government owns some 47 million acres of California terrain—which is to say almost half of the 100,300,000-acre total.

California is thus one of the States to which the Engle bill is of especial importance. For it is in the block of 11 Western States that contain a whopping 89 percent of the total Federal holdings of 408 million acres.

The bill never would have been written, of course, and would have no support whatever if the Armed Forces restricted their land requisitions to necessary areas for required uses such as artillery ranges, bombing areas and test sites. The findings of ENGLE's committee show, however, that this is woefully not the case.

There is no sound reason, for instance, why the Air Force and the Navy should not use the same 100,000-square-mile testing range for identical purposes or why these huge land areas should not be put to multiple use, so that grazing, prospecting, and other civilian activities could go forward at safe times and places.

Again, there is every reason why public lands, taken over by the military and then found unnecessary, should revert to the public domain. As matters now stand, such areas can be sold as "surplus." This whittles away at public lands and wilderness areas which ought to be rigidly protected for future generations.

The Engle bill would correct such abuses and would largely prevent them in advance by requiring that Congress approve all withdrawals of public lands by the military that exceed 5,000 acres.

Graver Tank & Manufacturing Co.—Centennial Anniversary

EXTENSION OF REMARKS
OF
HON. RAY. J. MADDEN
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 20, 1957

Mr. MADDEN. Mr. Speaker, Indiana's great industrial Calumet region, located in the northwest corner of Indiana, on the shores of Lake Michigan, is indeed proud of its honor to be ranked as the most concentrated and progressive industrial center in the United States. Three of the Nation's major steel mills are located in Indiana's First Congressional District. All major oil companies have offices or plants within the borders of this area. Several hundred other industries and manufacturing plants, both large and small, have located here in order to enjoy the unlimited water, rail, air, and truck transportation facilities in the center of the great Midwest.

The Graver Tank & Manufacturing Co. of East Chicago, is one of the major industries in Lake County, Ind., which has reached the position of leadership in its industrial field over the last century.

Today I wish to call to the attention of Members of Congress, some of the history of the Graver Tank & Manufacturing Co. which this year celebrates its centennial anniversary.

The growth of Graver Tank since 1857 exemplifies the courage and endeavor of the men who have assumed leadership in the industrial progress of the United States. A leader in the field of tank production, Graver Tank has supplied the oil industry with storage units since the discovery of oil in 1859 and has witnessed and served the many extensions and expansions of that industry since that time.

While an expanding firm in an expanding economy is not an incident of note, reviewing the economic history of the United States over the past 100 years brings to mind the times the American economic system has suffered financial misfortunes.

However, the inherent strength of the country and the legitimacy of our system of economy during these times of financial disaster becomes evident in the stability of companies such as Graver Tank. Firmly believing that the economy was not doomed, these many young producers, in a young country, held fast to original standards and helped avert a complete collapse of American industry.

Graver has assumed leadership during its 100-year history. A pioneer industry of the Calumet area, Graver Tank was the first manufacturing plant to discover the physical assets of northern Indiana as a great production center. Now, more steel is fabricated in this area than anywhere else in the world.

We salute a successful area inhabited by a resourceful population—men like William Graver, who founded Graver Tank & Manufacturing Co., at the age of 15; men like Edward N. Gosselin, who guided its growth in the final decades of Graver Tank's first century of craftsmanship now being celebrated throughout the country by Graver's 4,000 employees.

The petroleum industry and Graver Tank grew up together. The storage of petroleum and petroleum products has presented problems ever since the first discovery of oil, and Graver Tank—2 years senior to the oil industry—has always been ready to provide workable answers to these storage problems.

In 1857, 15-year-old William Graver joined with his half brother, Michael, in a little iron plate business which has, 100 years later, grown into a national organization with plants in Indiana, Delaware, Oklahoma, Texas, and California.

Two years after the start of this little backyard shop in Pittsburgh, oil was discovered in western Pennsylvania. Almost overnight, the Graver shop became a regular supplier of tankage. The Graver brothers, trained to old-world standards of workmanship by their father, a boilermaker who had emigrated from Germany, early gained a reputation for craftsmanship that has stood untarnished for a century.

Relying on native ingenuity to solve problems, the infant industry of tank-building flourished with the oil industry.

However, this stream of prosperity and success was suddenly dashed by the great panic of 1883. The steel mills along the Allegheny were dark, and business was at a standstill. William Graver was hard hit, but he decided to leave his many ties with Pennsylvania and make a fresh start in the West.

Chicago was a thriving city, largely rebuilt after the great fire, and offering a diversity of industry—grain, packing plants, railroads and steel mills—attractive to a tank builder bent on success. William Graver bought a small lot on Chicago's South Side and moved his family from Pittsburgh to its newly adopted locale.

Still, business was not easy to find and he turned his hand to whatever metalworking was available. Wheelbarrows had a ready market and Graver supplied them for a while. Soon he had orders for lard tanks from a meat packing house and William Graver was back with the product of his choice.

Storage tanks at that time were made of heavy boilerplate of the same thickness throughout the tank structure. It was William Graver's theory that in a

vertical tank, since the pressures were less in the upper sections, these could be made of lighter plate. Although this theory had been successfully demonstrated by Graver-built oil tanks in Pennsylvania, no one in the Middlewest would accept the idea. Finally Graver Tank took an order for four large linseed oil tanks of this type of construction. The tanks were erected and when tests were completely successful, a new design in storage tanks was established—the first of Graver's many contributions to tank-building technology. After oil was discovered in Ohio, the Midwestern demand for tankage became acute. When Graver Tank received an order for a large battery of 35,000-barrel tanks, William Graver moved his plant to Lima in order to handle this and other jobs on the spot. He retained his Chicago shop, but put most of his equipment on flatcars and set up new quarters at Lima. Work there continued from 1886 to 1888.

At a time propitious to return to Chicago, William Graver was persuaded by Gen. Joseph Thatcher Torrence to locate in East Chicago, Ind. The area was then only an expanse of sand dunes and sloughs, but Graver had the foresight to envision the potential of the area. Graver thus became the first industry in the great Calumet area, perhaps now the greatest concentration of heavy industry in the world.

In 1910 William Graver retired, leaving the administration of the Graver Tank Works to his five sons.

At this time Graver Tank boasted two frame buildings housing a powerplant, a machine shop and fabricating shops, a warehouse, and a riveting yard and shed. Steel plate had replaced wrought-iron plates and, consequently, larger plates could be handled.

In the next 20 years Graver erected another assembly department, and new shops were equipped with overhead cranes. These new facilities enabled the company to meet the demands of increasing business from new oilfields in Oklahoma, Louisiana, Arkansas, and Texas.

Progress in tank-fabricating methods partially outmoded the use of riveting. Acetylene welding in small-tank construction and, by 1930, electric welding became fairly standard procedures in the shops and on some field work. The industry and Graver Tank kept pace with American endeavor as a whole.

In 1930 Edward N. Gosselin assumed the presidency of the Graver corporation.

Gradual expansion followed, marked by new plants in Delaware, Oklahoma, California, and Texas. Welding procedures became specialized, modern steel buildings with efficient handling facilities replaced the wooden factories, and new office buildings were erected. Assets and volume grew.

The Graver Tank story could, in effect, be called the boilermaker story. It is a story of a boy just 15 who wanted to get into the mainstream of American life and was successful. It is the story of his industrious sons and daughters who have perpetuated his name, his skill, and his high standards. It is an American story which has been recorded in other industrial fields.

These industrial pioneers have contributed greatly to win for the Nation its position as leader of the world.

Senate's Decision To Continue Soil Bank Makes Sense

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 20, 1957

Mr. SPRINGER. Mr. Speaker, the Senate's vote yesterday to continue the soil bank does make sense. The House vote of some weeks ago to stop the soil bank in the middle of the program is like playing a five-inning ball game with the score tied and stopping at that point.

Nothing can be determined about the success of the soil bank unless it is carried through the full 3 years of the program. When this program was instituted last year, the House and Senate Committees on Agriculture both believed that the greatest reduction in crops would be met in the third year. The House action cut off the third year—the most productive part of the 3-year program.

I am including herewith an editorial from the Decatur (Ill.) Herald, of June 10, 1957, titled "Senate's Decision To Continue Soil Bank Makes Sense":

SENATE'S DECISION TO CONTINUE SOIL BANK MAKES SENSE

The decision Friday by the Senate Appropriations Committee to continue to keep all soil bank windows open at least through 1958 is sensible. For the program has not had a fair trial. To close up the major part of it at the end of this year, as the House voted to do last month, is shortsighted and unfair to the intrinsic merits of the soil bank idea.

While the program was abused in the name of presidential year politics in 1956, it has not yet been given a chance to prove itself. The legislation was passed late in the spring of 1956. The Members of Congress who insisted that it be placed in operation immediately knew as well as Secretary of Agriculture Benson that good administration would yield, as it did, to the pressure of time and politics.

This year the soil bank is more orderly. Not so many farmers are participating as had been hoped, but not until harvest time will anyone know with any certainty whether the program has the possibilities its proponents have always held out for it. So it is too early to write off the program as a failure or praise it as a success.

But in May the House voted to end the acreage reserve part of the soil bank, the most important part, at the end of the year and continue the conservation reserve program on a limited basis. Under the acreage reserve farmers are paid for removing land from the production of corn, wheat, cotton, peanuts, rice, and tobacco during the current crop year. Under the conservation reserve the Government pays farmers for retiring any cropland to trees or grass for from 3 to 15 years.

The Senate Appropirations Committee voted 18 to 2 to provide $500 million for the acreage reserve program and $350 million for the conservation reserve next year. While the acreage reserve authorization is $250 million less than the Agriculture Department requested and the conservation reserve figure is $100 million under administration requests, the Appropriations Committee has been generous enough so as to provide another year of adequate trial for the program. The Senate, and the House, too, should go along with the committee's decision.

Learn More Before Spending More

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 20, 1957

Mr. NEAL. Mr. Speaker, as a reminder that Government spending during recent years has impressed the people of the Nation with the idea that it is not only excessive, from the taxpayers' standpoint, but perhaps being conducted on the basis of overgenerous appropriations available rather than upon carefully studied justification for specific projects. The recent outburst of popular criticism arising as it were spontaneously, would seem to indicate that the people of the Nation are demanding that each and every phase of foreign spending be analyzed carefully with the view of determining its real worth in our united aim to create a sentiment for peace throughout the world while at the same time protecting and maintaining our ability to counter any aggression from whatever source it may come.

The following editorial from the Parkersburg News of June 19 will be found interesting:

The United States Senate has passed—with the joint support of the rival party leaders—a bill authorizing the appropriation of $3,637,000,000 for foreign aid use during the fiscal year beginning July 1.

The figure compares with $4,400,000,000 originally appearing in the budget, and $3,274,000,000 subsequently accepted by the President as a minimum figure.

This action by the Senate does not mean that the appropriation of this much new money for foreign aid is assured. It merely authorizes it, so far as the Senate is concerned. The actual appropriating must be done later. Moreover, the House has taken no action on foreign aid. Its appropriations committee opens hearings on the bill tomorrow. The temper of the House, as often is the case, may be quite different. Even in the Senate, the fight on the authorization was less vigorous than basic sentiment back of it, because of the still present opportunity of reducing the figure when the actual business of providing the money comes up. So that the provision of this much new money for foreign aid, whether it is too much or too little, is by no means a fait accompli.

There must be some deep-seated reason for all of this which cannot be explained away by the assertion that it is the result of Communist propaganda. It is something more basic than that, something we should find out about before we build too many hopes on the sort of defenses we have set up around the world. Maybe, if a showdown came, we would discover that we have built on sand in many quarters.

Th News thinks it would be a good idea for Congress to learn a little bit more about the health of our mutual defense system before deciding how much more money to pour into it.

New Jersey Court of the Catholic Daughters of America Looks Back on 50 Years of Service to God and Country

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mrs. DWYER. Mr. Speaker, recently I was privileged to attend the 50th anniversary observance of the State Court of New Jersey, Catholic Daughters of America.

It was a beautiful and inspiring event, and it served to highlight once more the devotion to God and country that has been the hallmark of service of the Catholic Daughters of America.

Too often, we are inclined to overlook the contributions to our society of such dedicated organizations as the Catholic Daughters. That is why, today, I would like to read into the RECORD of this Congress, the report of the 50th anniversary observance of the New Jersey State Court, Catholic Daughters of America. This report, compiled by Miss Mary Kanane, State regent, and Mrs. Thomas J. Dinan, State public relations chairman, provides a deeper understanding of the objectives and accomplishments of the Catholic Daughters. The report follows:

FIFTIETH ANNIVERSARY OBSERVANCE

"If a woman is properly motivated and enthused, she can be a better influence than a whole host of apostles preaching from the rooftops," Archbishop Thomas A. Boland, archbishop of the Newark diocese, told more than 1,500 members of the Catholic Daughters of America from all parts of New Jersey on Sunday, June 8, at the Essex House in Newark.

The Catholic Daughters attended a Solemn Pontifical Mass celebrated by His Excellency, Archbishop Boland, in Sacred Heart Cathedral to close their 50th anniversary year, and were addressed by him at dinner.

Archbishop Boland congratulated the CDA "not only on your anniversary, but on your achievements in the past five decades." The archbishop urged members to "look into yourselves as individuals and ask yourselves, 'What have I contributed to the success of the organization?'"

The archbishop added: "An organization is not sound unless all of its members are sound."

Archbishop Boland explained that everyone who is confirmed has received the seven gifts of the holy ghost, as the apostles did on the first pentecost. Noting that a woman properly motivated and dedicated can exert more influence than a host of apostles preaching from the rooftops, Archbishop Boland recalled the gospel story of the Samaritan woman at the well. After she received the gift of faith from Christ, she went out and told others and brought back many to receive the gift.

Reminding the Catholic Daughters that they are endowed with the gifts of the holy spirit, Archbishop Boland called upon them as individuals to "be stirred up to apostolic work among those not of the fold or those who are indifferent."

Noting that the anniversary was a celebration of the fact that the Catholic Daughters are both Catholic and patriotic, Archbishop Boland said, "It is impossible to have patriotism without being religious."

At Mass in the cathedral, members were read a cable from Pope Pius XII, sending his paternal apostolic blessing to the CDA on their anniversary. The sermon at the Mass was by the Right Reverend Martin W. Stanton, State CDA chaplain and director of the Society of the Propagation of the Faith. The cathedral choir, under the direction of the Reverend John M. Oates, sang the Mass.

New Jersey's State Court, CDA, was founded on June 4, 1907, at a meeting in the Knights of Columbus headquarters in Newark. The first State unit was comprised of 8 courts with a membership of 736. Today, there are 96 courts in the State with a membership of 14,500.

The original courts were: Courts Immaculate Conception and Paulus Hook of Jersey City; Court Columbus of Trenton; Court Bayley of Elizabeth; Court Palisades of Palisades; Court Sancta Maria of Belleville; Court Conchessa of Harrison, and Court Seton of Newark. The late Miss E. McMahon of Court Sancta Maria of Belleville was the first State regent.

The aim of the Catholic Daughters of America is the propagation and preservation of our holy faith and the intensification of patriotism, as the name implies; the material, moral, and intellectual development of Catholic womanhood, and the protection and well-being of our Catholic girls. We also are pledged to the dispensation of charity and the furtherance of Catholic charitable projects.

There are no limitations placed upon the scope of activities of the CDA. Each unit maps out its own work commensurate with the needs of the locality. We are not an insurance organization. The touchstones of the order are unity and charity.

In the 50 years of our existence we have contributed generously to Catholic charitable projects and Catholic education. We have endowed Catholic colleges, churches, schools, sponsor a college scholarship, educate young men for the priesthood.

At the present time, there are 15 State committees actively functioning. They are apostolate of the aged; education, juniors, legislation, world missions, public relations, retreats, share the faith, confraternity of Christian doctrine, vigilance, Catholic war relief service, Catholic action, rural life, Catholic veterans' administration, and civil defense.

Miss Mary C. Duffy of South Orange, Miss Marguerite Martin of Jersey City, and Miss Louise Oberst of West Collingswood, all past State regents, are still living. Miss Duffy served on the national board as vice supreme regent, and she was the third supreme regent, elected in 1923.

In recognition of their splendid contribution to the church, both Miss Duffy and our present State regent, Miss Mary Kanane of Union, had the highest honor conferred upon them by our holy father Pope Pius XII, the papal decoration, Pro Ecclesia et Pontifice.

Still Heavy Odor of Red Propaganda

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 20, 1957

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the St. Louis Globe Democrat, on Tuesday, June 18, 1957, entitled "Still Heavy Odor of Red Propaganda":

STILL HEAVY ODOR OF RED PROPAGANDA

When the statements of Nikita Khrushchev and Moscow's representative Zorin at London are closely assayed, it is found the only new proposal for disarmament is directed toward barring nuclear tests. Even this is a wily concession, that has more a smell of Communist propaganda than integrity in arms reduction.

Make no mistake about it, Russia wants to end the nuclear weapons race. There can be no doubt about that. Nor about the reason. America is far ahead of Moscow in nuclear defense.

Atomic arsenals of the United States are perhaps the only real fear, the only significant deterrent of major war that exists in the Kremlin.

Khrushchev would like to disarm the atom. He would rather disarm America's atom, but probably would be willing to toss the world's whole nuclear arsenal into discard. That would leave Russia much more aggressively powerful than she is today.

If this cannot be accomplished, perhaps Moscow can halt the steady advance of the West's nuclear power. If the atomic hazard to the human race could be prevented from growing steadily more dangerous, the people of America and all the world would welcome some kind of stop order upon nuclear weapons development.

Washington has offered, has hepeatedly sought to go much further in this respect than the Soviet ever has. In 1946 we urged an international agency to control all atomic energy. We have repeatedly recommended aerial, ground and scientific inspection, with foolproof controls to end the nuclear weapons race.

All this the Soviet has persistently repudiated. It still does. Last week Khrushchev ridiculed the United States first step inspection program, just to get such a system started, in the Arctic. Khrushchev bluntly declared "no system of control" can solve the problem of disarmament.

Then he added the Soviet will, however, be willing to establish inspection posts in the Soviet, the United States, Britain and other countries, if this could facilitate a ban on nuclear tests. And this was greeted as a bright, promising concession.

Inspection posts could not be adequate to detect nuclear development, even nuclear tests, save, perhaps, hydrogen or other huge blasts. These could be detected without such posts, as Moscow well understands. But the smaller tests would not necessarily be detected by fixed posts. The United States for that reason has insisted on general, comprehensive inspection, with compulsory controls.

After the Khrushchev statement in Helsinki, Valerian Zorin, of Russia, explained at the London conference the Kremlin proposal for inspection posts should be under the United Nations. Would that mean it would be subject to Security Council veto, and not worth the paper of its signature?

Prime Minister Macmillan of Britain has written Russia that general disarmament cannot be achieved until tensions between East and West are abated. He listed these tensions primarily as the political division of Europe, especially Germany, under Red satelliteism; the Soviet's hostile policy in the Mideast, and the Soviet repression in Hungary.

Disarmament must come. It is essential for the survival of nations, perhaps the entire race. But even partial disarmament cannot be practical, except with ironclad control machinery, until the tensions Mr. Macmillan cites are dispersed. Only Red Russia can disperse them.

We must keep arms negotiations open. We must use them realistically at every chance to inch toward disarmament. But America dare not be grappled to dangerous, innocuous agreements with Russia, spurred by emotionalisms.

There must be hard, clear-thinking assessment every step of the way. We have too often invited peril in the past by wearying of the arms burden and lowering our defense.

Arthur T. Vanderbilt

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 20, 1957

Mr. AUCHINCLOSS. Mr. Speaker, the State of New Jersey and indeed the entire Nation has suffered a great loss in the death of Arthur T. Vanderbilt, chief justice of the Supreme Court of New Jersey, but the contribution that he made to the cause of sound judicial procedure will never be forgotten. Under the new constitution adopted by the State of New Jersey he reorganized the judicial system of our State and although there were some who were critical, he commanded the respect of all and today the rules and procedures which were adopted under his guidance and leadership are held in high esteem by members of the bar as well as the public generally. He was a very human man and fully recognized the frailties of human nature but he would never compromise with inefficiency or slovenly effort.

The editorials from the Asbury Park Press and the Long Branch Record are fitting tributes to this great man and I am pleased to include them with my remarks.

The editorials follow:

[From the Asbury Park Press of June 18, 1957]

ARTHUR T. VANDERBILT

The history of New Jersey reveals few contributions to the civic welfare that measure up to those of Arthur T. Vanderbilt. As a lawyer, a teacher of law, a champion of good government, an aggressive advocate of judicial reform, and a chief justice of the State's highest court, he performed in a manner that brought lasting benefits to the citizens of New Jersey. Mr. Vanderbilt's death before he had reached the age of retiring as chief justice leaves a vacancy that will be very difficult to fill. But as it mourns his passing the State is grateful for the monument of achievement that Mr. Vanderbilt had created.

Not only in this country, but throughout the world, the transformation of the New Jersey court system from a slothful and sometimes futile judicial contraption into an efficient medium for dispensing prompt justice is hailed with admiration and an effort at emulation. The new constitution adopted in 1947 outlined the great improvements that have been made in the State's court system but it was the implementation supplied by Mr. Vanderbilt and his associates on the new supreme court that actually gave New Jersey the modern and efficient judicial system that it now boasts.

Previously Mr. Vanderbilt had shown his talents for improving obsolescent court systems when he was chairman of a committee to help the United States Supreme Court reorganize the Federal court system. This service coupled with his long and successful tenure as dean of the New York University law school brought Mr. Vanderbilt wide acclaim as a vigorous expert in judicial reform. And it made him the ideal choice to assume the burdensome task of reorganizing the New Jersey court system in accordance with the new constitution.

Fortunately Mr. Vanderbilt had completed this task, perhaps not to his own satisfaction, but to the point where New Jersey, whose court system evoked nationwide scorn only a decade ago, is now regarded as having a model system of judicial administration.

Now it behooves all citizens, and especially those in a position to appoint judges and the judiciary itself, to preserve the great gains made under Mr. Vanderbilt and to hold high the standards of New Jersey justice. The State owes him a memorial in reward for services, and none would be more appropriate than to continue his valiant effort to give New Jersey a court system based upon the highest concepts of justice.

[From the Long Branch Record of June 18, 1957]

JUSTICE VANDERBILT

Chief Justice Arthur T. Vanderbilt was a man who dedicated his life to the law.

His death has written finis to a career in jurisprudence marked by monumental achievements in the administration of justice.

His work in revamping the New Jersey court system would have been accomplishment enough for any ordinary man. But Justice Vanderbilt was not an ordinary man.

He was impelled by a driving force to see that justice was done. Delays and crowded court calendars gnawed at him constantly. It was this factor that led him to cut through a maze of entanglements and bring order, speed, and systematic disposal of legal matters to our halls of justice.

His colleagues have described him as an "exemplar in the public service," as "the greatest force in the judicial history of the State," and as one of the Nation's "outstanding legal and judicial figures."

His death will be keenly felt, not only by those who knew and worked with him, but by all who will, in some measure, reap the benefits of his profound knowledge of the law.

This newspaper joins the rest of the State in mourning his passing.

One Hundred and Twenty-fifth Anniversary of First Public Singing of the Song America

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 20, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I am pleased to include the resolution filed for adoption by the General Court of Massachusetts by Senator John R. Yerxa and Representatives James C. Bayley and William F. Otis, all of Boston, for the Park Street Church, Boston, said resolution commending the observance of the first public singing of the song America.

The resolution follows:

RESOLUTION COMMENDING THE OBSERVANCE OF THE FIRST PUBLIC SINGING OF THE SONG AMERICA

Whereas on Sunday, June 30, 1957, and through July 6, 1957, the 125th anniversary of the first public singing of the great patriotic song America will be celebrated at the Park Street Church in the city of Boston at ceremonies commemorating the event; and

Whereas it is fitting and proper that due recognition be given to the observance of this memorable event and to a song which has been an inspiration to all; and

Whereas the song America was written by the Reverend Dr. Samuel Francis Smith in the town of Andover, Mass., in February 1832; and

Whereas the first it was sung publicly was at a children's celebration of American independence at the Park Street Church, Boston, on July 4, 1832; and

Whereas the first time it was sung publicly ten with reference to any special occasion, it has during the years been widely used as a national anthem: Therefore be it

Resolved, That the General Court of Massachusetts commends to all citizens that appropriate recognition be given to the celebration of the first public singing of the song America during the week of June 30 through July 6, 1957.

Inauguration of Direct Flight From Detroit to Paris and Rome

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. LESINSKI. Mr. Speaker, the following article taken from the Detroit Free Press of May 26, 1957, shows how close Detroit is coming to Europe. The inauguration on June 2, 1957, of direct flights from Detroit to Paris, France, and Rome, Italy, not only indicates the growth of the city but also gives testimony to the wisdom and foresight of those, such as myself, who have envisioned Detroit as a world port:

DIRECT AIR SERVICE TO LINK DETROIT WITH PARIS AND ROME

Detroiters will be able to fly directly to Paris and Rome from Wayne Major Airport under a new service to be inaugurated June 2 by Pan American World Airways.

The flights will leave Wayne Major at 1 p. m., Sundays and Thursdays, returning to Detroit at 9:35 a. m., Tuesdays and Saturdays.

J. P. Smith, Jr., Detroit district manager, said the new service will bring to nine the total of weekly round-trip Pan American direct, no-change flights from the Motor City to Europe. Pan American already is flying daily to Shannon, London, Frankfurt, and other European cities.

Detroit became a gateway to Europe on April 30, 1954, when Pan American inaugurated the first no-change-of-plane service to London, Frankfurt, Stuttgart, and other points on a 3-round-trips-a-week schedule.

Prior to that Detroiters took domestic flights to New York, transferring to Pan American for flights to Europe. Customs and immigration facilities now are located at Wayne Major Airport.

The Detroit-Europe flights, Smith pointed out, have made the Ford Rouge plant as

familiar a signpost for in-coming Europeans as the Statute of Liberty.

Pan American established daily service to the same European points on June 1, 1955. It became the first airline to put new 5,000-mile range Douglas transports into transatlantic operation a year later, flying the first nonstop flight across the Atlantic in DC7C's.

The Detroit-Paris-Rome schedule calls for a refueling stop at Boston, but passengers may remain in the same seats to Paris and Rome.

Public Works Appropriation Bill, Fiscal Year 1958

SPEECH

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 19, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 8090) making appropriations for civil functions administered by the Department of the Army and certain agencies of the Department of the Interior for the fiscal year ending June 30, 1958, and for other purposes.

Mr. SIKES. Mr. Chairman, I endorse the statements that have been made by my colleagues on the very fine work done by the distinguished members of the Subcommittee on Civil Functions. Theirs is indeed a most difficult assignment which they have handled courteously, carefully, and capably.

I presume that all of us are disappointed when projects on which we are seeking approval are not included. That certainly is not a reflection on the fine work this committee does. I recognize that the efforts to stay within budget limitations has played an important part in selection of the projects now included in this year's bill. I do not feel that this is always the best procedure. The Bureau of the Budget recognizes one set of standards; the Congress may wish to recognize others. The Bureau of the Budget undoubtedly reflects the thinking of the current administration, but the majority of the Congress is of another political faith and it is well within the range of probability that our projects suffer accordingly. I do not feel that the Congress should be tied to the recommendations of the Bureau of the Budget, nor do I consider the Bureau of the Budget infallible in its thinking and in its recommendations.

I have a particular interest in two small items which are not included in this bill. The House Committee on Public Works has authorized a review by the United States engineers of the proposed routing of the Intracoastal Waterway from Carrabelle to St. Marks. The present authorization is for the Crooked River route. I have requested that consideration be given to a change in the authorization via the Alligator Point route. The latter is 18 miles shorter and involves 1 highway bridge instead of 3. It would be much less expensive to dredge and, I believe, less expensive to maintain. The Intracoastal Waterway from Carrabelle to St. Marks has been authorized, but not constructed. The increasingly heavy flow of waterborne traffic into St. Marks requires that consideration be given to this matter.

The Committee on Public Works also has authorized a review of the channel needs of St. Marks, Fla., which is the eastern terminus of the Gulf Intracoastal Waterway. The present harbor at St. Marks is maintained at a depth of 6 feet and a width of 50 feet. A minimum of 12 feet by 200 feet is a necessity. In my statement before the subcommittee I pointed out that several hundred craft use this port each week, and the list includes oil barges, construction-material barges, commercial fishing vessels, and pleasure craft. Navigational aids are totally inadequate. As a result, the cargo craft and the larger commercial and sporting craft find it necessary to come and go only during daylight hours and when the tide is high.

The sum of $10,000 is needed for the necessary surveys which are a part of the reviews by the engineers.

I made an earnest appeal to the committee that these items be included even though they are unbudgeted.

I have a similar great interest in the channel improvement in the harbor at Port St. Joe, Fla. Although there is not a budget recommendation, I feel that it is a serious oversight not to include in this bill improvement for Port St. Joe Harbor in Florida. The present channel depth is 32 feet. A 35-foot channel was recommended by the United States engineers and authorized by the Congress. It will cost approximately $1⅓ million with a small additional maintenance cost.

According the the Government reports for the year 1955, there was handled through the port of Port St. Joe 1,909,032 tons of waterborne commerce. Port St. Joe was only outranked in Florida, in the amount of tonnage handled, by Tampa, Jacksonville, Port Everglades, and Miami.

The terminaling facilities at Port St. Joe for bunker C fuel oil is 275,000 barrels. Port St. Joe is the terminal for the southeastern pipeline and has terminaling facilities for 980,000 barrels of gasoline and light fuel oil. Terminating facilities are available for bunkering Navy and other type vessels. At the present time bunker C fuel oil is being delivered to Eglin Air Force Base and is also being furnished to the United States district engineers at Mobile for equipment at times when operating in this area.

The development of the Apalachicola-Chattahoochee Valley Waterway will make it possible to barge bunker C fuel oil from the terminaling facilities at Port St. Joe to various inland ports (including Fort Benning, Ga.) along this route. This additional potential business is estimated at 50,000 short tons annually.

St. Joe Paper Co. has recently completed, at a cost in excess of $500,000, a sheet-piling, concrete-topped bulkhead which will permit docking of tankers and other vessels with draft of 35 feet.

The Glidden Co. has installed a tall-oil plant in Port St. Joe, which will be in operation this month, with estimated production of 25,000 tons, a percentage of which will be exported in tankers.

The General Chemical Division of Allied Chemical & Dye Corp. is now erecting a liquid-alum plant in Port St. Joe which will necessitate the importation of bauxite.

With the approval of the United States engineers and the Coast Guard the E. I. du Pont Co. is now in the process of erecting facilities for handling explosives through the port of Port St. Joe. These facilities will be made available to other companies producing and shipping explosives.

It is to be anticipated that the study now being made by a Government agency as to the suitability of various ports for handling explosives will show Port St. Joe to be one of the most acceptable ports on the gulf and will possibly have priority over other ports, in that it will already be handling explosives.

Thirty-seven feet depth over the bar and 35 feet depth in the channel will mean that several square miles of natural deep water in St. Joseph Bay will make accessible to the Navy a landlocked bay on the Gulf of Mexico in close proximity to Tyndal Field, Eglin Air Force Base, and Pensacola Air Base and would seem to add to the advantages to be gained by making the deep water of St. Joseph Bay accessible to the Navy.

Your attention is called to the fact that St. Joseph Bay and the harbor of Port St. Joe only have a diurnal tidal rise of 1.4 feet and do not enjoy the advantages of a tidal rise of 3 to 5 feet which prevails at all eastern seaboard ports and most of the gulf ports. Under extreme northerly wind conditions, we frequently experience a minus 3 feet below mean low tide.

With the recently created port authority it is to be anticipated that additional port and dockage facilities will be made available in the near future.

The present trend to the considerably larger ships makes it very important that this rapidly growing port have improved depth facilities.

Finally, Mr. Chairman, I wish to comment briefly on the very important central and southern Florida project. There has been question of the amount of local participation, although I hardly think there can be question of the importance of the project. Actually, I feel that it can clearly be shown that Florida is meeting its full part of the cost in that local interests are bearing a full 39 percent of the total project cost for the first phase of the central and southern Florida project.

The cost of the local flood-control district to date indicates that $23.4 million have been made available to this project to finance the requirements of local cooperation. Eleven million dollars of this amount came from general revenues of the State of Florida, the balance from an ad valorem tax levy on all real property in the 17 counties of the flood-control district.

When the project was started in January 1950 the works and assets of the old Everglades Drainage District were incorporated in the Federal-State plan. These included canals and rights-of-way which were actually usable in the project. These works, representing a significant start on the overall project in the

Everglades and lower east coast area cost the taxpayers of Florida $18 million to construct. However, local interests are given no credit under project financing for this substantial contribution in the form of completed works.

In addition to the works included in the Federal-State plan, it is necessary that individual landowners and drainage districts provide on the land water control works to regulate ground water elevations in the South Florida area. It is estimated that such on the land works in the Everglades Agricultural Area represent an expenditure by private land owners of approximately $24 million to date. Similarly, the landowners in the coastal areas in Palm Beach, Broward and Dade Counties have spent approximately $21 million to provide their needed water-control facilities to augment the works of the Federal-State project.

To summarize the activities of local interests to date, the following substantial contributions have been made:

Cash contributions	$23,400,000
Everglades Drainage District works	18,000,000
On-the-land water control	45,000,000
Total	86,400,000

From the foregoing it is apparent to me, and should be equally apparent to any unbiased observers that the citizens of Florida are bearing more than their fair share of the cost of this flood control and water-conservation project in central and southern Forida.

Assets of former works, 16 to 18 millions.
Costs incurred by local interests, 1949–57, $23,458,433.
Appropriated by Congress, $38,074,000.
Local budget, fiscal year 1958, $6,318,800.

Flood experience (Corps of Engineers)

	Damages	Savings
1947, last 9 months	$59,000,000	
1956, October	1,800,000	$10,825,000
1957, January	9,025,000	
10-year period:		
1947	59,000,000	
1948	49,800,000	
1949	4,000,000	
1950	2,400,000	
1951	2,500,000	
1952	9,000,000	
1953	20,000,000	13,000,000
1954		
1955		
1956	1,800,000	
1957	9,025,000	7,500,000
Total	157,525,000	20,500,000

This is a flood-control project of greatest importance. Very substantial benefits are anticipated and I believe the returns to the Federal Government in the development of the area and subsequently in taxes cannot fail to be many times the amount to be expended.

Scientists and the Fallout Scare

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, there has been considerable confusion in this matter of H-bomb fallout. The Communists have been waging an inspired campaign against fallout tests of the atomic bomb. Many people have a genuine fear of the effects of atom fallout, and we all share a real concern about it. The danger, however, at this time is not as real as the Communists tell us, and in a recent article in the U. S. News & World Report, June 21, 1957, there appeared an article entitled "Scientists and the Fallout Scare"; and under leave to extend my remarks, I am including the article.

The article follows:

[From the U. S. News & World Report of June 21, 1957]

SCIENTISTS AND THE FALLOUT SCARE

When you hear the views of "scientists" on fall-out and other atomic matters, it's well to find out who is talking.

That's indicated by a look at the record of "scientific" testimony and petitions.

A check shows that of 250,000 United States scientists, a tiny percentage signed recent petitions and appeals. Many signers are students and others who are not in atomic work.

* * * * * * *

In the United States 250,000 individuals are rated as scientists by the National Science Foundation.

Of these, about 9,000 are working on atomic energy and the problems related to nuclear explosions. They are either with the Atomic Energy Commission and its contractors, or in private industry. Only a portion of the 241,000 other scientists have special knowledge of atomic problems.

The 9,000 atomic scientists were represented by about 38 of their leaders in recent hearings before a subcommittee of the Congressional Joint Committee on Atomic Energy. They were called in by Congress to tell what they knew about the harmful effects of fall-out and radiation resulting from nuclear bursts.

Substantial agreement: These atomic experts are conducting research in laboratories all over the country. Many work on the same problems, each using his own methods. What they told Congress often differed in quanitity and degree. But when they sat down for roundtable discussion of what had been said, they found that, on nearly all basic issues, all but 2 or 3 of them were in substantial agreement.

The Atomic Energy Commission's representatives and all but a few of the other scientists agreed that radiation dangers were serious and must be taken into account constantly when planning nuclear tests. They agreed also that tests should be curtailed or discontinued by the United States as soon as other nations would agree to do likewise, but not before.

In the midst of the hearings, however, a clamor arose in the newspapers that made it appear that a large segment of American scientists were in disagreement with the Government's nuclear weapons program.

The headlines read, "2,000 Scientists Appeal for Ban on A-Tests." Dr. Linus C. Pauling, head of the chemistry division at the California Institute of Technology, reported to the press on June 3 that 2,000 scientists had signed a petition of his, asking for "an international agreement to stop the testing of nuclear bombs."

Only 1,351 names: The petition was received by Congress about a week later, after the hearings had ended. A count of the signatures showed there were actually 1,351 names.

No signer was identified, other than by name and place of residence. A check of the names was made in "American Men of Science" a standard registry, which lists about 90,000 persons who are considered to be scientists of some prominence. Only about half the 1,351 petitioners were found to be listed.

Dr. Pauling explained that a few of the signers were "students of science." A check of the signers at one institution, the University of California, shows that a number of them were graduate students, research assistants and fellows.

Some scientists who examined the petition questioned whether many of those who signed it had any expert knowledge of the scientific problems it raised.
